P R E F A C E .

THE year 1877 witnessed the culmination of many very important events, and perhaps the commencement of others which may, in a still greater degree, involve the welfare of mankind. The war between Russia and Turkey closed with the defeat of the latter, causing Europe to be extremely agitated lest the great military position of Constantinople should come into the hands of the conqueror.

The election of the President of the United States was determined in peace, although it awakened in many quarters fearful anticipations of the future. The strife of principles, the seething of opinions, the struggles of interests, and the aims and efforts of noble and ignoble passions, and the industries of mankind during the year, are fully portrayed in these pages.

The great conflict in Europe has involved the highest diplomacy of the age, and the latest improvements in military skill and science, all of which are set forth in the article "Turkey," and in those treating of "Ordnance," "Torpedoes," etc. Nor is the ever-recurring "Eastern Question" overlooked, with its complications.

A survey of the commerce of the civilized world is given in "International Commerce," and the intermingling and ever-flowing streams of all nations, the swelling volumes and the ebbs, with the causes of the rise and depression of each.

The "Currency," a great question before the public of the United States, with its varying standards, was discussed in Congress, in conventions, in books and reports, all of which is so presented as to illustrate the principles involved and present the facts on which they rest.

In the United States the "Electoral Commission" peacefully took the place of Congress in determining who should be President; and the quiet of the country was undisturbed except by the conflicts between labor and capital, which led to fearful, and in some places destructive, "Labor-strikes." Meanwhile the civil governments in all the Southern States were entirely abandoned by the Federal Government to the care and reconstruction of their own citizens, whether black or white.

The details of American affairs in these pages embrace the speeches and proceedings of the Electoral Commission and of Congress on important subjects; the administration of the Federal Government; its army and navy; its finances and their relation to the resumption of specie payments; the results of its sys-

tem of revenue and taxation; the strength of local banks, and the demand for Government paper currency; the commerce, manufactures, and general state of the country; the finances of the States; their debts and resources; their educational, charitable, and reformatory institutions; the various political conventions of the year, with their nominations and platforms; the results of elections; also commercial and financial conventions and their proceedings; the proceedings of State Legislatures on the various local matters of importance; the extension of railroads and telegraphs, and all those improvements involved in the rapid progress of the country.

The compass of this work embraces the world's history during the year, in every department of human activity of sufficient importance to be a matter of record. A special article is devoted to the affairs of every country, which contains a sketch of its history during the year, and all official and reliable information on area, population, religion, education, finances, army, navy, commerce, political affairs, military operations, and the reforms effected. The great war in the East will be found to be presented with most full and accurate details.

The religious history of the year is set forth in special articles on the great religious divisions and denominations, containing a mass of information hardly accessible elsewhere in any language.

The nature and progress of the great "Engineering" works of mankind in all countries; the important "Mechanical Improvements"; and the inventions and discoveries relative to the "Phonograph," "Telegraphy," and other departments of activity, are illustrated and described in these pages.

The manifestations of "Astronomical Phenomena"; the advance and discoveries in "Chemistry," such as the liquefaction of gases, new metals and compounds, with new and valuable applications, are fully presented.

The narrative of "Geographical Discoveries" in the different parts of the earth is very complete; also under the title "Earth" are summaries of the area, population, and religion of the large divisions of the globe, according to the latest statistical information.

The record of "Literature and Literary Progress" in the United States and many other countries is as important as in any previous year.

The biographical department is quite full, embracing a very large number of men who have come to distinction during the year, with brief notices of deceased persons of distinction in all pursuits.

The volume contains numerous illustrations of noted cities, places, and buildings in all parts of the world; also steel portraits of the English premier, Earl Beaconsfield, the United States Secretary of State, William M. Evarts, and Dom Pedro, Emperor of Brazil.

All important documents, messages, orders, and letters, from officials and others, have been inserted entire.

Great efforts have been made to secure the completest information from all parts of the world, and it is felt that in its several departments this work may be safely consulted as the completest and most reliable book of reference.

APPLETONS'
ANNUAL CYCLOPÆDIA.

A

AARIFI PASHA, who succeeded Savfet Pasha as Minister of Foreign Affairs in July, 1877, is considered one of the finest scholars and most able statesmen of Turkey. He possesses a thorough knowledge of French, and was for a long time interpreter to Abdul Medjid; he also possesses a knowledge of German. In October, 1872, he was appointed ambassador to Austria, but was recalled in 1873, and in 1874 was appointed to the ministry of foreign affairs. In the different ministries which succeeded each other in 1875 and 1876, he held at times the offices of Minister of Education and of Justice. In the beginning of 1877 he was again appointed ambassador in Vienna, and in July, 1877, was recalled to succeed Savfet Pasha as Minister of Foreign Affairs; but, before one month was past, was forced to resign. As a scholar he gained considerable reputation by his translation of Michaud's "History of the Crusades."

ABBOTT, JOHN STEVENS CABOT, died in Fair Haven, Conn., June 17, 1877. He was born in Brunswick, Me., September 18, 1805, and was educated at Bowdoin College and Andover Theological Seminary, graduating from the former in 1825. He was ordained to the ministry in the Congregational Church in 1830, and was settled successively at Worcester, Roxbury, and Nantucket, Mass. His first published work, "The Mother at Home," appeared in 1833, and was followed not long after by "The Child at Home." In 1844 he relinquished the pastorate, and devoted himself exclusively to literature, but occasionally resumed his ministerial labors for brief periods, and in 1866-'68 acted as stated supply in New Haven. With few exceptions his works have been professedly historical. The principal of them are: "Practical Christianity;" "Kings and Queens, or Life in the Palace;" "The French Revolution of 1789;" "The History of Napoleon Bonaparte" (2 vols.); "Napoleon at St. Helena;" "The

History of Napoleon III." (1868); 10 vols. of illustrated histories; "A History of the Civil War in America" (2 vols., 1863-'66); "Romance of Spanish History" (1870); and "The History of Frederick the Second, called Frederick the Great" (1871). Most of Mr. Abbott's works have had a large sale, and several of them have been translated into many languages.

ABDUL KERIM PASHA, commander-in-chief of the Turkish forces in Europe from April 17, to July, 1877, was born in 1807 at Tchirfa, in the district of Philippopolis, of a family descended from one of the Bulgarian chiefs who embraced Mohammedanism at the time of the Mussulman conquest. He entered the army in 1828, and was immediately sent by Mahmoud II. to the military academy of Vienna. Here he acquired a knowledge of German, which he speaks quite fluently, reading also with decided predilection German newspapers. On his return to Constantinople he was rapidly promoted, and his efforts toward the reorganization of the imperial forces contributed greatly to the realization of the reforms contemplated by the Sultans Mahmoud and Abdul Medjid. He has been Mushir for more than twenty-five years, and has served in all the wars of Turkey of recent times. When Hussein Avni Pasha was assassinated in 1876, he was appointed Seraskier or Minister of War in his place, but resigned, when war became imminent, to assume the chief command. During the campaign against Serbia in 1876 he gained great credit for the successful issue of the war, and owed to this his appointment as Serdar Ekrem, or commander-in-chief of the Turkish army. He was removed from this position on July 19, as his inactivity, which permitted the Russians to advance almost unopposed, met with disfavor in Constantinople. He hates Christians, in spite of his long intercourse with them, while his morose and misanthropic temperament has frequently gained

for him the disfavor of his sovereigns. But he was adored by his soldiers, always looking after their comfort and well-being.

ABYSSINIA, a country of Eastern Africa; area about 158,000 square miles; population variously estimated at from 3,000,000 to 4,000,000. The ruler of the country is King John. The news from Abyssinia during the year 1877 was of a very conflicting nature. It was several times reported that peace had been concluded with Egypt, and as often contradicted. No hostilities, however, seem to have taken place between the two countries. On October 27th an English correspondent wrote as follows:

Six months ago King John of Abyssinia made a convention with Colonel Gordon, which, though of an informal character, really amounted to a treaty of peace between Egypt and Abyssinia. He was then harassed by neighboring enemies, and the terms he accepted were favorable to Egypt. Since that time the relations of the two countries have been peaceful. But Colonel Gordon a few days ago telegraphed for a ship-of-war to go down the Red Sea. This looks very much as if King John, like some other people, considered treaties matters of imperfect obligation, to be set aside or respected according to circumstances. The King, however, has a great respect for Colonel Gordon, and it is to be hoped the difficulty may be arranged.

It is stated that the recent war between Egypt and Abyssinia was mainly due to a personal enmity between King Johannes and Munzinger Bey, the Egyptian governor of Massowah. Another cause was furnished by the inevitable raids which exist on the ill-defined borders, where the frontier tribes sometimes join one side, sometimes the other.

Abyssinia may roughly be stated to be divided into the provinces of Hamasen, Tigre,

under an hereditary chief. In 1869 or 1870, Walad Denkal, the chief of Hamasen, carried on a clandestine correspondence with the Emperor Napoleon. In this he was detected by Johannes, who imprisoned him at Adowa.

OBELISK AT AXUM.

This rendered the people of Hamasen discontented with Abyssinian rule, and some of their chiefs who knew Munzinger made overtures to him, which led to the expedition of Arendrup. Walad Denkal was thereupon released by Johannes, and on his promise of fidelity was allowed to return to the Hamasen on the defeat of Arendrup. Then came the greater expedition in 1876, which resulted in a defeat of the Egyptians on the 18th of March, and of the Abyssinians on the 19th of March, the losses on both sides not much exceeding one another. Previously, however, to these battles, Walad Denkal came over with all his force into Egypt, and afterward he retired into Egyptian territory with the Egyptian troops. Since March, 1876, there have been no hostilities between Abyssinia and Egypt. The Abyssinian troops, being irregulars, and having no system, eat up the country if kept long together. Every man being a soldier, no one is left to till the fields in a lengthened campaign. Tribute is exacted twice, and even three times a year, and the tax-collectors take twice, and more than twice, the proper tribute. The result is constant revolts, brought about by the illegal levy of taxes by the King's semi-independent chiefs. Where Johannes is he is King, and only there. His position is very difficult; his independent chiefs oppose any standing army, and therefore will never let him form one; for they know it would be their death-knell. Till a standing army is formed, there can be no quiet in Abyssinia.

Between the frontier of Abyssinia and the Red Sea is the Mussulman tribe of Danakli. It is hostile to Johannes, and forces him to

ROYAL SEAT, AXUM.

Amhara, and Godjam. The King's authority was recognized fully in Hamasen, Tigre, and Amhara, but not entirely so in Godjam. Shoa was under a separate king. Wallo Galla never submitted to Johannes. Each province was

pay tribute if his people pass its territory. These people have never paid him tribute, but did so to Egypt. The policy of Egypt is now to abstain from any communication with any of the chiefs of Abyssinia, to regard Johannes and the King of Shoa as independent, and to keep clear of all the political questions of both those regions.

There have been only three engagements, in which the Egyptians have twice been worsted, but not in any way so completely as has been represented. Had it suited Egypt to continue the war, she must have eventually prevailed, for the Abyssinians could not keep a large force together for any time. As it was, several vassal states threw off their allegiance the moment the war ceased, taking advantage of Johannes's enfeebled condition, and driven to revolt by the increased taxation consequent on the war.

A war broke out during 1877 between Johannes and King Menelek of Shoa. Nothing was known of this war beyond the fact that, in the middle of June, there was a battle in which King Menelek was worsted. Another battle was reported to have occurred on September 17th, in which Menelek was completely defeated, losing, according to a report, 20,000 killed and wounded, and 10,000 prisoners. King Johannes, who was slightly wounded, was reported to have lost 9,000 men. It was asserted by some that Menelek had been killed, by others that he escaped with 7,000 men.

ADAMS, EDWIN, an American actor, was born near Boston, Mass., February 3, 1834, and died in Philadelphia, Pa., October 25, 1877. He made his first appearance on the stage in Boston, August 29, 1853, at the National Theatre, acting *Stephen* in the "Hunchback." In 1854 he appeared in Philadelphia at the Chestnut Street Theatre, and, after acting in Baltimore, Md., he came out about 1860 as *Hamlet*, and also in other great parts, in Buffalo, N. Y. He subsequently appeared with Miss Kate Bateman and Mr. J. W. Wallack at the Winter Garden, New York, and remained with this combination for a considerable time, appearing in various parts of the country. In 1866 he reappeared in New York at the Broadway Theatre (Wallack's old theatre), playing *Robert Landry* in the "Dead Heart," and *Adrian de Teligny* in "The Heretic." On the opening of Booth's Theatre, February 3, 1867, he appeared as *Mercutio*, and shortly after enacted *Narcisse*, *Iago*, *Raphael*, *Rover*, and *Claude Melnotte*. He played *Enoch Arden* at the same theatre for the first time in New York on June 21, 1869, and appeared in this character, and others, in various cities for the last five years. He visited Australia, where he declined in health, and returned thence to San Francisco. There he was the recipient of a generous benefit, which was followed by others in New York, Philadelphia, Boston, and other cities.

ADVENTISTS. I. ADVENT CHRISTIANS.—The annual meeting of the Western Advent Christian Publishing Society was held in Chicago, Ill., August 30th. Elder C. W. Smith presided. The society publishes a weekly journal called the *Advent Christian Times*. A proposition for a consolidation of this journal with the *Bible Banner*, published in New York City, was discussed, but not decided upon. The business agent reported that a more extensive work had been done in the publishing of tracts than for several years previous. Besides a new edition of the "Advent Minstrels," and nearly four thousand tracts of the stereotype editions, considerable editions had been published of tracts on "Christian Faith," "Christian Hope," "Christian Ordinances," "The Christian Sabbath," "Evidences of the Coming of our Lord," and a pamphlet on "The Great Pyramid," making, in all, 26,000 new tracts and pamphlets issued during the year. The total amount of issues of tracts and books for the year was about 31,000 in number, or 336,000 pages. The resources of the society and its work were computed at \$4,618.38, and the liabilities at \$1,862.87, showing an excess of \$3,255.51 in resources. The business operations of the year had been attended with a net gain of \$723.36.

II. SEVENTH-DAY ADVENTISTS.—The following is a summary of the statistics of this denomination as they were reported to the General Conference in September, 1877:

CONFERENCES.	Minist.	Licentiate.	Churches.	Members.
Maine.....	3	1	18	263
Vermont.....	6	2	18	425
New England.....	3	5	21	400
New York and Pennsylvania.....	3	5	40	650
Ohio.....	1	3	13	800
Michigan.....	21	15	103	3,253
Indiana.....	3	2	13	315
Wisconsin.....	8	8	50	1,135
Illinois.....	6	13	22	500
Minnesota.....	12	16	45	871
Iowa and Nebraska.....	12	12	60	1,865
Missouri.....	4	2	17	433
Kansas.....	5	4	13	386
California.....	5	6	22	600
Kentucky and Tennessee.....	2	3	6	67
North Pacific Mission.....	2	..	2	43
Texas Mission.....	1	..	2	92
European Mission.....	4	..	8	800
Total.....	106	97	473	11,708

The total amount of pledges to the fund of Systematic Benevolence was \$47,176.56. The treasurer of the General Conference accounted for the sum of \$4,055.91 which had passed through his hands.

The treasurer of the Seventh-Day Adventist Publishing Association reported to the annual meeting, held in September, that his receipts for the year had been \$185,102.67, and that he had a balance in hand of \$3,636.21. The total assets of the Association were estimated at a value of \$160,993.34, and the total amount

of indebtedness was \$62,019.81, leaving a clear balance of assets of \$98,973.58.

The receipts of the Health Reform Institute for the year ending in September, 1877, were \$36,648.04, and the expenditures during the same period were \$33,139.52. The assets of the Institute were valued at \$58,805.13, and its liabilities were \$12,928.82. Four hundred and ninety-three patients, residents of twenty-three different States and the Canadas, were treated at the institution during the year, and no death occurred. Measures were taken looking to a change in the name of the Institute.

The treasurer of the Seventh-Day Adventist Educational Society reported at the annual meeting of the society, September 24th, that his receipts for the year had been \$11,289.63. The property of the society consisted of the college grounds and buildings at Battle Creek, Mich., detached lots, seven new buildings, etc., and were valued at \$56,477.52, while the liabilities amounted to \$9,306.29.

The sixteenth annual session of the General Conference of the Seventh-Day Adventists was held at Lansing, Mich., beginning September 20th. Elder James White was elected president. A report was made concerning the missionary work of the conference in Denmark, showing it to be in a prosperous condition. In view of the favorable opening which appeared among the Swedes, Norwegians, and Danes, in the United States, and in the Scandinavian countries themselves, young men of those nationalities were invited to prepare themselves for preaching. The conference expressed the hope that it might soon be able to establish a mission-field in the English-speaking parts of Europe. The president of the conference was advised to visit the southern field in the United States, or to send some one in his place, accompanied by other laborers. A Biblical Institute having been held in California with the result of almost doubling the number of laborers of the church in that State, the holding of similar institutes in other States was advised. The possession of the gift of prophecy by Mrs. White, the wife of Elder James White, was recognized, and to it was ascribed the unity of doctrine and practice which prevailed among all the Seventh-Day Adventists, while other bodies of Adventists were crippled by division. The conference rescinded all that part of an address on "Leadership" which had been passed in 1873, which taught that the leadership of the body was confined to any one man, and declared by resolution that "the highest authority under God among Seventh-Day Adventists is found in the will of the body of that people, as expressed in the decisions of the General Conference when acting within its proper jurisdiction; and that such decisions should be submitted to by all without exception, unless they can be shown to be in conflict with the word of God and the rights of individual conscience."

III. LIFE AND ADVENT UNION.—The four-

teenth anniversary of the Life and Advent Union was held at Wolfboro', N. H., August 8th. Mr. G. K. Carroll presided. The treasurer reported the receipt of \$1,238.25, and the expenditure of \$1,549.46. The receipts of the business agent had been \$3,397.54, and his expenditures \$3,856.29. It was resolved to raise \$1,800 for the purposes of the Union during the ensuing year. The sum of \$842 was pledged to this purpose during the meeting.

The sixth anniversary of the Life and Advent Missionary Society was held at Wolfboro', N. H., August 10th. The treasurer reported that his receipts for the year had been \$71.66, and his expenditures \$137.68. The society resolved to endeavor to raise \$200 for missionary efforts. Forty-six dollars were subscribed toward this sum at the meeting. A tent-meeting was appointed to be held at Provincetown, Mass.

AFGHANISTAN,* a country in Central Asia; area, 278,000 square miles, population about 4,000,000. The tribes inhabiting the northwestern frontier of India fall under three divisions: the idolatrous Kafirs and other tribes of the countries of Afghanistan opposite the Cashmere frontier, the Pathan or Afghan tribes opposite the Punjab frontier, and the Belooch and Brahoe tribes opposite the Sinde frontier. They all claim independence, and in Afghanistan are virtually independent and under no rule whatever, except that of their own chiefs, who are seldom obeyed one instant longer than is convenient. The only authority, indeed, revered by the Afghan tribes is that of the Akhund of Swat, who accidentally gained his ascendancy over them through his reputation as a saint. The Amir of Cabool, Shere Ali, however, is the nominal ruler of Afghanistan.

The Afghans style themselves the Bani Israel, or Sons of Israel, and claim descent in a direct line from Saul. Saul had two sons, Barakiah and Iramia, and the latter a son named Afghana. When Bakht-n-Nasr (Nebuchadnezzar) took the children of Israel into captivity, the Afghana were driven into the mountains about Herat, and afterward extended their migrations eastward into the Cabool valley and to the borders of Sinde and Beloochistan, where many of the tribe fell into idolatry. They first heard of Mohammed nine years after his announcement of his mission. They sent six of their chief men under a leader called Kish to Medina, where they at once embraced the new religion, and returned to Afghanistan to convert their fellow countrymen; and in the course of a few years a large proportion of them became Mohammedans. But many resisted to the last, and there is a tradition still current among the Afghans that the Khyber hills were inhabited, until a comparatively recent period, by a colony of Jews. The principal tribes are the Durranis, Tarins, Kakars, Ghilzais, Provindahs, and others of Afghanistan

* For an account of the population of the several provinces, see ANNUAL CYCLOPEDIA for 1874.

proper, and on the northwestern frontier the Yusufzas, numbering altogether 73,000 fighting men; the Afridis, 20,000; and the Wuzeris, 30,000. The differences between the Indian Government and the Afridis, a tribe inhabiting the Kohat Pass, was definitely settled in March by the complete subjection of the latter, who furnished thirty hostages for their future good behavior. The Kohat Pass was formally opened on March 24. This was of great importance, as the Indian Government now hold all three passes leading to Afghanistan, the Bolan Pass, the Khyber Pass, and the Kohat Pass, and can at any moment send its troops across the frontier. On January 24, Sir Lewis Pelly arrived in Peshawer, as special envoy of the Indian Government, to meet and confer with the special envoy of the Amir of Cabool, Syiid Wur Mohammed Shah, the prime minister of Cabool. The result of the conferences remained a secret. In April, the envoy of the Amir died, and another was appointed in his place. But, before the latter arrived in Peshawer, Sir L. Pelly received orders to embark for Europe, and the conference therefore came to an end. H. Vambery, in an article in the *Augsburg Gazette* of May 12, after giving an account of the relations between Afghanistan and Russia and England, stating that the policy of the present Amir, Shere Ali Khan, had been to receive money and arms from the British, and at the same time negotiate with the Russians, while lately he had committed several acts of discourtesy toward the British, describes the present relations of the Amir to the two powers as follows:

The British Munshi, accredited at Bula-Hissar, the citadel of Cabool, constantly complained of acts of discourtesy at the hands of the Amir; and, as the border difficulties in the Khyber Pass, together with the ever-increasing reports of Russian missions to Cabool, could no longer fail to interest the British, Lord Lytton in the beginning of this year arranged a conference at Peshawer for the purpose of settling all disputed points. The Amir sent one of his best diplomatists to the Conference, but, as the latter unfortunately died at Peshawer, and, on the other hand, the satisfactory conclusion of the British negotiations with the Khan of Kelat had not inclined the Amir to continue the diplomatic negotiations, the report arose of a serious breach between Cabool and Calcutta, while at the same time, and in connection with this report, the telegram announcing the outbreak of hostilities between the two countries was sent out, of course from Russian sources. We will not consider here

the justness of the claims of the Amir on Beloochistan, and only remark that Afghanistan has as many, or rather as few, claims on Kelat and Quetta as on Badakhshan and Roshan in the northeast. The tributary relations to Cabool of both points were always of a very doubtful character, and it is only due to a British-Russian agreement that Afghan tax-collectors are at present established in Fyzabad. In Kelat and Quetta, however, Afghan officers have never been tolerated. If Shere Ali Khan should seriously regret the British successes in Beloochistan, he is acting under the impulse of Russian instigation, but, that the latter should succeed in fanning this dissatisfaction into a war against India, we are compelled to doubt very strongly. For we must not overlook that, during the past year, such factors have gained prominence in Cabool, India, and the other Mohammedan countries of Central Asia, which make a co-operation with Russia impossible. We may ridicule the messages which the sheiks of Constantinople, Mecca, and Bagdad, have sent to their co-religionists in the far East, and may doubt the awakening of Pan-

CABOOL.

Mohammedan ideas, yet it is still difficult to believe that the reports of the danger threatening Islam were entirely disregarded on the shores of the Helmund or the valleys of the Hindoo Koosh, and that an alliance with the Czar, the antichrist of the Mohammedan legend, was possible. I have never had great confidence in the religious zeal of the Afghan warriors, intent only on plunder; but neither can I see that the Government at Cabool would act on orders received from Tashkend or St. Petersburg, or that it would go to war with the Empress of India, who permits collections to be taken up on the Indus as well as on the Ganges for the soldiers of the Sultan, and who allows enthusiastic speeches for the Caliph to be made in English meetings.

Emil von Schlagintweit, the well-known German traveler, gives the following description of the state of affairs in Afghanistan: "In Afghanistan a disorder is brewing, which will soon be fully equal to that in Kelat before the advent of the British troops; but in this case a deadly hatred of the Amir against the British is clearly manifest. In May, the English mail was robbed, which, since 1874, had gone to Djellalabad, half-way between Peshawer and

Cabool, with great regularity, and had enjoyed great security under the protection of the mountain tribes. It was furthermore definitely settled that the treaty of 1873, according to which the Amir was to receive 20,000 breech-loaders and a sum of about \$500,000 as a present for the concessions made by him with regard to the border of Seistan toward Persia, could not be executed. He actually received the arms and one-half the money, but, upon being asked to determine the time and place when he would wish to receive the other half, he answered, that he did not care for the money, he would make a present of it to England, the

members expressed themselves to the effect that the Russians are great in promising, but that they were not known to keep their promises. One of the Sirdars even remarked: "These golden but treacherous promises have brought us unfriendly relations with the British Government for India, and I cannot but wonder that the Amir is delighted with these propositions, and seriously believes in the fulfillment of the promises." To this the Amir replied: "I am convinced that I may be deceived by the Russians, but I do not wish to break off negotiations with them yet." The assembly finally resolved to submit the Russian proposition

to the Akhund of Swat, and in the mean while admit the Russian agent to the durbar without showing him any particular honors; on the other hand, the British agent, Mohammed Khan, was not to be invited to the sessions till the close of the Russo-Turkish war, as the honesty of the British sympathies for the cause of Islam was still to be proved. At a later session the Russian agent made a proposal that Russian troops be granted a free passage through Afghanistan, and the right to establish garrisons at any point in case the British should

THE CITADEL, HERAT.

amount was too small. This conduct appears all the more insolent, when we are told that the state treasury was entirely empty, and the greatest extortions were made use of in order to obtain money. Thus all the high dignitaries of the capital were recently taxed large sums because they were said to have defrauded the public treasury. In order to avoid a criminal prosecution, they all paid the sums of money demanded of them, but they all sought to retrieve their losses from the people; and, as the officials have full power to plunder their subordinates, such acts tend to increase the existing dissatisfaction." Herr von Schlagintweit then goes on to say that in India it is generally assumed that this line of conduct at Cabool is brought about by the negotiations of the Amir for Russian friendship. It is now known that a Russian agent was in Cabool quite recently, is still there, and made some definite propositions, but did not have an official character. Indian papers stated that the Russian Government had offered about \$3,000,000 for the privilege of placing a Russian force in cantonments on Afghan territory, somewhere near the border. This offer was read in a grand durbar in Cabool on July 15th. All the mem-

advance from Quetta against Herat. This proposition was immediately rejected by the Amir, who fears nothing more than foreign troops in his dominions, and who refused to receive an Englishman as permanent British ambassador, because the Indian Government desired to furnish him with a considerable escort. Herr von Schlagintweit adds that this news comes from too good a source to be doubted.

At the Conference of Peshawar, Sir Lewis Pelly made the continuance of the subsidy dependent on the following conditions: To accept a permanent English resident at Cabool, and to place at the head of the Afghan troops a number of English officers, who should take care that the soldiers were regularly paid. As Shere Ali's pride did not allow him to accept these proposals, which would have reduced him to the condition of a vassal, and hampered his freedom of action, the yearly subsidy was stopped. Notwithstanding this unsuccessful issue of the Peshawar negotiations, the Afghan Amir long hesitated to break openly with his old allies, though he was instigated to do so by the Akhund of Swat and by his own people, who more than once expressed their hostility

to the English. The aged Akhund, who is a violent hater of British influence, and enjoys immense respect not only in his own little country, but throughout the whole of Afghanistan, repeatedly demanded that Shere Ali should immediately break off all relations with England, reproaching him with hypocrisy and subserviency to the Giaours. Having convinced himself that the Amir still hesitated to take a decided step, the Akhund, on his own authority, called upon the Kadis of Cabool and Candahar to declare a holy war against the English. In consequence of this, a great popular demonstration was made under the auspices of the clergy, and Shere Ali began to prepare for war. The taxes on agriculture and manufactures were considerably augmented, and each house had to furnish a certain amount of iron in the form of kettles, pots, and similar articles for casting cannon. The casting operations have proceeded very slowly—not more than three or four guns per month—but the raising of troops has been rapid enough. At present,

it is said, there are 66,000 men in the neighborhood of Cabool; and in all the provinces a conscription is going on.

Upon the breaking out of the war with Russia, the Sultan of Turkey sent an ambassador to Shere Ali with presents. He did not reach Cabool until September, owing to the delay on the part of the Amir in granting him permission to enter his country. Upon his arrival the Amir refused to accept the Turkish presents, unless the ambassador should declare that no conditions were connected with their acceptance, such as, to break off all intercourse with the Russians, and to form an alliance with the British. He declared himself unable to assist Turkey, as he was too far distant and too weak; nor could he ally himself with the British, as long as they held territories which in reality belonged to him.

AFRICA. The area and population of the different divisions and subdivisions of Africa were estimated as follows at the close of 1877:

DIVISIONS AND SUBDIVISIONS.	AREA IN SQUARE MILES.		POPULATION.	
	Of Divisions.	Of Subdivisions.	Of Divisions.	Of Subdivisions.
Morocco.....	259,600	6,000,000
Algeria.....	258,817	2,448,700
Tunis.....	45,710	2,000,000
Tripoli (inclusive of Fezzan and Barca).....	844,400	1,150,000
Sahara.....	2,486,500	8,700,000
NORTHERN AFRICA.....	3,344,500	15,299,000
Egypt (inclusive of Darfour, Harar, etc.).....	869,400	17,000,000
Other territory.....	959,000	24,280,000
NORTHEASTERN AFRICA.....	1,828,000	41,280,000
CENTRAL SOODAN.....	547,500	81,400,000
WESTERN SOODAN.....	585,000	17,600,000
UPPER GUINEA.....	283,000	26,000,000
TERRITORY OF THE EQUATOR.....	1,594,600	44,000,000
British territory (inc. of Caffraria and Transvaal Republic).....	870,100	1,618,702
Orange Free State.....	42,500	67,000
Other territory.....	2,184,800	18,790,000
SOUTHERN AFRICA.....	2,547,400	20,461,000
ISLANDS IN THE ATLANTIC OCEAN.....	5,964	566,217
ISLANDS IN THE INDIAN OCEAN.....	235,778	3,315,400
Total.....	10,921,700	199,921,600

An important change took place in 1877 in the political aspect of Africa. An independent state, the Transvaal Republic, after a separate existence of exactly twenty-five years, ceased to exist, and was incorporated in the British dominions. The British commissioner, who had been appointed to watch the affairs in the republic, came to the conclusion that, if the inhabitants were permitted to proceed unrestrained, they would not only bring about their own destruction, but would also endanger the British colonies. Under these circumstances, he considered it advisable to proclaim the annexation of the country to the British crown, which he did on April 12. (*See TRANSVAAL REPUBLIC.*)

The Cape Colony, which received a new governor in March, in the person of Sir Bartle Frere, was the scene of a Caffre war in the latter part of the year, which resulted in the acquisition of new territory. (*See CAPE COLONY.*)

The blockade of the coast of Dahomey by British men-of-war was raised in May.

Advices from Congo, dated January 15th, stated that the British war vessel Avon had destroyed seven villages on the Congo River, and killed three natives, as a punishment for plundering the American schooner Thomas Nickerson, of New York. This vessel had been captured by the natives, and about thirty tons of coffee were carried off up the country. She was fired by the Avon, in order to prevent further plundering.

The King of Gaboon died during the early part of the year, aged nearly one hundred years. His son, Adande, on succeeding him, abolished a number of objectionable customs. He discharged the hundred women of his father's harem, liberated fifty slaves, and abolished the sacrifice of human beings at religious rites.

Among the works of the year containing information on Africa are, V. L. Cameron, "Across Africa" (2 vols., London, 1877); M.

Th. von Heuglin, "Reise in Nordost-Afrika" (2 vols., Brunswick, 1877).

The war between Russia and Turkey also made itself felt in Egypt, which, as a tributary to the Porte, was bound to furnish troops and money. After a great deal of deliberation the Egyptian Government decided to furnish a contingent of troops, but declared itself unable to do any more. The English Government manifested its interest in the future of Egypt in a very decided manner, and rumors were afloat that it intended to purchase from the

treaty of peace did not seem to have been concluded. On the other hand, Abyssinia was the

CONGO, ROYAL GUARD.

DAHOMANS—THE KING'S DANCE.

Sultan his suzerain rights over the country. (See EGYPT.)

The relations of Abyssinia with Egypt were not disturbed by war during 1877, although a

scene of civil war between King Johannes and the King of Shoa, in which the latter seemed to have been worsted. (See ABYSSINIA.)

AGRICULTURE. The International Statistical Congress, which assembled at St. Petersburg in 1872, confided to the Statistical Corps of the French Government the compilation of the Agricultural Statistics of Europe. The work has recently appeared, and it contains returns chiefly for the year 1873. In some instances the average production is given; in others that of the year. The two following tables show the crop of wheat, etc., in the various countries:

COUNTRIES.	Wheat. Bushels.	Rye. Bushels.	Barley. Bushels.	Oats. Bushels.	Buckwheat. Bushels.
Great Britain.....	104,572,354	1,779,426	91,513,013	123,248,640

Austria produces an average of 10,172,028 bushels of maslin; Württemberg, 778,362; Baden, 805,992; Hesse-Darmstadt, 266,567; Belgium, 2,034,383; France, 21,998,669. Great Britain produces an average of 6,063 tons of sugar-beets; Hungary, 686,571; Württemberg, 114,018; Baden, 39,735; Hesse-Darmstadt, 420,448; Saxe-Weimar, 13,229; Saxe-Altenburg, 22,229; Holland, 475,766; Belgium, 613,666; France, 9,598,989. The following is the average product of hops: Great Britain, 56,441 tons; Denmark, 585; Sweden, 2,205; Finland, 220; Hungary, 864; Bavaria, 23,857; Württemberg, 8,535; Baden, 3,140; Holland, 242; Belgium, 5,474; France, 5,100.

The average annual production of cereals of all sorts in Europe is estimated at 5,153,808,000 bushels, of which 1,657,392,000 bushels, or nearly a third, are assigned to Russia; 766,260,000 bushels, or nearly 15 per cent., to Germany; 709,500,000 bushels, or nearly 14 per cent., to France; 567,600,000 bushels, or over 11 per cent., to Austria-Hungary. Europe produces a little over 17 bushels *per capita* of her population. The average ratio *per capita* of the different countries of Europe is given as follows: Roumania, 40.8 bushels; Denmark, 33½; Russia, 23; Prussia, 22½; France, 19½; Hungary, 19½; Bavaria, 18½; Sweden, 15.6; German duchies, 14.5; Belgium and Spain, 13.9; Austria and Württemberg, 13.8; Ireland and Turkey, 13; Finland, 12.5; Great Britain, 11.9; Saxony and Servia, 10.7; Holland, 9; Norway and Greece, 8.8; Italy and Portugal, 7.9; Switzerland, 5.9.

Estimating the average consumption at 15.6 bushels *per capita* for food, seed, and various manufactures, Europe produces about enough to meet her own demand, except in wheat and some other breadstuffs, which exhibit a considerable deficiency to be supplied by importation.

Spain, Italy, and France raise a larger proportion of wheat than any other grain; Finland, Switzerland, and Germany, of rye; Scandinavia and Germany, of barley; Ireland, Hungary, and North Germany, of oats. Maize holds first rank in Roumania, Servia, and Portugal; buck-wheat has but little importance, except in Holland and France. Oats is the leading crop of Europe, followed by wheat and rye.

Of potatoes, Ireland produces 23 bushels *per capita*; the German Empire, 18.1; Holland, 14.5; Belgium, 11.6; France, 10.2; Scandinavia, 9.9; Austria-Hungary, 8½; Russia and Finland, 4½; Great Britain, 3½; Italy, 1.1; Portugal, 0.85; Spain, 0.28. In the other States this culture is still more insignificant.

The "industrial plants," including colza, flax, hemp, sugar-beet, hops, and tobacco, are grown to a considerable extent in those countries in which a varied culture is pursued. Roumania produces 88½ bushels of colza per hundred of her population; Belgium, 34½; Holland, 27; France, 22; Hungary, 20½; Germany, 14½; Denmark, 4½. This plant is a species of cabbage, raised for its seed, from which a kind of lamp-oil is expressed. The largest proportion of hemp is raised in Hungary, amounting to 61 pounds *per capita*; Germany averages 50; Finland, 45½; France, 32½; Sweden, 20½; Roumania, 12½; Belgium, 8½. In flax Ireland takes the lead, producing 13.9 pounds *per capita*; Belgium, 10.14; Holland, 7½; France, 3, etc. France is the great sugar-beet country of Europe, her crops averaging 531 pounds *per capita*; next, Holland, 260 pounds; Belgium, 233 pounds; Hungary, 88½; Germany, 74.3. Of hops, Germany and Great Britain each average about 4½ pounds *per capita*; France less than 2, etc. Tobacco-culture is limited in Europe, yet Hungary produces 5 pounds *per capita*, and Germany 4½; smaller products are noted in

Denmark, Sweden, Finland, Holland, Belgium, France, and Roumania.

The number of domestic animals in 28 European States is given at 379,031,705, of which 31,573,663 are horses, 4,136,031 asses and mules, 89,678,248 cattle, 194,026,236 sheep, 42,686,493 swine, and 16,931,034 goats. Taking all the States together, there are for each 1,000 inhabitants 112 horses, 15 asses and mules, 318 cattle, 687 sheep, 151 swine, and 61 goats. Russia, Denmark, Finland, and Hun-

gary stand at the head of horse-owning States; Spain, of mules; Ireland, Denmark, Bavaria, Finland, Norway, and Württemberg, of cattle; Spain, Great Britain, Roumania, Denmark, Hungary, and Norway, of sheep; Hungary, Spain, Denmark, and the German duchies, of swine; Greece stands at the head of the goat-owning States; next, with a wide interval, comes Spain, and then Portugal. The following table gives the more important details:

COUNTRIES.	Horses.	Asses.	Mules.	Cattle.*	Cows.	Sheep.	Swine.	Goats.
Great Britain.....	2,201,100	6,002,100	2,253,800	20,485,900	2,519,300

Saxe-Altenburg.....	190,579	120,241	310,820
Holland.....	2,437,033	3,263,053	5,700,086
Belgium.....	3,926,704	2,007,087	5,933,791
France.....	64,984,190	45,209,091	110,193,281
Portugal.....	4,551,400	6,449,571	11,000,971
Roumania.....	8,556,770	11,518,343	20,175,113

In the above classification, lands under tillage, or regular plough-culture, whether in a system of rotation or otherwise, constitute the first grand division, which includes cereals, farinaceous crops (such as pease, beans, and potatoes), grass crops, and all others, together with land in fallow. The other grand division of productive lands, not subjected to regular or periodical plough-breaking, includes orchards, vineyards, pastures, and woods and forests. A wide range of difference is found in the pro-

portions of productive area in different countries. The States of the German Empire represented in the above table have utilized nearly the whole of their respective territories in some form of production, their proportion of waste land varying from 4 to 11.3 per cent. of the whole. At the other extreme, as might be expected, are those bleak, inhospitable northern regions, Finland, Sweden, and Norway. The two former have about half, and the latter nearly three-fourths, of their territories entirely unproductive. It is remarkable that Portugal, in a bright southern climate, has less than half her area occupied with any sort of production. This is partly due to the very large surface covered by her mountain ranges. Great Britain utilizes but 58 per cent. of her territory in agricultural production, and 28 per cent. of her agricultural lands are unused, leaving about 14 per cent. for sites of cities and towns, lakes, streams, roads, etc. France and Belgium utilize in agriculture five-sixths of their lands, including mountains and rivers. Austro-Hungary loses only from 10 to 12 per cent., Holland nearly a third, and Ireland nearly a fourth of their respective areas.

Of lands under tillage, the States showing the largest proportion, in descending order, are Saxe-Altenburg, Saxe-Weimar, Belgium, and Hesse-Darmstadt, each of which has over half her territory under plough-culture.

* Including cows.

AHMED VEFYK PASHA, President of the Turkish Chamber of Deputies, is one of the most cultivated men in Turkey, and has a considerable literary reputation. He was trained in the Translation Bureau of the office of Foreign Affairs, where especial opportunities are afforded to young Turks to make themselves acquainted with western languages and literature, and early attracted the attention of his superiors by his general intelligence and versatility. In 1848, he served on a commission to settle some questions which had arisen with Russia with reference to the affairs of the Principalities of Moldavia and Wallachia, and showed himself quite a match for the craftiness of Russian diplomacy. In 1860, as ambassador to Paris, he had to deal with the situation which was caused by the permission which the great powers gave to France to station troops in Syria, for the purpose of preserving order, after the antichristian outbreaks at Damascus. He assumed an attitude which compelled the almost immediate withdrawal of the French troops, much to the disappointment of Napoleon III., who demanded and obtained his recall. When Sultan Abdul-Aziz, upon his accession to the throne, dispatched commissioners to all parts of the empire, to examine the administration and condition of the several provinces, Ahmed Vefyk was sent to Western Asia Minor, and returned with a full report of the abuses which he had found. The report had no practical result in effecting reforms; for those of the Turkish Government are seldom thorough, but Ahmed Vefyk is thankfully remembered in the provinces which he tried to serve. As Minister of Worship, he tried to reform the abuses which prevailed in that department of the Government. He was baffled by the powerful parties who were interested in the perpetuation of the abuses, and who had influence enough with the Prime Minister, Ali Pasha, to compel his resignation. He retired to private life, determined to hold no public office while Ali Pasha was Prime Minister, and busied himself in literary work. He published the works of several Turkish authors, mostly historical, translated one of Molière's plays, and published some lithographic maps with a Turkish text for the use of the schools. After the death of Ali Pasha, he was appointed by the new Grand Vizier, Mahmoud Nedim Pasha, director of the customs, and soon afterward his *musteshar* (private secretary), a position in which he performed the functions of a Minister of the Interior. Toward the end of 1872, he was appointed Minister of Instruction. His brusque manner made him unpopular, and he soon retired to private life. He attended the Congress of Orientalists, which was held at St. Petersburg in 1876, and presided over the Turco-Tartaric section of that body. He was chosen President of the Chamber of Deputies at the opening of the Turkish Parliament on the 18th of March, 1877, and was shortly afterward raised to the rank of a vizier, with the

title of pasha. When he was congratulated by the deputies on his elevation, he replied that he had been offered the title of pasha five times, but had always heretofore declined it; this time he would accept it, because he regarded the bestowal of it as a sign of the high esteem which his majesty, the Sultan, entertained for constitutional principles. In August, 1877, he was appointed Governor of the Adrianople district. Ahmed Vefyk Pasha is not a pure Turk, but has both Semitic and Greek blood in his veins, and features of a striking Semitic type. Notwithstanding his high culture, he has an aversion to Europeans and European innovations, and is warmly attached to the past traditions of the Ottoman race.

ALABAMA. The first biennial session of the Legislature of Alabama under the revised constitution began in November, 1876, and ended on the 9th of February following. One of the most important acts provided for the organization and regulation of a public-school system. The school-revenues are to consist of annual interest at 6 per cent. on all sums received from sales of land granted by the United States for school-purposes; annual interest at 4 per cent. on the surplus revenue of the United States, deposited with the State under the act of Congress of June 23, 1836; annual rents, incomes, profits, or proceeds of sales of all lands hereafter given for the support of public schools; all sums accruing to the State as escheats; \$130,000 from any money in the State Treasury not otherwise appropriated; and the proceeds of the poll-tax of \$1.50 on each male inhabitant between the ages of 21 and 45, to be retained and distributed in each county. A superintendent of education is to be elected by the people every two years, beginning with the general election of August, 1878, to be commissioned by the Governor, and to receive a salary of \$2,250 a year from the educational fund. He is authorized to have a clerk, at a salary of \$1,400. His duties are fully defined, and he is required to make an annual report to the Governor as soon as practicable after the close of the school-year in September. A county superintendent is to be appointed in each county by the State Superintendent, to have charge of school-moneys, and administer locally the affairs of the educational system. County superintendents are allowed a salary of \$75, and 1 per cent. on the money disbursed by them. Three school trustees are to be elected every four years in each township, to have immediate supervision of the schools in their several townships. Trustees are required to "contract with teachers, when they are satisfied of their competency and good moral character, to teach in any of the public schools of their township, to pay them a *pro-rata* share of the school-fund apportioned to the township, according to the number of days reported in said teachers' annual report of the actual attendance of each pupil at the expiration of the scholastic year."

Teachers are required to keep records and make reports. Every child between the ages of 7 and 21 years is "entitled to admission into, and instruction in, any public school of its own race or color in the township in which he or she resides, or to any public school of its own race or color in the State of Alabama." Separate schools, separate records, and a separate distribution of the poll-tax, for the education of white and colored children, are provided for. The provisions of this act do not apply to cities and incorporated towns which are provided for by local school-laws.

At the time of the passage of this act, a protest was recorded against it by several members of the Assembly, because it so restricted

Some amendments, of no great importance, to the registration and election laws were adopted. An act was passed for the more efficient organization of the volunteer militia of the State. It is made subject to the orders of the Governor and to the discipline of the United States Army when in actual service. An act was passed authorizing the appointment of a commissioner of swamp and overflowed lands. An act to regulate the practice of medicine requires a diploma or certificate of qualification from some authorized board of medical examiners. The boards of censors of the medical association of the State, and of the county associations in affiliation with it, are constituted authorized boards of medical examiners. The standard of qualifications for the practice of medicine, and the rules governing the boards of examiners, are to be determined by the State medical association. The diploma or certificate required for the practice of medicine must receive the indorsement of the probate judge of the county, and be recorded in a book kept for the purpose. Any person practising without such diploma or certificate is made liable to a fine, and to imprisonment in default of payment of the fine.

STATE CAPITOL, MONTGOMERY.

the powers and duties of county superintendents, and provided for the payment of teachers only once a year, and then not by a fixed compensation, but a *pro-rata* of the school-fund, and for other reasons. The protest said: "It will be such a retrogression as will place our State, which now has a better educational system than many, and a larger fund than some of the States, behind them all, and even behind all the organized territories but one, in this important interest. This, I am satisfied, is not in accordance with the spirit of our new constitution nor the genius of our people. Our mineral wealth, our fertile soil and diversified products, and our genial climate, when combined with general intelligence among the people, will afford every element of State wealth and happiness. If we would utilize these elements and reap the benefits, we must keep pace with the spirit of the age in the matter of public education. It is mistaken economy which would suffer us to go backward now. Ignorance and its offsprings—indolence, vice, and crime—are too costly to be encouraged."

An act providing for the payment of the obligations of the State, issued under the act of December 19, 1873, entitled "An act to provide for the funding of the domestic debt of the State," authorizes the Governor to issue 7 per cent. 20-years' bonds, not exceeding \$1,000,000 in amount, for the purpose of taking up such obligations. Another act authorized the funding of the debts of municipal corporations, city, town, and county, in bonds running not more than 30 years, and bearing interest at not more than 6 per cent. The existing indebtedness must not be increased by the process, and the tax for the payment of interest and principal of the bonds is limited to one-half of 1 per cent. on the value of taxable property. Among the other acts of the session was one forming a new county, called Cullman, out of portions of Blount, Winston, and Morgan, and providing for its organization.

A joint resolution authorized the Governor to negotiate with the State of Georgia for the purpose of ascertaining and defining the boundary-line between the two States, "so that all doubt may be removed as to the jurisdiction of the State of Alabama along the western

bank of the Chattahoochee River." Memorials were addressed to Congress, asking that the public lands in the State be granted in aid of public schools, and that an appropriation be made for the improvement of the Alabama River.

Under the changes in the constitution of this State, effected in 1876, elections and legislative sessions occur henceforth but once in two years. This year there was no State election, and consequently no political action calling for record. There was also no session of the Legislature for 1877-'8, and, as a consequence, no official reports of the financial or other interests of the Government for this year are obtainable. Unofficial statements represent the Treasury and the public institutions of the State as in a more satisfactory condition than for several years past.

The compromise of the State debt offered to the holders of the bonds had been accepted by most of them before the close of the year. When completed, it will leave the outstanding indebtedness as follows:

Old bonded debt.....	\$5,084,713 50
Debt incurred since July 13, 1868.....	3,041,209 50
Debt incurred for railway companies.....	1,542,500 00
Total	\$9,668,423 00
"Patton" certificates	87,255 00
Grand total.....	\$9,705,678 00

The receipts of the Treasury for the year ending September 30th were \$1,034,559.53, including a balance of \$54,967.32 from the preceding year. The disbursements amounted to \$880,604.06, leaving an unexpended balance of \$153,955.47. The estimated receipts for 1877-'8 are \$925,000; expenditures, \$852,752.

ALDEN, Rear-Admiral JAMES, was born in Maine in 1809, and died in San Francisco, Cal., February 6, 1877. In 1828 he entered the Navy as a midshipman; in 1841 he was made a lieutenant, in 1863 a captain, in 1866 a commodore, and in 1872 he retired with the rank of rear-admiral. He accompanied the Wilkes Exploring Expedition, took part in naval operations during the Mexican War, and from 1848 to 1860 was engaged in the coast survey. At the beginning of the Civil War he was in command of the steamer South Carolina, and in 1862 he was transferred to the sloop-of-war Richmond. He was engaged in the capture of New Orleans, and in the attacks upon Vicksburg and Port Hudson. The steam-sloop Brooklyn, designated as the leading ship of the line, was commanded by Captain Alden in 1864, and participated in the engagement in Mobile Bay, and in two attacks on Fort Fisher. In 1868 he commanded the navy-yard in California. In 1869 he was appointed Chief of the Bureau of Navigation and Detail in the Navy Department. In 1871 he was promoted to the rank of rear-admiral, and took command of the European squadron.

ALEXANDER II., autocrat of Russia, was born April 29 (old style, 17), 1818, and suc-

ceeded his father, the Emperor Nicholas, March 2, 1855. Like all the Russian princes, his father intended to give him a military education, but, as his disposition was not at all warlike, the development of his mind received an essentially different direction under the guidance of the poet Shukovski. As Czarevitch he kept aloof as much as possible from the army, but devoted particular attention to diplomatic and administrative affairs. On several occasions, during the absence of his father from Russia, he acted as regent of the empire, and in 1848 was sent on a special mission to Berlin, Vienna, and other European capitals. He ascended the throne in the midst of the Crimean War, which he continued with undiminished energy, visiting in the fall of 1855 Odessa and the Crimea. The treaty of Paris in 1856 weakened the position of Russia in the East considerably, but it soon recovered from this blow by the cautious and yet energetic policy of Alexander. The subjection of the tribes of the Caucasus was continued and completed, while at the same time the extensive territories between the Caspian and the Aral seas were brought under Russian influence, and the greater part annexed to the empire. Much more important, however, than these conquests, were the reforms introduced by Alexander at home. With the accession of Alexander, it seemed, indeed, as if a new spirit pervaded the empire, many of his first acts being indicative of a reformatory policy. Thus, the number of students at the Russian universities was no longer restricted, the difficulty of obtaining passports for traveling abroad was removed, and the rigor of the press laws was relaxed. But the most important act of his reign was the abolition of serfdom, by which millions of human beings were freed from bondage fully equal to that imposed upon the negro slaves. Steps were also taken to reorganize the army, while at the same time a system of public education, comprising all degrees from the primary school to the university, was introduced, so that now Russia can boast of an educational system superior to that of many of the older countries of Europe. On the other hand, he has been blamed for the barbaric severity with which his government suppressed the insurrection in Poland in 1863, and the severity with which the Russification of the Polish and Baltic provinces was conducted. Two attempts against his life, in 1866, and again in 1867, greatly diminished his reformatory zeal, and in some respects, particularly with regard to the liberty of the press, he has partly undone his former work. With regard to the army and navy, he remained true to his early distaste, and surrendered these two departments entirely into the hands of his brothers. (See NICHOLAS and MICHAEL.) At the beginning of his reign, he had the good fortune in finding in Prince Gortchakoff (q. v.) a statesman of great ability, and has ever since intrusted to his chancellor the supreme direction of the foreign policy of

Russia, giving most emphatic utterance to his private opinions only on the question of the maintenance of the most intimate relations with Germany. He was married in 1841 to Maria, daughter of the grand duke Ludwig II., of Hesse. His oldest son, Nicholas, born in 1841, died in 1865. He was betrothed to the Princess Dagmar of Denmark, who, after his death, married the second son of the emperor, Alexander, who is now the Czarevitch or heir apparent to the throne. The Czarevitch has given but few indications of his future policy, although it is pretty well known that he shares his father's views as to the continuance of friendly relations with Germany, and that he is in full sympathy with the most extreme section of the Panславists. During the war in 1877, he commanded the army of Biela.

ALGERIA, a French province in Northern Africa, having an area of 258,317 square miles, and 2,416,225 inhabitants. The French colonies have never enjoyed that prosperity which the British colonies have had. The principal reason for this has been stated to be the difference in the system employed by the two nations in governing their colonies. While the British, in India, for instance, do not interfere with the customs and religion of the natives any more than is absolutely necessary, the French in Algeria have always striven to assimilate the natives to themselves. True to this principle, the Government of Algeria was begun by a centralization of its affairs in Paris. The little progress made by the colony caused, in 1860, a radical change to be made, which,

on the working of the present system, and, although General Chanzy still regards assimilation as ultimately possible, he still favors this system. He particularly remarks with satisfaction that the "arbitrary and despotic" decrees had been discontinued, and that now, whenever the basis for a new institution was to be laid, or a new principle was to be established, the Government always fell back upon the law to do it. It was an important and beneficial measure not only to guarantee liberty of religion, but to assume the financial care of the Mohammedan church, by providing for the payment of all connected with the mosques. In the department of education, the French influence makes itself more strongly felt. The Mohammedan schools for superior instruction have been, indeed, restored by the law of July 30, 1876, but the Arabic instructors are assisted by French professors of history, geography, arithmetic, and of the principles of law. The Arabs do not seem to have primary schools for themselves, but there are French schools in which Arabic is taught. In 1875, there were 46,887 pupils in a total European population of 322,792. The police and the courts are arranged according to the French system. In a few provinces only have the native cadis been permitted to remain, and they are gradually decreasing, numbering 144 in 1875 to 204 in 1874. On the other hand, there were in 1875 69 justices of the peace. The criminal statistics for the province are very instructive, there being in 1875 one convicted Frenchman for every 2,751 inhabitants, one

CONSTANTINE.

although it did not lead to a complete adoption of the British system, did away with the centralization. The report of the Civil Governor-General, General Chanzy, shows that, since that time, a decided improvement has been made. The report begins with an opinion

developed of the country could proceed. In executing this law, however, it became apparent that its author had not foreseen all the possibilities that might arise. A special commission was therefore appointed to regulate the real estate relations. In agricult-

ure, the country is decidedly progressing. In 1875, 19,676,290 cwt. of grain was raised on 2,950,000 hectares, against 16,000,000 cwt. on 2,733,370 hectares in 1874. The vineyards have increased from 16,688 hectares in 1872 to 20,000 hectares in 1875. Vine-growing has received a considerable impetus of late years, as a large number of vine-growers from Southern France, ruined by phylloxera, went to Algeria. Fruit and vegetable growing is also making considerable progress. Stock-raising still needs considerable encouragement, horse-raising only being satisfactory, so that Algeria on an av-

posite political opinions, no such united action could take place. The Republican candidate, Rutherford B. Hayes, was finally declared to be the choice of the people. (*See CONGRESS, UNITED STATES.*)

An Indian war of more than usual importance threatened to break out during the year, but was finally averted. (*See ARMY, UNITED STATES.*)

The reduction of the wages of engineers and brakemen on the railroads of the Middle States led to the most alarming and destructive riots. In many districts it was necessary

to summon the military power to guard the lines. (*See LABOR STRIKES.*)

The financial embarrassments of the country continued to increase throughout the year, and led to numerous suggestions and propositions relative to the currency. (*See CURRENCY.*)

The agricultural products of the country were unusually abundant.

The South and Central American States and Mexico have had a year of comparative quiet, though by no means free from trouble and

BONA.

erage sends 3,000 horses to the army annually. In sheep, the country is very rich, their number being estimated at 9,699,000. The production of tobacco is also steadily increasing. In 1875, 6,670 hectares produced 5,622,000 kilogrammes, against 4,700,000 kilos on 6,460 hectares in 1874. Mining is also looking up very favorably. In the first half of 1876, not less than 234,000 tons of iron ore, 2,438 tons of copper, and 727 tons of lead, were exported.

AMERICA. The negotiations between Great Britain and the United States relative to the amount to be paid by the latter for the privilege of fishing in the bays and harbors and creeks of the Dominion of Canada, were, by the Treaty of Washington of 1871, to be conducted by a joint commission. This body met at Halifax, Nova Scotia, on June 15th, and awarded the sum of \$5,500,000 to be paid to Great Britain within one year.

An unusual interest pervaded the United States at the beginning of the year, relative to counting the votes cast for President of the United States. It was manifest that the votes of Florida and Louisiana, and perhaps some other States, would be contested, and that the decision of the final result might turn on a single vote. The contested votes were therefore referred to a commission, created by act of Congress, whose decision, unless reversed by the action of both Houses of Congress, should be final. As the Houses were of op-

anxiety, such has been the general depression of commerce, industry, and, consequently, finance, in all of them. Indeed, this discouraging condition has been the main topic of interest in most, and the all-absorbing one in many, of those countries, to the exclusion, in a few cases, of questions involving the interests of more than one at the same time; as, for instance, the boundary question between Chili and the Argentine Republic.

A miniature naval combat in the Pacocha waters, off the coast of Peru, between two British war-vessels and the Peruvian iron-clad ram Huascar, took place in May last, and disturbed for a time the amicable relations between the two countries. The event is, however, not likely to be followed by any serious consequences of an international character.

Colombia, after a lull of almost 15 years, interrupted in 1875, seems once more to have entered into a period of civil strife, though of a less violent form than that by which she suffered so considerably in the year preceding.

Mexico bids fair to regain, though by different means, the ground lost in overthrowing the constitutional government bequeathed by Juarez, and establishing a new order of things under the present military administration. Indeed, were it not for the vexatious events which have followed each other in such rapid succession during 1877, frequently threatening to involve the Republic in an armed contest with the United States, the present state of

things would not be, for Mexico, at all an unsatisfactory one.

ANGLICAN CHURCHES. I. CHURCH OF ENGLAND.—The one hundred and seventy-sixth anniversary of the *Society for the Propagation of the Gospel in Foreign Parts* was held in London, April 30th, the Archbishop of Canterbury presiding. The report stated that the income for 1876 had been £136,906 16s., the largest amount ever received in one year. There were now sixty-two colonial and missionary bishoprics, in forty-two of which 533 missionaries had been engaged. The missionaries were thus distributed: In Asia, 132; in Africa, 112; in Australia and the Pacific, 63; in America and the West Indies, 225; in Europe, 1. There were also about eight hundred catechists and lay teachers in the service of the Society, mostly natives, in heathen countries. Sixty-seven women were teaching in India, Burmah, Japan, Africa, and Madagascar. Sir Thomas Wade, in addressing the meeting, said that in China the Society single-handed could hardly effect what it desired, but would have to work with the other Christian societies there.

The seventy-eighth annual meeting of the *Church Missionary Society* was held in London, May 1st, the Earl of Chichester presiding. The annual statement showed that the total income of the Society for the year had been £190,693, and the gross expenditure £210,859. A subscription of £4,000 sterling had been made toward meeting the deficiency in income. Fifty-five candidates for appointment as missionaries had been accepted, and eighty-one candidates were under training. Much success had attended the labors of the missionaries in South India, Ceylon, the Fokien province in China, and Northwest America. An increase of 280 communicants had taken place in Ceylon, and several native ministers had been ordained in China. The progress of the missions in West Africa, at Sierra Leone, was sketched, as well as that in East Africa, where the Society not only has missions on the coast, but has also, since 1875, established a new mission on the Victoria N'yanza Lake. The report referred to difficulties which had been recently encountered by some of the missions of the Society, as in Ceylon, where, in 1876, an effort to introduce ritualism into some of the native churches had been assisted and supplemented by the assumption of Episcopal authority over the missions, which the Society was not willing to acknowledge, as involving "elements of very real danger," and avowed the intention resolutely to "persevere in taking measures to secure the faithful preaching of the full and unadulterated Gospel among the heathen, and to defend the native Christian congregations connected with the Society from erroneous doctrine and superstitious ritual. It has been, and ever will be, the aim of the committee to secure the distinct and emphatic utterance by the Society's agents of those great truths of

the sole supremacy of Holy Scripture as the rule of doctrine and of justification through faith on account of the merits of Christ, which are the life-blood of an intelligent and vigorous piety, and which are wont to be ignored or denied by those who receive their inspiration from the leaders of the well-known tractarian movement of some forty years ago." Bishop Crowther, a native African, gave an account of the condition of the Niger missions in West Africa, of which he has charge.

By order of the Privy Council, issued April 30th, a new diocese, to be called the Diocese of St. Albans, was constituted out of the counties of Essex and Herts and a part of Kent, the bishop of which should be subject to the jurisdiction of the Metropolitan of England. St. Albans Abbey was made the cathedral church. The Right Rev. Thomas Legh Claughton, Bishop of Rochester, was appointed Bishop of St. Albans, and was enthroned June 11th. The Rev. Anthony Wilson Thorold, vicar of St. Pancras, and canon residentiary of York Cathedral, was appointed Bishop of Rochester in place of Bishop Claughton.

At a meeting of the bishops of England, Scotland, and Ireland, held on the 17th of May, it was determined that the Archbishop of Canterbury should invite all the bishops of the Anglican communion to meet in London during the month of July, 1878, the first and last weeks to be devoted to general conference, and the two intermediate weeks to the deliberation of committees and other private matters. It was also proposed that the following subjects, in their order, should be presented for consideration: 1. The unity of the several branches of the Anglican Church; 2. The establishment of courts of arbitration; 3. The relation of missionary bishops of different branches of the Church in foreign countries; 4. The establishment of chaplaincies on the continent of Europe and elsewhere; 5. The special forms of modern infidelity, and how they are to be met; 6. The general interests of the several branches of the Anglican communion. It is stated that thirteen bishops, among whom are five American bishops, have refused to attend the conference. The call has been issued for the conference to meet July 2, 1878.

The *Convocation of York* met April 17th, the Archbishop of York presiding. A petition was presented asking, among other objects, the appointment of a royal commission to inquire into the Public Worship Regulation Act; another petition from fifteen thousand working-men, eleven thousand of whom were communicants, prayed that liberty of worship might not be taken from them, as they conceived was done by the present prosecutions of clergymen under the act. A third petition, from laymen of the upper classes, including sixteen peers, set forth that much distress existed as to the question of spiritual jurisdiction. The President stated that a joint committee of

the two Convocations would be appointed to consider petitions on the Public Worship Regulation Act and the relation of Church and state. Resolutions were offered by the Dean of Manchester, "that, inasmuch as all priests having care of souls, in any diocese, have received their commission from the bishop, as chief pastor, it is an invasion of the rights of the Church that any priest should be inhibited *a sacris* by other than spiritual authority," and that the present court of ecclesiastical appeal "does not command that confidence of the laity and clergy which is necessary to the well-being of the Church of these realms." The subject-matter of these resolutions was referred to the joint committee of the two Convocations about to be appointed. A resolution was adopted approving generally of the Burials bill which the Government had submitted to Parliament. On this subject the principle was affirmed that the bishops should be the judges as to the fitness of monumental inscriptions in churchyards.

The *Convocation of Canterbury* met at Westminster May 24th. The Burials bill, then before Parliament, the representation of the laity, and the increase of the Episcopate, were the principal subjects of discussion. The petition of sixteen peers and a number of other laymen respecting the unsatisfactory state of ecclesiastical legislation, which had been previously presented to the Convocation of York, was also offered in the Lower House of this body. A resolution by the Archdeacon of Gloucester, "that no legislation on the rubrics can be safely entered upon until some safeguards are devised against the danger lest changes affecting the worship of the Church should become law by the action of Parliament alone without the consent of Convocation," was adopted. A resolution was adopted, as an *articulus cleri*, in support of the measure proposed in Parliament by the Government for dealing with the burials question. This resolution contained a clause praying the bishops to "oppose permission being given to any person other than a minister of the Church of England to officiate at burials in our churchyards, being assured that such a change in the law will be regarded as a grievance by the general body of churchmen, and will have a tendency to unsettle the present relations between Church and state." A resolution was adopted, recommending the formation of additional Episcopal sees in Northumberland, Yorkshire, Cheshire, Nottingham and Derby, Birmingham, the Tower Hamlets, and Southwark. A resolution was adopted, proposing the formation of a house of laymen, with whom Convocation should confer, and whose approval of the measures passed by the ecclesiastical houses should be requisite before any propositions were submitted to the Crown or Parliament for legal sanction. The Upper House discussed the report of the Committee on Clergy Discipline, which gave the heads of a bill for the amendment of the present law on

that subject. In the course of the debate the difficulty which existed in obtaining the prosecution and punishment of derelict clergymen for immorality was contrasted with the ease of the process in case of ritualistic grievances. The Convocation met again on the 3d of July. The principal subject of discussion in the Upper House was the book for the Confessional, called "The Priest in Absolution," to which public attention had been directed by debates in Parliament. A resolution was adopted, calling the attention of the Lower House to the declaration on the subject of Confession, which had been adopted by the Upper House in July, 1873, and asking its immediate consideration of the same. (The text of this declaration is given in the *ANNUAL CYCLOPÆDIA* for 1873.) The declaration was concurred in by the Lower House, by a vote of 62 to 6. On the subject of the book itself, the following resolution was unanimously adopted by the Upper House:

1. That this House holds the Society of the Holy Cross responsible for the preparation and dissemination of the book called "The Priest in Absolution."
2. That this House, having considered the first resolution appended to the statement of the Society of the Holy Cross presented to this House on Friday, July 6, 1877, viz.: "That, under these considerations, the Society of the Holy Cross, while distinctly repudiating the unfair criticisms which have been passed on the book called 'The Priest in Absolution,' and without intending to imply any condemnation of it, yet in deference to the desire expressed by the Archbishop of Canterbury to the representatives of the Society, resolve that no further copies of it be supplied," is of opinion that the Society has neither repudiated nor effectively withdrawn from circulation the abovesaid work.
3. That this House expresses its strongest condemnation of any doctrine or practice of confession which might be thought to render such a book necessary or expedient.

It was decided to refer the statutes of the Society of the Holy Cross to a committee of all the bishops of the province, who should submit their report to the President as soon as possible. A committee, to whom had been referred in the previous year a petition on the subject of ecclesiastical discipline, reported that, in their opinion, there were some grounds for dissatisfaction with the present mode of administration, which it was desirable, as far as possible, to remove; that the draft of a scheme for improving one branch of the law of the discipline of the clergy had been recently submitted to both Houses of Convocation; and that there were hopes that some method of dealing with the subject might be suggested by which existing anomalies could be removed, "so far as may be consistent with the necessary relations between the Church and the state." The report was adopted. A resolution was adopted, declaring that, in exacting measures for Church discipline, provision should be made for dealing with cases of neglect of duty, or other causes of grave scandal. In the Lower House, a petition was presented from 1,606 clergymen, protesting against the virtual repeal of the ornaments rubric in the

decision in the Ridsdale case, and praying the House to assert the constitutional rights of the Church to determine its own doctrine and ceremonial. The following form for a new rubric, to be inserted in the Prayer-Book, was adopted and sent to the Upper House for its concurrence:

In saying any public prayers, or ministering the sacraments and other rites of the Church, the minister shall wear a surplice with a stole or scarf, and the hood of his degree; and in preaching he shall wear a surplice with a stole or scarf, and the hood of his degree; or, if he think fit, a gown with hood and scarf. Nevertheless, he that ministereth in the Holy Communion may use, with the surplice and stole, a cope: provided always, that such cope shall not be introduced into any church, other than a cathedral or collegiate church, without the consent of the bishop.

The Ritualistic Controversy, under the influence of the judicial proceedings under the Public Worship Regulation Act, has assumed the character of a direct issue upon the question of the jurisdiction of Parliament, and the courts established by Parliament, over ecclesiastical cases.

On the 3d of April, a communication was presented to the archbishops signed by about eighty clergymen, who were for the most part regarded as attached to the High Church party, reciting that, being anxious to retain the existing relations of Church and state, they felt great anxiety at the present position of affairs. "On the one side," they said, "we see coercive measures resorted to for enforcing uniformity such as have been happily unknown in this country for centuries; and on the other a determination to endure any suffering rather than submit to a jurisdiction which, rightly or wrongly, is regarded as purely secular." They were also impressed with the unsatisfactory character of the authority and arguments, to which appeal was made in the controversies distracting the Church; for, while the Church had the same authority it had always had in the matter of rites and ceremonies, appeal was made, not to the "living voice of the Church, but to events and documents which have themselves always been matters of controversy." The signers of the address were convinced that not the mere interpretation of existing law was required, "but the living voice of the Church clearly laying down what the law shall be in the future." They would, therefore, urge upon the consideration of the archbishops "that, in our opinion, no peace can be secured for the Church, nor can her existing relations with the state be long continued, unless laws for the regulation of Divine service and for other spiritual matters of primary importance are made by an authority which both clergy and laity would feel to be binding upon conscience; and we are equally satisfied that no authority will be considered thus binding which does not proceed from the synods of the Church as well as from Parliament." The view was further expressed in the address that the legislative action of the Church was now paralyzed by

the apprehension that, when its synodical acts were submitted to Parliament, they would be so altered as to be finally quite different from what was intended. The Archbishop of Canterbury replied to this address, April 7th, that its exact meaning was not quite clear to him, and particularly that it did not seem to distinguish between judicial and legislative ecclesiastical matters, the former of which were conducted in a regular gradation of ecclesiastical courts, culminating in the sovereign, advised by the Privy Council, which were "jealously kept distinct from the ordinary civil tribunals of the realm." He presumed they desired some alterations in these courts, but pointed out that they did not specify with any accuracy the character of the changes they sought. "But I gather," he continued "that the main object of the address is to urge that matters of legislation affecting the Church in its rites or ceremonies and controversies of faith should always be submitted to Convocation. It is not alleged that this principle has in any specific case been violated, and, perhaps, it has escaped your attention that, for the last five years, since Convocation adopted the Act of Uniformity Amendment Act, in 1872, it has been engaged in a task such as that which you rightly consider to be its peculiar function, having been called by the authority of the Crown to revise the Rubrics of the Book of Common Prayer, a work which it has not as yet accomplished." In conclusion, the archbishop promised that the subject of the address should receive the attention of the Episcopal bench.

The case of Clifton against Ridsdale, the first case tried under the Public Worship Regulation Act, in which Lord Penzance, of the Court of Arches, in 1876, condemned the wearing of certain vestments, the use of unnecessary lighted candles, and certain practices at the sacrament, as illegal (*see ANNUAL CYCLOPEDIA* for 1876), was carried by appeal to the Judicial Committee of the Privy Council. The hearing of the appeal was begun on the 23d of January, and a judgment was given on the 12th of May, sustaining the decision of the lower court, and adverse to the appellant. The decision covered four points: 1. That the vestments worn by the appellant in the eucharistic services, the alb and chasuble, as distinguished from the surplice, were illegal. 2. That it was the duty of the minister to stand at the side of the table in such a position that "he might in good faith enable the communicants present, or the bulk of them, being properly placed, to see if there be breaking of bread, and the performance of the other manual acts mentioned. He must not interpose his body so as intentionally to defeat the object of the rubric and prevent this result." In the present case the court were not satisfied "that the evidence proved an intention to prevent the people seeing him break the bread," and recommended an alteration to be made in the decree in this respect. 3. That the use of wafer bread was illegal, but the mere

circumstance of bread, "such as is usually to be eaten," being round and thin did not constitute it wafer bread. It was not proved that the appellant had used the wafer, properly so called, and a change in the decree was advised on this point. 4. That the erection of a crucifix without a faculty was illegal; that the condemnation of the crucifix by the court below on the ground of its liability to be used in a superstitious manner was correct; and, therefore, the direction to remove this erection was affirmed. Still the court desired to say that they "thought it important to maintain, in respect to the representation of sacred persons and objects in the church, the liberty established in '*Philpotts vs. Boyd*,' subject to the power and duty of the ordinary, so to exercise his judicial discretion in granting or refusing faculties as to guard against their being likely to be abused for purposes of superstition." The decision was received with satisfaction by the evangelical party of the Church, although it was not as completely in their favor as they had hoped it would be, but was strongly opposed by the ritualistic party. Mr. Ridsdale refused to obey it, and announced his intention of continuing the condemned ways in defiance of it, stating that he was resisting the monition because it was contrary to a plain order of the Church. He was convinced that the law of the Church commanded the use of vestments, and the two lights on the altar were likewise sanctioned by the rubric. On some points on which there was no rubrical direction he would yield. His reason for pleading in the court was, that he sought, if possible, to secure peace for the Church, in the hope that the law of the Church would be legalized by the civil law, but, having failed, he was bound to obey the Church. He suggested, however, that if his diocesans should think fit to exert a dispensing power as bishops, which he admitted to exist, he would conform to the form of service as defined by the court. Shortly afterward the Archbishop of Canterbury wrote to him that, understanding that he was willing to be guided by him as his bishop, his grace would gladly take upon himself the whole responsibility of directing Mr. Ridsdale as to the manner in which he should administer the communion, and would grant him a complete dispensation from the obligation under which he believed himself to lie, to act upon what he conceived to be the literal meaning of the Ornaments Rubric. Mr. Ridsdale consented to obey the archbishop's order as a temporary measure until convocation should have a fitting opportunity to deliberate on the question, after which, if no decision were given, he should not feel justified in using the dispensation any longer. On the 2d of July, in the Convocation of Canterbury, a petition was presented from Mr. Ridsdale asking the convocation to decide whether the bishops had such power of dispensation as had been exercised by the archbishop in his case, and whether they have

power to require the clergy to accept such dispensations in view of serious complications with the state; to set forth a law of ritual observance which will leave no room for doubts or controversies; and to constitute or indicate the courts by which it would have the clergy tried for ecclesiastical offenses.

A declaration on the subject of the *Ridsdale* judgment has been made by a large number of ritualists to the following effect:

1. Having considered the judgment delivered by the judicial committee in the case of *Ridsdale vs. Clifton*, although we are unable to concur in the whole of the reasoning which it contains, yet we find in it some grounds of satisfaction, in so far as it (a) allows the eastward position of the celebrant, (b) confirms the principle of a distinctive eucharistic dress, (c) recognizes the full right of the Church of England to the legitimate use of religious art in her churches.

2. Seeing that successive judgments have left members of the Church of England free to hold and teach her entire doctrine, we advisedly recommend submission to the discretion of the ordinary in regard to the points of ritual touched by the late judgment, and we regard such submission as best calculated to promote the entire constitutional freedom of the Church.

3. We believe that the ultimate solution of our present difficulties will be found in the exercise by the Church of her legitimate right to deal with ceremonial, through convocation, with consent of Parliament.

The second case, which was tried by the ecclesiastical courts under the Public Worship Regulation Act, was that of the prosecution of the Rev. Arthur Tooth, rector of St. James's, Hatcham, for violation of the rubrics in the celebration of the Holy Communion, which, as was charged in the indictment, and appeared in the evidence, the defendant had caused to be accompanied with elaborateness of vestments, ceremonial, and ornaments. A decision was given by Lord Penzance, Dean of Arches, on the 19th of July, 1876, condemning the practices of Mr. Tooth which were complained of, except as to those points on which an appeal had been taken in the case of *Clifton* against *Ridsdale* to the Privy Council, as contrary to the usages and discipline of the Church, and admonishing him to refrain from them. The defendant paid no attention to the decree of the court, whose jurisdiction he denied, but continued his ritualistic practices. He was cited to appear and answer for contumacy in December. Refusing to obey the summons, he was inhibited for three months, with an intimation that the suspension would be continued if he did not abstain from the objectionable practices. The Rev. Canon Gee was appointed to take charge of the parish during the inhibition, but Mr. Tooth refused to admit him to the church, and he retired from the attempt to serve. The services on the succeeding Sundays, which were the last in December, 1876, were characterized by greater display than ever. On the 31st of December, a disturbance occurred at the church, and a force of police had to be organized to restore

and preserve order. Mr. Tooth posted on the door of the church a declaration asserting that he was the lawfully and canonically instituted priest of the parish, "not inhibited therein, nor deprived thereof, by any lawful and canonical authority," declaring all ministrations therein other than his own to be schismatical, and "an invasion and robbery of the rights of the Church of England," and exhorting the congregation to permit no public ministration or discharge of pastoral duties among them other than his own. On the 13th of January, 1877, an order was issued by Lord Penzance, declaring the defendant contumacious, and committing him to jail. On the following Sunday, however, Mr. Tooth held three early services, after which an order was posted by the bishop of the diocese (Rochester), prohibiting the opening of the church or the ringing of the bells. The bishop appointed another clergyman to serve at the church, but Mr. Tooth refused to permit him to be admitted. He was imprisoned in Horsemonger Lane jail on the 31st of January, where he continued in confinement until February 17th, when, the clergyman deputed by the bishop having gained possession of the church, he was released, on the ground that the object sought by his imprisonment had been gained. Mr. Tooth then went abroad, but returned in May, and issued a declaration that all the services which had been conducted in the church since his removal from the parish were schismatical, null, and void, and held a service in the church on the 18th of May. Mr. Tooth's position on the points of law in his case, upon which his conduct was based, was sustained by the voluntary society called the "Church Union." This society, at a meeting held in February, adopted resolutions reciting that, while it acknowledged the authority of all courts legally constituted in regard to matters temporal, it denied that the secular power had authority in matters purely spiritual; declared "that any court which is bound to frame its decisions in accordance with the judgments of the Judicial Committee of the Privy Council, or any other secular court, does not possess any spiritual authority with respect to such decisions. That suspension *a sacris* being a purely spiritual act, the English Church Union is prepared to support any priest not guilty of a moral or canonical offense who refuses to recognize a suspension issued by such a court;" professed a willingness to submit itself to the duly constituted synods of the Church; and, in regard to the matters under dispute, appealed to the rubrics of the Book of Common Prayer, and the interpretation which had been put upon them by the Convocation of Canterbury in 1875. Bishop Claughton, of Rochester, having been transferred to the See of St. Albans, the Archbishop of Canterbury, in June, became *pro tempore* administrator of the diocese. He invited Mr. Tooth to take Episcopal advice concerning his course, and communi-

cated to him as the action of a purely spiritual body, whose jurisdiction he should acknowledge on the questions at issue, a resolution which had been passed by the Convocation of Canterbury, to the effect that no alteration from the long-sanctioned and usual ritual ought to be made without the sanction of the bishop of the diocese being first had. Mr. Tooth replied that he had searched the records, but had not been able to find "any such canon, constitution, or ordinance, provincial, or other synodical act, promulgated by convocation, or by his grace himself," as the archbishop had mentioned. The archbishop referred him to the record of the proceedings of the two Houses of Convocation on the 13th and 15th of February, 1867, as containing the resolution which he had mentioned, and inquired if he objected to its validity because it had not become law by receiving the sanction of the civil power, adding that, by the law of the realm, except in cases where the civil power steps in, no decision or judgment of convocation could answer such conditions as might be supposed from Mr. Tooth's expression of his views to be deemed by him indispensable. Mr. Tooth replied that the proceedings quoted did not constitute a synodical act of the province, because they had not been passed or promulgated as such; but, had such a synodical act been passed by convocation, or promulgated by the archbishop, or put in use, the fact of the state's having refused to recognize it as a canon would have made no difference in the respect with which he should have treated it. The archbishop summed up as the reasons for which he considered Mr. Tooth bound to abstain from the ritual observances which were complained of against him:

1. Because of the obedience which you owe to the law of the Church of England, as interpreted by the Archbishop's Court and the Supreme Court of Appeal.

2. Because you are formally called upon by me as your bishop, in virtue of your oath of canonical obedience, to conform to the order which, as acting Bishop of Rochester, I hereby lay upon you.

3. Because, if through some scruple of conscience, to me inexplicable, you feel a difficulty in paying due obedience either to the law of the Church and realm, as interpreted by the courts, or to the bishop set over you in the Lord, the decision of convocation to which I have referred you seems to afford on your principles a solution of the difficulty in which you have involved yourself.

I should be sorry to believe that you desire to act in contravention alike of the law, the bishop's order, and the express decision of the two Houses of Convocation.

Mr. Tooth reiterated his determination to disregard the judgment of the court, insisting that there was no law or valid declaration of the Church to sustain it.

Mr. Tooth obtained from the Court of Queen's Bench, in July, a rule calling on Lord Penzance to show cause why a writ of prohibition should not issue against him. The application for this rule was based upon the allegation that the judgment prohibiting the applicant from

officiating at St. James's, Hatcham, was heard by Lord Penzance at Lambeth instead of in London or Westminster, or within the diocese of Rochester. The rule was made absolute in November, and Mr. Tooth afterward resigned the incumbency of the parish at Hatcham.

In the House of Lords, July 14th, Lord Redesdale called attention to a book entitled "The Priest in Absolution," which had been privately printed and placed at the disposal of an association of clergymen called "The Society of the Holy Cross," for private and limited circulation among the clergy. It was described as containing directions for the examination of both adults and children on the most private and delicate matters, including special questions to be put to children of seven, six, and even five years of age, and also to married persons, the priests being advised in all cases to be careful to frame their questions in discreet language. The book was pronounced directly opposed to the doctrines of the Church, as justifying confession, absolution, and the judicial character of the priest. The Archbishop of Canterbury said that it was a disgrace to the community that such a book should be circulated under the approval of the clergy of the Established Church. The subject of the book and the Society of the Holy Cross received a full discussion in the Convocation of Canterbury at its session in July, of whose action a statement is given in another place. From a communication which was presented to the convocation by the authority of the society itself, it appears that it "is a society of clergy, founded in 1855, for the primary purpose of deepening the spiritual life in its brethren. Besides this main object, it is also engaged in aiding or carrying on mission work, at home and abroad; it promotes spiritual and temporal charity among the brethren, and unites them in common consultation on matters affecting their duties and the interests of the Church. The connection of the society with the book called 'The Priest in Absolution' arose from accidental circumstances. Some members of the society, feeling the need of a manual to help them in the difficult and important duty of hearing confessions and giving absolution, to which priests are obliged by their commission at ordination and the requirements of the Prayer-Book, informally asked one of their number to compile such a treatise. The society, under the peculiar circumstances of the case, was never called upon to revise, read, or pass judgment upon the book." The communication further stated that the book was designed for use only in extraordinary circumstances and under peculiar safeguards, and claimed that it was wrong to judge it as if it were a book for common use; also, that the number of persons of all classes who resorted to confession had multiplied year by year, and that many of them were "persons of the highest education and refinement." It was asserted by the Rev. A. H. Mackonochie, one of the most prominent of the Ritualists,

that, before the book was prepared, the bishops had been asked to provide for the education, selecting, and licensing of duly qualified confessors; and that for this request the makers of it "were rewarded by the bishops and the public with scorn and obloquy." The society, after the matter was brought to the notice of the public, resolved that no more copies of the book should be supplied; and added, in their action, the expression of the opinion that their commission at ordination and the express terms of the Prayer-Book required them to hear the confessions of those who wished to make them; and that, while the Church taught that confession was not a matter of compulsory obligation, all Christian people had the right to observe it. The society was said to have on its rolls the names of two hundred and seventy members.

An address signed by ninety-six peers was forwarded to the Archbishop of Canterbury in August, directing the attention of his grace to the disclosures concerning "The Priest in Absolution," expressing alarm at the introduction into the Church of the practice of auricular confession, and urging him to express condemnation of the system. In acknowledging the address the archbishop assured their lordships that nothing should be wanting on his part to maintain the scriptural character of the Church, and reminded them of the recent formal statement of the bishops of the Province of Canterbury, and the pastoral letter issued by both provinces in March, 1875, with reference to the doctrine of the Church of England on the subject of confession.

The pastoral address of a new society called the *Order of Corporate Reunion*, having for its professed object the restoration of the spiritual authority of the Church, was issued on the 8th of September. The address is headed with the words *Pro Deo, pro ecclesia, pro patria*, and begins with the formula: "In the sacred name of the most holy, undivided, and adorable Trinity, Father, Son, and Holy Ghost.—Amen. Thomas, by the favor of God, Rector of the Order of Corporate Reunion, and Pro-Provincial of Canterbury; Joseph, by the favor of God, Provincial of York, in the kingdom of England; and Laurence, by the favor of God, Provincial of Caerleon, in the Principality of Wales, with the provosts and members of the synod of the order, to the faithful in Christ Jesus, whom these presents may concern, health and benediction in the Lord God everlasting." A sketch follows of the history of the Church of England from St. Augustin to the present time, which is made to indicate indirectly the aims and policy of the order by pointing to the mistakes and failures of the past, the repetition of which should be avoided. In it the submission of the bishops and clergy in 1586 is declared to have been the turning-point of their own and their successors' degradation. The paragraphs following this declaration state that, notwithstanding the

religious advantages gained by the Simeonite and Oxford movements, the opposition to God's truth has since become more and more violent; and, moreover, that in the Established Church "every vestige of distinct corporate entity" has now utterly disappeared. As examples in proof of this proposition are cited the mode of nomination, election, and confirmation of the bishops of the establishment, the extraordinary oath of homage which their lordships take on their knees to the Queen on their appointment, by which they solemnly declare that they "receive all spiritual as well as all temporal power and authority" from her majesty. The division of existing sees and the erection of new dioceses by letters patent alone, as well as the recent Public Worship Regulation Act, and other examples of the strained power involved in "royal supremacy," are asserted to have brought about the existing crisis and the coming disestablishment. A formal and solemn protest follows "against all and every intrusion and interference of the civil power in spiritual things, whether past or present," both as contrary to the Word of God, and "because the great and venerable charter of our liberties secured in 1215 recognized and solemnly guaranteed the spiritual freedom of the Church of England." Among the special objects of protest are carelessness in administering baptism, the disuse of chrism in confirmation, the abolition of unction for the sick, the abrogation of spiritual discipline, looseness as to the marriage of divorced persons, the Public Worship Regulation Act, appeals to the Privy Council, and the anti-Christian character of board schools. The authors of the pastoral express their desire "to avoid all violence, schism, and disobedience to constituted authority in things secular, regarding it as our duty rather to support and restore, as Almighty God may permit, the ancient constitution of our country in Church and state, than to coöperate in any rash and dangerous work of demolition and destruction, the consequences and end of which none can foresee," profess a frank and unreserved acceptance of the faith and teaching of the undivided Church, and appeal to a general council to bring about corporate union. In order to gather up and preserve the canonical authority which, it is alleged, the bishops of the establishment have yielded up, the order has secured three distinct and independent lines of a new Episcopal succession. While claiming all their rights as citizens and sharers of the legitimate benefits of the establishment, the members of the order are represented as intending to refuse to recognize any intrusion of "Cæsar or Cæsar's servants" into spiritual affairs. All members of the order must be certainly baptized; no clergyman will be admitted who has had two wives, no divorced person who has been married again, nor any person who has married a divorced woman, and no freemason or member of any similar secret society can be a member,

except in all these cases after the renunciation of his error and subjection to due discipline. The document is signed by Adrian de Helte, Notary Apostolic.

A prospectus has been issued for the establishment of a new religious order in London in the spring of 1878, to be called *The Fraternity of Jesus*. The fraternity will consist of three orders: the first order to include brethren living under the three vows of poverty, chastity, and obedience, in the strictest sense; the second order to consist of brethren at business in the world, but who live in the college of the fraternity, paying for their board and lodging, and who will keep the three vows in a modified form; and the third order to consist of associate brethren, who will live at their respective homes, but who will subscribe according to their means toward the expenses of the fraternity, who may visit the college at any time they may choose, and will keep the vows of poverty and obedience as the second order, but whose vow of chastity will be limited to conversation. The fraternity will engage in parochial and mission work, and will encourage the formation of societies and guilds to be under the management of its brethren. Its affairs will be managed by a fortnightly conference of the first order, and a general monthly conference of the three orders.

Mr. Frederick Martin, compiler of "The Statesman's Year Book," was requested by the Liberation Society, in 1875, to make an estimate of the extent, nature, and value of the property in possession of the Church of England. He presented in May, 1877, the following estimate of the income of the Church:

	Number.	Total Annual Income.
Church dignitaries, including deans, etc..	172	£247,000
Extra cathedral revenues.....		130,000
Beneficed clergy.....	13,300	5,027,000
Net revenue of Queen Anne's bounty...		84,000
Total.....	13,472	£5,538,000
Net disposable income of the Ecclesiastical Commission.....		700,000
Building and repairing of churches.....		1,000,000
Total annual revenue.....		£7,238,000

This statement has been criticised on the ground that the sum applied to the building and repair of churches is the result of free-will offerings, and, therefore, not properly classed among the revenues from endowments; also, that a discount showed in the annual value of the parsonages, the average of which is estimated, it is alleged, at too high an amount. Making deductions on account of these items, the revenues of the Church would be about six million pounds sterling per annum, representing a capital amounting to £150,000,000.

Mr. Martin's report furnishes also the material for the following statement of the number of acres of land included in the properties of the Church:

	Area of Land in Acres.
Ecclesiastical commissioners.....	149,882
Bishops.....	22,414
Deans.....	68,388
Colleges of Oxford.....	126,879
Colleges of Cambridge.....	108,764
Glebe land.....	150,000
	626,777

On the other hand, it is asserted that the revenues of the Church are altogether derived from voluntary gifts, and a publication called the *National Church* gives the following table:

1. The endowments of the Established Church amount to a little more than four millions sterling.

2. Of this sum,

Tithe and rents voluntarily given to the Church of England by charitable persons BEFORE the Reformation bring in.....	£1,949,200
Tithe, rents, and interest on money voluntarily given to the Church of England SINCE the Reformation bring in.....	2,251,100

Total endowments..... £4,200,300

Of which sum the state takes as taxes, etc., other than income tax and sums usually paid by occupiers.....	714,000
--	---------

Total net endowment..... £3,486,300

3. The sum of £3,486,300 is, therefore, the amount of the net salaries received by the 20,000 bishops, priests, and deacons of the Church. It is thus divided:

2 Archbishops.....	} receive	£188,600
26 Bishops.....		
70 Archdeacons.....		
30 Deans.....		
127 Canons.....	} receive	201,600
120 Minor deacons.....		
600 Singers.....		
Lay officers and servants.....		
13,041 Rectors and vicars.....	} receive	3,146,100
5,706 Curates.....		
Total net salaries.....		£3,486,300

The seventeenth annual meeting of the *Church Congress* was held at Croydon, beginning October 9th. The opening sermon was preached by Canon Lightfoot. The Archbishop of Canterbury presided, and made an opening address, in which he said that the question whether the congress was for the good of the Church must be considered as settled favorably. It operated, he said, as a kind of safety-valve, furnishing the opportunity for the free expression of thought, and was also a manifestation of motion and life in the Church. He spoke of certain styles of discussion of theological subjects as bearing a relation to regular argument similar to that which the operations of irregular forces like those of Bashi-Bazouks and Cossacks bear to those of the regular army, and declared them out of place in the nineteenth century. At the close of his address, he referred, amid loud expressions of applause and some dissent from the audience, to the Church of England as "the grand old historical Church as it came to us from the fathers of the Reformation." The discussions were opened with the reading of a paper on "Mohammedanism," which had been prepared by Bishop Steene, of Zanzibar. The subject was con-

sidered in the paper, and in the remarks which followed it, in the light of the most practicable manner of introducing Christianity to the people of the Mohammedan faith. The subject of "Christian Faith and Skeptical Culture" was considered in papers by Prof. Pritchard and Prof. Wace; that of "The Church in Relation to Trades' Unions and Agricultural Laborers' Unions," by the Rev. Mr. Oakley and the Rev. V. H. Staunton. On the second day's session, the papers read by Canon Garbet and Canon Farrar on "The Best Means of promoting United Action and Mutual Toleration between Different Schools of Thought within the Church" called forth an important and interesting discussion of the attitude of the several parties in the Church toward each other. Other subjects considered on this day were, "Representative Assemblies of the Church of England, General and Diocesan" (paper by Archdeacon Emery); "Intemperance, and the Legislative Remedies and Church Action by which the Evil should be combated" (papers by Canon Duckworth and Dr. A. Carpenter); "Pauper and Truant Children" (papers by Francis Peck and R. Weston); "The Church in Relation to Public Amusements" (paper by Canon Money, of Deptford); and "Charity Organization in its Christian Aspect, with Reference to Almsgiving and Medical and Provident Institutions—their Use and Abuse" (papers by Sir Lovelace T. Stammer and Dr. Fairlee Clark). The principal discussion of the third day was on "The Readjustments, if any, desirable in the Relations between Church and State." The subject was opened with papers by Canon Gregory, Canon Ryle, and the Rev. T. Lee. Other subjects considered during the day were, "The Position of Voluntary Schools under the Education Acts of 1870 and 1876, and the Duty of the Church with Reference to Board Schools" (papers by Mr. Talbot, M. P., the Rev. J. Munro, and Mr. Grantham, M. P.); "The Observance of the Lord's Day" (papers by Archdeacon Hlessey, the Rev. J. C. Egerton, and the Rev. J. Gritton, Secretary of the Lord's Day Observance Society); and "Personal Religion in Daily Life." On the fourth day, papers were read on "The Mutual Relations of the Church and Nonconformity at Various Periods of the Nineteenth Century," by Canon Curteis, Mr. George Harwood, and the Rev. T. P. Garnier, and the subject was discussed by the Dean of Bangor, Mr. Thomas Hughes, the Rev. Levi-son Lorraine, Canon Ryle, the Rev. W. Benham, Canon Brooke, and Mr. Beresford Hope, M. P. Papers were also read on "Biblical and Theological Study" (the Dean of Durham; Prof. Stanley Leathe, Canon Hoare, and the Bishop of Lincoln); "The Permanent Diaconate and Lay Help" (the Bishop of Guildford and Lord Hatherly); "The Church's Duty toward Children of the Upper and Middle Classes" (the Rev. Dr. Butter, head master of Harrow School, the Rev. R. Elwyn, and the Rev. E. C. Wickham). The sessions closed with a *conversa-*

zione, at which the Archbishop of Canterbury made a second address, congratulating the congress on the success of its meeting, and declaring that it had been wise to avoid certain difficulties and "burning" questions with which it had been supposed it would be agitated, but had not hesitated to touch upon the great principles on which such questions should be settled. It was observed at the opening of the congress that a part of the extreme "evangelical" party of the Church were absent, but that the attendance of the opposite party and churchmen of the moderate school was greater than usual.

The differences between the managers and agents of the *Church Missionary Society* and the Bishop of Colombo, in reference to the missions in Ceylon, have been made the subject of a correspondence which has taken a wide range. An account of the origin of these differences is given in the *ANNUAL CYCLOPÆDIA* for 1876. They involve the question of the jurisdiction of the colonial bishops over the missions of the *Church Missionary Society*. They began in an attempt by the Bishop of Colombo to exercise control over the Tamil Coolie Mission—a mission which, though nominally connected with the *Church Society*, is supported by members of several denominations—and to remove and appoint agents to conduct the same. This assumption was resisted by the *Missionary Society*, and a sharp discussion of the merits of the case ensued, which has been continued at intervals through a large part of the year. Among the propositions to which it led was one for the direct establishment of the Colonial Church, which, however, was not carried. In March, 1877, the bishops in India, having met in conference, unanimously adopted resolutions declaring that the bishop of every diocese is, in the last resort, responsible for all teaching and work done in his jurisdiction; that all appointments of spiritual teachers ought to be made after consultation with him and subject to his veto; that any change in the conduct, place, or order of worship ought only to be made with his approval; that churches or places of worship should not be consecrated or allowed to be used for the celebration of the holy communion without such property is first made over entirely to the Church forever. They also decided to have these questions referred to and considered by the bishops of the other provinces of the Anglican Church, and finally to secure an expression upon them from the Pan-Anglican Synod which is to meet in 1878. The resolutions were forwarded to the committee of the Society for the Propagation of the Gospel and to the *Church Missionary Society*. The Society for the Propagation of the Gospel made a reply explaining what its policy had been in the establishment of missions and the administration of them by bishops, and sustaining the Indian bishops in the main points of their positions, expressing particular approval of the theory

that the missions of the Church should be brought more directly and more effectually under Episcopal influence. The *Church Missionary Society* made a formal reply to the resolutions, traversing and contradicting their pretensions in plain language. It asked how a diocesan organization could exist in India among military chaplains, assuming that, if such organization were established, it should be done by native bishops of free and independent action. As much liberty was claimed in the matter of the appointment of lay readers and city missionaries as was enjoyed in the Church at home. The society declared that, if the alternative of working without licenses or ceasing to evangelize India was presented, the same course would be adopted as on a previous occasion—the former would be chosen. The Bishop of Colombo replied to these resolutions, July 20th, with statements showing that the society was mistaken in assuming that the province of the bishops in Ceylon was not the organization of the native Church, representing the facts to be as follows:

The Bishop of Colombo is "appointed" by "letters patent" not to "European work" only, but also, and in an equal degree, "to the superintendence, management, and discipline of missionary work and the development of the organization of native churches." This I proceed to prove: 1. It is so provided by the letters patent themselves, which constitute the bishop ordinary over all clergy of the Church of England in Ceylon and all churches in which the services of the Church of England are used. 2. It will probably be admitted that the bishop appointed by the crown has the full authority of a bishop, whatever it may be, over the chaplains and catechists who are paid by the crown and are officers of the department over which he presides. The whole number of these, including three aided chaplains, is twenty-five. Of these, fifteen or (omitting one who ranks as European) fourteen are natives, and all in priest's orders. From this it is evident that the bishop's legally defined jurisdiction is in a very large degree to be exercised over the native Church.

Besides, the clergy of the Propagation Society, a part of whom were natives, with their people, were under the management of the bishop, and the bishop was made a trustee in the case of every church built or school founded by natives. A few days before this letter was written, July 10th, the Rev. Mr. Clark, the missionary who had been suspended by the bishop, wrote to him, stating that he had received advice from his society, that the opinion of counsel learned in ecclesiastical law had been received, to the effect that the revocation of his license was bad on the merits, and void for informality, and giving notice that, unless steps were taken to give him a judicial trial and revoke his license legally, he should resume his ministerial functions. The bishop replied with an argument in support of the legality of his position, assuming that, as the order in council constituting the diocese declared English ecclesiastical law to be established, under it he could withdraw licenses without assigning reasons. He would, however, if the Metropolitan would consent to

such a course, give him a hearing before a spiritual court, "which might or might not be, strictly speaking, informal, but which would be conducted according to the spirit and practice of the Church of England, and from whose decision there would be an appeal to the Metropolitan, but no further," and suggested that, pending the submission of this plan to the Metropolitan, the suspended missionary should continue the provincial mission which he had hitherto thought right. Mr. Clark declined to accept the offer of such a trial as the bishop proposed, and shortly afterward resumed the exercise of his functions as a minister.

II. THE IRISH EPISCOPAL CHURCH.—The report of the *Commissioners on Church Temporalities in Ireland* for 1876 stated that the commissioners had now advanced so far in realizing the property vested in them by the Irish Church Act, that they were able to form a tolerably accurate estimate of the surplus which will remain to be applied as Parliament may direct, under the provisions of the sixty-eighth section of that act. That surplus, they believed, would be larger than they had thought would be the case two years ago, but it would be a yearly receipt and not a capital sum. The net annual revenue at the end of 1879, when the present commission expires, will, it is estimated, be £593,000, and the capital value of the surplus at that time the commissioners put approximately at £3,068,000. In 1893, the annual revenue will, according to their estimate, be £600,000, and the capital value of the surplus £10,494,100. The commissioners then suggested a mode by which the surplus of six millions, anticipated in 1879, might be then made available for public purposes by postponing or prolonging the liquidation of the debt due to the Government.

The report of the *Irish Church Representative Body* shows that the total funds possessed and administered by them in 1876 were £7,524,710, of which £6,959,582 was capital, and the remainder interest, profits, contributions, and miscellaneous receipts, and that the year 1877 was begun with a capital balance of £6,988,097. The income of 1876 had been £320,227, of which a balance remained after expenditure to 1877 of £41,915. The sum of £6,474,212 was invested in securities, producing a yearly income of £286,298. The Irish parish had raised for stipends during the year £124,424. The excess of annuities over interest for 1876 was £122,167. Three hundred and fifty glebes out of nine hundred were vested in the representative body. The dioceses of Cork, Dublin, and Down seemed to be the most prosperous ones.

The *Synod of the Irish Church* met in Dublin, April 10th. The principal business accomplished was the discussion and adoption of the preface to the revised Prayer-Book, which contains in brief a statement of the alterations which have been made in the service, and of the considerations on which they are based.

In the House of Bishops, the Archbishop of Dublin opposed the new preface in its entirety, as requiring certain of the bishops, himself among the number, to impose a declaration on candidates which they themselves did not believe. The preface was carried in this House by a vote of 5 to 4; the Bishops of Cashel, Killaloe, Meath, Ossory, and Kilmore, voting in its favor, the Primate, the Archbishop of Dublin, and the Bishops of Down and Derry, voting against it. It passed the clergy by a vote of 94 to 10, and the laity by 187 to 3. The "High Church" bishops, clergy, and laity had, to a great extent, absented themselves when the final vote was taken in the Lower House. June, 1878, was fixed upon as the time for the new Prayer-Book to come into operation. The preface, which presents a complete summary of the seven years' work of the synod in revision, is as follows:

When this Church of Ireland ceased to be established by law, and thereupon some alteration in our public liturgy became needful, it was earnestly desired by many that occasion should be taken for a new and full review thereof (such as had already more than once been made in former times), and for considering what other changes the lapse of years or exigency of our present times and circumstances might have rendered expedient. And though we were not unaware of many dangers attending on such an attempt, yet we were the more willing to make it, because we perceived to our comfort, that all men, on all sides, professed their love and reverence for the Book of Common Prayer in its main substance and chief parts, and confessed that it contained the true doctrine of Christ, and a pure manner and order of Divine service, according to the Holy Scriptures and the practice of the primitive Church; and that what was sought by those who desired such a review was not any change of the whole tenor or structure of the book, but the more clear declaration of what they took to be its true meaning, and the removing of certain expressions here and there, which they judged open to mistake or perversion. And as this Church has already, in its Convention of 1870, received and approved the book as it then stood and was in use, so we now declare that, in such changes as we have made on this review, we imply no censure upon the former book as containing anything contrary to the Scriptures, when it is rightly understood and equitably construed. The true reasons of such changes will, for the most part, appear on a comparison of the two books; but it has been thought good to add some further explanation why certain things have been altered and others retained.

As concerning the Holy Communion, some of our brethren were at first earnest that we should remove from the Prayer-Book certain expressions which they thought might seem to lend some pretext for the teaching of doctrine concerning the presence of Christ in that sacrament repugnant to that set forth in the Articles of Religion, wherein it is expressly declared that the body of Christ is given, taken, and eaten in the Supper only after a heavenly and spiritual manner, and that the mean whereby it is therein received and eaten is faith; but upon a full and impartial review we have not found in the formulas any just warrant for such teaching, and therefore, in this behalf, we have made no other change than to add to the Catechism one question with an answer taken out of the twenty-eighth of the said articles.

As for the error of those who have taught that Christ has given himself or his body and blood in this sacrament to be reserved, lifted up, carried

about, or worshiped, under the veils of bread and wine, we have already in the canons prohibited such acts and gestures as might be grounded on it, or lead thereto; and it is sufficiently implied in the note at the end of the Communion Office (and we now afresh declare) that the posture of kneeling prescribed to all communicants is not appointed for any purpose of such adoration; but only for a signification of our humble and grateful acknowledgment of the benefits of Christ which are in the Lord's Supper given to all worthy receivers, and for the avoiding of such profanation and disorder as might ensue if some such reverent and uniform posture were not enjoined.

In the formularies relating to baptism we have made no substantial change, though some have desired to alter or omit certain expressions touching which diversities of opinion have prevailed among faithful members of our Church. At the same time, we desire fully to recognize the liberty of expounding these formularies hitherto allowed by the general practice of the Church. And as concerning those points whereupon such liberty has been allowed, we hereby further declare that no minister of this Church is required to hold or teach any doctrine which has not been clearly determined by the Articles of Religion.

The special absolution in the office for Visitation of the Sick has been the cause of offense to many; and as it is a form unknown to the Church in ancient times, and as we saw no adequate reason for its retention, and no ground for asserting that its removal would make any change in the doctrine of the Church, we have deemed it fitting that, in the special cases contemplated in this office, and in that for the Visitation of Prisoners, absolution should be pronounced to penitents in the form appointed in the office for the Holy Communion.

No change has been made in the formula of ordination of priests, though desired by some; for, upon a full review of our formularies, we deem it plain, and here declare, that, save in the matter of ecclesiastical censures, no power or authority is by them ascribed to the Church, or to any of its ministers, in respect of forgiveness of sins after baptism, other than that of declaring and pronouncing, on God's part, remission of sins to all that are truly penitent, to the quieting of their conscience, and the removal of all doubt and scruple; nor is it anywhere in our formularies taught or implied that confession to, and absolution by, a priest are any conditions of God's pardon; but, on the contrary, it is fully taught that all Christians who sincerely repent, and unfeignedly believe the Gospel, may draw nigh, as worthy communicants, to the Lord's table, without any such confession or absolution; which comfortable doctrine of God's free forgiveness of sin is also more largely set forth in the Homily of Repentance, and in that of the Salvation of Mankind.

With reference to the Athanasian Creed (commonly so called), we have removed the rubric directing its use on certain days; but, in so doing, this Church has not withdrawn its witness as expressed in the Articles of Religion, and here again renewed, to the truth of the Articles of the Christian Faith therein contained.

In revising the Table of Lessons, we have judged it convenient to follow generally the new table which the Church of England has lately adopted—with these principal exceptions, that whereas in that table some lessons are still taken out of the books called Apocryphal, we have so arranged ours as that all the lessons shall be taken out of the Canonical Scriptures; and we have included in our Lectionary the whole of the Revelation of St. John.

After the adoption of the preface, the following resolution, offered by the Bishop of Meath, and drawn, as he stated, in such a way as not to commit any member on the validity

of what had been done, or left undone, was adopted without a dissenting vote: "Bearing in mind the great difficulties and danger of the ordeal through which the Church of Ireland has been called to pass during the last six years, this synod desires to record hereby its thankfulness to Almighty God for having, during that interval, so mercifully preserved the Church from the great peril of disunion, and for having otherwise vouchsafed to it so many tokens of his superintending care and guidance." Among the later resolutions of the synod was one that the office of burial be not used for any that die unbaptized, excommunicated, or by deliberate suicide, and one in repudiation of auricular confession and priestly absolution. The Bishop of Derry announced his intention of withdrawing from the synod "for the present," in consequence of the adoption of the preface, and stated in a letter to the Lord Primate that he was determined to have neither "art nor part" in narrowing the basis of the Church. The Archdeacon of Dublin published a card calling for clergymen dissenting from the new Prayer-Book to enter a formal protest under the act before the 1st of June. He held that everything done toward revision during the current year was illegal, no enabling statute having been passed by the new synod, as was done in 1878.

III. THE SCOTTISH CHURCH.—The attention of the ecclesiastical authorities in England was called early in the year to a case of intrusion by one of the colonial bishops upon the functions of the Scotch bishops. Some English Episcopal churches in Scotland, not being satisfied with the existing Episcopal oversight, and desiring the offices of an English bishop, invited Dr. Beckles, late Bishop of Sierra Leone, who was holding the position of a beneficed clergyman in London, to become their presiding bishop. He accordingly visited Scotland, and confirmed in one day about seventy candidates in two churches in Edinburgh, doing so in opposition, it was said, to the remonstrance of his diocesan, the Bishop of London, and to the known views of the Archbishop of Canterbury. The Primus of Scotland addressed Dr. Beckles a letter, protesting against his course. The Archbishop of Canterbury disavowed all sympathy with his action; the Convocation of York unanimously declared it to be a violation of ecclesiastical law; and the Convocation of Canterbury pronounced it schismatical, and "contrary to the rules of the Catholic Church." Bishop Beckles defended his conduct in a letter addressed to the English Episcopal Church in Scotland, in which he said that, previous to performing his Episcopal functions, he had consulted persons qualified to give an opinion upon ecclesiastical law, who assured him that the course he purposed to pursue would be perfectly legal.

IV. THE CANADIAN CHURCH.—The ninth annual meeting of the *Provincial Synod of Canada* was held at Montreal, beginning September

12th. The Metropolitan presided at the opening session, and delivered the opening address. In it he referred to the marvelous progress which the Church had made during the past sixteen years, and mentioned that, within his own experience of eight years, the numerical dimensions of the synod had nearly doubled, it having increased from five to nine dioceses. One diocese had been added during the year. Concerning the subject of the election and consecration of bishops, and the right of bishops to interfere with nominations to that office, in the discussion of which the Church was much interested, the Metropolitan stated the position of the bishops to be, that they desired nothing more than legitimate protection against the possibility of having an unfit person forced upon them for consecration, while the synods wished to guard against any undue interference with their acknowledged rights of election. The Metropolitan also expressed himself as thankful that the Canadian Church had been spared those painful controversial scenes which had disturbed the Church in other lands. The Very Reverend Archdeacon Whitaker was chosen Prolocutor of the House of Clerical and Lay Deputies. The most important business transacted by the synod consisted in the adoption of the canon on the consecration of a bishop. This canon as adopted provides that, on the election of a bishop, a certificate of election shall be sent to the Metropolitan, who shall within seven days send formal notice of the election to all the bishops within his ecclesiastical province. Should any bishop desire to object to the consecration of the person elected, on the ground of canonical disability, he shall make the objection in writing, delivered to the Metropolitan within fourteen days of the notification to him of the election, setting forth his reasons in full. In case of his receiving objections, the Metropolitan shall summon the House of Bishops to meet within one month to consider the objections, and shall send a copy of the objections, and a notification of the time and place of the meeting, to the candidate objected to, at least twenty-one days before the appointed time. If the objection is declared canonical, and sustained by the House of Bishops, another person must be elected in place of the rejected candidate. The bishop who makes the objection is not permitted to vote at the final decision, and bishops objecting to the consecration are not required to participate in it. The following are defined as canonical objections, on the sustaining of which only the election of a bishop may be nullified: 1. That the person elected is not fully thirty years of age; 2. That he is not a priest in holy orders of the Church of England, or of some branch of the Church in full communion therewith; 3. That he is deficient in learning; 4. That he has either directly or indirectly secured, or attempted to secure, the office by any improper means; 5. That he is guilty of any other crime

or immorality; 6. That he holds and teaches, or has, within five years previous to the date of his election, taught or held, anything contrary to the doctrine and discipline of the Church of England. A proposition had been made at the previous session of the synod for authorizing the ordination of deacons at twenty-one years of age, and had been referred to a committee to consider and report upon at the present session. The committee reported unfavorably to the proposition, and its report was adopted. The committee appointed by the previous synod, on intercommunion with the Protestant Episcopal Church in the United States, made a report, which was adopted. It recommended, first, that great caution be exercised with respect to the testimonials produced by clergymen coming from the United States; secondly, that letters of commendation and information be given to families or individuals emigrating to the United States; thirdly, that a bishop suspending or deposing a clergyman from the ministry shall give notice of the same to all the other bishops of the Church in the United States and British North America; fourthly, that the Metropolitan be requested to take steps for the appointment of an editor to furnish missionary intelligence from Canada for insertion in the *Spirit of Missions*. A resolution was approved, giving permission, with the written sanction and approval of the bishop, to use a shortened form of morning and evening prayer on Sundays and holidays, when the clergymen shall deem it desirable, either from the peculiar condition of his congregation or from the laborious nature of his ministrations. A resolution was passed declaring that "no clergyman of this ecclesiastical province shall knowingly solemnize a marriage forbidden by the 99th canon of the year A. D. 1603, which is as follows: 'No person shall marry within the degrees prohibited by the laws of God, and expressed in a table set forth by authority, in the year of our Lord God 1563.'" The House of Bishops were requested to represent to the Archbishop of Canterbury the desire of the synod that a day of humiliation and fasting be appointed to be observed previous to the meeting of the Pan-Anglican Conference in 1878, to pray to God to pardon and heal the divisions of Christendom. The Bishop of Algoma made a report to the synod of the missions in his diocese, which are chiefly to Indians. Owing to the want of funds, and of proper persons to engage in the work, no increase in the missions could be reported. The receipts for the past three years had been about \$20,500, and the expenditures about \$19,000. Nine clergymen, sixteen lay readers, and several schools had been supported. The Shingwauk Industrial Home contained forty boys, and was prevented only by the want of funds from receiving others who were waiting to be taken in. The Wawanosh Home, for girls, was to be opened early in October, in a part of the new building, with

ten girls as pupils. It was in contemplation to train and educate promising Indian youths as missionaries and teachers.

ARGENTINE REPUBLIC (REPÚBLICA ARGENTINA), an independent state of South America. The Republic proper extends from latitude 20° to 41° south, and from longitude 53° to 71° 17' west, being bounded on the north by Bolivia; on the east, Paraguay, Brazil, Uruguay, and the Atlantic Ocean; on the south, Patagonia; and on the west, Bolivia and Chili, the dividing line with which last is the Cordillera of the Andes.

According to the Argentine claim, however, the extreme northern latitude is 20°, and the southern 56°, the extreme western longitude being 71° 30'; thus embracing the whole of Patagonia east of the Andes, together with Tierra del Fuego, Desolation Island, and the other smaller islands south of the Brunswick Peninsula.*

"The discussion of the boundary question with Chili," says the Minister of Foreign Affairs, in his report in 1876, "has not been resumed since its interruption last year, notwithstanding the friendly disposition of this Government to do all in its power to the end that a solution may be arrived at." The minister then recapitulates the history of this long contest, from its commencement in 1843; makes special mention of the treaty of 1856, by the terms of which it was mutually agreed upon that the limits thenceforward to be recognized should be those claimed by both countries respectively at the time of their separation from the mother country (1810); and concludes with a summary of the more recent negotiations. "The principle of arbitration having been admitted, Señor Barros Arana was accredited as Chilean Minister Plenipotentiary to Buenos Ayres in 1876. Before he had presented his credentials, however, the capture of the Maria Amalia (sailing under the Argentine flag), by a Chilean vessel, took place; and that act, together with many others of defiance on the part of Chili—as, for instance, the concession of lands on the western shore of the Sea of Otway to a French citizen, and others of similar character—was promptly and decidedly protested against by the Argentine Government." It may be added that, in the mean time, the Chilean envoy set out for Brazil, he being accredited to the court of Rio de Janeiro also; and the Argentine legation was recalled from Santiago.

The estimated population of the Republic in 1875 was set down at 1,768,681,† exclusive of savages; but, from a later statistical publication (Buenos Ayres, 1876), it would appear that, "during the six years which have elapsed since the census was taken, the population has augmented in such a degree, not only by natural increase, but also by immigration, that its

total, at the end of 1875, ought to be calculated at not less than 2,400,000."

The population of the capital—Buenos Ayres—for the same year, was reckoned by Dr. G. Rawson to have been not short of 230,000.

The following table shows the number of uncivilized Indians wandering over the various territories of the Republic, according to the census of 1869:

Territories.	Population.
Gran Chaco.....	45,291
Misiones.....	8,000
Pampa.....	21,000
Patagonia*.....	24,000
Total.....	98,291

In the matter of immigration, the strenuous efforts of the Government to attract Europeans to the Republic would seem to have been counteracted of late by some powerful influences, chief among which are, perhaps, the reports of the unfavorable condition of commerce, and those (in all probability somewhat exaggerated) of an unsettled state of political affairs in the Plata provinces. The following extract from the President's Message to Congress, in 1876, will, with the subjoined table, serve to show at the same time what has been done in this department, the results so far obtained, and what is expected of the future:

In the year 1875, 42,060 immigrants arrived, which is about one-third of the number that arrived in the years 1873 and 1874. Immigration, however, has everywhere declined, and in the United States, the home of immigrants, the arrivals, which, in 1873, reached 369,487, fell to 208,089 in 1874, and the diminution for the last year is even greater. The returns for the first eight months of 1875, for New York, give but 63,553 immigrants. The emigration of man, like the movement of capital, obeys certain fixed rules, and produces in all cases the most inevitable results. The immigrant asks for protection in his adopted country, and to escape from the exactions of privilege and the violence of anarchy. Rebellious and disturbed countries are not the lands for immigration. The immigrant aims to acquire real estate, and we, the owners of immense territories, have not been wise enough to offer it to him. We must abolish every obstacle that impedes immigration. As yet we have done nothing to bring the strong, laborious north-of-Europe emigrant to Buenos Ayres or Rosario, for the same fare that carries him to North America. We have to do all this, and it is a misfortune when immigrants congregate in commercial cities, where they are subject to epidemics or commercial crises, which finally compel them to leave the country, as is now the case in Buenos Ayres and New York. The law (Colonization bill) proposed to you last year, and which was so favorably received by the European press, had this in view. But the passing of this law is not sufficient; we must facilitate the acquisition of land for the immigrant; we can waste no further time in determining national limits. The question is, Which has the greater power to people a country—the nation or the province? The answer in the United States is, the Nation, owing to its great resources, its authority, and its simple and uniform price for lands, which is the most permanent inducement to immigrants. We can give lands to immigrants without expense, since we own them; but, if we wish to help the immigrant, and reduce the passage-

* From an official report, published at Buenos Ayres, in 1876.

† See ANNUAL CYCLOPEDIA for 1876.

* Observe that Patagonia is here included as an Argentine territory.

money from the north of Europe, we must spend money, which, owing to the economy we have adopted, is rather a serious question. If our imports exceed our exports, we must economize more, since capital is scarce, and we have to work hard to increase it; but if economy is a sure way out of the present situation, it is also a long one. Let us economize, but let us also increase our produce, so as to establish the balance of trade. The great agent for all this is the immigrant, and happy the land that can secure so powerful an element: its troubles are but temporary, its progress constant. In every

branch of public service let us economize, but let us spend money for immigration. I will not refer to the astonishing figures of Prussia in the last century, nor the fabulous history of California, where the sweat of honest labor has done far more than the richest of its gold mines; I will only show that the most reproductive expenditure of capital is that made for immigration.

The number and nationalities of the immigrants arrived at Buenos Ayres for the six years 1870-'75 inclusive are as follows:

NATIONALITIES.	1870.	1871.	1872.	1873.	1874.	1875.	1870-'75.
Italians	14,045	8,170	14,769	26,278	23,904	9,130	96,296
Spaniards	8,888	2,554	4,411	9,185	8,272	4,086	81,843
French	2,986	1,988	4,602	7,481	6,554	2,633	24,704
English	453	694	963	1,538	1,036	1,288	6,027
Swiss	499	435	623	1,049	679	376	4,261
Germans	143	155	269	796	392	854	2,114
Portuguese	119	157	151	210	213	107	937
Austrians	67	50	62	127	156	98	555
Belgians	27	22	38	136	48	83	309
All others	2,941	396	815	982	820	477	5,431
Arrived direct	24,083	14,621	26,208	48,882	40,674	18,532	172,500
Arrived <i>via</i> Montevideo	15,884	6,309	10,829	27,950	27,908	23,534	112,109
Total	39,967	20,930	37,037	76,832	68,577	42,066	284,609

The total number of arrivals for 1876 was but 30,965.*

The more important features of the "Colonization bill" referred to by President Avellaneda, and which became a law in 1876, are briefly as follows:

The advance of the passage-money from any European port to the city of Buenos Ayres.

The free gift of one hundred hectares (= 250 acres nearly) of land to each of the first 100 families which establish themselves in one of the sections already surveyed for colonization.

The sale of lands at \$2 gold per hectare, payable in ten annual payments, commencing in the third year, without interest.

Advance of food for one year at least.

Advance of working and breeding cattle, of seeds and agricultural implements, the building of a house, and, in general, of all that a family may require in such conditions.

The entire advance, excepting the price of the land, cannot exceed \$1,000 gold per family, and is payable without interest, and at the cost-price of what they may have received in produce, in five annual installments commencing after the end of the first year. Moreover, the colonists are free from all taxes during ten years; and after the colony is six years old, the Government will give a prize of \$10 per thousand for trees at least two years old, planted by the immigrant.

The intention of the Government is to grant these privileges chiefly to agricultural families, these being best calculated to meet the immediate requirements of the country; but, at the same time, the bill expresses the intention of favoring artisans also.

Judging from British reports, one would be justified in presuming that the new homestead law† already alluded to had begun to yield fruit in 1877. Numerous mercantile firms, en-

couraged by its provisions, proposed the establishment of new colonies in Argentine territory, and immigration was expected gradually to return to its former standard. Indeed, the general character of the immigration was already observed to be superior to that of 1875. The Minister of the Interior reported that 10,118 new settlers had been sent to the upper provinces in the course of 1876.

The President of the Republic is Dr. Don Nicolás Avellaneda (entered office on October 12, 1874); the Vice-President, Dr. Don Mariano Acosta (elected in the same year).

The cabinet is composed of the following ministers: Of the Interior, Dr. Bernardo de Irigóyen; of Foreign Affairs, Dr. Rufino de Elizalde; of Finance, Dr. Victorino de la Plaza; of Justice, Public Worship, and Public Instruction, Dr. José María Gutiérrez; and of War and Marine, Dr. Adolfo Alsina.

The Argentine Minister Plenipotentiary to the United States is Sr. Dr. Don Manuel R. García; the Secretary of Legation, Sr. Don G. Videla Dorna; and the Argentine Consul-General (New York), Mr. Edward F. Davison.

The governors of the several provinces, etc., were as follows:

Buenos Ayres	Cárlos Casares (May, 1875).
Minister of the Interior	Dr. V. G. Quesada.
Minister of Finance	Rufino Varela.
Catamarca	M. Molina.
Córdoba	Dr. A. del Viso.
Corrientes	Dr. J. L. Madariaga.
Entre-Ríos	Dr. R. Febre.
Jujuy	C. Aparicio.
La Rioja	V. A. Almonacid.
Mendoza	J. Villanueva.
Salta	J. Solá.
San Juan	R. Doncel.
San Luis	R. Cortés.
Santa Fé	S. Bayo.
Santiago	B. Olacoea.
Tucumán	T. Padilla.
Gran Chaco Territory	Lieut.-Col. P. Gómez.

The provincial governors are elected by the people, and their period of office is three years.

* The total of arrivals in 1873, 1874, and 1875 was 186,975, from which should be deducted the aggregate number of departures for the same period—61,540—or an average of 20,400 per annum approximately. The departures in 1876, however, are given at 13,487—a sign of returning prosperity.

† See also ANNUAL CYCLOPEDIA for 1875, page 80, and for 1876, page 88.

The Army, as shown by official returns, was comprised, in 1876 (exclusive of the National Guard, 8,283 strong), of 4,648 horse, 515 artillery, and 3,120 foot, with 4 generals of brigade, 7 colonels-major, 33 colonels, 92 lieutenant-colonels, and 808 other officers.

The Argentine Navy, in 1875, included 26 steam and 2 sailing vessels (2 of the former being iron-clads), of an aggregate tonnage of 12,000, and armament of 88 guns.

The annexed tables present the branches and amount of the national revenue and expenditure, as set down in the estimated budget for the fiscal year 1876-'77:

REVENUE.	
Import duties.....	\$11,748,596
Export duties.....	2,616,610
Public warehouse fees.....	513,964
Stamped paper.....	852,529
Wharfage dues, etc.....	23,231
Lighthouses.....	35,573
Telegraphs.....	219,307
Post-Office.....	79,553
Railways.....	50,000
Interests, etc.....	255,388
Sundries.....	125,470
	<hr/> \$16,140,526
EXPENDITURE.	
Ministry of the Interior.....	\$1,876,670
Foreign Affairs.....	116,376
Finance.....	8,869,638
Justice, etc.....	1,208,088
War (\$4,815,332) and Marine (\$700,579).....	5,015,911
	<hr/> \$17,080,733

Details of the foreign debt of the nation, amounting to about \$55,000,000, were given in the ANNUAL CYCLOPEDIA for 1874 and 1875.

The improvement in the condition of Argentine finances, referred to in our volume for 1876, has been progressively maintained throughout 1877; and the general aspect of that department is understood now to be more promising than it has been at any time since the beginning of the crisis, the causes of which have been elsewhere explained.* Concerning the promptitude with which the payment of interest and amortization of Argentine loans are made, we transcribe the following from a leading financial authority of London, under date of October 25, 1877:

We have satisfaction in being able to state that, according to telegrams received yesterday, the money for the next dividend and drawing on the Argentine loan of 1868 is on the way hither, by the steamer Tagus. The fact that the remittance is sent off nearly two months and a half before it is required in London, speaks volumes for the punctuality and business habits of the Argentine Government. It may also be accepted as an effective corroboration of what we have repeatedly described as the fairly healthy condition of the Argentine finances, and an equally effective contradiction of the false and reckless misstatements which are continually being disseminated in London on the subject.

The following review of the Argentine finances, from 1863 down to the present time, published in London in October, 1877, and

traced to diplomatic sources, is based upon the report of the Argentine Minister of Finance for that year:

During this period there has been a surplus expenditure of nearly \$60,000,000, or 33 per cent. over the revenue, principally caused by the Paraguayan war and internal revolutions. Last year was financially so disastrous, that we find no parallel except the year of yellow fever, 1871. The decline of trade placed the Government in a critical position, and the customs receipts were, of course, much lower than before. The "expenditure extraordinary" during the 14 years is set down at \$73,869,936, of which \$15,877,930 went in the construction of railways. Hence, but for that expenditure extraordinary, there would have been a surplus of \$13,000,000 in the Treasury, the revenue of 14 years showing that excess over the cost of government in the same period. At present there are 1,140* miles of railway, including 500 miles which belong to the national Government. The balance of floating debt handed over to 1877 was \$5,696,816. The ways and means for 1876 were made up thus: Year's revenue, \$13,583,633; borrowed, \$12,570,244: total, \$26,153,877. Comparing the revenue of 1876 with the previous year, we find a decline of 25 per cent. in import duties, 1 per cent. in exports, 28 per cent. in warehouse fees, 22 per cent. in stamps, 6 per cent. in telegraphs. During the last 14 years the Government has redeemed \$24,750,000 of the public debt: 30 per cent. of the total, besides paying \$43,500,000 for interest. The annual service of the debts amounts to \$6,500,000, or an average interest of nearly 6 per cent. per annum on the debts all round, and 4½ per cent. annual amortization. The bank has made 10 loans since 1865 in favor of the national Government, down to December 31, 1876. In the budget for 1878, Minister Plaza begins by cutting down the national expenditure to what it was 10 years ago—say \$16,000,000. The expenditure in the last seven years (1870-'76) amounted to \$154,000,000—say \$22,000,000 per annum. Minister Plaza calculates on an increase of 10 per cent. in imports, which is highly probable, as the country is slowly recuperating. If the Government and Congress keep on for a few years in the same wise spirit of economy and good book-keeping as this budget indicates, the Republic will soon be in a flourishing condition.

"One—perhaps, indeed, the only—weak point of the Argentine state machine," writes an Argentine economist, "is, beyond all doubt, its finance system. Hitherto the only resources of the federal Government are indirect taxes upon the revenues of its custom-house, the extent of which depends entirely on the condition of commerce. When there is a brisk import and export trade, the receipts of the Government increase, and their diminution is determined by a commercial crisis. Inasmuch, therefore, as the revenue is directly influenced by the fluctuations of trade, in time of straits the Government is not only powerless to relieve the situation, but constrained to increase the imports, that being regarded as the only immediately available means of averting financial disaster. Then, the Government itself suffers in all its branches from commercial crises; for, having to meet the numerous exigencies incidental to new countries, it never has an opportunity of securing a sufficient surplus in a good year to cover the deficit of a

* See foot-note, page 34, ANNUAL CYCLOPEDIA for 1875.

* 1,393 in actual traffic.

bad one. On the contrary, the entire revenue is swallowed up at once for the defrayal of expenses incurred by the introduction of improvements and the general 'raising up' of the country. Whenever the revenue falls short of the amount set down beforehand in the estimates, it becomes necessary to have recourse to a loan, or else all material progress is suspended; the reaction is soon felt in commercial circles, and then are observed the heightened intensity and lengthened duration of those periodical disasters.

"To prove the urgent necessity of reform in the finances," continues the same writer, "we should also mention the incredible expense attending the collection of the taxes—an expense which fully reaches 7 per cent. of the whole imports. Doubtless the political organization of the country presents, in this respect, serious difficulties. Inasmuch as the 14 provinces fix their own budgets, and consequently raise their own taxes, being in this,

as in all other respects concerning their internal administration, altogether independent, their interests might appear to be compromised if the central Government, by levying upon their chief resources, collected direct taxes within their jurisdiction. There is, therefore, little ground for apprehending the presentation of any import bills tending to prejudice the provincial tax-system.

"Again, the vast possessions of the Republic offer secure and simple means for rendering the national finances less dependent upon the custom-house. The nation owns millions of acres of valuable land, which do not as yet produce a dollar, while, if under cultivation, they would contribute largely to swell the national revenue."

Much, however, still remains to be accomplished before the country shall regain its wonted financial tone and vigor. Thus turning the public lands to profit necessarily depends upon the influx of a strong tide of immigration,

BUENOS AYRES.

and more prompt means must be resorted to. What has hitherto been achieved is rather a mitigation of the symptoms of the evil than the absolute removal of the causes; and so long as these persist, no reasonable hope can be entertained of positive recovery. Temporary relief has been secured by rigid economy; but the really productive sources of the nation are still in a state of comparative inactivity. Meantime, in the second half of 1877, theories, as discordant as numerous, were hurled in rapid succession along the columns of the public press, or constituted the chief burden of voluminous *memorias*, as to the means to bring the crisis to an end. Some economists urged the necessity of a still higher tariff on all imports indiscriminately; others admitted the propriety of that measure, but would confine it to spirits and tobacco; while still others cried it down unconditionally, as not only inopportune, but calculated to ag-

gravate the evil for which it was proposed as a remedy. When controversy was at its highest, the Finance Committee, in September, sent in their report on the proposed Custom-House Law for 1878. One of the members of the committee dissented, and for reasons of much interest to the commercial body. Even the majority of the committee admit that the iron hand of necessity alone forces them to sanction the proposed increase of duties, which Senator Lucero strongly opposes. The honorable senator declares that the high customs duties are mainly answerable for the falling off in the import trade, and that, if they are raised further, the inevitable result will be a further falling off in trade.

The first eight months of 1877 show a serious falling off in the import trade, compared with the same period in 1876, the value being only \$18,870,000. It is not alone in Buenos Ayres that this decline is observed. Last year the

value of the imports at the Rosario custom-house reached \$4,137,000; in 1877, up to August 31st, they were only \$2,379,000.

It is clear that the "milch cow" of the national Treasury, as the custom-house is often facetiously called, is running dry, under the strain of exorbitant import duties. The majority of the Finance Committee declare that it was only for "one year more" that the country would be asked to bear the additional burden; but Senator Lucero declared that this "one year more" might prove the hair that breaks the camel's back, if the trial of the experiment were persisted in.

Indeed, the general voice of the press and the country at large would seem to show that the time has come when a further increase of the tariff must prove useless, if not dangerous, and that the way out of the still existing trouble is through a yet greater reduction of the Government expenses, rather than new additions to the already too numerous burdens heaped upon the commercial circles.

Chief among the moderate economists above alluded to, who propose the restriction of the new imports to spirits and tobacco, is Señor Rufino Varela, Minister of Finance of the province of Buenos Ayres. The following extract, from a *memoria* by that gentleman, under date of September, 1877, will serve to make manifest some interesting details:

I would propose to put a high duty on imported spirits, and so give rise to a new source of revenue by taxing the spirits made in our country, and by this means lessen the taxes on capital and industry, cheapen the cost of the necessities of life, and above all free us from the heavy balance we pay out by the fifth part of our wool, hides, and other products, in exchange for wines and spirits.

Another consideration: A tax, to be good, must be general. And herein the tax on wines and spirits is unrivaled. In Jujuy as in Patagones, in San Juan as in Corrientes and Buenos Ayres, there is a majority in consumers of spirits and tobacco. Therefore this tax in all parts is most remunerative, and, as a source of revenue, is the most effective for covering the expenses of a country.

Let us suppose, in these three years of depression, that the Argentine Government, to cover its deficits, had, instead of a tax of 30 per cent., put a tax of 100 per cent. on spirits, as in the United States—let nobody say I take an exceptional country; you can also add France and industrious Belgium, and many others—should we have had to suffer so many difficulties?

If, in 1875, we had put on spirits the same tax as in England, this would have given the country an average revenue of \$12,000,000 per annum, or \$36,000,000 for the last three years; and, deducting what was paid to the custom-house, would have left \$29,000,000, or twice the amount of our deficits.

If high duties diminish importation, either it would have been substituted by the manufacture in our own country, or, owing to its dearness, the consumption would have diminished.

In the first case, the national revenue would have lost nothing, for to the custom-house duties could be added the excise on the local production, and the country would have gained, because agriculture is necessary for the manufacture of spirits and liquors.

In the second case, the country would not have lost either; since, the importation of spirits diminished, other articles would have profited, or general

industry, and a large sum would not have to be sent out of the country.

But, in either case, the highest duty on the smallest quantity would have given better results than the system now followed.

Thanks to this system, England, France, the United States, and Belgium, and all who follow it, have no deficits. Moreover, this is urged by more potent motives. The value of imports of wines, spirits, and tobacco amounted in 1875 to \$11,283,000. This enormous sum has not contributed in the least to the social wealth nor to industry; while in exchange we have had to pay with the noble products of our industry. We would understand this exchange if it were for machines, coal, instruments of industry, useful values, or reproductive articles of any kind; but to exchange them for spirits, is not to be tolerated.

England, France, and the United States, conscious of the impossibility of doing away with the use of spirits and tobacco, determined to make social welfare take advantage of it. To make spirits, products of the soil are necessary, and, consequently, the manufacture of spirits, being localized, would immensely contribute to foment agriculture, and shut the door against a foreign product that is of no use to society.

By this means the importation of spirits to the United States is relatively insignificant, in France *nil*, and in England does not figure for the third part of the taxes paid by the local manufacturers, in spite of the very high duties. We see how this alone powerfully increases local industry and social wealth.

Nearly all the spirits now imported can be made in the Argentine Republic, benefiting agriculture, and leaving their value in the country. Tucuman and Salta have excellent caña. San Juan, Mendoza, La Rioja, Catamarca, etc., have splendid wines; Córdoba and Santiago del Estero have their "algarobas" to make aguardiente; and Santa Fé, Entre-Ríos, Corrientes, and Buenos Ayres have their maize and potatoes. Why should we, then, import them? Then, as is the case in all other countries, spirits of home manufacture should be subject to a tax.

Notwithstanding the vigorous opposition it met with from all parties, the new national stamp law was passed in October. It has been described by an Argentine writer as "a most important law, as it affects every one and everything, increasing the taxes on merchants and steamboats very considerably; in fine, the most comprehensive act of the kind hitherto known—a kind of new income-tax, caused, no doubt, by the depressed state of the revenue. Merchants, lawyers, doctors, stevedores, lightermen, ship-brokers, surveyors, medical students, clergymen, pilots, officers, judges, policemen, in fact everybody, will have to lend a small annual contribution to keep the ship of the state from running high and dry. From January 1, 1878, bills of exchange will have to be stamped twice over, first by the province, and secondly by the nation; in fact our bills of exchange will henceforward go home with as many stamps as our hide with marks; the grasp of the new stamp act is almost universal."

Popular education is making rapid strides—so rapid, that the Argentine Republic, which, not many years ago, was behind its neighbors in this respect, now surpasses all of them.

The following table shows the attendance, in 1875, at the primary schools in the principal countries of South America:

ELEMENTS.	Argentine Republic.	Chil.	Brazil.
Population, including Indians.....	1,836,490	2,089,767	11,780,000
Children from 6 to 16 years.....	459,122	509,941	2,945,000
Number of primary schools, public and private.....	1,830	1,256	4,593
Pupils in primary schools.....	112,220	80,609	151,416
Students in academics and universities.....	4,980	8,213	8,642
Total number of scholars.....	117,203	88,812	155,053
Total number of children not attending schools.....	341,919	426,129	2,789,942
Proportion between population and number of schools.....	1 per 992.65	1 per 1,642.01	1 per 2,564.77
Proportional numbers of scholars and population.....	1 per 15.66	1 per 24.33	1 per 75.32
Annual expense of public instruction, in gold dollars.....	2,425,259	1,133,354	2,356,738

In the following table is given the number of schools, public and private, in the fourteen provinces, and the attendance thereat during the year 1875: *

PUBLIC SCHOOLS.					PRIVATE SCHOOLS.					Total Number of Schools.	Total Number of Pupils.	Census of Population without Indians.

										1,830	112,220	

Concerning the number and general character of the newspapers and other periodicals published in Buenos Ayres, we reproduce the following brief report from the Argentine official publication already referred to:

The liberty of the press is an old acquisition among us, although it is much less abused than in other states in the same condition. Extravagances naturally take place here also, as certainly no one will imagine that our press would keep itself within the limits prescribed in other countries by the attorney-general or the prejudices of shop-keepers. But it would be easy to prove that our journals are generally well-conducted in this respect, and sustain a good comparison with those of other countries where the same liberty is enjoyed.

Aside from the political newspapers—which abound particularly in the capital, and of the largest size—there is also a number of scientific periodicals, which naturally struggle here against many difficulties, but whose efforts on that very account are only the more meritorious. We also have newspapers in foreign languages at present, two in English, four in German, one French, and two Italian. The foreigners, whose organs these newspapers are, also support societies of charity and social enjoyment, which flourish alongside of similar establishments of the same kind founded and sustained by Argentine citizens; for charity is a virtue fully generalized in this beautiful and wealthy country.

Concerning the present condition of commerce in the Argentine Republic, but little can here be added to what may naturally be inferred from the remarks on finance. There are, however, some statistical details of an eminently valuable character, and which we shall endeavor to set forth in as concise a form as possible.

It is first of all necessary to make two important observations in regard to the tables given below, namely: that the countries named therein are always those of entry or clearance, though they are, in some instances,

by no means the source of production. For example, no inconsiderable proportion of the merchandise credited to France and England in the table of imports was sent to the various ports of these countries for shipment to the River Plate by countries having no direct shipping communication with South America, and conversely in the matter of exports. Some countries, as Switzerland, for instance, receive Argentine commodities in large quantities, but indirectly, and consequently their names do not appear in the tables at all. Belgium also figures in the first place among the purchasers of Argentine produce; but it would be a mistake to believe that she takes such a great quantity for her own consumption; on the contrary, a large portion of it passes to Germany and to other North-European countries. Again, a great many loaded vessels are cleared for England, and nevertheless only touch in the Channel for orders—that is, to learn their final destination; in this way the owner is able to send his cargo to a market where the prices or other circumstances may be more favorable to his interests. Yet this produce appears in custom-house registers as exported to England; while, in reality, it is rarely introduced into that country, but generally figures among the imports of another one. Thus, it is easy to understand that the books of the Argentine Custom-House, and those of countries in commercial relations with us, cannot always agree on the head either of exports or imports.

Our tables show quite large importations from Uruguay; but, at the same time, it is remarked that these almost exclusively consist of foreign articles. This is explained by the fact that many of the large commercial houses of Buenos Ayres have their branches at Montevideo, for the purpose, according to their convenience, of supplying both markets. On the

* For a detailed statement of educational matters in the Republic, see the ANNUAL CYCLOPEDIA for 1874 and 1875.

other hand, many vessels load in the Uruguay River, in Uruguayan ports, but, before setting sail for Europe or for North America, complete their cargoes with Argentine productions, which is all the easier, as most of these ports are situated opposite Argentine river ports. Thus, the exporting merchants in these latter find it more advantageous to dispatch their goods on board the foreign vessel on the other side of the river, than to send them to the more distant market of Buenos Ayres, where freight and local expenses are much higher.

Chili also sends goods of European manufacture to the Argentine Republic. The Chilean markets offer to the provinces of Mendoza, San Juan, and Salta, greater advantages for the acquisition of certain articles than through Argentine ports; and, although it is requisite

to transport them across the Cordilleras on mules, the transportation is in this way effected more rapidly and at much lower rates. This state of things will be notably changed on the completion of the principal railways; and even now a diminution of imports from Chili may be remarked, due to the increased facility of communication between Argentine ports and the cities of the interior.

We must yet remark, in reference to the column of totals in our statistics, that the values are not based upon the real cost of the merchandise imported or exported, but at an average of from 30 to 35 per cent. below the real value.

The total value of the imports and exports, and the names of the countries with which trade was carried on during the years 1870-'74, are exhibited in the following table:

COUNTRIES.	1870.	1871.	1872.	1873.	1874.	Totals.
Belgium.....	\$7,811,689	\$7,838,408	\$15,201,913	\$16,859,094	\$16,777,061	\$64,488,160
Bolivia (by land).....	443,690	341,923	831,670	551,864	601,334	2,270,456

The total value of the imports in 1875 and 1876 was \$55,765,627 and \$34,910,000 respectively.

The subjoined report of the foreign trade carried on at the very flourishing river port of Rosario is from Dr. Plaza's *Memoria* to the Congress of 1877:

YEARS.	Imports.	Exports.
1871.....	\$1,864,447 12	\$97,889 97
1872.....	1,711,065 06	121,775 92
1873.....	1,680,472 42	93,281 63
1874.....	1,525,599 69	111,371 40
1875.....	1,736,858 41	144,508 05
1876.....	1,109,654 62	122,794 30

The duties on foreign merchandise for Salta and Jujuy reached \$21,768.73.

The official value of foreign merchandise reëmbarked and forwarded to other custom-houses of the Republic amounted to \$355,223.25, the duties of which on entry reached \$50,718.97.

The official value of native products embarked in this port with destination to other ports of the Republic was \$477,808.66, and their export duties \$28,668.52.

The tax for lighthouses brought in \$1,392.56; and the port duties reached the sum of \$22.50.

The total receipts for 1876 were as follows:

Cash on hand	\$38,452 56
Imports	1,109,069 84
Exports	122,794 30
Stamps	20,637 77
Telegraphs	26,981 27
Andine Railway	6,082 24
Lighthouse tax	1,392 56
Stamped paper	26,016 56
Sundries	188,908 14
San Gerónimo telegraph	804 05
San Lorenzo telegraph	250 00
National bank	261,619 49
Total	\$1,802,458 73

The above figures show a notable decrease. The imports of 1876 were \$704,667.75 under those of 1875, and exports fell \$20,877.15, making a difference of \$725,344.90, or a falling off of over 38 per cent.

The causes of this decrease are but too well known. The present crisis has paralyzed the progress of commerce in the country, but its effects have been severely aggravated by the notorious bank question, which has caused a complete restriction of credit, this important branch of commerce having been forced into liquidation. But, doubtless, the present state of affairs is only temporary, and our custom-house will soon recover its former importance.

The advance to the Government by the London and River Plate Bank, which amounted to \$725,000, was, at the end of 1876, reduced to \$96,180.

As the minister will see, the revenue of this custom-house amounted to \$1,232,448.92, but the cost of collecting this sum amounted to over 8 per cent.

It may be found not uninteresting to present at one view the imports from the Argentine Republic to the United States, and the exports from the latter to the former, during the twenty years from July 1, 1857, to June 30, 1876:

YEARS.	Exports.	Imports.	Totals.
1857.....	\$1,313,807	\$2,788,478	\$4,098,280
1858.....	904,594	2,725,218	3,629,812
1859.....	1,438,285	4,070,088	5,508,268
1860.....	999,708	4,020,848	5,020,556
1861.....	1,166,625	8,200,886	4,367,461
1862.....	1,084,858	1,973,552	3,068,710
1863.....	1,404,852	4,501,322	5,906,674
1864.....	1,072,081	5,971,227	7,043,258
1865.....	1,798,619	3,586,166	5,384,785
1866.....	1,801,498	6,882,266	8,683,764
1867.....	2,599,514	5,342,811	8,442,325
1868.....	2,819,116	4,807,574	7,626,990
1869.....	2,507,514	5,162,966	7,670,480
1870.....	2,479,437	6,414,669	8,894,106

ARKANSAS. The regular biennial session of the Legislature of Arkansas began on the 8th of January, and came to an end on the 9th of March, being limited by the constitution to 60 days. Ex-Governor A. H. Garland was elected to the United States Senate by a nearly unanimous vote of both branches. A joint committee, including persons of both political parties, was appointed to notify him of his election. A Republican member of the committee addressed to him a separate communication, in which he said: "It may not be out of place for me, as one of the committee, and a conceded Republican, to advise you of the reasons that have prompted a majority of the votes of a majority of that party who heretofore have been found opposing you on many a political field. You found the State Government in confusion: you have restored peace. You found human life insecure and uncertain: you vouchsafed and gave protection to all, regardless of condition. You found financial prostration: you have built up the State's credit. You found the State looked upon with distrust: you have placed her name high on the roll of States for integrity and honor. In fact, you have fully shown, as we believed, as Arkansas's favorite son, that you knew her wants, and that you have as fully anticipated them in their fruition. With a firm and unyielding hand you guided the ship of state,

until, to-day, she has become the peer of her proudest sister."

The following resolution of thanks to ex-Governor Garland was adopted by both branches of the Legislature, with little opposition:

Resolved, That we hereby express our sincere thanks and gratitude to ex-Governor A. H. Garland, for his wise and peaceful direction of the ship of state, of which he took command in the heat of local civil war, when bitterness and prejudice were ranking in the hearts of our people, and which he has conducted through all perils safely and triumphantly to the close of his administration.

The legislation of the session was for the most part unimportant. There was an act passed authorizing the several counties to fund their outstanding indebtedness, and one requiring the Auditor of State, in connection with his biennial report, to publish "an accurate detailed statement of the receipts and expenditures of the public money, or evidences of indebtedness, showing the several amounts paid, to whom paid, and on what account." An act to reduce taxes provided for a levy of 1 mill on the dollar for defraying the general expenses of the Government and supplying deficiencies; 4 mills on the dollar in 1877, and 5½ mills after that year, "for the purpose of paying interest on the public debt and redeeming the State bonds hypothecated by the State Board of Finance; 2 mills on the dollar, and a poll-tax of \$1 per capita on male inhabitants over 21 years of age, for the support of public schools. The 5-mill tax, levied in 1876 for general purposes, was reduced by the same act to 1 mill.

Negotiations for an adjustment of the State debt have been kept up during the year, but no definite action has been taken. In reply to a communication from a committee of bondholders, Governor Miller, in February, furnished the following statement of the indebtedness and resources of the State, with interest computed to July 1st:

FLOATING DEBT:	
5 per cent. scrip.....	\$1,299,890
Interest—estimated.....	178,745
Non-interest-bearing scrip.....	81,809
Total floating debt.....	\$1,510,444
Deduct amount retired by 1st July—estimated.....	\$600,000
Total outstanding, July, 1877..	\$910,444
BONDS HELD BY THE UNITED STATES:	
6 per cent. bonds—old.....	\$538,000
Interest.....	994,156
6 per cent. funding bonds.....	168,000
Interest.....	37,800
Total Government debt.....	\$1,737,956
NEW BONDS:	
10 per cent. bonds.....	\$239,688
6 per cent. bonds of 1874-'75.....	256,000
Total new bonds.....	\$515,688
OLD UNFUNDED DEBT, EXCLUSIVE OF DEBT DUE THE UNITED STATES:	
5 and 6 per cent. bonds, and interest,	\$485,335
NEW FUNDED DEBT:	
6 per cent. bonds of 1869-'70.....	\$3,084,000
Interest.....	1,160,510
Total new funded debt.....	\$4,194,510

RAILROAD AID BONDS:	
7 per cent. Railroad Aid bonds.....	\$5,350,000
Interest.....	1,807,145
Total Railroad Aid bonds.....	\$7,157,145
LEEVE BONDS:	
7 per cent. Levee bonds.....	\$1,986,774
Interest.....	764,344
Total Levee bonds.....	\$2,751,118
RECAPITULATION:	
Floating debt and interest to July 1, 1877.....	\$910,444
Debt due the United States.....	1,737,956
New bonds.....	515,688
Old bonds, unfunded.....	485,335
New funded debt.....	4,194,510
Railroad Aid bonds.....	7,157,145
Levee bonds.....	2,751,118
Total, estimated to July 1, 1877,	\$17,752,196
RESOURCES OF THE STATE:	
Assessed value of property, 1877-'73,	\$91,000,000
Tax for general purposes, and to pay interest on public debt.....	\$793,000
Deduct for assessing, collecting, and delinquent.....	133,000
Leaving total revenue.....	\$660,000
In addition, there is a 2-mill school-tax.	
EXPENDITURES:	
Estimated expenses of State Government, per year.....	\$320,000

This was followed by a proposition from the creditors for a settlement on the basis of 50 cents on the dollar for 6 per cent. bonds, 35 cents for Railroad Aid bonds, and 15 cents for Levee bonds. This was not accepted, and the Governor, in laying the matter before the Legislature, expressed the opinion that it did not bring the debt within the limit of the State's ability to pay. It should be noted that the validity of a large part of the State debt was questioned. The Legislature took no action beyond continuing the State Board of Finance.

In the course of the summer this board received from John D. Adams and J. E. Redfield a proposition for a compromise of the State debt. It was in the following terms:

SIRS: As a feasible and fair plan of funding and compromising the State debt, we propose the following:

There are now outstanding, of old bonds issued to the State and Real Estate Banks.....	\$485,335 00
Similar bonds issued for funding debt, under act passed in 1868, by which the old bonds issued to State and Real Estate Banks were funded in new 6 per cent. bonds, leaving out the new bonds given for the Holford bonds..	2,844,510 00
The Real Estate Bank actually received, on the hypothecated "Holford bonds,"	\$121,836,
which, with interest, now amounts to.....	397,982 08

Making, in all, an undisputed debt of..... \$3,727,827 08

The legality of this debt, or of any part of it, has never been disputed by any one, so far as we know.

Now, we propose to settle the entire debt of the State, excepting that part of it due to the United States, the outstanding scrip, and the 10 per cent. and Loughborough bonds, in new 6 per cent. bonds having 30 years to run, for the aggregate sum of \$4,000,000.

This will be the amount of new bonds to be issued, which will nominally exceed the amount of the undisputed debt by the sum of \$272,172.92.

But the real amount of the new bonds, estimating them on a basis of 6 per cent. bonds, will be less than the amount of the undisputed debt above mentioned, for we propose that the new bonds shall not draw 6 per cent. from date, but that the interest for the first years shall be as follows: For the first year the interest shall be at 2 per cent.; for the second year, 3 per cent.; and for the third year, 4 per cent.—which will be an annual reduction from the interest of the first three years of the following amounts:

For the first year.....	\$160,000
For the second year.....	120,000
For the third year.....	80,000
In all.....	\$360,000

Which will make the new bonds, estimating them on the basis of 6 per cent. bonds, for an amount less than the old and undisputed debt above mentioned, by the sum of \$87,827.08.

As it is desirable for the good name and prosperity of the State that all the paper outstanding, having her name and official seal on it, shall be withdrawn and canceled, we propose to get up and deposit, at the time of the issue of the new bonds, and without any further charge or remuneration than the funding of the undisputed debt as above mentioned, the following outstanding bonds, the legality of which has been disputed—that is to say:

Railroad Aid bonds, with interest to July 1, 1877.....	\$7,157,145
Levee bonds, with interest to July 1, 1877.....	2,751,118
Excess of Holford bonds, with interest to July 1, 1877.....	1,566,288

Making, in all..... \$11,474,501
of a disputed debt which the State will get in with-out paying a cent therefor.

This will remove every ground of reproach against the State, and will give her as good standing as that of any State in the Union.

We propose that the first semiannual coupon shall be payable July 1, 1878.

No new bond shall be issued under this plan until we deposit in the State Treasury one-half of the nominal amount of each of said kinds of bonds above mentioned, both the disputed and undisputed, as they are above designated; and for every new bond of \$1,000 issued, there shall first be deposited in the State Treasury the following amounts of each of said kinds of bonds—that is to say:

Of the old bonds issued to the Real Estate and State Banks, and of the bonds funded under the act of 1863, excluding the Holford bonds, except for amount which is undisputed.....	\$931 95
Of the Holford bonds, for amount disputed.....	891 56
Of the Railroad Aid bonds.....	1,789 29
Of the Levee bonds.....	687 78
Total.....	\$3,800 58

The new bonds shall be issued in denominations of \$500 or \$1,000, at the option of the holders of the surrendered bonds, and similar provisions shall be made for securing the payment of the interest on the new bonds as is made by law for securing the payment of the interest on the new outstanding Loughborough bonds. We are to pay all expenses in the matter, except that of printing the bonds.

This proposal is made for the approval of the Board of Finance, and subject to the approval of the Legislature.

Respectfully submitted,

JOHN D. ADAMS,
For self and J. E. REDFIELD.

To the Board of Finance, City of Little Rock.

STATE CAPITOL, LITTLE ROCK.

This involves the wiping out of the entire disputed debt and the funding of whatever may appear to be the undisputed debt, with the exceptions noted in the proposal, the amount of new bonds being sufficiently above the nominal amount of debt to secure 6 per cent. interest from the start, while the actual interest shall be only 2 per cent. for the first year, 3 per cent. for the second, and 4 per cent. for the third. The Governor, in making a statement

of the matter to the public on the 8th of October, gave the following as the actual amount of undisputed debt in the hands of private creditors as it would stand January 1, 1878. (see page 38).

This would make the amount of bonds to be issued under the proposed plan \$3,243,117, in stead of \$4,000,000, as roughly stated in the proposal of Adams and Redfield, and the proportion of disputed bonds to be surrendered

CLASSES OF BONDS.	Principal.	Interest.	Total.
Five per cent. State Bank bonds, 1837.....	\$22,000	\$43,001	\$65,001
Six per cent. " " 1838.....	108,000	225,120	333,120
Six per cent. Real Estate Bank bonds.....	45,000	89,550	134,550
Six per cent. funding bonds, 1869.....	941,000	327,138	1,278,138
Six per cent. funding bonds, 1870, exclusive of those issued on account of Holford debt.....	777,000	205,020	982,020
Undisputed indebtedness on account of Holford bonds.....	121,337	103,257	229,594
Aggregate.....	\$2,014,337	\$1,008,086	\$3,022,423

correspondingly larger, in order to secure the surrender of the entire amount, which is about \$11,474,501. This proposal, as thus construed, was accepted by the Board of Finance, subject to ratification by the Legislature, which does not meet until January, 1879, unless a special session is called. Regarding the legal status of the disputed bonds, it should be stated that the Supreme Court of the State has declared the act under which the Railroad bonds were issued unconstitutional, and the United States Circuit has decided that the Levee bonds were lawfully issued. The arrangement for securing the surrender of these bonds is altogether in the hands of the creditors, who propose the plan of settlement. This plan of settlement failed at the end of the year, owing to the refusal of certain bondholders of the most questionable class of the indebtedness to accede to the proposition, and not to the opposition of a majority of the Legislature or of the people.

There was no State election this year, and no political action by the parties. The sessions of the Legislature being biennial, no official reports covering the operations of the year have been submitted.

ARMY, UNITED STATES. Pursuant to the act of Congress of August 15, 1876, the Army has been reduced to a maximum of 25,000 men. As this act provided that no reduction should be made in the cavalry, it became necessary to reduce the other arms of the service to very scant dimensions. By General Orders issued May 19, 1877, the maximum strength of all organizations, excepting cavalry, was fixed as follows:

Enlisted men of engineers.....	200
Enlisted men of ordnance.....	350
Ordnance-sergeants at posts.....	114
Commissary-sergeants at posts.....	143
Hospital-stewards.....	200
West Point detachment.....	200
Recruiting-parties.....	300
Indian scouts.....	600
Guard at military prison.....	74
Sixty-five enlisted men per battery for 5 light batteries of artillery.....	325
Forty-eight enlisted men per battery for 5 batteries at the artillery school.....	240
Thirty-eight enlisted men per battery for 50 batteries of artillery, and 5 enlisted men for non-commissioned staff at each of 5 regimental headquarters of artillery.....	1,925
Thirty-seven enlisted men per company for 250 companies of infantry, and 5 for non-commissioned staff at each of 25 regimental headquarters of infantry....	9,375

In order to effect the necessary reduction, there was ordered a suspension of recruiting, and the discharge of all soldiers whose terms of enlistment would expire before October 31, 1877. Since July 1st, recruiting has not been resumed, excepting to a limited extent.

The actual strength of the Regular Army, according to returns received by the Adjutant-General, October 12, 1877, was as follows:

General officers.....	11
General staff-officers.....	506
Hospital-stewards.....	186
Engineer battalion.....	199
Ordnance enlisted men.....	346
Enlisted men of staff corps.....	781
Ten regiments of cavalry:	
Officers.....	439
Enlisted men.....	7,911
Cavalry.....	8,350
Five regiments of artillery:	
Officers.....	284
Enlisted men.....	2,321
Artillery.....	2,605
Twenty-five regiments of infantry:	
Officers.....	877
Enlisted men.....	8,778
Infantry.....	9,655
Besides which there are reported as non-commissioned staff, unattached to regiments, Military Academy, recruits unassigned, Indian scouts, and prison-guard, amounting to—men.....	1,577
Signal Corps.....	404
Retired officers.....	301
And captain United States Army, by act of Congress..	1
Aggregating officers and men.....	24,501

The force available for war is made up of the cavalry, artillery, and infantry regiments, amounting to 20,610 officers and men, to which should be added the 11 general officers, and the officers of the general staff serving with them, together with 570 Indian scouts.

The country is divided into 10 military departments, each of which is commanded by a brigadier-general or by the senior colonel serving in the department, specially empowered by the President of the United States. These departments are then grouped into three geographical divisions, commanded by the lieutenant-general and by two of the major-generals.

The Military Division of the Missouri, Lieutenant-General Sheridan commanding, embraces the Departments of Dakota, Platte, Missouri, and Texas, commanded respectively by Brigadier-Generals Terry, Crook, Pope, and Ord.

The Military Division of the Atlantic, Major-General Hancock commanding, comprises the Department of the East, commanded by General Hancock; of the South, by Colonel T. H. Ruger; and of the Gulf, by Brigadier-General Augur.

The Military Division of the Pacific, Major-General McDowell commanding, includes the Department of California, commanded by

General McDowell; of the Columbia, by Brigadier-General Howard; and of Arizona, by Colonel A. V. Kautz.

General Sheridan's command embraces substantially the vast territory west of the Mississippi, to and including the Rocky Mountains, from the Canadian line to the Mexican frontier, containing the great majority of the nomadic and hostile Indians of the country; headquarters, Chicago, Ill. General Hancock's comprises, substantially, all the country east of the Mississippi, bordering the Northern lakes, the Atlantic and Gulf coasts; headquarters, New York City. General McDowell's includes the States and Territories bordering on the Pacific Ocean; headquarters, San Francisco, Cal.

Besides the above, there is the Department of West Point, commanded by Major-General Schofield, which is somewhat exceptional in its nature, being designed to give due importance to the Military Academy, and to invest the commanding general thereof with power to exercise all the functions necessary to secure thorough discipline and administration.

The Secretary of War recommends that authority be given to the President to increase the strength of the depleted companies now embraced within the Army organization. He says:

The Army now has a sufficient number of officers, regiments, and companies; but the companies are too small. I recommend that the President be authorized to recruit all companies of infantry to 50 men each, and all batteries of artillery to 75 men each, with power, in his discretion, in case of emergency, to increase the former to 100 and the latter to 122 men each. We may safely assume that such a discretion would be exercised with becoming moderation and prudence; and the result would be that the grand aggregate would never, in any probable emergency arising in the recess of Congress, exceed 40,000 men, while 80,000 would suffice to meet any demands upon the Army that can at this time be certainly anticipated.

It must not be forgotten, in considering this question, that there must always be a large percentage of an army not available for duty in the field. Besides the number of soldiers on the sick-list, and those employed on detached duty of various kinds, a large number of men are always needed for guard and garrison duty. For example: we have now about 226 military posts, at most of which men are necessarily employed continually in taking care of and guarding government property. We have some 19 arsenals and armories, besides about 40 storehouses or depots, at each of which is stored property of great value belonging to the Government. The vast interests involved in the protection of the property of the United States at these numerous and widely-scattered places renders it necessary to keep a considerable force on duty for that purpose, and therefore withdrawn from other service.

The number of desertions during the year ending June 30, 1877, was 2,516; 1876, 1,844; 1875, 2,521; 1874, 4,606; 1873, 7,271.

The Signal Service has continued its usefulness in the diffusion of scientific and practical information. The duties now devolved upon that service are, besides the instructions in military signaling and telegraphy, to conduct the

observation and report of storms; to report upon the average depth of water in the great rivers of the interior, and give notice of their dangerous rises; to give assistance to the life-saving service on the coast; and to construct and repair military telegraph lines. There have been maintained, during the year, 159 stations of observation. Of the published "Indications," 86.16 per cent. have proved correct. The average of 90 per cent. is believed to be attainable. These reports appear regularly in almost all of the daily newspapers of the country, and no great storm has passed over the United States without pre-announcement.

The publication of the official records of the Civil War has been diligently and systematically pursued during the past year. Since the beginning of the work, several years ago, there have been published 47 volumes, containing more than 33,000 pages, of which 37 volumes relate to the United States, and 10 to the Confederacy. The war-records of the Confederate States have been published up to the end of the year 1861. A very large amount of materials remains for publication. It is the intention to print all records pertaining to the war. But there are important documents in the possession of State and private societies and individuals. This fact explains the marked difference between the quantity of Federal and that of Confederate documents that have been issued; since the records are published in chronological order, and many early ones relating to the Confederacy are not yet in the possession of the Government.

The estimates of the War Department for the fiscal year ending June 30, 1878, amount to \$43,115,443, as follows:

Salaries, contingent expenses, and postage.....	\$1,193,884
Military establishment.....	31,597,270
Public works.....	7,953,078
Miscellaneous.....	2,371,210

The most important army operations during the year were those against the Nez Percés Indians under Chief Joseph. The great body of the Nez Percés have been for several years on the Lapwai Reservation, in the northwest part of Idaho Territory. But ever since 1863, Joseph, at the head of about 500 Indians, has claimed the boundaries of the reservation as established by the Stevens treaty of 1855, more especially that part of it west of Snake River, in Oregon, and known as the Wallowa Valley. Though this valley was never the home of Joseph and his followers, who usually lived on Salmon and Snake Rivers, nevertheless they persisted in their claims to it. It was conceded to them by President Grant, in his executive order of June 16, 1873; but on June 10, 1875, this order was revoked, and all that part of Oregon west of Snake River, embracing the Wallowa Valley, was restored to the public domain. It has been partly surveyed; forms a part of Union County, Oregon, and settlers have acquired legal titles under the laws of the United States.

Early in 1877 the Government decided to have Joseph and his band removed from the Wallowa to the reservation in Idaho. Orders were accordingly given to General Howard "to occupy Wallowa Valley in the interest of peace," and efforts were made by that officer to induce Joseph to comply with the wishes of the Government. On the 21st of May, General Howard reported that he had had a conference with Joseph and other chiefs on the 19th, and that "they yielded a constrained compliance with the orders of the Government, and had been allowed 30 days in which to gather in their people, stock," etc. On June 14th the Indians belonging to Joseph from Wallowa, White Bird from Salmon River, and Looking-Glass from Clearwater, had assembled near Cottonwood Creek, on the border of the reservation, apparently in compliance with their engagement, when news reached General Howard, who was at Fort Lapwai, that four white men had been murdered on John Day's Creek, to the south of this reservation, by some Nez Percés, and that White Bird had proclaimed that he would not go on the reservation. Information of other murders was also received. General Howard now dispatched two cavalry companies, with 99 men, under Captain Perry, to the scene of disorder. The latter officer found the Indian camp at White Bird Cañon, and on June 17th made an unsuccessful attack, with a loss of one lieutenant and 33 men.

General Howard now determined to take the field in person, and, having collected a force of about 400 men, on July 11th discovered the Indians in a deep ravine on Clearwater, near the mouth of Cottonwood Creek, where he at once attacked them. On the next day the Indians were fairly defeated and driven in confusion, losing their camp and much of their provisions. General Howard reported 23 warriors killed, "at least twice as many" wounded, and 23 taken prisoners, besides 17 women and children captives. His own loss was 13 men killed, and 2 officers and 22 men wounded. General Howard's force was about 400; the Indians numbered 400 warriors.

On the 17th Joseph began his famous retreat eastward toward the Buffalo country by the Lo-Lo trail, which, in the language of General Sherman, is "one of the worst trails for man and beast on this continent." General Howard delayed pursuit for some days, to give increased security to the people in his rear against apprehended danger, and to enable his own reinforcements to come within reach. He then reorganized his command, sending one force up north into the Spokane country; another was held in reserve near the Indian reservation; and he himself, with a select force, started in pursuit on the Lo-Lo trail. The Indians reached Rawn's Fort and passed up the Bitter-Root Valley with a large herd of horses. Colonel Gibbon, who was then in Montana, started in pursuit with 15 officers and 146 men, who were afterward joined by 34 citizens. He overtook

the Indians on a branch of Big Hole or Wisdom River, and attacked them August 9th; but being greatly outnumbered, he was compelled to assume the defensive, till the Indians withdrew on the night of the 10th. Colonel Gibbon reported his loss at 2 officers, 6 citizens, and 21 enlisted men killed, and 5 officers, 4 citizens, and 31 men wounded. The enemy's loss was about 90 killed, besides a large number wounded.

On the morning of the 11th General Howard arrived with a small escort, and resumed the pursuit. On August 20th, when General Howard was at Camas-Prairie, the Indians turned on him, stampeded and ran off his pack-train, which was partly recovered by his cavalry. The Nez Percés, after leaving Henry's Lake in Montana, passed up the Madison and Fire-Hole Basin into the National Park, and crossed the divide and the Yellowstone River above the falls and below the lake. They next crossed the Snowy Mountains and moved down Clark's Fork, with General Howard in close pursuit. On September 18th Colonel Sturgis had a fight with them on the Yellowstone below the mouth of Clark's Fork, capturing several hundred of their horses, and killing a number of the Indians. He continued the pursuit. The Indians crossed the Yellowstone, passed north through the Judith Mountains, and reached the Missouri River near Cow Island on September 22d. On the following day they crossed the Missouri, and continued north toward the British boundary.

Meanwhile General Howard had sent word to Colonel Miles, at Tongue River, of the flight of the Indians. Colonel Miles at once moved across the country with such troops as he had at hand, and, turning north, crossed the Missouri River near the mouth of the Mussel-Shell. On September 30th he overtook the Nez Percés near the mouth of Eagle Creek, and, after a severe engagement, in which 2 officers and 21 men were killed, and 4 officers and 38 men wounded, he captured the entire band of Indians, numbering between 400 and 500 men, women, and children. The Indians in this fight lost, in killed, 6 of their leading chiefs and 25 warriors, besides 46 wounded. General Howard, with a small escort, arrived on the field a short time before the surrender, but did not exercise any command.

"Thus," says General Sherman, "has terminated one of the most extraordinary Indian wars of which there is any record. The Indians throughout displayed a courage and skill that elicited universal praise; they abstained from scalping; let captive women go free; did not commit indiscriminate murder of peaceful families, which is usual; and fought with almost scientific skill, using advance and rear guards, skirmish-lines, and field-fortifications. Nevertheless, they would not settle down on lands set apart for them ample for their maintenance; and, when commanded by proper authority, they began resistance by murdering

persons in no manner connected with their alleged grievances."

ASIA. The area and population of the dif-

ferent divisions of Asia were as follows in 1877 (*see* Behm and Wagner, "Bevölkerung der Erde," iv, Gotha, 1877):

DIVISIONS AND SUBDIVISIONS.	AREA, IN SQUARE MILES,		POPULATION	
	Of Divisions.	Of Subdivisions.	Of Divisions.	Of Subdivisions.
SIBERIA	4,824,500	3,429,000
Russian Central Asia	1,279,600	4,650,218
Lake Aral	25,900
Territory of the Turkomans	79,700	175,000

Total	17,291,300	824,543,500

The war between Russia and Turkey, which occupied the attention of all Europe during 1877, was also of great interest to a large part of Asia. At the same time that the Russians entered upon Turkish territory in Europe, they crossed from the Caucasian provinces into Turkish Armenia. Although at first decidedly successful, they afterward met with several reverses, which forced them to retreat to the border. In October they again began to advance, and in November took the fortress of Kars. This made their campaign in Asia a complete success. (*See* TURKEY.)

Besides the vast territories of Russia and Turkey in Asia, the war also affected the entire Mohammedan world on that continent. Persia, although not taking an active part in the struggle, was known to sympathize with

Russia. In Afghanistan, Turkistan, and India the struggle was watched with the greatest interest by the Mohammedan population, and large contributions of money, with expressions of sympathy, were sent to Constantinople. (*See* MOHAMMEDANS.)

An event which in its ultimate results may again change the political map of Asia, was the death of the Amir Yakub Beg of Kashgaria. The Chinese troops having, at the close of 1876, completely subdued the rebellion in Soongaria, after a campaign of ten years, proceeded to attack Yakub Beg in his own territory. In the midst of the campaign he died—by an assassin's hand, it is said. (*See* KASHGARIA.)

In India, Lord Lytton, in the presence of a vast assembly of native chiefs, proclaimed the

assumption of the title of Empress of India by Queen Victoria, on January 1st. The proclamation was made at Delhi, and conducted with all the pomp and splendor of an Eastern court. The political division of India was changed in 1877 by the incorporation of Oude in the Northwest Provinces. Large districts of India and China were visited by severe famines in 1877. In India they prevailed chiefly in the presidencies of Madras and Bombay, and the distressed districts in these two provinces included an area of 138,700 square miles, and a population of 27,000,000. The measures adopted by the Government for the relief of the sufferers diminished many of the worst features of the distress, if they were not able entirely to alleviate the suffering. In China, the Government contributed very little, and the suffering produced by the famine, as described by missionaries, was truly horrible. (See INDIA and CHINA.)

The relations of India with its neighbors on the west, which in the beginning of the year promised to be of a friendly character, afterward became very threatening. Even the Khan of Kelat, who during the preceding year had given proofs of friendship to India, was reported to entertain hostile feelings toward the British, while Shere Ali, the Amir of Cabul, openly negotiated with the Russians. The occupation by the Indian Government of the highly-important town of Quetta, in Beloochistan, in the beginning of the year, and of the towns of Dadur and Mitri later on, was considered an important step toward the ascendancy of British influence in Central Asia, and was bitterly resented by the Khan of Kelat. In this feeling he was strengthened by the Amir of Cabul, who called upon him to join in an alliance with the Russians. This the Khan of Kelat refused to do, and even Shere Ali was reported to have been dissuaded from his negotiations with Russia by a special envoy sent to him from Constantinople. (See ARGHANISTAN and BELOOCHISTAN.)

Japan was, in 1877, the scene of a rebellion which, in point of numbers engaged, and its duration, was certainly the most important that the Government of the Mikado had yet encountered. (See JAPAN.)

ASTRONOMICAL PHENOMENA AND PROGRESS. *The Discovery of Oxygen in the Sun.*—The *American Journal of Science* for August, 1877, contains an important article by Prof. Henry Draper on the discovery of oxygen in the sun by photography. In previous experiments the presence of the various elements found in the sun was indicated solely by dark, or absorption, lines in the solar spectrum. The discovery of Dr. Draper consists in demonstrating that oxygen reveals itself by *bright* lines or bands, and does not give absorption-lines like the metals. "We must therefore," the discoverer remarks, "change our theory of the solar spectrum, and no longer regard it merely as a continuous spectrum with certain

rays absorbed by a layer of ignited metallic vapors, but as having also bright lines and bands superposed on the background of continuous spectrum. Such a conception not only opens the way to the discovery of others of the non-metals, sulphur, phosphorus, selenium, chlorine, bromine, iodine, fluorine, carbon, etc., but also may account for some of the so-called dark lines by regarding them as intervals between bright lines." Dr. Draper continues:

From purely theoretical considerations derived from terrestrial chemistry and the nebular hypothesis, the presence of oxygen in the sun might have been strongly suspected, for this element is currently stated to form eight-ninths of the water of the globe, one-third of the crust of the earth, and one-fifth of the air, and should therefore probably be a large constituent of every member of the solar system. On the other hand, the discovery of oxygen and probably other non-metals in the sun gives increased strength to the nebular hypothesis, because to many persons the absence of this important group has presented a considerable difficulty.

At first sight it seems rather difficult to believe that an ignited gas in the solar envelope should not be indicated by dark lines in the solar spectrum, and should appear not to act under the law, "A gas, when ignited, absorbs rays of the same refrangibility as those it emits." But, in fact, the substances hitherto investigated in the sun are really metallic vapors, hydrogen probably coming under that rule. The non-metals obviously may behave differently. It is easy to speculate on the causes of such behavior, and it may be suggested that the reason of the non-appearance of a dark line may be, that the intensity of the light from a great thickness of ignited oxygen overpowers the effect of the photosphere, just as, if a person were to look at a candle-flame through a yard thickness of ignited sodium vapor, he would only see bright sodium lines, and no dark absorption-lines. Of course such an explanation would necessitate the hypothesis that ignited gases, such as oxygen, give forth a relatively large proportion of the solar light. In the outburst of *T Coronæ*, Huggins showed that hydrogen could give bright lines on a background of spectrum analogous to that of the sun.

The Sun-Spot Period.—Prof. Wolf's *Astronomische Mittheilungen*, No. xlii., February, 1877, contains an exhaustive discussion of sun-spot observations from 1749 to 1877. The first thirty-five years average ninety days of observation per annum; the next thirty-five, seventy; from 1819 to 1848, two hundred and sixty; and from 1849 to the close of 1876, three hundred and seven: making, in one hundred and twenty-eight years, twenty-two thousand days in which the number of sun-spots had been determined. Some earlier records, from 1610 to 1748, are also discussed. The mean length of the twenty-four periods is found to be 11.1 years, subject, however, to considerable variation; the shortest being 7.3, and the longest 16.1 years. Dr. Wolf has found, moreover, that the average time of increase—from minimum to maximum—is but four and one-half years, while that of decrease is six and one-half years. From the whole discussion he finds evidence of a longer sun-spot period, which he fixes at about one hundred and seventy-eight years. This cycle, as he re-

marks, is equal to six periods of Saturn, fifteen of Jupiter, or sixteen of the eleven-year sun-spot periods.

In the *Astronomische Nachrichten*, Nos. 2,123 and 2,124, Dr. Spoerer, of Potsdam, gives some recent results of his solar observations. A striking feature of the sun's surface in 1876—an epoch of spot minimum—was the relatively high chromosphere in the polar regions, though large prominences were less numerous than usual. One solar explosion was witnessed—a jet of flame which shot up suddenly and remained visible seven minutes. Dr. Spoerer twice observed prominences at points on the limb where spots almost immediately afterward made their appearance. The spots were generally observed within thirty degrees of the equator, though found occasionally at higher latitudes.

Mass and Density of Mercury.—As the perihelion of Encke's comet is in the vicinity of Mercury's orbit, the occasional near approach of the two bodies furnishes data for determining the disturbing influence of the planet. A new and greatly reduced value of Mercury's mass has thus been obtained by Dr. von Asten after a thorough discussion of the comet's perturbations. According to this astronomer, the mass of Mercury is to that of the sun in the ratio of 1 to 7,600,000. The corresponding density is 0.88, that of the earth being 1. This density is slightly greater than that of Mars, and less than that of Venus.

The Late Transit of Venus.—The reduction of the transit observations of December 8, 1874, has been patiently looked for by the scientific public. A preliminary estimate, based on a few of the French observations, gave a parallax of $8''.879$, corresponding to a distance somewhat less than 92,000,000 miles. It now appears, however, that this value (of the parallax) must be materially diminished. In October, 1877, the official report of Sir George B. Airy, the astronomer-royal, on the observations made by the expeditions sent out by the British Government was given to the public. The general result, derived from a discussion of all the British observations, is a parallax of $8''.760$, from which the astronomer-royal finds the sun's distance to be 93,300,000 miles. This value of the parallax is considerably less than was expected by astronomers—less by one-tenth of a second than that obtained in various methods by the most trustworthy researches. Thus we had :

Leverrier's value, deduced from his planetary theories	$8''.860$
Powalky's, from the transit of 1769	$8''.860$
Foucault's, from the velocity of light	$8''.860$
Newcomb's, mean value by various methods	$8''.843$

This discrepancy, it must be confessed, is somewhat perplexing, and other reports will be looked for with undiminished interest. It is proper to add that Sir George Airy's discussion takes no account of the photographs obtained by the British observers. A large number of these sun-pictures are yet to be ex-

amined, and the details of the process are reserved for a separate report.

New Determination of the Diameter of Venus.—A. W. Downing, Esq., of Dublin, Ireland, has recently communicated to the Royal Astronomical Society the result of his discussion of the observations of the vertical diameter of Venus made with the Washington Transit Circle during the years 1866-'72, inclusive. The true diameter of the planet, derived from this discussion, is 7,469 miles—less by 150 miles than the value found by Prof. Peirce from observations made by the Washington Mural Circle during the year 1846. The density corresponding to this diameter is slightly greater than that of the earth.

The Mass of the Earth.—It is well known that a fixed relation exists between the solar parallax and the mass of the earth. The value of the latter, as derived from Sir George Airy's determination of the former, is $333,455$, the mass of the sun being unity.

The Satellites of Mars.—On the night of August 11, 1877, Prof. Asaph Hall, of the United States Naval Observatory, noticed a small star near the disk of Mars, and recorded its position. Cloudy weather prevented any further observations till the night of the 16th, when, at $11^h\ 42^m$, a star of the thirteenth or fourteenth magnitude was again observed very close to the planet. The relative places of the two bodies were carefully noted, and after an interval of nearly two hours the planet and star were a third time examined, when it was found that the latter was moving with the former. Prof. Hall at once concluded that he had discovered a Martial satellite. On the morning of the 17th the observations were submitted to Prof. Simon Newcomb, who, from the data furnished by Prof. Hall, calculated the period of the satellite at nearly thirty-one hours. This indicated that the body would pass behind Mars on or before the night of the 17th. That evening it was accordingly looked for in vain. About 1 o'clock, however, on the morning of the 18th it reappeared on the opposite side of the planet's disk. On the evening of the same day it was again found very nearly in its predicted place, and its position was determined by Profs. Hall, Newcomb, and Harkness.

About 4 o'clock on the morning of the 18th Prof. Hall discovered a second satellite, interior to the first, and of somewhat superior brightness. On the same day these discoveries were communicated to Prof. Joseph Henry, LL. D., Secretary of the Smithsonian Institution, by whom they were announced to the principal astronomers both in Europe and America.

From a series of observations extending to the morning of August 21st, the elements of the orbits of both satellites were computed by Prof. Newcomb. The distance of the inner one from the centre of Mars is about 5,800 miles, its period seven hours and thirty-eight minutes; the distance of the outer satellite is nearly 15,000

miles, and its period thirty hours and fourteen minutes. The inclination of their orbits to the plane of the ecliptic is about twenty-five degrees.

Before the discovery of these satellites the determination of the mass of Mars was a problem of much difficulty, the planet being so small as to have little effect in disturbing the motions of other bodies. Burckhardt's determination gave the ratio of its mass to that of the sun as 1 to 2,680,337. Leverrier, after immense labor, found the ratio to be that of 1 to 3,000,000—a close approximation to Newcomb's value derived from observations of the exterior satellite, viz., γ , that of the sun being unity. The density corresponding to a diameter of 4,200 miles, this value of the mass is 0.715.

The Martial satellites are the smallest members of the planetary system hitherto discovered. Prof. Newcomb, on the assumption that their surfaces have the same reflective power as that of Mars, infers that their diameters cannot much exceed ten miles.

The most remarkable fact in regard to these bodies is the extremely short period of the inner satellite, which completes three revolutions in less than a Martial day. It seems difficult to reconcile this rapidity of motion with the nebular hypothesis as proposed by Laplace.

Within four months from the date of their discovery these diminutive bodies were lost to view by reason of the increasing distance of Mars from the earth. Fortunately, however, Prof. Hall had secured about fifty observations of each, by the discussion of which he will be enabled to determine the elements of their orbits with a good degree of accuracy. The satellites will not probably be again observed till 1879.

New Minor Planets.—Since the issue of our last volume the following names have been given to minor planets discovered before 1877: No. 150, Nuwa; 161, Athor; 162, Laurentia; 163, Erigone; 164, Eva; 168, Sibylla; and 169, Zelia. Nine new members of the group were discovered during the year, bringing the number up to 178: Myrrha, No. 170, was first seen by M. Perrotin, at Toulouse, on the 10th of January; No. 171 by Borelly, at Marseilles, January 13th; Nos. 172 and 173 by the same astronomer, February 10th and August 2d; No. 174 by Watson, at Ann Arbor, September 3d; Idunna, No. 175, by Peters, at Clinton, October 13th; No. 176 by Henry, at Paris, November 5th; No. 177 by Palisa, at Pola, November 6th; and No. 178 by Watson, at Ann Arbor, November 12th. Hind, of London, Borelly, of Marseilles, and Palisa, of Pola, are now each credited with ten asteroids; Goldschmidt with fourteen, Luther with twenty, Watson with twenty-one, and Peters with twenty-seven. The whole number is distributed among thirty-two observers. The elements of those recently discovered, so far as published up to November, 1877, are as follows:

No.	Name.	Mean Dist.	Period.	Eccen.	Inclin.	Long. Per.	Lon. Aa. Node.
			Days.		° ' "	° ' "	° ' "
159	Æmilia....	3.125	2018.06	0.116	6 5	100 40	185 05
161	Athor.....	2.876	1887.72	0.138	9 10	312 56	18 33
162	Lurentia...	3.021	1917.95	0.165	6 8	147 44	38 15
163	Erigone....	2.407	1863.78	0.090	4 11	226 15	152 7
164	Eva.....	2.591	1523.71	0.321	24 29	0 40	77 29
165	Loreley...	3.129	1489.82	0.078	11 10	282 24	804 1
166	Rhodope...	2.720	1683.46	0.289	11 41	30 52	129 15
167	Urda.....	3.216	2109.12	0.312	1 42	32 39	170 7
168	Sibylla....	3.378	2267.80	0.067	4 35	5 43	209 36
169	Zelia.....	2.358	1822.55	0.131	5 81	326 35	354 35
170	Myrrha....	2.551	1488.22	0.065	14 21	98 37	301 18
171	3.147	2029.31	0.141	2 30	151 21	100 54
172	2.379	1840.68	0.101	9 41	326 17	331 48

It will be noticed that the number of asteroids discovered per annum is now gradually decreasing. Thus, the numbers in 1875, 1876, and 1877, were 17, 12, and 9, respectively. Those recently discovered are small, generally of the twelfth or thirteenth magnitude. The orbit of Eva, No. 164, is remarkable both for its eccentricity and inclination.

The Elements of Gerda.—In the *Astronomische Nachrichten* for November 10, 1877, we find an interesting discussion of the observations of Gerda, the 122d member of the group, by John N. Stockwell, Esq., of Cleveland, Ohio. This planet was discovered by Dr. Peters, at Hamilton College, New York, in 1872, and the observations of that year extend from the 31st of July to the latter part of September. Observations were also obtained in 1873, 1876, and 1877. Mr. Stockwell obtained elements which almost perfectly represent the entire series of observations excepting those of 1873. It was impossible, however, to find an orbit which would harmonize the observations of that year with those of 1872, 1876, and 1877. The conclusion was accordingly reached that the planet observed for Gerda in 1873, not far from its computed place, was really a different body never before observed. In order to test this question, Mr. Stockwell computed elements from the observations of 1873 alone. The elements of the two orbits are as follows:

EPOCH, 1873, NOVEMBER, 7.0 M. T., WASHINGTON.

	Planet of 1873.	Gerda.
	° ' "	° ' "
Mean longitude	35 4 56.6	35 47 13.55
Mean anomaly	181 50 19.1	187 27 44.50
Longitude of perihelion	213 14 87.5	208 19 29.05
Longitude of ascending node	173 58 9.4	178 59 39.87
Inclination	1 36 2.5	1 36 18.97
Angle of eccentricity	1 58 39.8	2 0 51.09
Mean daily motion	618".9390	614".3842
Mean distance	3".2205	3".2190

Mr. Stockwell thus concludes his interesting discussion:

If we compare these elements, we shall at once perceive that four elements of the two orbits are almost identical, namely, the mean distance, the eccentricity, the inclination, and the longitude of the node; while the transverse axes form an angle of about five degrees with each other, and the mean anomaly of Gerda is greater than that of the other planet by more than five and a half degrees, and its mean lon-

gitude is greater by about seven-tenths of a degree. Although the two bodies are apparently so close together, we must remember that an arc of their orbits amounting to seven-tenths of a degree implies a distance of about 3,600,000 miles. It is perhaps impossible to decide with certainty in regard to the identity of the planet observed in 1873 with that of Gerda; the close similarity of most of the elements would seem to indicate an identity, while the dissimilarity of the other elements and the impossibility of representing the observations indicate, perhaps with equal force, a dissimilarity. If there are really two planets moving in orbits so extremely near together, it must happen in the course of time, unless their mean distances are exactly the same, that they will approach each other so closely that their mutual perturbations will cause them to unite and form a single planet.

Phenomena of Jupiter's Satellites.—The *Monthly Notices* of the Royal Astronomical Society for April, 1877, contains an interesting communication from Charles Todd, Esq., of the Adelaide Observatory, South Australia, on the phenomena of Jupiter's satellites, with notes on the physical appearance of the planet. "On one or two occasions," this astronomer remarks, "when a satellite has been on the point of occultation, it has appeared to be projected on the disk of the planet; or rather, as it appeared independently to my assistant (Mr. Ringwood) and myself, as if seen *through* the edge of the planet, as if the latter were surrounded by a transparent atmosphere laden with clouds. I noticed this on two occasions, viz., on August 21st, at the disappearance of the first satellite, when the satellite was distinctly seen on or through the edge of the disk for about two minutes before disappearance—I say *through* the edge of the disk, because the satellite was less bright than in a similar position at a transit; and again at the disappearance of the second satellite on August 28th. Mr. Ringwood also noticed it on August 12th and 19th, at occultation of first and third satellites. In each instance the planet was splendidly defined—better than I ever remember to have seen it in England."

In regard to changes observed in the appearance of Jupiter Mr. Todd continues: "I was much impressed on some nights with the sudden and extensive changes in the cloud-belts, as though some tremendous storm was in progress on the planet's surface, changing the form and dimensions of the cloud-belts in an hour or two, or even less."

The Physical Condition of Jupiter.—The observations of Mr. Todd, especially those of August 21st and 28th, 1876, appear to strengthen the views advanced by Mr. Proctor in respect to Jupiter's present condition. These views are presented at some length in *THE POPULAR SCIENCE MONTHLY* for May, 1877. The appearance of Jupiter's surface, the motion of its cloud-masses, etc., indicate, according to Mr. Proctor, that the planet is much less advanced in its physical history than Mars and the earth; that it has a very extensive atmosphere, probably from 6,000 to 11,000 miles in

depth; that the spots have proper motions with respect to the surface, and do not indicate the true rotation-period of the solid or liquid planet; that the nucleus is intensely hot; and, finally, that this giant member of our system "may justly be described as a miniature sun, vastly inferior in bulk to our own sun, inferior to a greater degree in heat, and in a greater degree yet in lustre, but to be compared with the sun—not with the earth—in size, in heat, and in lustre, and, lastly, in the tremendous energy of the processes which are at work throughout his cloud-laden atmospheric envelope."

The Rotation of Saturn.—In the *Astronomische Nachrichten* for August 16, 1877, Prof. Asaph Hall gives a new determination of the length of the Saturnian day. The value hitherto accepted, and said erroneously to be Sir William Herschel's final determination, was $10^h\ 29^m\ 16^s.8$ —nearly fifteen minutes greater than the period found by Prof. Hall. On the night of December 7, 1876, a bright spot was noticed on the ball of Saturn. It was two or three seconds in diameter, round and well defined, and of a brilliant white color. From December 7, 1876, to January 2, 1877, nineteen observations were secured: twelve at Washington, by Profs. Hall, Eastman, and Newcomb; four at Cambridgeport, Mass., by Mr. A. G. Clark; one at Poughkeepsie, N. Y., by Miss Mitchell; one at Albany, N. Y., by Mr. Boss; and one at Hartford, Conn., by Mr. Edgecomb. A discussion of these observations gives $10^h\ 14^m\ 23^s.8$ as the period of rotation, with a probable error of $2^s.3$. Prof. Hall remarks, however, that "this value has been found by assuming that the spot had no proper motion on the surface of the planet. Whether this was really the case or not we cannot determine from the observations."

Appearance of Saturn's Rings.—Prof. Hall, of Washington, commenced a series of observations of Saturn's satellites in 1875, which he continued till January, 1877. During this time occasional attention was given to the system of rings, especially after the publication of Mr. Trouvelot's description of their phenomena as observed by himself. Strangely enough, however, Prof. Hall has not been able to see the slightest trace of certain peculiarities noticed by Mr. Trouvelot. The former remarks that during a summer in Washington there are not more than six or eight nights in which the 26-inch refractor gives excellent images of Saturn. "On these nights," he says, "the appearance of the planet is very beautiful; but my experience is that on these rare nights one will see fewer strange phenomena about the ring and the shadows than when the images are blurred and indistinct. Still I do not wish to be understood as denying the reality of what others have seen and described. I can only say that during the past two years I have not been able to see some of these things." Prof. Hall adds:

The appearances which I have seen, and which may be worthy of notice, are the following:

1. The principal division of the ring has been easily visible to the present time (January 10, 1877), but I have not certainly seen any other division, although at times there is an appearance of slight markings on the ring which may be caused by other divisions.

2. The dusky ring when seen on a good night appears remarkably bright. Although the edge of the ring will be turned toward the earth early in 1878, and the position is rapidly becoming more unfavorable for observation of the dusky ring, I have noticed this brightness more especially in 1876. It is possible that this is only a result of the great light-power and good definition of our glass. The appearance of the dusky ring is well described by Mr. Trouvelot as "somewhat like particles of dust floating in a ray of light traversing a dark chamber."

3. The outline of the shadow of the ball on the ring, as I have said, always appears of a regular and continuous curvature, but the convexity of this outline is turned toward the ball, and not away from it, as it is usually drawn, and as we ought to see it if the surface of the ring is a plane surface. This shadow of course appears on different sides of the ball before and after opposition, and I have examined it in both positions and always with the same result, viz., the convexity of the outline is turned toward the ball.

The phenomenon here described may possibly be explained by regarding the system of rings as lenticular in form.

Orbit of Hyperion.—Although Hyperion, the faintest satellite of Saturn, was discovered in 1848, the extreme difficulty of observing it has prevented the accurate determination of its orbit. In the *Astronomische Nachrichten* for June 19, 1877, Prof. Hall gives approximate elements derived from his observations in 1875 and 1876 with the Washington refractor of 26 inches aperture. Prof. Hall concludes that the plane of Hyperion's orbit does not coincide with that of the ring, but lies between those of Titan and Iapetus. The mean distance from the centre of Saturn is found to be 939,440 miles; the period $21^d\ 7^h\ 28^m\ 16^s$; and the eccentricity 0.125. The orbit is therefore more eccentric than that of any other satellite; the difference between the greatest and least distances of the body being greater than that between the mean distances of Hyperion and Titan, the large satellite next interior.

Comets.—The first comet of 1877 was discovered by M. Borelly, at Marseilles, on the morning of February 9th, and independently on the morning of the 10th by Pechüle, of Copenhagen. It passed its perihelion on the 19th of January, at a distance of 75,000,000 miles from the sun. For several days after its discovery it appeared as a circular nebulous body, without either tail or nucleus. Its apparent diameter, on the 20th of February, was 8', which corresponds to a true diameter of 63,000 miles. On the 16th and 17th of February Father Secchi examined the spectrum of this comet, and found in it the usual three bright cometary bands.

The second comet of 1877 was discovered at Strasburg, on the 5th of April, by Dr. Winnecke. It was well observed both in Europe

and America, and became sufficiently bright to be seen by the naked eye. The elements of its orbit resemble those of the comets 1827 II, and 1852 II. "The stellar nucleus appeared to be composed of about a dozen stars of the twelfth magnitude. The comet passed its perihelion about April 19th, at a distance of some 90,000,000 miles from the sun, being then rather farther from the earth."—*Christie's Observatory*, No. 1.

The third comet of the year was discovered by Lewis Swift, Esq., of Rochester, N. Y., at $9^h\ 30^m$ on the evening of April 11th. The same body was independently observed three days later by Borelly at Marseilles.

At the May meeting of the Royal Astronomical Society Lord Lindsay read a paper on the spectra of the second and third comets of 1877. That of the former showed three bright lines, which did not coincide with the positions of the lines of carbon. The spectrum of the nucleus, when examined with a low power, appeared continuous, but with a high power it gave three bright lines. According to Mr. De la Rue, the spectrum had lines very near the magnesium line.

D'Arrest's Comet.—The periodic comet of D'Arrest, whose last previous return was in 1870, was discovered by M. Coggia, at Marseilles, on the 8th of July, 1877, very near the position indicated by the ephemeris of Leveau. As this comet sometimes passes within a short distance of Jupiter, its motion is occasionally greatly disturbed by that planet, and hence the elements of its orbit are liable to great variation. The comet passed its perihelion on the 10th of May.

Another comet was discovered by M. Coggia on the 14th of September, three days after its perihelion passage. Its least distance from the sun was 1.576; greater than the mean distance of Mars.

The sixth comet of 1877 was discovered by Dr. Tempel, of the observatory of Arcetri, near Florence, on the 2d of October. Its perihelion passage occurred on the 27th of June, and its least distance from the sun was 1.024.

De Vico's comet of short period, whose return was due in 1877, entirely escaped detection, though carefully looked for by several astronomers.

The motion of Swift's comet, the third of 1877, is direct; that of the first, second, fifth, and sixth, retrograde.

Meteors.—The August meteors were seen, in 1877, wherever the state of the atmosphere permitted observations. On the night of the 10th Rev. J. L. Gay, of Parsons, Ka., counted 100 in an hour. The November shower was observed at Bloomington, Ind., on the morning of the 14th. The meteors, however, were by no means numerous. In an hour and fifty minutes—from $1^h\ 55^m$ to $3^h\ 45^m$ —fifty-four were counted by two observers. This was at the rate of thirty per hour. The morning of the

15th was cloudy. The meteoric shower of December 11th-12th, whose radiant is in the vicinity of Alpha Geminorum, was observed in Indiana, on the night of the 11th, by Prof. S. B. Wylie, of the State University. Between 10 and 12 o'clock fourteen meteors per hour were counted by one observer.

Aërolites and Meteoric Fire-balls.—About twenty or twenty-five minutes past 7 o'clock on the morning of January 3, 1877, a remarkable fall of meteoric matter occurred near Warrenton, in Warren County, Mo. No explosion was heard; but a peculiar sound, compared by some to the whistle of a distant locomotive, called the attention of observers to the descending meteorite. The direction of its motion appeared to be from northwest to southeast. Several limbs of a tree were broken off by its fall, and the meteorite itself was dashed into numerous fragments. The weight of the entire mass was nearly 100 lbs.; the specific gravity, 3.47.

About 4 o'clock in the afternoon of January 23, 1877, a meteor of great brilliancy was seen at several points in Indiana and Kentucky. Its height, when first seen in Decatur and Monroe Counties, was not less than 70 miles. It exploded with a loud detonation over Harrison County, Ky., and reached the earth's surface nine miles north of Cynthiana, penetrating the soil to a depth of thirteen inches. Its weight was over thirteen pounds, and its specific gravity 3.41. Full descriptions and analyses of the Warrenton and Cynthiana stones, by Dr. J. Lawrence Smith, will be found in the *American Journal of Science* for September, 1877.

A meteor of great brilliancy was seen at Ellettsville, Ind., about half-past 2 o'clock on the morning of February 8th. As described in the "Proceedings of the American Philosophical Society," vol. xcii., it was "first seen in the southeast, crossed the meridian south of the zenith, and disappeared at a point about 30° or 35° south of west, and 10° above the horizon. Numerous sparks were emitted by the meteor in the latter part of its track, and a luminous train remained visible for several seconds."

The *Monthly Notices* of the Royal Astronomical Society for April, 1877, contains a description, by Captain G. L. Tupman, of a very large meteor seen in England, at London, Cambridge, Brighton, and many other places, about 10 o'clock on the evening of March 17th. When first observed it was vertical over Taunton, in Somersetshire, at an elevation of 60 miles. Its course was northward; height at disappearance, 29 miles; length of visible track, 59 miles; time of visibility, 3 or 4 seconds. The meteor was in its ascending node, and approaching perihelion. At London its apparent magnitude was two-thirds that of the full moon. From Waterford it was seen to be double, the less part closely following the greater. All along its track small frag-

ments or sparks were observed to fall nearly vertically toward the earth. No deposit was found, however, nor was any explosion heard after the meteor's disappearance. Its radiant was very nearly in right ascension 145°, and north polar distance 95°. Its motion was direct, and its perihelion distance about 0.85.

In the *Observatory* for May, 1877, Mr. Robert J. Lecky describes a fire-ball which passed over Ireland at 9^h 26^m, Greenwich mean time, on the evening of April 6th. It was "remarkable for its great size as well as for extreme brilliancy, especially at the moment of explosion, the force of which was something terrific; for, although the distance must have been 50 miles, the houses in the city of Cork were shaken, and the windows rattled with as much violence as if from an explosion of gunpowder." The course of the meteor was from north to south, and the explosion took place over the Atlantic.

On the evening of June 12th, about 8^h 45^m, a large meteor was seen in Marshall, Delaware, and Monroe Counties, Ind., the points of observation in the first and last being nearly 200 miles apart. Its motion was from west to east, and its height above the earth's surface at the moment of its disappearance was estimated at 30 miles.—(*American Journal of Science*, August, 1877.)

A fine bolide was seen at Putney, and other places in England, about 8^h 13^m on the evening of August 17th. Its apparent path was short, extending only from Beta Piscium to Omicron in the same constellation. "It had the appearance of a large round ball of bluish-green color, and one person saw a small body left, as it were, behind it, and following in its track; it was visible some two or three seconds."

A large meteor was seen at Bloomington, Ind., September 27th, at 7^h 30^m P. M. It appeared in the northeast, about 50° above the horizon. Its apparent size was estimated at one-fifth that of the full moon. Its motion was westward, and before reaching the meridian it separated into three fragments, each larger than Jupiter.

A daylight meteor of great brilliancy was seen in Virginia between 4 and 5 o'clock P. M. —just before sunset—on the 20th of November. Its course was westward, and its disappearance was followed by a loud detonation, like the prolonged roar of distant thunder. At Richmond it was first seen near the zenith, and it disappeared in a bank of cloud near the horizon. Its brightness was intense, and its track remained for forty minutes.

The New Star T Corona.—The *Astronomische Nachrichten* for February 20, 1877, contains a communication from Prof. Schmidt, director of the observatory at Athens, Greece, detailing his observations of this star from its sudden outburst in 1866 to the close of 1876. These observations show that in May, 1866, the star fell in nine days from the second to the seventh magnitude; that this rapid change was followed by a gradual decrease from the

seventh to the tenth magnitude during the years 1866-'74; and that throughout the years 1875 and 1876 the magnitude had remained nearly constant. But during the whole period of ten and a half years variations of brightness were observed through approximately regular periods of 94 days. Thus, after the first sudden fall in 1866, the star again increased from the seventh to the eighth magnitude in less than five months. Both the length of the period and the extent of the variation appear, however, to be diminishing. The color of the star has been constant—a pale yellow.

The New Star in Cygnus.—On the 24th of November, 1876,* Dr. Schmidt, of Athens, noticed a new star, of the third magnitude, in the constellation Cygnus. The three nights immediately preceding had been cloudy, but the star had not become visible on the night of the 20th. Astronomers throughout the world were at once notified of the discovery, and the object was diligently observed both in Europe and America. Its apparent magnitude very rapidly diminished from the date of its discovery. In a few weeks it became invisible to the naked eye, and in less than three months its light was no greater than that of a star of the tenth magnitude.

The spectroscopic analysis of the light of this star was undertaken by Cornu, Vogel, and other astronomers. At first, and for some time after its appearance, it exhibited a continuous spectrum, with a number of bright hydrogen lines, thus resembling the spectrum of the new star in the Northern Crown. This spectrum gradually changed, however, until it was found to consist of a single bright line, corresponding in position to the characteristic line of the gaseous nebulae. In short, Mr. Copeland's observations at the Dunecht observatory justify the conclusion, according to Lord Lindsay, that *the star has been transformed into a planetary nebula*—a process exactly the reverse of that imagined by Laplace in his nebular hypothesis.

Star Systems.—The *Monthly Notices* of the Royal Astronomical Society for January, 1877, contains a paper by Mr. J. R. Hind on the orbit of Alpha Centauri. By combining two sets of measures of the angle of position made by Lord Lindsay at the Mauritius in 1874, with those of Sir John Herschel, Captain Jacob, and Mr. Powell, and adopting the angle for 1752.2, given by Lacaille's right ascension and declination, Mr. Hind obtained the following elements:

Peri-astron passage.....	1874.85
Node.....	21° 49'.0
Node to peri-astron on orbit.....	59° 32'.1
Inclination.....	82° 13'.4
Eccentricity.....	0.6678
Semi-axis major.....	21".797
Period of revolution.....	85.042 years

With an annual parallax of 0".928, which is a mean between Henderson's value, as corrected by Peters, and that of Moesta, the mass of the system is found to be greater than that of

the sun in the ratio of 179 to 100, and the semi-axis major of the orbit 23.49.

Dr. Doberck, of Colonel Cooper's observatory, Markree, Ireland, has been devoting special attention for several years to the orbits of binary stars. His elements of Omega Leonis and Eta Cassiopeæ were given in our volume for 1876. The periods of others, together with the eccentricities of their orbits, as given in the "Transactions of the Royal Irish Academy" and the *Astronomische Nachrichten*, are as follows:

NAME.	Period.	Eccentricity.
Gamma Coronæ Borealis.....	95.5 years.	0.850
Xi Scorpii.....	95.9 "	0.077
Xi Boötis.....	127.4 "	0.708
Tau Ophiuchi.....	155.2 "	0.582
Lambda Ophiuchi.....	241.0 "	0.493

Burnham's Double-Star Discoveries.—The *American Journal of Science* for July, 1877, contains a paper by S. W. Burnham, Esq., of Chicago, on his double-star discoveries made with the 18½-inch Chicago refractor. The labors of this distinguished observer, of which honorable mention was made in our volumes for 1875 and 1876, are still continued with interesting results. No. 438 in his latest list, a star which had been previously known as triple, is now shown to be quintuple. No. 440, which had also been recognized as a ternary system, is proved to consist of seven members, "the whole forming one of the finest multiple systems known." No. 442 is a system of at least seven members: three comparatively large stars, between the eighth and ninth magnitude, with four very minute companions. Mr. Burnham's list is continued in this paper to No. 452.

In the last volume of the "Annals of the Observatory of Paris," M. Wolf gives the details of several years' labor devoted to the Pleiades, together with some interesting conclusions in regard to the relations existing between the members of the cluster. In this well-known asterism, where the unassisted eye sees only *six* stars, more than 600 have been observed with the telescope, and nearly all have been accurately mapped. In addition to this determination of their relative positions the comparative magnitudes of over 500 have been carefully measured. Several very small nebulae have also been detected within the group, and the light of many of the stars is certainly variable. But one of the most interesting facts established by M. Wolf is that the stars of the cluster have the same proper motion—leaving no room to doubt their physical connection. The discussion indicates, moreover, that their orbital motions *inter se*, or about a common centre, are extremely slow in comparison with their progressive motion in space.

Changes in Nebulae.—In the *American Journal of Science* for December, 1877, Prof. E. S. Holden, of Washington, presents evidence of the proper motion of the Trifid Nebula, designated as No. 20 in Messier's catalogue. This

* The announcement of this discovery came too late for our last volume.

remarkable object was discovered as long since as 1764. The available evidence is therefore drawn from a century's records, including the observations of Sir William and Sir John Herschel, Messrs. Mason, Smith, Lassell, and Trouvelot, and Profs. Langley, Pickering, Winlock, Holden, and Eastman. A detailed discussion of the recorded facts justifies the conclusion, according to Prof. Holden, that this nebula, during the period from 1784 to 1877, has not only moved from its first observed position, but has likewise undergone perceptible changes of brightness.

The position of the Trifid Nebula at the beginning of 1860 was R. A. $17^{\text{h}} 53^{\text{m}} 51^{\text{s}}$.8, N. P. D. $113^{\circ} 1' 39''$.9.

According to Dr. Tempel, the large nebula known as No. 8 in Messier's catalogue has now a very different appearance from that given in Sir John Herschel's drawing made at the Cape of Good Hope just forty years since. These changes he thinks can only be accounted for either by the nebula's change of position in relation to the stars by reference to which it was delineated, or by great changes in the constitution of the nebula itself. The observations of Dr. Tempel were made with the large Amici-telescope, at Arcetri, near Florence.

AUSTRALIA AND POLYNESIA. The area and population of Australia and Polynesia

were, according to the latest accounts, as follows:

COUNTRIES.	Sq. Miles of Sub-divisions.	Sq. Miles of Divisions.	Population of Sub-divisions.	Population of Divisions.

The estimated population of each of the colonies comprising the continent of Australia was as follows:

AUCKLAND, NEW ZEALAND.

COLONIES.	Population.
Victoria (December 31, 1876)	840,341
New South Wales (June 30, 1876)	617,166
Queensland (May 1, 1876)	173,283
South Australia (December, 1876)	225,477
Western Australia (December 31, 1876)	27,321
Northern Territory	743
Natives	55,000
Total	1,939,351

Some of the social statistics in the different colonies were as follows:

VOL. XVII.—4 A

NAMES OF COLONIES.	Marriages.	Births.	Deaths.
New South Wales (1875)	4,605	22,528	10,771
Victoria			
South Australia (1875)	1,688	3,684	4,036
Western Australia (1876)	192	760	473
Tasmania			
Queensland (1875)	1,474	6,706	4,104
New Zealand			

The following table shows the rate of taxa-

tion per head of population, the revenue, the debt on December 31, 1874, for each of the imports and exports for 1874, and the public Australian colonies:

NAMES OF COLONIES.	Rate of Taxation.	Revenue.	Debt.	Imports.	Exports.
	£ s. d.				
Victoria.....	2 8 0%	£4,236,433*	£13,990,553	£16,952,965	£15,441,109

Sir Redmond Barry made the following statement of the libraries of Victoria at the International Congress of Librarians, held in London. In Melbourne, the Government Library has 90,000 volumes, the library of Parliament 40,000, and the libraries of the University and of the Supreme Court together 33,000 volumes, making, in all, 163,000 volumes. None of these libraries date back further than 1853. There are, in addition, 30,000 volumes in the libraries of different societies, and an unknown number in 14 popular libraries. Outside of Melbourne, the colony has 130 libraries with 174,103 volumes, not including circulating libraries. In 1874, books to the value of £267,000 were imported in Australia. The Government has contributed £50,388 to the costs of the library buildings, while £150,510 were raised by subscription for building purposes and the purchase of books.

In New South Wales, early in 1877, the ministry, being defeated in Parliament, thereupon advised the Governor to dissolve that body. He consented to take this step if the supplies necessary to carry on the various departments of the public service, pending an appeal to the constituencies, could be obtained. On March 14th the Colonial Treasurer moved the question of supplies in the House, but was met by an amendment presented by Mr. Piddington, the leader of the Opposition, declining to grant supplies to a defeated Government, under cir-

cumstances which would, in all probability, result in two general elections within a short period of time. The Government was defeated in the division by a vote of 33 to 27; and, the Governor having declined to grant a dissolution, Mr. Robertson, the head of the Cabinet, and his colleagues, resigned. Sir Henry Parkes was then intrusted with the task of forming a new cabinet, and on March 22d the names of the new ministers were announced in both Houses. This ministry, however, resigned on August 10th, and a new one was again formed under Mr. J. Robertson. But even this did not seem to possess the popular confidence. On October 11th Parliament was dissolved by the Governor, and the ministry continued in office pending the new elections.

The Parliament of Victoria was dissolved in April, and a general election ordered for May 11th. The ministry announced that they would adopt a policy in the direction of free trade, and that they proposed to cover the deficit arising therefrom by the imposition of stamp and land taxes. The elections, however, resulted in the return of a Protectionist majority. On May 22d the new Parliament met, and on the 29th elected Sir Charles Gavan Duffy Speaker, and then adjourned until June 26th. A new ministry was formed, with Mr. Berry as Premier.

* These statements are for 1875.

† For 1876.

The South Australian Parliament, in the latter part of 1877, offered a prize of £10,000 for the discovery of coal in the colony. At the same time, it was resolved to attempt to open the large tracts of land lying west of Port Augusta to the border of West Australia, for the raising of sheep and cattle. Salt water

AUSTRALIAN BUSTARD.

only is found throughout the region, and it is proposed to bore for fresh water, at the expense of the Government. The results of similar experiments made in Africa, and even in different parts of the colony, make the prospects of success very certain.

The Parliament of Queensland was opened on May 15th. The Governor's speech on the occasion referred to the action of the Imperial authorities in refusing to sanction the bill restricting Chinese immigration, and stated that a circular had been addressed to the other colonies requesting their assistance in this question. Various measures were promised, including an education bill and the financial separation of the railways.

The question of Chinese immigration was much discussed during the year in the Australian colonies, and particularly in Queensland. Years ago, when the gold-fields of New South Wales and Victoria were more attractive than at present, there was a large influx from China. The Governments, urged by a popular demand, imposed a poll-tax of £10 on every Chinaman landed. This law at once put an end to Chinese immigration. In both colonies it was repealed when no longer needed; and as there is not even now the attraction of rich alluvial gold-fields, very few Chinamen now come so far south. But the Palmer gold-field in Queensland is attracting them in large numbers, and in consequence there is a threatened depreciation of labor. In some places they outnumber the Europeans ten to one, while in others they maintain a numerical equality. Altogether

they were estimated, in 1877, at 17,000; which, in a colony with barely 200,000 inhabitants, is certainly a large proportion. Under these circumstances, no popular government could exist which did not try to deal with the question. The existing Government passed a measure which, in opposition to the advice of his ministry, Governor Cairns reserved for the Royal approval; and Lord Carnarvon advised that this approval should be withheld. This caused great indignation in Queensland, and the Government presented to Parliament two bills of similar purport. If this were all, the contest would simply be one between Queensland and the Colonial Office; but in order to obtain moral support the Queensland Premier sent a circular letter to the premiers of the other colonies, soliciting their sympathy and assistance, on the ground that it was an infringement of the colonial rights of self-government for the Colonial Office to cause the disallowance of a bill which, in the judgment of the colonists, was essential to the safe interior government of the colonies. It was thought that a united protest from all the colonies would secure for the new bills a more favorable consideration than the last measure received. The Government of South Australia, which has a northern territory of its own, and which has even been soliciting Japanese immigration, has replied very cautiously, asking for further information. The Government of Victoria, which by the last general election was placed under the command of a premier of very pronounced Radical proclivities, and flushed by unexpected victory, replied by encouraging Queensland to

EMU.

resist the Colonial Office. Sir Henry Parkes, the Premier of New South Wales, sent a cautious answer, expressing sympathy under the difficulties of the Chinese invasion, and promising a careful attention to any well-considered and temperate legislation. But Parliament being in session, the opinion not merely of the

Cabinet but of the Legislative Assembly was obtained on the subject, which was brought under the notice of the House in a resolution submitted by Mr. Buchanan, who asked the House to express its regret at the disallowance of the Queensland measure. It was felt on both sides of the House that, while the resolution could not be assented to, a mere negative

GREAT KANGAROO.

would be uncivil to the sister colony. The Premier and the leader of the Opposition each submitted an amendment. That of the former was based on the letter he had already written to the Queensland Government. That of the latter recommended the Government to urge the Earl of Carnarvon to obtain such a modification of the treaty with China as would allow the Australian colonies to protect themselves against any undesirable influx of Chinese population. The latter amendment was withdrawn by the mover, on the ground that, as he wished for as nearly unanimous a vote as possible, he would not divide the House or give the debate a party aspect. But as the House obviously gave the preference to his amendment, the substance of it was, with the assent of the Government, substituted for the latter portion of the Premier's amendment, and in that form was agreed to without a division, the original resolution having been negatived by the large majority of 26 to 6.

In New Zealand, the Legislative Assembly passed a vote of want of confidence in the ministry, in the beginning of October, and the ministers, in consequence, resigned. A new ministry was then formed by Sir George Grey, who had formerly been a Governor, and who was an opponent of the abolition of provincialism.

Governor Gordon of Feejee, in July, proclaimed Suva the capital of that colony. According to a report of the Colonial Secretary of Feejee, the total exports in 1876 amounted to £107,464, and the imports to £112,806. The principal articles of export were as follows:

Copra and coconut-oil	£1,486
Cotton	11,922
Sugar	9,086
Maize	8,464
Bêche-de-mer	2,491

Next to Hamburg, to which port produce to the value of £36,774 was sent, the bulk of the exports found their way to Sydney. The total white population at the close of 1876 was estimated at 1,569 persons.

The northwestern portions of New South Wales suffered severely from drought during the summer months. The loss of stock in consequence was serious, and it was expected that the export of wool would show a falling off. In Victoria, also, a severe drought was experienced, but, fortunately, without any serious results.

An exhibition was opened in Sydney on April 10th, which, by the coöperation of American and Canadian manufacturers, assumed the dignity of an international exhibition. It was held under the direction of the Agricultural Society of New South Wales—a body which devotes itself to the promotion of agriculture and stock-raising. As soon, however, as the society ascertained that it could count on support from the United States and Canada, the scope of the undertaking was enlarged, and exhibits of all sorts invited from all the colonies, in order that the manufactures of America might appear in appropriate company. Canada seemed to have been better canvassed than the United States, or to have responded more readily to the appeal made by the representatives of New South Wales, for her wares took up more space than the goods from the States. They had been sent to Sydney under

LYRE BIRD.

the care of special commissioners, directed to make inquiry into the resources as well as the requirements of the colonies, and to report on the best means to open up communication between the two countries. Unfortunately,

the shipments, both from New York and the St. Lawrence, came in slow vessels, which landed their cargoes so late that the principal exhibits could not be unpacked in time for the opening day. The consequence was, that the visitors, who poured in in thousands in the first week, found the courts in a state of disarray, and not ready for inspection. Though contributions had been solicited from all the colonies, Queensland and Tasmania only had sent special collections. A large number of prizes and certificates of commendation were awarded to American and Canadian exhibitors.

A FEEJEEAN.

On September 17th, Queen Pomare II., of the Society Islands, died at Tahiti, and her oldest son, Arxane, was proclaimed king. She was the wife of Pomare, who died in 1821. Her eldest son having died during his minority, he was succeeded by Queen Aimata, who, upon ascending the throne, assumed the surname of Pomare, according to custom. In 1843 the kingdom was occupied by the French. The queen made her escape to one of the neighboring islands, and several skirmishes took place between the natives and the invaders. In 1846, the French power being completely established, Queen Pomare was recalled, and a treaty was entered into, by which she was restored to authority, and the whole of her dominions were placed under the protectorate of France.

A treaty was ratified early in 1877 between the German Emperor and the King of the Tonga Islands, a group of islands in the South Pacific, better known as the Friendly Islands. The fourth and fifth clauses of the treaty provide that there shall be free commerce between the German Empire and all the Tongan country. The subjects of the two contracting

powers are to have full liberty to enter any of the German or Tongan ports or harbors with their ships or merchandise; and Germans residing in Tonga, or Tongans living in Germany, are to enjoy the same rights and privileges as the subjects of the respective sovereigns. The war-vessels of either power are to be allowed to enter, anchor, and remain in any of the ports of the other, and may provision, coal, or refit there. It is hardly probable, however, that Tonga will, for some time to come, benefit by this last clause, since the Tongan fleet consists at present of a few double canoes, and even to build these the Tongan shipwrights have to repair to the neighboring Feejee Islands, as no trees of sufficient size for the purpose grow upon their own territory. The total population of the Tongan Islands, which consist of three groups—the Hapai, Leforga, and Vavas Islands—is estimated at 18,000 souls, of whom about 4,500 are nominally Christians. The only article of export is cocoanut-oil. This is the first attempt by Germany to gain a foothold in the South Pacific.

In Samoa, the Navigators' Islands, a disordered state of affairs existed during 1877, resulting mainly from quarrels among the different consuls resident there. Toward the close of the year the Secretary of State of Samoa came to Washington to arrange a treaty, whereby the islands might be placed under the protection of the United States Government. (*See SAMOA.*)

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, the Emperor Ferdinand I., on December 2, 1848. Heir-apparent to the throne, Archduke Rudolphus, born August 21, 1858.

The ministry for the common affairs of the empire consisted, toward the close of the year 1877, of Count Andrassy, Minister of Foreign Affairs and of the Imperial House (appointed 1871); Baron Leopold Friedrich von Hofmann, Minister of the Finances of the Empire (appointed 1876); and Count Arthur Bylandt-Rheidt, Minister of War (appointed 1876).

The ministry of cis-Leithan Austria was in 1877 composed of Prince Adolf von Auersperg, President (appointed November, 1871); J. Lasser, Freiherr von Zollheim, Interior (November, 1871); C. von Stremayr, Public Worship and Instruction (November, 1871); Glaser, Justice (November, 1871); J. Ritter von Chlumecky, Commerce (appointed in November, 1871, Minister of Agriculture; transferred to the Ministry of Commerce in May, 1875); Baron von Pretis-Cagnodo, Finances (January, 1872); Colonel Horst, Defense of the Country (appointed *pro tem.* November, 1871, definitely March, 1872); Count Mannsfeld, Agriculture (May, 1875); J. Unger (November, 1871) and Florian Ziemiakowski (April, 1873), ministers without portfolio.

Area of the monarchy, 240,848 square miles;

to religion, 6,757 were Roman Catholics, 208 Oriental Greeks, 187 Protestants, 1,025 Jews, and 150 others.

The periodical press of Austria, in 1875, was divided as follows:

The public debt of Austria increased 99,000,000 florins in round numbers in the first half of 1877. The total debt was thus increased to 2,937,000,000 florins, and the annual interest to be paid by the state to 119,230,000 florins. This increase is twice as large as that of 1876, the total increase for the whole of 1876 being but 48,230,000 florins. There were also issued 10,400,000 florins of Salina bonds. The decrease of the consolidated state debt amounted to 3,675,949 florins.

The political subjects prominently engaging public opinion in both halves of the Empire during 1877 were, the "Ausgleich" between Hungary and Austria proper (*see* HUNGARY) and the Eastern Question. The sufferings of the Slavs in Turkey aroused the sympathies of their brethren in Austria, so that, when General Tchernayeff made a trip to Prague, he was received with great ovations by the Czechs. The authorities, fearing disturbances, ordered him to leave; and, as he refused to do so, he was escorted to the frontier by two policemen. In the beginning of May, a large number of interpellations on the Eastern Question were made in both the Austrian Reichsrath and in the Hungarian Diet. On May 4th, the ministers gave identical replies in both Houses, to the following effect:

Austria maintains an attitude of benevolent interest in the Christian subjects of the Porte, and, while observing strict neutrality, reserves the right to protect its own interests, or intervene with efforts for the cessation or localizing of the conflict. The

ministers recognize the Empire's intimate connection with, and interest in, the affairs of European Turkey, but deem a resort to warlike measures for their protection unnecessary, in view of the attitude of the other powers, and the cordial support the Government can command from the representatives of the people whenever action becomes necessary.

In the latter part of June, the corps in Dalmatia and on the Croatian border were supplied with the necessary artillery, while at the same time the reserves belonging to them were called out. According to the official journals, no immediate intervention was thought of, but it was stated that it was necessary for Austria to be prepared to oppose any encroachment upon her interests. In July, the ministers, in replying to interpellations, both in the Austrian and Hungarian parliaments, stated that Austria had no desire for an increase of territory, and intended to leave her neutral position only when the interests of the monarchy should seem to be threatened. On July 31st a meeting of Austrian and Hungarian ministers was held at Vienna. The policy of Count Andrássy was entirely approved by his colleagues, and he was empowered to take measures for an eventual strengthening of the troops stationed along the southern frontier. The Cabinet also discussed the question of the cost—estimated at about 25,000,000 florins—of mobilizing four divisions, for the purpose of reinforcing the troops on the frontier, should that measure be adopted. An interview between the Emperors of Germany and Austria took place in the beginning of August, after having been spoken of for a long time. It was originally intended that they should be accompanied by their chancellors, but this was not done. On August 8, Emperor William arrived in Ischl, where he was received by the Crown-Prince Rudolphus, who was stopping there with his mother, the Empress. The Austrian Emperor arrived shortly after. The Emperors then had a lengthy conference, and the rest of the day was spent in private. On the following day, the 9th, Emperor William departed, accompanied by Francis Joseph, to Odensee. All official dispatches insisted that the meeting was of an entirely private character; and a dispatch to the London *Times*, from Vienna, asserted that it had no reference to the policy of Austria and Germany in the Eastern Question. The semi-official journals of Berlin and Vienna, on the other hand, while stating that the meeting had no political significance, still admitted that it demonstrated the continuance and strengthening of the triple alliance. This meeting of the two Emperors was followed on the 18th by that of their chancellors, at Salzburg. The proceedings were kept entirely secret. But, both in Berlin and Vienna, any intention of either Prince Bismarck or Count Andrássy to bring forward or encourage any attempt at mediation at that moment, was positively contradicted in official quarters, and the conviction expressed was that neither Austria nor Germany would abandon the reserve which

they had hitherto observed. In accordance with these views, Prince Auersperg, in the latter part of September, declared in the Austrian Reichsrath, in answer to a number of interpellations, that the Government had decided to continue in its policy of complete neutrality. It could not tell, however, at the present moment, what policy it would pursue in case Serbia should participate in the war. A similar but more extended declaration was made by M. Tisza in the Hungarian Diet at about the same time. (*See HUNGARY.*)

In the beginning of September, General Mollinary, the military commander of Croatia and of the remaining portion of the military frontier district, was, at his own request, relieved from his post, and General Baron Franz

the military frontier district. These lines are to be built with the proceeds of the sales of 33,000 Hungarian acres of prime old oak forests of great value, which form part of the state domain. General Mollinary, considering himself the guardian of the interests of the military frontier district, proposed to carry the tracing exclusively through its territory, quite irrespective of the direction of the rest of the railway; while the Hungarian Government, having in view the general interests of Hungary and Croatia, made a tracing by which all these interests were to have been harmonized. Gen. Mollinary handed in his resignation, which was finally accepted.

With the commercial and customs treaty of 1867 between Austria and Hungary, an arrangement about the

quota to be paid by each side toward common expenses for the navy, army, and foreign affairs, was likewise concluded for 10 years. This had, therefore, to be renewed in 1877. Each legislature elected a deputation of 15 members to examine the bill prepared by the two ministries, which left the proportion of the contributions unchanged. The two deputations met on May 29th; the Austrian elected for its president Count Wrbsna, and the Hungarian M. Szlavay. The two deputations could not come to an agreement, the Hun-

garians demanding that their contributions should in future be 29 per cent., instead of 30 per cent., as heretofore, while the Austrians insisted on 31 per cent. as the Hungarian share of the contribution. In July they adjourned until the fall, without having arrived at a definite result.

The delegations met on December 5th, and were received by the Emperor on the 7th. The respective presidents addressed the Emperor, offering him their homage, and expressing the satisfaction they felt at the maintenance of peace in the monarchy, and the hope that the endeavors of the Government would also succeed in preserving it in the future. In reply, the Emperor expressed his satisfaction at the loyal homage offered. He said that, in view of the complicated state of Europe, it had been his wish to summon the delegations sooner, but that even now they would scarcely be in a condition to finish at once the task assigned them; though he expected, from their oft-proved zeal and readiness, that they would find the means to pro-

OPERA HOUSE, VIENNA.

Philippovitch, commander of the military district of Moravia, was appointed his successor. While the portion of the military frontier district which extended along the Lower Danube and Transylvania had been incorporated with Hungary, the western portion of it, along the Save and thence to Dalmatia, is still in a state of transition from military to civil administration. Certain branches of the public service—the customs, excise, posts, telegraphs, and, to a certain point, the means of communication—had already been taken by the Hungarian Government; but the internal administrative service proper is still in the hands of the military commander of Croatia, who by degrees is to substitute a regular civil administration, and, when this is done, the remaining portion of the military frontier district is to be incorporated with Croatia. Such a double rule is apt to give rise to differences, and a certain amount of friction must needs be experienced in such a complicated machinery. In this case, the chief point of difference was the tracing of the railroads which are to be constructed in

vide temporarily for the necessities of the State. To his great regret, war had broken out between Russia and Turkey. The efforts of his Government had, therefore, been directed toward localizing the war and preserving the peace of the monarchy. These efforts had, happily, hitherto been successful; friendly relations had been preserved, and the interests of the realm had in every respect been maintained intact. It had been possible, also, to arrive at this result without asking his people for any extraordinary sacrifice, and he hoped that this would likewise be possible for the future. But if the interests of the monarchy required any self-abnegation on the part of his subjects, he expressed the fullest conviction that they would all be ready to do whatever was required of them. In conclusion, the Emperor expressed a hope that the delegations would support his Government in its arduous task.

On December 11th, in a discussion on the Eastern question in the Committee on Foreign Affairs of the Hungarian Delegation, Count Andrassy stated, in reply to the charge that his policy showed a deviation from the system which takes existing treaties as its only basis, that the binding power of treaties was shaken, and some other force must be substituted. Count Andrassy then spoke of the triple alliance as having been the means of preventing a general European war. But, while on friendly terms with the two great neighboring powers, not less

than the others, the monarchy was free to act, and no country in Europe could believe with greater confidence that its just and equitable interests would assert themselves. He protested against the charge that Austro-Hungary had no sympathy with the populations of the neighboring states, and that it was in the interest of Austria that Turkey should remain unaltered, as before the present crisis. He also denied the charge that Austria, in consequence of her relations with Germany and Russia, was under a restraint; and said that, if necessary, Austria would stand up alone for her interests.

In the Committee of the Austrian Delegation, on December 18th, it was asked what the attitude of Austria would be with regard to Serbia; and the answer was, that the fact alone that the principality had gone to war could be no reason for abandoning the attitude of reserve; but that, if Serbia struck into a direction

where Austrian interests were affected—for instance, by carrying the war into Bosnia or Herzegovina—the Government would decidedly protest against this, and, if not listened to, would forcibly intervene to prevent it.

On October 30th a Cabinet council was held at Pesth, under the presidency of the Emperor, which was attended by the ministers of both halves of the Empire as well as by the common ministers. At this meeting a full understanding was reached about the tariff question. The arrangement made was a compromise between the views of the Austrian and Hungarian ministries. While the Hungarian ministry had laid the greatest stress on a treaty with Germany, their Austrian colleagues, though preferring this solution of the question, insisted, in case of failure, on the introduction of the autonomic tariff. The compromise between these two views was that negotiations should be at once begun with Germany about a re-

PRESBURG.

ciprocity treaty on the "most-favored-nation" basis, which would secure for Austro-Hungary the export of her produce on the same conditions as to others; and which, on the other hand, would secure to Germany, under certain restrictions, the same privileges in the export and reimportation of half-finished goods as she enjoyed before. But it was decided, likewise, that, without waiting for the result of these negotiations, the tariff forming the basis of negotiations with Germany should at the same time be laid before the two legislatures as an autonomic tariff.

The Reichsrath met on January 22d. Its business was of little importance before the end of March, when it adjourned for the Easter holidays. On reassembling, in the second week of April, the Hungarian compromise was presented by the ministers, and referred by the House to a special committee. On May 15th

the Reichsrath rejected a bill providing for the political autonomy of southern Tyrol. In consequence, the deputies of southern Tyrol resigned their seats, declaring, in a letter to the President of the Chamber, that the House had proved, by refusing to grant wider

For the purpose of effecting these results, a special commission had been appointed, which would continue to exercise its functions. The minister proposed to cover the deficit of 20,200,000 florins by the issue of gold rentes. On November 6th, several questions of interest

were put to the ministers in the Lower House. The first regarded the recognition by the Government of the Old Catholics. To this the minister replied that, as the Old Catholics only made a declaration concerning their legal recognition on October 15th, the ministry was not in a position, before the 18th, to recognize them, and to authorize the formation of Old Catholic congregations in Vienna, Warnsdorf, and Ried. The Minister of Commerce, replying to an interpellation upon the subject of the negotiations with Germany for the conclusion of a customs treaty, said the German commissioners had declared that the proposal of the Austro-Hungarian Government could not be accepted. The idea of a provisional prolongation of the existing treaty for one year, as desired by Germany, could not be entertained by Austria. The Government would shortly submit to the House a general customs tariff, and hoped that it might come into force at the commencement of the new year. Meanwhile, they had proposed to the German Government the conclusion of a treaty based upon the "most-favored-nation" principle.

Replying to a question respecting the seizure of rails for railways in Hungary, the minister stated that the Hungarian Government

ST. STEPHEN'S CATHEDRAL, VIENNA.

autonomy to south Tyrol, that they had nothing further to expect from it. The Reichstag was adjourned on July 6th, and met again on September 4th. The budget was submitted to the Lower House on October 23d. The Minister of Finance said that it showed a decided change for the better. The expenditure was estimated at 424,347,469 florins, being an increase of 7,200,000 florins compared with the budget of 1877. This increase, the minister explained, was owing to an intended larger redemption of the public debt. The receipts are estimated at 404,114,600 florins, being 24,800,000 florins more than in 1877. Of this increase, 16,700,000 florins would accrue from an intended sale of Treasury bonds for the redemption of the public debt. Setting aside the sums relating to the debt, the expenditure for 1878 would be 9,500,000 florins less, and the receipts 8,000,000 florins more, than in 1877; while the deficit would be 20,200,000 florins, against 37,800,000 florins. Thus, the minister said, the budget for 1878 shows an improvement of 17,600,000 florins upon the previous year. This improvement was the result of great efforts at a reduction of the expenditure and an increase of revenue.

CROATS.

had regarded rails as contraband of war; but, upon the certificate from the Roumanian Government that the rails were destined for the Roumanian railways, the Government of Hungary gave orders to have them released. Measures had been taken by the Government for the purpose of settling the question whether rails were contraband of war or not. The new tariff was submitted to the Reichsrath on November 10th. Its most important features are: 1. That goods coming from states which treat Austro-Hungarian ships or goods less favorably than those of other countries, are subjected to an additional duty of 10 per cent. 2. That a system of stricter control is introduced with regard to the free import of goods for finishing purposes. 3. That the duties are to be henceforth paid in gold, instead of silver. The general principles of the tariff itself are the following: 1. Better protection of all textile goods, especially woolen and silk. 2. A counter tendency to compensate for this rise in the duty on finer goods by a lowering of that on cheaper materials.

3. The introduction of new or higher duties on articles of consumption.

The Diet of Galicia was opened on August 8th. The Landmarschall Count Wodzizki, in opening it, spoke of the relation of Galicia to the Empire, and expressed the hope that the Diet would be able to keep aloof from influences which would make it subservient to foreign interests. In referring to the troubles in the East, he said it was not the province of the Diet to express an opinion on the subject. Whatever course the events might take, the province would hold faithfully to its monarch. A committee was then appointed to draft an address to the Crown. Considerable excitement prevailed throughout the province in consequence of the war; and, in spite of the speech of Count Wodzizki, the Poles were actively working for a reunited Poland, and were therefore bitterly opposed to a Russian alliance. These views they sought to embody in the address to the Crown; but the discussion on the address was cut short by the closing of the Diet, on August 30th, by the Government.

B

BAILEY, THEODORUS, rear-admiral of the United States Navy, died in Washington, February 10, 1877. He was born in Plattsburgh, N. Y., in 1803. He entered the Navy as midshipman in 1818, and was made lieutenant in 1827. In 1840 he sailed in the frigate *Constellation* on a voyage around the world, which lasted about three years and a half. In 1846 he was ordered to the *Lexington*, the store-ship for the Pacific squadron during the Mexican War. After the close of the war he was commissioned as commander, and in 1856 was assigned to the command of the *St. Mary's*, in the Pacific squadron. He was made captain in 1855. On the breaking out of the Civil War he was put in command of the frigate *Colorado*, of the Western Gulf blockading squadron. He cooperated with General Harvey Brown in the operations at Pensacola, and afterward joined Farragut's squadron at New Orleans, becoming second in command to Farragut, and leading the attack on the forts. After the capture of New Orleans Captain Bailey was made a commodore, and was assigned to the command of the Eastern Gulf blockading squadron. After the war he became commandant of the Portsmouth navy-yard. In 1866 he was made rear-admiral, and soon after retired from active service.

BAPTISTS. I. REGULAR BAPTISTS IN THE UNITED STATES.—In 1876 there were in the United States 1,005 associations, 22,924 churches 13,779 ordained ministers, and 1,932,385 members, showing an increase over 1875 of 180 associations, 1,669 churches, 662 ordained ministers and 117,085 members. The following is a summary of the statistics of the Regular Baptist churches in the United States, as they are given in the *American Baptist Year-Book* for 1877:

Total.....	64	3,705	2,555	339,446

Three hundred and forty-two of the associations in the United States having failed to report at the time the *Year-Book* was made up, the number of members assigned to them was taken from the reports of previous years. The tables of Sunday-schools and benevolent contributions in the United States is as follows: Number of Sunday-schools, 10,015; of officers and teachers in the same, 93,553; of Sunday-school scholars, 750,367; amount of benevolent contributions, \$4,698,352.94. The list of Baptist educational institutions in the United States includes, theological institutions, with 40 instructors, 425 students for the ministry, property valued at \$1,511,900, and endowment funds of \$1,019,415; 33 colleges and universities, with 282 instructors, 4,007 students, \$8,178,781 of property, and \$3,460,927 of endowment funds; and 42 academies, seminaries, institutes, and "female colleges," with 241 instructors, 3,854 students, \$2,145,000 of property, and \$209,000 of endowment funds. The total number of students for the ministry in all of these institutions was 1,477. The list of periodicals contains the names of one quarterly, 32 weekly, 5 semi-monthly, and 12 monthly publications.

The 63d annual meeting of the *American Baptist Missionary Union* was held at Providence, R. I., May 22d. The Rev. Dr. Barnas Sears, President of the Union, was prevented by ill health from attending the meeting, and the Rev. Dr. Robinson, President of Brown University, was chosen to preside in his place. The report stated that the gross amount paid into the treasury for the year had been \$238,777.15; of which, by the stipulation of the givers, \$13,053.18 had been added to the per-

manent fund of the Union, leaving \$225,723.97 as the sum applicable to the payment of the current expenses of the year; the expenditures had been \$242,949.31. Including the deficit of \$30,136.17, which was reported in the accounts at the end of the previous year, the balance against the society was \$47,361.51. The following is a summary of the condition of the missions, as presented by the executive committee:

ASIATIC MISSIONS.

Eight missionaries had been sent out during the year—six to stations in Burmah, and two to Japan—and four young women were under appointment.

A paper by the Rev. Dr. Murdoch, discussing the question, "Shall we decrease our Mission-work?" presented the fact as an embarrassing difficulty, that the funds of the Union had steadily fallen short of the expenditures during the last eleven years, while the religious work among the heathen had advanced, and the need of larger resources to meet growing demands had greatly increased. This paper was referred to a special committee, who reported that the existing debt should be paid, not by a general contraction of operations, or by declining to open the proposed new mission, but "by more universal and larger giving." The sum of \$11,975 having been already subscribed toward the payment of the year's deficit of \$17,000, a collection was taken to obtain the rest of this sum, which resulted in raising the amount of subscriptions to \$30,000.

The 6th annual meeting of the *Woman's Baptist Missionary Society of the East* was held in Boston, April 17th and 18th. Mrs. Gardner Colby presided. The treasurer reported that the receipts of the society had been \$35,925—\$1,395 more than the receipts for the previous year—and the expenditures \$34,397. The contingent fund, consisting of legacies and memorial gifts, amounted to \$2,418, the interest on which was applied to the work of the society. A considerable number of circles had been formed during the year, and the society had now

nearly 1,000, with at least 25,000 members. The agents of the society were stationed in the missions among the Burmese, the Karens, the Eurasians, the Japanese, the Chinese, the Telooongs, and the Shans, and reported 20 missionaries, 33 schools, 32 Bible-women, 1,530 scholars, and 85 conversions in the year.

The 6th anniversary of the *Woman's Baptist Missionary Society of the West* was held at Dayton, Ohio, April 11th and 12th. Mrs. Robert Harris, of Chicago, presided. The treasurer reported that the receipts of the society for the year had been \$13,852.05, and the expenditures \$12,455.93. The Executive Board reported that the society employed 8 woman-missionaries and several Bible-women, and had the care of several schools. The work was restricted by the limited amount of resources.

The annual meeting of the *American Baptist Home Mission Society* was held at Providence, R. I., May 23d. The Hon. Robert O. Fuller, of Boston, presided. The receipts into the treasury of the society from all sources, not including temporary loans, for the year ending March 31st, had been \$189,824, and the expenditures, not including payments of temporary loans, but including the loans of the church-edifice fund, had been \$262,503.24. The receipts were \$31,557.82 less, and the expenditures and church-edifice loans were \$59,620 greater, than those for the preceding year. The balance against the society was \$40,452, which was entirely for borrowed money. The increase of expenditures was accounted for by the fact that the sum of \$43,124 of liabilities, which had not matured at the time of making the previous report, had been paid on contracts for the completion of the school-building at Nashville, Tenn., and on notes given for the original purchase of the property for the same; an amount exceeding by \$2,671 the present indebtedness of the society for borrowed money. A gift of \$20,000, made after the report was prepared, reduced the debt to \$20,452. Two hundred and thirty-three missionaries had been employed during the year, under whom 60 churches had been formed, 1,581 persons baptized, and 19,238 scholars gathered into the Sunday-schools. The subject of an increase of direct missionary work among the colored people had been under the consideration of the executive board. The development of better signs of the cooperation in this work of the white brethren at the South was noticed with "profound satisfaction." Seven freedmen's schools were taught under the patronage of the society, which were all in successful operation, under the care of 27 teachers, with an aggregate of 860 scholars. Twelve missionaries were employed among the Indian tribes, four of whom were white. In the church-edifice department, the total amount of loans outstanding was \$234,328, and the amount of interest due was \$23,037. The total amount of property, funds, and claims held by this department was \$274,140. A report

recommending the continuance of the missionary work among the Chinese in the United States was adopted. An amendment to the charter of the society granted by the Legislature of the State of New York, for the purpose of enabling it to receive endowment funds and hold real estate for the maintenance of schools and colleges, and the education of freedmen and Indians, was accepted.

The 53d annual meeting of the *American Baptist Publication Society* was held at Providence, R. I., May 25th. Mr. J. L. Howard presided. The receipts in the benevolent department of the society from all sources had been \$55,135; the receipts in the business department had been \$333,881; and the total receipts of both departments had been \$388,966. A system of life-annuities had been established, by which the society could receive at once the funds which its patrons intended to bequeath it, paying to them a given rate of interest, mutually agreed upon, for the use of the capital sum during the lives of the donors. Twenty-one new publications had been issued during the year, of which 20,400 copies had been printed. Of former publications, there had been printed 107,460 copies of books, and 181,750 copies of tracts. The total issues of the society for the year were equal to 329,116,580 pages 18mo. The total number of issues since the organization of the society had been 76,848,887 copies of books, tracts, and periodicals, containing 4,303,360,336 pages. The total number of publications on the catalogue, after a very extensive revision, was, on the 1st of March, 1877, 1,113 volumes. The present valuation of the real estate of the society was \$247,759.

The 24th anniversary of the *American Baptist Historical Society* was held in Philadelphia, Pa., June 4th. The finances were reported as in a good state, with a balance of several hundred dollars in the treasury.

The annual meeting of the *American Baptist Educational Commission* was held in Providence, R. I., May 23d, Rev. Alvah Heney, D. D., presiding. The report stated that "the commission had suspended its work during the past year, on account of the Centennial movement for the endowment of seats of learning."

A *Woman's Baptist Home Mission Society* was organized in Chicago on the 1st of February, with Mrs. J. N. Crouse as president, to cooperate with the American Baptist Home Mission Society, and yet be distinct from it. A meeting in behalf of this society was held at Providence, R. I., May 24th, in connection with the anniversaries of the other Baptist societies, at which it was recognized as one of the general societies of the denomination, and the formation of societies auxiliary to it was recommended.

The third *National Baptist Sunday-school Convention*, under the auspices of the American Baptist Publication Society, met in Boston, Mass., May 17th. Delegates, consisting

of persons actively engaged in Sunday-school work, were present from 23 States of the Union, the Dominion of Canada, and Burmah. The Rev. Warren Randolph, D. D., of Indiana, was chosen president. The sessions of the convention continued through three days, and were devoted mainly to the reading of papers and discussion of subjects connected with Sunday-school work.

The 28th anniversary of the *American Bible Union* was held in New York City, November 14th. The Rev. Thomas Armitage, D. D., presided. The treasurer reported that his receipts for the year had been \$16,299, and his disbursements \$16,213. The indebtedness of the Union, which amounted to about \$50,000, had been reduced by the amount of \$1,800. More than 31,000 Bibles had been distributed in various parts of the world.

The *Southern Baptist Convention* met at New Orleans, La., May 10th. The Rev. James P. Boyce, D. D., was elected president. The report on *Foreign Missions* showed that the receipts of the treasurer for the year had been \$32,276, against \$45,646 received in the previous year. Reports were received from the missions in Africa, China, and Italy. The African mission embraced stations at Abbeokuta, Lagos, and Ozbomoshu, with 2 missionaries, 1 native preacher, and 4 native assistants. A brick chapel had been completed at Lagos, and the church numbered 58 members. A chapel had been begun at Abbeokuta. Mission stations were established in China at Tung-Chow, Shanghai, and Canton, with 8 missionaries, 4 native ministers, and 14 native assistants and Bible-women. Several works had been issued from the Mission press at Shanghai. In Italy, stations at Rome, Torre Pellice, Milan, Modena, and Carpi, the island of Sardinia, Bari, Naples, and Venice, were supplied by 1 American and 8 Italian missionaries. The mission at Rome, founded by the Rev. Mr. Van Meter, had been transferred by the American Baptist Publication Society to the Southern Convention. The treasurer of the *Home Mission Board* reported that its receipts had been \$16,816, and its expenditures \$15,805. A reduction had been made in the expenses of the board and of its work. The work of this board was conducted among the destitute churches, the freedmen, and the Indians. Endeavors, not as yet attended with much success, had been made to establish schools in connection with the Indian missions. The Creeks had proposed, in consideration of the instruction of 50 boys and 50 girls annually, to give 160 acres of land for the establishment of a school, and \$6,000 annually to defray the expenses of tuition and board. The board had desired to appoint evangelists to labor among the freedmen, but had been prevented by want of means from doing more than instruct the missionaries to give special attention to their spiritual wants, as they should have opportunity. On the subject of the missions in Africa, resolutions were adopted:

1. That the Foreign Mission Board be instructed to increase the number of missionaries in Africa as soon as practicable.

2. That measures be taken to interest in this work the colored churches of this country.

3. That young colored ministers be preferred for this work, all other things being equal.

The *Consolidated American Baptist Missionary Convention* represents the colored Baptists in the United States, who are estimated to number 600,000 members. The 37th annual meeting of the society was held at Richmond, Va., October 11th. The Rev. Amos Johnson, of Macon City, Mo., was elected president of the convention. Delegates were present from 20 States of the Union. Reports were made and adopted on missions, temperance, colportage, and the state of the country. The Convention, having adopted the policy of bringing its work to the notice and securing the confidence of the Southern people, among whom is its largest field of operations, determined upon the removal of its Executive Board from New York to Washington City, or to Richmond, Va., as soon as suitable charter provisions could be obtained.

II. FREE-WILL BAPTISTS.—The following is a summary of the statistics of the Free-Will Baptist Church, as they are given in the *Free-Will Baptist Register* for 1878:

YEARLY MEETINGS.	No. of Churches.	Ordained Preachers.	No. of Communicants.
New Hampshire.....	118	189	9,780
Maine Western.....	69	62	4,849
Maine Central.....	100	95	6,688
Penobscot.....	111	90	4,316
Vermont.....	60	45	3,070
Massachusetts and Rhode Island.....	47	70	5,583
Holland Purchase.....	34	40	2,118
Genesee.....	23	19	1,422
Susquehanna.....	35	28	1,447
New York and Pennsylvania.....	50	20	950
St. Lawrence.....	12	17	642
Union.....	14	9	671
Central New York.....	38	28	2,105
Pennsylvania.....	7	11	448
Ohio and Pennsylvania.....	38	80	1,543
Central Ohio.....	25	20	1,567
Ohio.....	10	12	588
Ohio River.....	60	41	3,818
Indiana.....	6	3	267
Northern Indiana.....	21	12	782
Michigan.....	68	81	4,050
St. Joseph's Valley.....	21	13	866
Illinois.....	87	35	1,562
Southern Illinois.....	54	44	2,568
Central Illinois.....	18	13	762
Wisconsin.....	64	55	2,187

Union Association.....	19	17	772
Quarterly meetings not connected.....	88	81	550
Northwestern Missionary Association.....	24	25	1,080
Churches not connected.....	7	6	218
Other churches.....	9	11	550
Total.....	1,948	1,188	75,826

Number of yearly meetings, etc., 40; total number of quarterly meetings, 165; number of licensed preachers, 114.

The Free-Will Baptist *General Conference* met in its 23d session, at Fairport, N. Y., October 2d. The Rev. O. B. Cheney, President of Bates College, was chosen moderator. The Bengal and Orissa (India) yearly meeting, which had been organized two years before, was admitted to the Conference. Reports were received from delegates who had been appointed to attend the conferences of affiliated Free Baptist bodies, and of the Church of God, and the American Christian Conference, at Louisville, Ky. The delegate to the latter body reported that, on all essential points, the Free-Will Baptists and the Christian body were agreed; but that the minor points in which the two bodies disagreed were held by each so tenaciously that no union could now be effected. The measure adopted by the previous General Conference (held in 1874), for permitting persons who had not been immersed to be received into full membership in Free Baptist churches, was repealed. The effect of this action is understood to be, not to prohibit the admission of such persons, but to withdraw the sanction of the whole Church from the practice, and leave the subject to be decided by each church upon its own responsibility, whenever cases may arise calling for action. The following resolution was passed:

Whereas, We learn of various associations of Baptists, in different parts of the South, holding substantially our views of doctrine, and embodying in their practice our views of Church polity; and, *whereas*, many of these brethren are not only in harmony with us in faith and practice, but are known distinctly by name as Free Baptists; therefore,

Resolved, That we take this occasion to extend to these various associations the fraternal greetings of the General Conference of the Free-Will Baptists, and to extend a most cordial invitation to any and all of them to take a place among us as members of the denominational household.

Resolutions were adopted on the subject of temperance, affirming it to be the duty of all, and especially of Christian ministers, to practice temperance, discourage the use of alcohol, and seek its extermination; supporting the principle of prohibition; discountenancing the support of political candidates who may use intoxicating liquors; disapproving the use of tobacco, and the ordination of young men who habitually indulge in it; and disapproving the use of fermented wine at Communion. A number of decisions were made upon questions of Church polity, the most important of which were, that it is improper for ministers to baptize persons who do not intend to join some evangelical Church; that a church should not refuse to grant letters to members in good standing when properly requested to do so; that the band of fellowship should not be withdrawn from members in good standing without "church labor," or notification that such action is contemplated; that but three ways

are recognized for the termination of church membership, viz.: by death, exclusion, or dismission by letter or vote of the church; that persons holding letters of dismission, and retaining them unused, should report to the church granting the letter at least once in six months, and a failure to do so for two years should work a forfeiture of membership; and that unordained ministers ought not to administer the ordinances of the Lord's Supper and Baptism. Among the resolutions on doctrine were:

Respecting the import of holiness: We believe that holiness, sanctification, and consecration to God, imply freedom, through grace, from the voluntary violation of God's law, but not the perfection of the faculties and judgment.

Respecting the extent of pastoral service over different churches: We believe the Bible commands the ministry to go into all the world, and, in preaching the gospel to every creature, perform the work of a pastor for just as many churches as circumstances and ability will permit.

Respecting the design of Baptism: We believe that Baptism is designed to represent: 1. The burial and resurrection of Christ. 2. The remission of sin, and the resurrection of the soul to newness of life. 3. The final resurrection, secured by the resurrection of Christ.

We believe it to be the duty of all Christians, as such, to partake of the sacrament of the Lord's Supper. We also affirm, that our pastors and churches can, and should, withhold the elements of the Eucharist from any and all persons who are known to be unworthy.

The Conference resolved to celebrate the Centennial of the organization of the denomination in 1880, by an effort to raise the sum of \$500,000 for the several departments of Church work, as missions, education, the payment of church debts, etc. The next session of the General Conference will be held, in view of this occasion, at the nearest point practicable to New Durham, N. H., where the first church was organized in June, 1780.

The anniversaries of the benevolent societies of the denomination were held in connection with the meeting of the Conference, and much of the action of that body was based upon the consideration of their situation and needs as presented in their reports. The gross receipts of the *Home Missionary Society* for the year had been \$10,713. The society was out of debt, and had a small balance in the treasury. The receipts of the *Foreign Missionary Society* had been \$10,939. The statistics of the principal missions of the society are included in those of the Bengal and Orissa yearly meeting. The *Woman's Missionary Society* had been organized a little more than three years. It had contributed freely to both the home and foreign mission-work. The receipts of the *Education Society* had been \$1,446. The number of students in all the theological schools of the denomination was 79, and the number graduated during the year was 10. The total receipts of the publishing establishment had been \$115,717, and its present net assets were \$64,300.

The 45th annual Conference of the *Free*

Baptist Church of New Brunswick met at Penobscus, October 6th. The Rev. G. T. Hartley presided as moderator. The report of the corresponding secretary showed that 341 members had been added to the Church during the year. Reports were received from 74 Sunday-schools, returning 352 teachers and 3,126 pupils. The *Foreign Missionary Society* reported that there were needed, to pay all of its liabilities to January 1, 1878, \$864. The *Home Missionary Society* had \$66.40 in the treasury. Very little money had been received during the year, and very little had been expended.

The *Nova Scotia Conference of Free Baptists* represents about 3,300 members. It is engaged in the work of both home and foreign missions. A missionary in India has heretofore been partly, and will hereafter be wholly, supported by it.

III. SEVENTH-DAY BAPTISTS.—The *Seventh-Day Baptist General Conference* met for its 63d annual session at New Salem, W. Va., September 19th. The Sabbath-school Executive Board stated that they had received returns from 50 out of 74 Sabbath-schools to which they had sent blanks, reporting a total of 737 officers and teachers, 4,177 scholars, and \$1,099.03 raised for the expenses of the schools and for benevolent purposes. The duty of preparing and publishing lessons for the year had been confided to the executive board of the Sabbath Tract Society. The trustees of the Memorial Fund reported that the total amount of notes, cash, and other assets held by the board was \$45,562, besides which it held the receipts of different institutions for notes and cash paid directly to them, but to be counted as parts of the Memorial Fund, to the amount of \$14,452, making the whole value of the fund \$60,015. The attention of the Conference was called to the case of Mr. Daniel O. Waldo, a member of the Seventh-Day Baptist church of Cussewago, Crawford County, Pa., and of a man in his employ named Albert O. Wood, who had been fined, and were liable to imprisonment under the State law of 1794, for working on Sunday; with reference to which a resolution was passed, declaring "that we regard such fining and imprisonment as a species of persecution for conscience' sake, flagrantly inconsistent with the Bill of Rights of the Constitution of Pennsylvania, and also with the first amendment to the Constitution of the United States, passed March 5, 1789, which provides that Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof. That we hereby express our sympathy for Brother Waldo and his associate, as persons suffering for righteousness' sake, and that provision be made, here and now, for the preparation of a petition to the General Assembly of Pennsylvania in favor of the entire repeal of the Sunday Law of 1794, as a law in direct conflict with the rights

of conscience and the exercise of religious liberty."

The minority of a committee who had been appointed by a previous General Conference to prepare an *exposé* of the doctrines and principles of the denomination, presented a report covering 16 points of doctrine, which was ordered printed in the minutes, to be acted upon at the next meeting of the Conference. The Committee on the State of Religion reported that the total gain of the churches during the year, above the losses, had been 259; 13 churches had enjoyed revivals. A church among the Danish settlers in Dakota has been added to the body.

The 36th annual meeting of the *Seventh-Day Baptist Missionary Society* was held at New Salem, W. Va., September 20th. Resolutions were adopted advising that aid be given to weak churches struggling for existence in preference to opening new fields; and that the sixth-day evening before the first Sabbath in each month be set aside for a season of prayer for the mission cause; suggesting that every member of the churches and societies set apart at least five cents a week for the cause; and recommending the general adoption of the plan of systematic giving.

The 22d annual meeting of the *Seventh-Day Baptist Education Society* was held at New Salem, W. Va., September 21st. The treasurer reported that his receipts from all sources had been \$1,852, and his expenditures the same.

The 34th annual meeting of the *American Sabbath Tract Society* was held at New Salem, W. Va., September 23d. The society resolved to discontinue the system of sending out lecturers to propagate the doctrines of the denomination, on account of its expense, and to replace the lecturers by evangelists. A scriptural commentary, designed to be a critical exposition of all the passages of Scripture relating to the Sabbath, as well as of all those supposed to relate to it, which is in course of preparation by the Rev. James Bailey, was recommended as a work likely to be of great value in the promotion of the Sabbath cause.

IV. TUNKERS, DUNKARDS, OR GERMAN BAPTISTS.—This denomination has no distinctive name which is acknowledged by its adherents, but in their own intercourse and religious meetings they call themselves Brethren. The Brethren believe in trine immersion and feet-washing, are opposed to a paid ministry, and have peculiar views regarding dress and conformity to the world. The first attempt to make an enumeration of the Brethren was made by Howard Miller in 1877. The result of the census, so far as the returns have been completed and compiled, shows them to number about 60,000 members. They are most numerous in Pennsylvania, where they have 69 churches and 14,861 members. They are also numerous in Ohio.

The General Council of the Tunkers was held at New Enterprise, Pa., May 22d. D.

P. Sayler was moderator of the Council, and remarked, on taking the chair, that it had always been the custom of the Brethren to meet annually in Council to decide disputes among them, as was the manner of the apostles. A query was presented from Southern Missouri, whether evangelists or traveling ministers ought not to be restrained unless they conformed to the order of the Brethren in the matter of dress and of non-conformity to the world, to which the answer "Yes" was unanimously returned. Another question discussed was, whether the standing or the rolling coat-collar conformed to the old order of the brotherhood. Several precedents were cited, all in favor of the standing collar, and the decision of the Council was given accordingly. The keeping of musical instruments in the houses of the brethren, which was considered at a previous meeting of the Council, again received attention. It was decided to be against the principles of the brotherhood. On the subject of the sisters wearing fashionable hats at the Communion, it was decided without discussion that the sisters must "not wear hats at all, at Communion or at any other time;" and that elders and overseers who encourage or allow them to do so should be dealt with as transgressors. The Brethren were advised to abstain from voting, for fear that it would lead to a surrender of the non-resistant principles of the brotherhood; for the same reason, a brother was advised not to accept the office of a school-director in Pennsylvania, because he might have to collect the school-tax, and even imprison a citizen for non-payment of the tax. It was decided that hymn-books should be plainly bound, and without gilt. The Council being requested to decide upon one of the two methods of feet-washing—the "single mode," in which one person washes and another wipes the feet, or the "double mode," in which the same person both washes and wipes—passed an order giving full liberty to any church to adopt the double as well as the single mode. Baptism in a church-pool instead of a stream was declared valid. It was declared that applicants for membership should not be admitted unless they wore the dress of the Brethren, even though they might wear a plainer one. The connection of Brethren with lyceums or debating societies, in which theatrical performances or exercises for mere amusement were given, was prohibited. Petitions were presented for changes in the Constitution of the Council, asking that it be composed of one delegate for every four hundred members, and of the standing committee, also, for quadrennial instead of annual meetings. A committee was appointed to consider the matter, who reported recommending that no changes be made. By a unanimous vote, the subject was postponed till the next year.

V. BAPTISTS IN GREAT BRITAIN.—The *Baptist Hand-Book* for 1877 gives the following summary of the statistics of the Baptist church-

es of the United Kingdom of Great Britain and Ireland for 1876:

COUNTRIES.	Number of Churches.	Pastors in Charge.	Number of Members.	Number of Scholars.
England.....	2,007	1,417	190,245	306,429
Wales.....	529	389	65,244	64,288
Scotland.....	99	84	8,766	6,465
Ireland.....	86	23	1,542	1,570
Total.....	2,671	1,913	265,797	378,752

Besides the churches, a column is given showing the number of chapels, as follows: in England, 2,731; in Wales, 601; in Scotland, 102; in Ireland, 42: total, 3,476. The total number of lay members given is 3,524; number of chapel seats, 935,015. A comparative table of the statistics for ten years shows an increase of 260 churches, 834 chapels, 44,273 members, and 186,415 scholars. The greater number of these churches are connected with the Baptist Union of Great Britain and Ireland, an association which was formed in 1863. The Baptist churches of Wales are associated in the *Baptist Union of Wales*, which was formed in 1867, those of Scotland in the *Baptist Union of Scotland*, and those of Ireland in the *Irish Association*.

The missionary societies supported by the Baptist churches of the United Kingdom are: The Baptist Missionary Society, General Baptist Missionary Society, British and Irish Baptist Home Mission, Baptist Home Missionary Society for Scotland, Young Men's Association in Aid of the Baptist Missionary Society, Bible Translation Society, Metropolitan Tabernacle Colportage Association, German Mission in London, Ladies' Association for the Support of Zenana Work in India, Chinese Inland Mission, Palestine Mission (established 1870, central station Nablous, sub-station Rafidia, two native missionaries, seven baptized converts, one hundred children in the schools). The Bible Translation Society circulated editions of the Bible in which the words relating to baptism are translated by terms signifying immersion, of which translations have been made for India, Ceylon, the western coast of Africa, Orissa, and Japan. Besides these, numerous benevolent societies of various character, Publication and Tract Societies, are supported.

The list of Baptist periodicals in Great Britain comprises the *Hand-Book* and four *Almanacs*, the *Quarterly Reporter of the German Baptist Mission*, eleven monthly and two weekly periodicals in England, one monthly magazine in Scotland, and five publications in Wales.

The *Hand-Book* gives the following statistics of the churches in the missions and colonies: Ceylon, 26 churches, 60 sub-stations, 22 pastors, three of the churches self-supporting; India, 65 churches, 88 pastors, 9,748 members; South Africa, 23 churches, 10 pastors, 373 members, with 476 members in the King William's Town missions; West Africa, 8 churches, 13 pastors, 1,210 members; St. Helena, 1 church,

1 pastor, 200 members; West Indies, 152 churches, 94 pastors, 23,070 members; Australasia (tables very incomplete), 6,710 members; Denmark, 17 churches, 123 preaching stations, 1,869 members, 300 Sunday-scholars; Germany (the Baptist Union of Germany includes churches in Germany, Denmark, Holland, Poland, Russia, and Turkey), 110 churches, 1,263 preaching stations, 22,259 members, 6,000 Sunday-scholars; France, 25 churches; Finland, 3 churches; Greece, 1 church; Holland, 19 churches; Italy, 24 churches; Norway, 18 churches; Poland, 4 churches; Russia, 6 churches; Spain, 6 churches, 244 members; Switzerland, 9 churches; Turkey, 1 church, with 6 preaching stations; Sweden, 234 churches, 10,490 members, 16,183 children in the Sunday-schools, 2,115 in the day-schools, 12 mission unions, 4 local missionary societies, a theological school, building-fund, and poor-fund.

The annual meeting of the *Baptist Union of Great Britain and Ireland* was held in London, April 28d. The Rev. John Turland Brown was installed as the president for the year. The report of the secretary began with a recital of the part which the Union had taken during the year with reference to several public matters. A memorial was adopted for presentation to the House of Lords, protesting against the Government's "Burials Bill," which, it was asserted, did not even touch the question of the grievances of the Non-conformists, their demand being for perfect equality with Episcopalians in the national churchyards. A resolution respecting the Eastern Question was adopted, to the effect that it was the duty of the Government to further the self-government of the Turkish provinces which had suffered, and to secure British interests in some other way than by upholding the Ottoman Empire.

The autumnal meetings of the Union were held at Newport, Monmouthshire, during the first week in October. A statement was presented in behalf of the *Missionary Society*, asking for increased contributions to prevent a deficiency in the accounts, and stating that eight or ten missionaries were wanted, to be sent to India at once.

The *Baptist Union of Scotland* met at Dundee, April 10th. The proceedings of the meeting consisted mainly in the reading of papers, in one of which, on "Our Denominational Work," by the Rev. John McClellan, of Edinburgh, the separate existence of the denomination, as distinguished from the Presbyterian churches, was defended, as not only justifiable, but imperatively demanded.

The 108th annual meeting of the *New Connection of General Baptists* was held at Leicester, beginning June 25th. The Rev. Charles Clarke was chosen president. The number of churches reported as connected with the Association was 175, as against 170 in 1876; and the number of members 23,747, as against 23,453 in 1876. The churches in India returned

894 members, which would swell the total for 1877 to 24,631. The number of pastors connected with the home ministry was 103, while 65 churches were without pastors. The number of local preachers or evangelists reported was 344, and of Sunday-school teachers, 4,275. Twelve students were pursuing their studies at Chilwell College, and the number of applications for admission to the institution exceeded the vacancies.

BAYLEY, JAMES ROOSEVELT, an American archbishop, grandson of Richard Bayley, M.D., born in New York, August 23, 1814, and died in Newark, N. J., October 3, 1877. He graduated at Washington (now Trinity) College, Hartford, and was for some time tutor there. He studied theology with Dr. Samuel Farmer Jarvis, of Middletown, Conn., was ordained a minister of the Protestant Episcopal Church, and preached at Harlem, N. Y., and afterward at Hagerstown, Md. He then joined the Roman Catholic Church, prepared himself for the priesthood at St. Sulpice, in Paris, and was ordained in New York, March 2, 1842, by Bishop Hughes. He was appointed Professor of Belles Lettres at St. John's College, Fordham, of which he was president in 1845-'46, and from 1846 to 1853 was secretary to Archbishop Hughes. On October 30, 1853, he was consecrated first bishop of Newark, N. J., which under his administration became one of the most prosperous dioceses in the United States. He founded Seton Hall College, and numerous schools, academies, convents, and churches. On July 30, 1872, he was appointed Archbishop of Baltimore. He published a "Sketch of the History of the Catholic Church on the Island of New York" (New York, 1853; revised ed., 1869); "Memoirs of Simon Gabriel Brüté, First Bishop of Vincennes" (1860); and "Pastorals for the People."

BELGIUM, a kingdom of Europe. Leopold II., King of the Belgians, was born April 9, 1835; son of King Leopold I., former Duke of Saxe-Coburg; ascended the throne at the death of his father, December 10, 1865; was married August 22, 1853, to Marie Henriette, daughter of the late Archduke Joseph of Austria, born August 23, 1836. Offspring of this union are three daughters. Heir-apparent to the throne is the brother of the King, Philip, Count of Flanders, born March 24, 1827, lieutenant-general in the service of Belgium; married, April 26, 1867, to Princess Marie of Hohen-zollern-Sigmaringen, born November 17, 1845; offspring of the union is a son, Baldwin, born July 3, 1869.

The area of the kingdom is 11,373 square miles; population, according to the last census, taken in 1866, 4,737,833; according to an official calculation of December, 1875, 5,403,006. Of this population 54 per cent. belong to the Flemish and 44 to the Walloon-French nationality. The following table exhibits the population of each province of the kingdom on December 31, 1875, as well as the number of

arrondissements and communes into which each province is divided:

PROVINCES.	Number of Arrondissements.	Number of Communes.	Population on Dec. 31, 1875.
Antwerp.....	3	151	531,746
Brabant.....	3	841	959,782
Flanders, East.....	6	296	863,223
" West.....	8	251	696,651
Hainault.....	6	435	963,747
Liège.....	4	386	645,020
Limburg.....	3	206	206,187
Luxemburg.....	5	205	209,472
Namur.....	3	352	322,178
Total.....	41	2,572	5,403,006

The movement of population was as follows in 1874:

PROVINCES.	BIRTHS.		DEATHS.		Marriages.
	Males.	Females.	Males.	Females.	
Antwerp.....	10,086	9,621	7,004	6,293	4,272
Brabant.....	16,630	15,933	11,629	10,664	7,584
Flanders, East.....	14,447	14,021	11,046	10,563	5,444
" West.....	11,740	11,443	8,972	8,469	4,406
Hainault.....	15,145	14,341	10,111	9,102	7,290
Liège.....	10,767	10,212	7,372	6,563	4,976
Limburg.....	3,340	3,070	2,465	2,290	1,467
Luxemburg.....	2,965	2,845	2,153	2,012	1,372
Namur.....	4,654	4,309	3,076	2,746	2,309
Total.....	89,757	85,795	63,828	58,652	39,050

From these tables we derive the following facts: The number of boys born for 100 girls was 104.6; the number of inhabitants for one birth, 30.5; the number of births per 100 deaths, 143.3, and the number of inhabitants for one death, 43.6. In the same year the number of stillborn amounted to 7,749, 4,395 males and 3,354 females, and the number of divorces to 126. Of the births, 163,348 were legitimate and 12,204 illegitimate; and of the stillborn 7,031 were legitimate and 718 illegitimate; making, in all, 170,379 legitimate and 12,922 illegitimate births.

Instruction is well cared for in all grades. In 1875 there were 5,856 primary schools, with 669,192 pupils. Schools for adults have been established in most communes. Their number in 1875 was 2,615, with 204,673 pupils. The number of normal schools for primary teachers was, in 1874, 37, with 2,314 students, of which 22 schools, with 1,115 students, were for females. The number of secondary schools in 1874-'75 was 169, with 18,498 pupils. Superior instruction is imparted in the two state Universities of Ghent and Liège, and the two free Universities of Brussels and Louvain. The number of students in each of these in 1874 was as follows:

UNIVERSITIES.	Students.
Ghent.....	222
Liège.....	521
Brussels.....	601
Louvain.....	954
Total.....	2,298

Nearly the entire population of Belgium is nominally connected with the Roman Catholic

Church, at the head of which are the Archbishop of Malines and five bishops. The other ecclesiastical benefices consisted, December 31, 1875, of 184 deaneries, 230 *cures* (parishes of the first class), 2,787 *succursales* (parishes of the second class), 188 chapels, 1,855 vicariates, 84 coadjutors, 26 annexes, 695 oratories and chapels of hospitals, colleges, etc.

The representatives and senators are chosen directly by all citizens paying taxes to the annual amount of 43 francs. The number of deputies is fixed according to the population, and cannot exceed one member for every 40,000 inhabitants, while the number of senators is exactly one-half of that of the deputies. At the last general election in 1870, at which all the provinces voted, 107,099 voters were registered, and 80,575 cast. At the election for the Senate in 1874, the provinces of East Flanders, Hainault, Liège, and Limburg voted. The other provinces voted in the following year for representatives. The number of voters registered and the votes cast on these occasions were as follows:

PROVINCES.	SENATE, 1874.		REPRESENTATIVES, 1875.	
	Registered.	Votes cast.	Registered.	Votes cast.
Antwerp.....	15,048	12,361
Brabant.....	25,790	13,707
Flanders, West.....	13,873	10,321
Flanders, East.....	17,433	12,658
Hainault.....	18,696	14,142
Liège.....	12,526	7,055
Limburg.....	8,499	2,227
Luxemburg.....	3,022	2,652
Namur.....	6,045	5,143
Total, 1874.....	52,164	36,082
Total, 1875.....	63,278	45,184
Grand total registered, 115,442; votes cast, 81,266.				

The Chambers at present consist of 124 representatives and 62 senators, apportioned as follows among the different provinces.

PROVINCES.	Senators.	Representatives.
Antwerp.....	6	12
Brabant.....	11	22
Flanders, West.....	8	16
East Flanders.....	10	20
Hainault.....	11	22
Liège.....	7	14
Limburg.....	2	4
Luxemburg.....	3	6
Namur.....	4	8
Total.....	62	124

No man can be a senator who does not pay at least 1,000 florins in direct taxes. The number thus qualified in 1876 was as follows:

PROVINCES.	Number eligible.
Antwerp.....	53
Brabant.....	95
Flanders, West.....	54
Flanders, East.....	86
Hainault.....	76
Liège.....	51
Limburg.....	11
Luxemburg.....	10
Namur.....	44
Total.....	480

This makes 89 persons eligible for the office of senator for every 10,000 inhabitants in the kingdom.

The receipts and expenditures for 1874 were as follows:

RECEIPTS.		Francs.
I. Ordinary receipts:		
1. Taxes.....	154,590,822	
2. Tolls.....	7,973,040	
3. Stocks and rentes.....	88,665,253	
4. Reimbursements.....	2,186,309	
5. Extraordinary resources, applied to the general needs of the State.....	1,707,509	
II. Special receipts.....	70,751,939	
Total receipts.....	315,874,872	
EXPENDITURES.		
I. Ordinary expenditures:		
1. Public debt.....	59,611,856	
2. Dotations.....	4,328,080	
3. Justice.....	15,371,929	
4. Foreign affairs.....	1,581,805	
5. Interior.....	17,363,479	
6. Public works.....	88,422,664	
7. War.....	44,064,996	
8. Finances.....	14,174,157	
9. Outstanding debts and reimbursements.....	1,124,588	
II. Extraordinary expenditures.....	60,599,201	
Total expenditures.....	301,642,735	
Excess of receipts over expenditures.....	14,232,137	

The public debt at the close of 1875 was as follows:

LOANS.	Francs.
Two and one-half per cents.....	219,959,632
Four and one-half per cents.:	
1st series, conversion of 1844.....	55,864,182
2d series, emission of 1844.....	67,483,000
3d series (1853).....	141,294,900
4th series (1857 and 1860).....	65,846,400
5th series (1865).....	58,581,000
6th series (1867, 1869, 1870, 1871).....	77,573,200
Four per cents. (1871).....	50,335,000
Three per cents. (1873).....	243,250,000
Three per cents. (1874).....	1,409,635
Floating debt.....	25,000,000
Total.....	1,066,092,149

The standing army is formed by conscription, to which every able-bodied man who has completed his 19th year is liable. Substitution is allowed. The legal term of service is eight years, but two-thirds of this time are generally spent on furlough. The strength of the army is to be 100,000 men on the war footing, and 40,000 in times of peace. In 1875 the army was composed as follows:

ARMY.	Officers.	SOLDIERS.		
		En Solde.	Sans Solde.	Total.
Infantry.....	1,975	23,226	44,841	68,067
Cavalry.....	365	5,097	3,154	8,251
Artillery.....	376	6,663	7,618	14,281
Engineers.....	71	1,119	1,314	2,433
Other troops.....	582	2,886	2,590	5,476
Total.....	3,169	38,991	59,517	98,508

The civic militia, or National Guard, numbers 125,000 men without, and 400,000 with, the reserve. Its duty is to preserve liberty and order in times of peace, and the independence of the country in times of war. A royal decree, dated October 20, 1874, divided the kingdom into two military circumscriptions, one em-

bracing the provinces of Antwerp and West and East Flanders, and the second the others.

The imports in 1874 amounted to 1,292,500,000 francs; the exports to 1,114,640,000 francs, and the transit trade to 955,600,000 francs. The special commerce with the different foreign countries in 1874 was as follows:

COUNTRIES.	Imports.	Exports.
Russia.....	92,155,000	14,515,000
Sweden and Norway.....	25,889,000	8,581,000
Denmark.....	5,197,000	2,749,000
German Customs Union.....	158,703,000	228,853,000
Hanse Towns.....	8,149,000	14,287,000
Netherlands.....	171,193,000	156,658,000
England.....	204,149,000	222,387,000
France.....	326,098,000	843,402,000
Portugal.....	1,998,000	8,312,000
Spain.....	12,594,000	6,684,000
Italy.....	7,588,000	22,898,000
Switzerland.....	2,208,000	21,917,000
Austria.....	825,000	7,238,000
Turkey.....	12,647,000	7,466,000
Africa.....	3,968,000	1,988,000
Asia.....	5,656,000	476,000
United States.....	128,344,000	18,616,000
Other countries.....	180,602,000	81,088,000
Total.....	1,292,463,000	1,114,640,000

The commercial navy in 1875 consisted of 59 vessels of 50,186 tons.

The aggregate length of railroads in operation on December 31, 1875, was 3,490 kilometres (1 kilometre = 0.62 mile), of which 655 kilometres were state railroads, and 2,844 kilometres belonged to private roads. The aggregate length of the lines of electric telegraph was, in 1872, 4,430 miles; that of wires, 15,802; the number of telegraph offices was, in 1871, 478; the number of telegrams sent in 1875 was 2,871,890, of which 1,929,945 were inland, 708,716 foreign, and 233,229 transit dispatches.

The Chambers assembled after the Christmas holidays on January 16th. The President of the Ministry, Malou, introduced the bill securing personal liberty at the elections, in accordance with a promise made to the Liberals at the beginning of the session. The bill, however, was considered not only inadequate, but as actually augmenting the objections it was intended to remove. Popular demonstrations occurred at Antwerp and Ghent, and demands for the dismissal of the clerical ministry were made from all quarters. The King, however, refused to consider them. In April, the Belgian bishops petitioned the Government to take active measures to improve the situation of the Pope. Before this petition had been answered, resolutions of inquiry on the same subject were introduced in both Chambers. M. Malou, in reply, said that he believed it to be the Government's duty to protect the interests of all Belgian subjects, but that it could not violate the duties imposed upon it by law, and therefore the Government neither desired nor was able to proceed in this matter. The Electoral Law was passed in June, and produced great dissatisfaction among the Liberals. It was returned by the Senate to the Chamber of Deputies in the beginning of July for a recon-

sideration, and on July 7th was again passed by the latter body, when it adjourned.

The Chambers met again on November 13th, and were opened by the King in person. In his speech from the throne he said that Belgium, faithful to her pacific policy, continued to entertain most amicable relations with all the powers. The last census proved that in 10 years the increase of population had been 508,000. The number of legislators must therefore be increased by 5 senators and 10 representatives. The provincial and communal representation must also be increased accordingly. The law for the prevention of electoral frauds would be completed, and unity of electoral legislation established. Public instruction was in a prosperous condition, and sufficient provision for teachers of all grades had been made. The situation of agriculture was satisfactory, and the invasion of the cattle-plague had been prevented. Notwithstanding the commercial crisis, Belgian commerce had not declined, and the activity of the ports had increased. The execution of new maritime works at Antwerp, commenced on the river Meuse, would soon render it navigable through the whole of Belgian territory. The construction of railways was progressing notwithstanding the financial disasters. Belgium would join the other Governments in the question of the simplification of railway tariffs. Postal legislation would be put in harmony with the principles of the postal union. Maritime legislation was to be revised, and a law would be presented regulating responsibility of transport. In relation

anniversary of national independence would be celebrated; "then the great things accomplished in half a century would be commemorated, and, as to-day, God would be thanked for having always protected the dear fatherland." On the 21st, the Chamber of Representatives adopted the address in reply to the King's speech, and rejected an amendment calling on the Government to combat the enterprises of "Ultramontane Maligners" of the Constitution.

HOTEL DE VILLE, BRUSSELS.

CHURCH OF ST. GUDULE, BRUSSELS.

to questions on which the public mind was divided, the King said the principles and ideas uniting all should not be forgotten, as the love of national autonomy and attachment to constitutional liberties. In two years the 50th

The International Commission for the exploration of Africa met on June 20th, in Brussels. It was attended by a large number of African explorers and others interested in the work. It was resolved that the first station for explorers should be established by the executive committee, and that its principal object be the suppression of the slave-trade. The commission reelected the King of Belgium as its president.

BELOOCHISTAN. The relations between Beloochistan and India continued to be of a very friendly character during the early part of the year. The Khan of Kelat, having attended the durbar of the Viceroy in December, 1876, returned highly pleased. In February a treaty was concluded with the Khan, whereby the British Government agreed to support the Khan against internal and foreign foes, and to pay an annual subsidy of £10,000, besides a further sum of £2,200, for the purpose of effecting such improvements in the country as the Government might approve. In return, the Government will have the right to occupy the chief towns with troops, to construct railways

and telegraphs, and to erect forts. A British agent is to have his headquarters at Kelat, while another is also to be stationed at Quetta. On February 24th an official notice was given that the friendly relations between the British Government and the Khan of Kelat, which were suspended in 1873, had been resumed. The Viceroy was pleased, in compliance with the Khan's wishes, to direct the reestablishment of the Kelat agency, and to appoint Major Sandeman as the agent to the Governor-General for Beloochistan. Major Sandeman left Calcutta on February 23d, to assume the position. He was accompanied by an escort of about 1,000 men, half of whom were stationed at Kelat and the other half at Quetta. His first duty was to endeavor to appease the discord between the Khan and his feudatory, the Chief of Mekran, as well as other minor chiefs in western Beloochistan. In this he was successful. The well-known German traveller, Emil von Schlagintweit, gives the following account of the occupation of Quetta:

On April 1st, the city of Quetta, politically the most important one next to Kelat, and strategically the point of junction of the roads from India and Beloochistan to Afghanistan, became the seat of a British garrison, while the British political agent resident there was placed directly under the Supreme Government. A telegraph line was constructed from Jacobabad, the last Indian telegraph station, to Quetta, and was completed in the middle of May, so that the agent could communicate directly with Calcutta. For months the best understanding prevailed between the garrison and the natives, the only complaint being of the high prices of food. In July, however, some native laborers on the fortifications attacked two British officers, killing one and seriously wounding the other. Upon the first alarm, the British commander ordered the occupation of the fortress of Quetta—left hitherto in the possession of the Kelat troops—which commands the city and the entire neighborhood, and therefore afforded good protection. It was soon ascertained that the attack was not made for political reasons. The fortress, however, remained in the hands of the British, on account of various reasons. It was, for instance, stated that the communication with India was so insecure that it became necessary constantly to patrol the road; while the Afghans and the border tribes daily showed their dissatisfaction with the close proximity of the British more plainly. To secure the communication with India, a garrison was also placed in Mitri, halfway between Jacobabad, in India, and Quetta. This town is situated in a fertile country, at the entrance to the Bolan Pass, and is inhabited by peaceable tribes.

The continued occupation of Quetta by the British was regarded with great distrust by the Khan, who complained of it as a direct breach of faith. In October it was currently reported that the Khan and the chief people were all thoroughly convinced that the British occupation was an accomplished fact; that the British Government had no intention of withdrawing the force located in Quetta under the designation of its Resident's escort, and that it was to be essentially strengthened. Many messengers and confidential agents were going to and fro between Cabool and the Khan and the Sirdars. The Amir strongly advised the forcible

expulsion of the British garrison, offering his aid, and warning the Khan that the occupation meant eventual absorption. He advised a Russian league, and urged, as an inducement, the plunder of the rich plains and cities of India, and the possession of Sind. The Khan and the Sirdars were said to be willing to co-operate with the Afghan army, but they distrusted the Amir. In the latter part of October it was reported that the Khan had made an effort to raise the Belooch tribes, and induce them to attack the English cantonment at Quetta. The Beloochees, however, professed themselves unequal to such an enterprise, and advised the Khan to go to Candahar and get the aid of the Afghans.

On October 20th the Indian Government sent three more battalions of native infantry, a regiment of irregular cavalry, and one-half of a mountain battery, to Beloochistan. Of this force only a small part went to Quetta, two battalions went to Mitri, and one battalion and the artillery to Dadur. Mitri is situated in a well-watered mountain country on the Nari River; it is the principal town of the strongest of all the Brahovee tribes—the Larawan tribe—numbering 10,000 warriors, and was quite flourishing until a few years ago, when it was destroyed by the Khan of Kelat. Dadur is situated 13 miles northwest of Mitri, immediately at the entrance to the Bolan Pass.

BOLAN PASS.

Mitri was up to this time used as a relay station for the postal service between the garrison of Quetta and India. In order to explain its elevation to a strongly-fortified point, and the guarding of the entrance to the Bolan Pass, the Indian Government adduced that the formation of a winter camp at the mouth of the Pass had been provided for in the first

negotiations with the Khan of Kelat, in order to watch the wild mountain tribes during the winter; while the strengthening of the Mitri post had for its object the cutting off of supplies from the marauding tribes north of Kelat.

Among the works of the year containing information on Beloochistan is A. W. Hughes's "The Country of Beloochistan: its Geography, Topography, Ethnology, and History," London, 1877.

BOGY, LEWIS V., United States Senator, died in St. Louis, September 20, 1877. He was born in St. Genevieve, Mo., in 1813, graduated at the Lexington (Ky.) Law School in 1835, and began practice in St. Louis. He was several times elected to the State Legislature, and in 1867-'68 was Commissioner of Indian Affairs. He was interested in the development of the mineral resources of the State, and was one of the original projectors of the St. Louis and Iron Mountain Railroad, of which he was president for two years. In 1873 he was elected to the United States Senate. In politics he was a Democrat.

BOLIVIA (REPÚBLICA DE BOLIVIA), an independent state of South America, situated between latitude 10° to 24° south, and longitude $57^{\circ} 25'$ to $70^{\circ} 30'$ west. It is bounded on the north and northeast by Brazil; on the south by the Argentine Republic and Chili; and on the west by the Pacific Ocean and Peru.

No census or survey having taken place since 1872, we have to refer to the ANNUAL CYCLOPÆDIA for that year for particulars concerning the territorial division, area, and population of the Republic.

The President of Bolivia is General Hilarion Daza, who was installed on May 4, 1876. The ministers of the various departments were as follows: Interior and Foreign Affairs, —*; Finance and Public Works, Señor Don Agustín Aspiaru; Justice and Public Worship, Dr. J. M. Del Carpio; War, General Carlos De Villegas.

The Bolivian Consul-General in New York is Señor J. Pol; and the Consul in San Francisco, Señor F. Herrera.

The American Minister of the United States in Bolivia is the Hon. R. M. Reynolds, residing at La Paz.

The Metropolitan Archbishop is Dr. P. J. Puch y Solona (elected in 1861), and there are the following bishops: La Paz, Dr. Juan de Dios Borgue (1874); Cochabamba, F. M. del Granado (1872); and Santa Cruz de la Sierra, F. X. Rodriguez (1870).

The standing Army of Bolivia comprises 8 general, 359 superior, and 654 subaltern officers, with, at most, 2,000 rank and file. The annual cost of the Army is \$2,000,000, approximately.

* The minister of this department was Dr. J. Oblitas, until August, 1877, when, consequent upon a quarrel with the President, he was compelled to resign.

No precise statement of the Bolivian finances can be given for the past year, for want of official returns. Indeed, no report of this kind has been published for several years past.

According to the estimated budget for the fiscal year 1873-'74, the revenue was set down at \$2,929,574, and the expenditure at \$4,505,504, which would constitute a deficit of upward of a million and a half.

AYMARAS, AND AN AYMARA TOMB.

In a semi-official report, the national debt was given at £3,400,000 in June, 1875, including Colonel Church's loan of £1,700,000, negotiated in London, in 1872, at 68 and 6 per cent. interest.

The best information on this subject will be found in the following extract from the fourth report of the Corporation Bondholders for 1876:

During the past year the council and committee have directed their attention chiefly to negotiations having for their object the distribution of the Trust Fund, which formed the subject of the long-pending chancery proceedings, in the event of the suit instituted by the Republic resulting in the liberation of the fund, which now amounts to about £700,000. A preliminary arrangement having been made with Señor Quijarro, who, in January, 1876, arrived in England as the accredited Minister of Bolivia, a public meeting of bondholders was held on May 24, 1876, when the following resolution was passed:

"That the fourth report of the Committee of Bolivian Bondholders be received and adopted; and that this general meeting of Bolivian bondholders request the committee to support the Government of Bolivia in obtaining the funds in court, on condition that the said funds be applied (subject to such deduction as the committee may deem expedient) for division among the bondholders, according to the plan approved in the original letter of Señor Quijarro of the 28th of March last, and that the committee be requested to continue their efforts to effect a settlement on this basis."

A more definite arrangement was subsequently made with Señor Quijarro, which provided for the payment out of the Trust Fund, when liberated, of

32 per cent. cash of the amount of the outstanding principal of the bonds. The suit came on for hearing in November, but resulted in the dismissal of the bill. It is, however, not impossible that terms of compromise between the several parties to the suit may be agreed upon; and an agent has been sent to Bolivia, charged with the duty of obtaining, if possible, the execution of a convention by the Bolivian Government. The Trust Fund is still under the control of the court, and continues to receive half-yearly increments by the accumulation and investment of current interest upon the securities in which it is invested.

The chief articles of export are guano, hides, Peruvian bark, tin, silver, etc.

The total value of the exports for 1875 was \$5,000,000, and that of the imports, \$5,750,000. The foreign trade by sea is, for the most part, carried on through the Peruvian port of Arica.

In regard to railways, and especially the long-projected line to connect the stations of the National Bolivian Navigation Company's steamers on the Rio Mamoré, at either end of the portion of that river rendered unnavigable by rapids, a satisfactory solution appears at last to have been arrived at. The following is an extract from a notice published on the subject, in Philadelphia, in the latter part of 1877:

The subject of increased trade between this port and Brazil, by the establishment of a line of steamers, lately received a new impetus by the news cabled from London in reference to the Madera Railroad contract. This contract is between "The Madera & Mamoré Railroad Company" and "The National Bolivian Navigation Company" and Messrs. P. & T. Collins, of this city, and foots up an outlay for the road of \$6,000,000. The Philadelphia contractors agree to complete the gradation, masonry, and superstructure, and furnish the equipment of a road 180 miles along the eastern shore of the Madera River, in Brazil, from the point of navigation below the rapids of that river to the point of navigation on the Mamoré River, a branch of the Madera. The Madera River, rising in the immense water-shed of Bolivia, is navigable for steamers as far up as Balramao, but just above that town are the Catarata del Inferno and a series of falls which render the river useless for 180 miles. The Mamoré River is the chief branch of the Madera, and joins the latter above the falls, on the borders of Bolivia. On the Momoré are the Bananeira Falls. The railroad is to be run from the Bananeira Falls to the head of navigation on the Madera, a distance about twice as great as from this city to New York.

When it is constructed, the trade of Bolivia, which now has no convenient outlet, will flow easily down the Madera and Amazon to the Atlantic. The aggregate lengths of the affluents of the Madera, with their tributaries, is 5,500 miles, and 3,000 miles navigation by steamers would open the unequalled mineral wealth and agricultural products of the country to the commerce of any nation energetic enough to bid for such a great trade.

In 1868 the Brazilian Government sent to the United States for an engineer to devise means of getting round the rapids, either by canal or railway. The services of Colonel George Earle Church, of New York, were secured, and he decided that the railway scheme was more feasible. He then contracted for the establishment of the "National Bolivian Navigation Company." The Government issued bonds to defray the expense of constructing the proposed road, and sent Colonel Church to London to negotiate their sale. Finding that the

Bolivian Government had no credit in London, he endeavored to negotiate with the English capitalists on the credit of Brazil, but was told that no treaty existed between that empire and Bolivia.

To obviate these difficulties, a decree was issued by the Brazilian Government, opening the Amazon River to all flags; and the Emperor agreed to grant Colonel Church a charter for the road, and a concession of 1,300,000 acres of land. Dom Pedro was induced to this action because Matto Grasso, an immense Brazilian province, rich in mines and plantation lands, will be placed in communication with the sea by the road. The Matto Grasso diamond tracts and gold mines in the Cordillera del Norte and Geral Mountains equal those in Bolivia in wealth. In addition to the charter, Dom Pedro issued \$2,400,000 worth of debenture bonds to raise funds for the road. These bonds have found eager purchasers, so that the projectors of the great scheme are enabled at this moment to push it through.

The payment to the Messrs. Collins will be about three-quarters in cash, and the money to pay them is now in hand. The debentures guaranteed by the Brazilian Government stand for the remainder.

The road is to be of narrow-gauge construction, the iron rails being 45 pounds per yard. The materials will be furnished by the Philadelphia and Reading Coal and Iron Company, according to an agreement with the contractors, and the cash for the materials (\$5,000,000) will be paid upon shipment from this port.

The spirit of revolution and civil strife still rages unremittently in this distracted country. A rebellion which was to have broken out at Potosí on March 4, 1877, in favor of Dr. Corral, was discovered in time for its prevention. The leaders were all arrested, and probably shot. Another rebellion, which began prior to the former, at Santa Cruz de la Sierra, and was headed by one Ibáñez, continued until August, when it was put down by the national troops, under the command of President Daza in person. Lastly, in September, an attempt was made to overthrow the Government, during the absence of General Daza in the district of Yungas. On being apprised of the conspiracy, the President repaired immediately to La Paz, and succeeded in frustrating the plans of the revolutionists. Among those implicated in the conspiracy were Colonel Daria Medina and Dr. Julio Mendez, who, with a number of their associates, were imprisoned. All were, however, released in October, and Colonel Daria Medina set out for the Argentine Republic.

A decree of September 18th ordered that the meeting of the National Assembly should take place in La Paz, the shortness of funds in the National Treasury rendering it difficult for the Government to assemble in the capital of the Republic at that time, and its presence being required for the maintenance of public order. The election of deputies for the Assembly, which was to meet in November, began on September 15th. The opposition was to abstain from voting, so that the elections, according to the lists, would be governmental.

A decree was issued in October, 1877, granting freedom of transit to the ports of the Bolivian coast, so that all merchandise for

The exportation-tax on smelted silver and silver ores had been sold at auction for one year, for the sum of \$386,164, to be paid by monthly installments, in advance.

BRAZIL (IMPERIO DO BRAZIL), an Empire of South America, and the only country with a monarchical form of government in the New World. It is situated between latitude $5^{\circ} 10'$ north and $33^{\circ} 46'$ south, and longitude $34^{\circ} 47'$ and $74^{\circ} 7'$ west. It is bounded on the north by the United States of Colombia, Venezuela, the Guianas, and the Atlantic; on the east by the same ocean; on the south by Uruguay, the Argentine Republic, and Paraguay; and on the west by Bolivia, Peru, Ecuador, and Colombia.

The only two countries with which the question of boundaries still remains unsettled are Bolivia and the United States of Colombia. In May, 1875, a new Brazilian commission was appointed to pursue the work of deciding the boundaries; a similar appointment was made by the Bolivian Government, and the two commissions met at Corumbá, for the purpose of determining upon the most convenient course to be pursued for the prosecution of the labor from the northern extremity of Lake Cáceres, at which point the previous commission had left off. Unexpected incidents supervened, however, which ultimately led to a new postponement of operations. Before setting out from Corumbá, General Mujía applied to the Brazilian Government, stating that he was in want of funds to carry on the work, and petitioning an advance. The Imperial Government, in view of the official character of the petitioner, as Bolivian appointee, and in order to prevent any further cause of delay, unhesitatingly yielded to his request, supplying him with money to the amount of \$12,816. Meantime, the Bolivian Government, having been apprised by the Bolivian Minister at Rio de Janeiro, manifested its indignation at the commissioner's conduct, directing, at the same time, that no further advances should be made. In the course of diplomatic correspondence, the affair assumed a character which bade fair to be, and may still become, prejudicial to the project. On October 6, 1876, the Bolivian Minister of Foreign Affairs informed the Brazilian Foreign Minister that his Government had resolved upon recalling General Mujía, adding that, if the latter should give a satisfactory explanation of his conduct, he should at once return to the discharge of his duty, and, if not, an effort would be made to appoint another in his stead. It was afterward proposed by Brazil, and acceded to by Bolivia, that the Brazilian commission should proceed alone, and that Bolivia should, when most convenient, send out a commission to verify the accuracy of the demarkation. Lastly, on November 28, 1876, the Bolivian Government manifested its readiness to appoint a new commission, so that the work should be carried on to completion simultaneously on each side; but the appointment was not made, owing, most probably, to the troubled condi-

tion of affairs in the Republic in the year just past.

The Colombian Government, with which no agreement has yet been made respecting the common boundary-line, protested, under date of March 15, 1875, against the demarkation of limits between Brazil and Peru. The protest, however, was not received in Rio de Janeiro until September of the same year, "long after its publication in the Lima newspapers, *as had already occurred on other occasions*." The renewal by correspondence, and at so great a distance, of a discussion which could lead to no practical result, was by the Brazilian Government decreed useless; Brazil's right to the territory claimed by Colombia had been "abundantly proved" by Señor Conselheiro Azambuja, during his mission as Minister to Bogotá. So the only reply elicited by the protest was a reference to the correspondence between Azambuja and the Bogotá Government, and the confirmation of the imperial resolution to adhere to the boundaries marked out.

Statistical details relating to the territorial division, the area, population, etc., of the Empire, will be found in the volumes of the ANNUAL CYCLOPEDIA for 1872 and 1876.

The results of the new census take up 23 printed volumes, containing an aggregate of 8,546 statistical tables.

The population is set down at 10,110,090, of whom 1,419,966* were slaves; but if the estimated number of the uncivilized Indians be added, the total population will stand at 11,110,090.

The ethnological proportions would appear to have been as follows: Caucasian race, 3,787,289; African, 1,954,452; hybrids (mulattoes, cafuzos, etc.), 3,801,782; and the remainder, of the American race, comprising 386,955 civilized Indians.

In regard to sex, the equilibrium is almost perfect, the proportion being approximately as 20 to 19 in favor of the males.

The number of Roman Catholics was given at 9,902,712.

Of the free population, 8,176,191 were set down as Brazilians; 121,246 as Portuguese; 45,829 as Germans; 6,108 as French; and 44,580 as Africans; and of the slaves, 1,872,246 were of Brazilian birth.

In the year 1875 there were 159 cases of naturalization, and 148 in 1876 (up to November 15th); the original nationality of the new citizens being: Portuguese, 210; Italian, 43; German, 18; French, 11; British, 6; Spanish, 5; Russian, 3; Austro-Hungarian, 3; Moorish, 2; Belgian, Uruguayan, Paraguayan, United States, and Swiss, 1 each. The number of the children of the naturalized was 232, of whom 126 were males, and 33 had attained their majority.

Concerning the subject of immigration, the Governments of the European countries which

* On December 31, 1875: report of the Minister of Public Works, Commerce, and Agriculture, 1876.

Dom Pedro de Alcântara

EMPEROR OF BRAZIL.

have furnished the largest number of colonists for America begin to feel their interests affected by emigration, and consequently the necessity of retarding its progress, as well as the urgency of measures to prevent abuses on the part of emigrant-agents. "The Imperial Government, while it respects the solicitude manifested by the countries referred to, considers itself, nevertheless, in duty bound to see that the Brazilian interests be not prejudiced thereby, either in a moral point of view, or in relation to its physical character, which latter is so imperfectly understood in Europe." These remarks, from the Brazilian Minister of Foreign Affairs, were elicited by a circular issued in August, 1875, by the French Minister of Agriculture and Commerce, prohibiting emigration to Brazil. The subject was taken up by the Brazilian legation in Paris, and discussed both in conference and by correspondence, but the desired result—the revocation of the circular—was not obtained. The French Government, however, declared that the measure was not tantamount to a prohibition, but merely intended to put an end to abuses committed by emigrant-agents, and expressed itself generally in terms which "could not fail to be duly appreciated." Very few French emigrate to Brazil, and in this respect the question is one of minor interest relatively.

A circular of like tenor was issued in September of the same year by the Italian Government, and provoked a similar discussion, leading, at the time, to similar results as in France; but, on a change of ministry shortly afterward, the new Minister of Foreign Affairs issued a second circular annulling the first, and containing a series of measures restrictive of the abuses practised by emigrant-agents.

Among other inducements and privileges offered to immigrants, as has been previously stated, are the following:

The payment by the Government of the difference in the amount of passage-money from the port of departure to the United States and that to Brazil; the advancement of the full passage-money to families intending to settle in the government colonies; exemption from import duty on all effects the property of and brought into the country by the immigrants; a hunting-gun given to each adult; etc., etc.

There were in 1875 fifteen colonies immediately dependent upon the central Government, with a population of 23,018, against 16,412 in 1873; about a dozen others founded under the auspices of provincial governments, and a number belonging to private companies, some of whom, however, receive subsidies from the national Government. Many of the colonies are in a prosperous condition.

The following remarks on the subject of immigration are extracted from a speech delivered in the Chamber of Deputies by Señor Costa Pereira, in 1877:

I said, Señor President, that it has been repeatedly asserted, both from the tribune and through the press,

that we have expended fabulous sums on immigration and colonization, and such, too, is the general opinion throughout the country. I shall now lay before the Chamber the result of my researches, namely, that the total expenditure for these purposes during the 30 fiscal years from 1846-'47 to 1875-'76 did not exceed \$11,825,621.24, including the outlay for the regular service of the public lands.

I commence with the year 1846-'47, for the reason that, prior to that period, little may be said to have been done, save the works involved by the establishing the colonies of S. Leopoldo, Tres Forquilhas, and Torres, in the earlier days of the independence.

The subjoined table will show the expenditure in each of the years referred to, including that made out of the appropriation of \$3,000,000 voted on October 4, 1856:

FISCAL YEAR.	Amounts.	FISCAL YEAR.	Amounts.
1846-'47.....	\$35,049 66	1861-'62.....	\$468,786 60
1847-'48.....	6,461 79	1862-'63.....	418,927 87
1848-'49.....	11,754 98	1863-'64.....	817,109 91
1849-'50.....	12,000 00	1864-'65.....	249,852 81
1850-'51.....	8,452 09	1865-'66.....	275,255 87
1851-'52.....	925 88	1866-'67.....	478,818 64
1852-'53.....	2,104 00	1867-'68.....	710,958 02
1853-'54.....	11,758 92	1868-'69.....	565,675 29
1854-'55.....	15,790 47	1869-'70.....	828,944 76
1855-'56.....	100,185 03	1870-'71.....	410,106 50
1856-'57.....	185,718 00	1871-'72.....	860,412 71
1857-'58.....	631,644 79	1872-'73.....	818,176 65
1858-'59.....	583,407 45	1873-'74.....	1,071,277 88
1859-'60.....	416,280 44	1874-'75.....	1,296,875 82
1860-'61.....	167,378 49	1875-'76.....	1,872,910 29

It is generally supposed that the appropriation of 1856 was all exhausted; but this is an error. Not more than \$603,644.46 was expended out of it from 1857 to 1863, and even in this latter sum is included a loan which was afterward refunded by the *Associação Central de Colonização*.

The law of September 28, 1871, for the progressive abolition of slavery, has hitherto been observed and fulfilled in a manner highly honorable to the national character.

The number of manumitted slaves up to December 31, 1875, was 21,704, as officially reported by the Minister of Public Works, etc., in 1876.

The Emperor, Dom Pedro II. de Alcântara, John Charles Leopold Salvador Bibiano Francis Xavier de Paule Leocadio Michael Gabriel Raphael Gonzague, born December 2, 1825, son of Dom Pedro I. de Alcântara (King of Portugal and Emperor of Brazil), is the sovereign now reigning.*

The Cabinet, formed June 25, 1875, was composed as follows: Minister of the Interior, Councilor A. C. Pinto e Silva, Deputy; Justice, Councilor F. J. da Gama Cerqueira, Deputy; Foreign Affairs, Baron D. Valho, Senator; War, Duke de Caxias, Senator, and President of the Council of State; Navy, Councilor L. A. Pereira Franco; Finance, Baron de Cotegipe (*ad interim*); and Public Works, Commerce, and Agriculture, T. J. Coelho de Almeida, Deputy.

The Council of State is made up of the following members in ordinary: Princess Imperial, Donna Isabel; Prince Gaston d'Orléans, Count d'Eu; Senators—Viscount de Abaeté; Marquis de São Vicente; Viscount do Rio Branco; J. T. Nabuco de Araujo; Viscounts

* Reference may be made to the *ANNUAL CYCLOPEDIA* for 1875, for the Constitution and Government of Brazil (page 86), and for a biographical sketch of the Emperor (page 615).

de Muritiba, de Bom Retiro (Senator), de Jaguaray (Senator), de Caravellas, and de Nictheroy; and of the six members extraordinary: Senators Viscount de Araxá, Duke de Caxias (President), J. P. Dias de Carvacho, J. J. Teixeira, Vice-Admiral J. R. de Lamare, and Dr. P. J. Soares de Souza.

BRAZIL NUT, SHOWING FRUIT CUT OPEN, DISCLOSING THE ARRANGEMENT OF NUTS.

The President of the Senate, which is composed of 58 life-members, is Viscount de Jaguaray.

The President of the Chamber of Deputies, with 122 members elected for four years, is Councilor of State P. J. Soares de Souza; and the Vice-Presidents, J. P. M. Portella, Baron da Villa da Barra, and Baron de Aquiraz.

The Archbishop of Bahia, J. G. de Azevedo (1875), is Primate of all Brazil; and there are 11 bishops: those of Pará, São Luiz, Fortaleza, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Cuyabá.

In pursuance of the law of February 27, 1875, military service is obligatory for all citizens, the law admitting, however, of numerous exceptions, and granting the right of substitution. The period of service is six years in the regular Army, and three in the reserve corps. The strength of the Army in time of peace is fixed at 15,000. In 1877 the Imperial Army comprised 1,574 officers and 16,177 men (exclusive of some 1,500 hands employed in the arsenal). The established war-strength is 32,000.

The regular Army consists of 5 regiments, 2 detachments, 1 squadron, and 4 garrison companies of cavalry; 21 battalions, 8 garrison companies, and 1 depot drill-company of infantry; 3 regiments of horse and 4 battalions of foot artillery; and 1 battalion of sappers and miners.

The police force consists of 7,306 men, of whom 1,066 are in Rio de Janeiro.

The reorganization of the National Guard, disbanded awaiting the new census returns, has not yet taken place.

The Navy consisted, in 1877, of 11 iron-clad steamers, 1 frigate, 6 steam corvettes, 20 steam gunboats, 15 steam transports, and 3

sail-of-the-line; with a total armament of 197 guns, and an aggregate of 7,192 horse-power. There were besides 9 vessels for port service, 1 school-ship, and 1 brig for midshipmen, both without armament; and, in process of construction, 1 iron-clad, 1 corvette, and 4 gunboats.

There were in the naval service 14 general staff officers, 349 first-class and 159 second-class and supernumerary officers, a sanitary corps 75 strong, 20 almoners, 99 accountants, 62 guardians, 40 engineers, 2,993 imperial marines, a naval battalion of 842 men, and 1,528 apprentices—total, 6,181.

The National Treasury, under the immediate supervision of the Minister of Finance, is the administrative financial centre of the Empire. Besides this central department, there is in each province a treasury subordinate to the former, and various bureaux, for the collection of taxes, in the capital and the provinces, and special agents in each municipality.

The Minister of Finance is required to lay before the Chamber of Deputies, at the opening of each session, a budget of the expenditure for the year following, and of all sources of public revenue, as also the final balance-sheet of the revenue and expenditure for the last year but one preceding, and the estimated balance for the year immediately preceding.

Although the fiscal year commences on July 1, and ends on June 30, taxes for that year are collected, and payments effected up till December 31.

The payment of the capital and interest of the home debt, consolidated by law, and represented by revenue bonds, is effected by a department independent of the National Treas-

BRAZILIAN EAGLE.

ury, and designated as that of the "Amortization, or Sinking, Fund," presided over by the Minister of Finance, and composed of an Inspector-General of the Fund and five native capitalists bondholders. The branches of this fund are the provincial treasuries.

The payment of the capital and interest of the foreign debt, contracted in London, is in-

trusted to the financial agents of Brazil in that city.

There is in Rio de Janeiro a delegation whose duty is to keep the accounts of the revenue and expenses of the Empire abroad. This delegation is immediately dependent upon the National Treasury department.

The public revenue comprises the municipal, provincial, and national imposts.

The municipal imposts are determined in the capital of the Empire by the Assembly and the Central Government, and in the provinces by the provincial assemblies, on the suggestion of the municipal chambers, and are appropriated to the municipal expenditures.

The provincial imposts are determined by the provincial assemblies, with the sanction of the respective presidents, and are applied on account of the expenditures of the several provinces.

The national imposts are fixed by laws emanating from the Central Legislature, and are collected mainly through the custom-house, general receiving bureaux, and other offices dependent on the latter.

The amounts and various branches of the national revenue and expenditure for the fiscal year 1874-'75 are exhibited in the following tables:

REVENUE.	
Custom-House.....	\$37,117,177
Shipping dues.....	209,637
Railways.....	4,303,183
Post-Office.....	493,985
Telegraphs.....	104,485
Stamp duties.....	2,136,942
Mutation duties.....	2,252,119
Taxes on industries, trades, etc.....	1,343,425
Licenses.....	249,431
Real estate tax.....	1,281,503
Lottery tax.....	762,383
Mines.....	13,850
Receipts extraordinary.....	792,026
Slave liberation fund.....	577,960
Deposits.....	892,104

“ of Commerce.....	13,261,276
Total.....	\$62,921,636
Surplus.....	\$4,174,039

In the budget for 1878-'79, the revenue is estimated at \$51,650,000; the expenditure at \$53,861,034: deficit, \$2,211,034.

It was presumed that the revenue for 1876-'77 would not exceed \$58,570,468, while the probable expenditure was set down at \$60,248,665; which would show a deficit of \$1,678,197. (For particulars concerning the national debt, reference may be made to the ANNUAL CYCLOPEDIA for 1876.)

The following remarks concerning the amount of the foreign debt, uses to which the loans were appropriated, etc., are transcribed from a prominent London financial publication, and were provoked by alleged misstatements on the subject, emanating from a British diplomatic source.

On October 18, 1877, the financial agents of Brazil, as appears from their advertisement, deposited in the Bank of England, on account of the Brazilian loans, that of 1875 excepted, bonds of the value of £861,700, canceled by the operations of the sinking-funds during the two and a half years ending in June, 1876; and since that time the amortization of those loans has gone on at a rate exceeding £350,000 per annum. By reference to the ordinary sources of financial information, it will be found that the outstanding amounts of the foreign loans of Brazil are, in round numbers, £19,000,000,* or a sum considerably less than two years' revenue of the Empire; and, as not the least anxiety is ever felt as to the punctual payment of the dividends, or the unerring application of the accumulating sinking-funds to their reduction, their market values are, in comparison with other foreign funds, high.

Such being the position of the foreign debt of Brazil, it is with amazement that we see, in the first sentence of a lately-issued report on that country by a young gentleman two years a member of the British legation at Rio, the statement that Brazil has been a borrower here of £30,000,000. The reporter includes, indeed, in that amount the railway capital raised by the three English companies on guarantees of interest by the Government. Now, even were the reporter correct in describing the Government as a borrower of that railway capital, say £5,700,000, this diplomatic youngster, whose inaccuracy ought to have been manifest to his chief and corrigible by him, would have exaggerated his £30,000,000 by the substantial sum of £3,300,000. But the Brazilian Government, in point of fact, is not a borrower of capital for the Bahia, the Pernambuco, and the São Paulo Railway Companies. It is not liable in any way for the payment of the capital those companies raised in this market on its guarantees to make up interest thereon for definite periods, to the rate of 7 per cent. in most of it, and to 5 per cent. on the other part of it. On the contrary, its guarantees terminate without any reimbursement of their capital by any one at the expiration of definite periods by the Imperial Government; and, as to the Pernambuco Railway, the Government, a creditor for £400,000, lent to it at 7 per cent. interest. But this is not the whole situation of the Government *vis-à-vis* these railway companies. The profits of the São Paulo Railway Company have for some years past been so large that the guarantee of 7 per cent. on its £2,750,000 has not only become wholly inoperative, but during three of those years the Imperial Government has participated in the profits of the company, beyond 7 per cent., to the amount of some £70,000; so that, by its connection with that prosperous undertaking, the Government does not lose a milrei, but gains substantially in sterling. In the case of the Pernambuco line, the company has, since the year 1861, realized a profit in diminution of the pressure of the guarantee, which, in the year ending June 20, 1877, only cost the Government £33,811 8s. on a guaranteed capital of £1,600,000; and, as the Government is, at its own cost, and out of the loan of 1875, extending that line, it may be anticipated that, when the extension is at work, the pressure of the Pernambuco guarantee on the Treasury will further diminish, if it be not wholly removed. In the case of the Bahia company the full weight of the guarantee is still borne by the Treasury, but, as its

* £19,093,500, on October 31, 1876, as appears from the report of the Minister of Finance.

extension is going on at the cost of the Government out of the same loan, and as an extension of some 16 miles is expected to be open within a year, there is a prospect of the Government finding relief in respect of that guarantee also.

"From these explanations," continues the writer just quoted, "it will be seen how grossly this attaché of the English legation at Rio has exaggerated the borrowing of Brazil in England, and how little he knows of the subject on which the Foreign Office has permitted him to appear before the English public.

"In 1873, a law was passed in Brazil, authorizing the Government to give guarantees of 7 per cent. on railway capital, for provincial lines which had reasonable prospect of yielding, on fixed costs of construction, 4 per cent. from the gross profits of working the lines. Under this law several concessions were granted; but the terms of the concessions under the law were soon found to be unworkable; and no capital, excepting one case (and there it is certain to be remunerative), has been received. The Government, before the report was written, had informed the Legislature that the law was inoperative, and that a new system must be devised, which has not yet been prepared. Nevertheless, this report adds up the whole capital which was involved in these unworkable concessions, and presents the sum total as if the guaranteed interest thereon was a practical liability of the Brazilian Treasury; accumulating in this way an amount of liability which has no existence whatever.

"The Government proposed lately, in violation, the reporter says, of its concessions, to subject the materials imported by the Anglo-Brazilian railways, that were profitable, to the customs duties of the Empire. The Government did nothing of the sort. Its proposal was limited to the application to those materials of a small tax in lieu of port charges, called *expediente*; and, in making this very different proposal, it was emphatically stated that all existing exemptions from customs duties were to be rigorously maintained. So far, then, as suggested, from contemplating any breach of faith to these companies, he confirmed their exceptional privileges.

"Then, as to the Maná litigation with the São Paulo Railway Company, the reporter states, first, that the concessions of the railway companies contained an express condition that disputes should be decided by the English tribunals only. That the Maná suit was not cognizable by Brazilian tribunals was a legal inference from the concessions and the nature of the Maná litigation, Brazilian tribunals had already twice decided, when the report was written, though all notice of the decisions is omitted by its writer, but there was not in the concession any such "express condition" as is alleged. Next he complains that when this litigation came again before Brazilian tribunals, it was "without hinderance or disapprobation on the part of the Brazilian Govern-

ment." Why, on what right or pretense could the Government interfere with any of its own subjects resorting, rightly or wrongly, to the tribunals of his country? No such intervention would be endurable, were it possible, in any civilized state. The resort to the tribunals was made and persisted in at the risk of the suitor; but three times did the Brazilian tribunals declare their incompetency, and, at last, finally. And the company has expressed its entire satisfaction with the conduct both of the tribunals and the Government in the litigation."

The following brief extract, from the report of the Minister of the Interior, is intended to present a comprehensive view of the progressive development of public instruction in Brazil:

While we cannot boast that public instruction has as yet attained among us that degree of development which is compatible with our free institutions, and with the state of civilization in the present century, it is, nevertheless, true that this branch has, since the foundation of the Empire, been the object of solicitous care on the part of the Government and of its delegates, especially within the past few years, in which rapid and encouraging progress has been made, not only in the higher and secondary, but more particularly in the primary branches of education.

In 1869 there were not more than 2,516 primary schools, public and private, in the whole Empire; in 1876 the number of these, according to the most accurate information, exceeded 6,000.

In 1869 the attendance at the primary schools was but 115,935, including both sexes; the attendance in 1876 was little short of 200,000.

In 1869 there was but one school for every 2,394 free inhabitants; in 1876 there was a school for every 1,250 free inhabitants, approximately.

In 1869 there was 1 primary school for every 541 free inhabitants of school-going age (from 6 to 15 years), the total number of these being 1,902,424; in 1876 there was 1 primary school for every 314 free inhabitants of said age.

A table showing the number of primary schools in each province, and the attendance thereat, etc., will be found in the ANNUAL CYCLOPEDIA for 1875.

In point of educational establishments, public and private, for the higher branches of instruction, military and other technical institutes, and scientific schools, Brazil, if not foremost among the South American states, has at least little to envy the most favored of these.

The total values of the exports and imports, including precious metals, were \$104,247,000 and \$83,774,500, respectively, in 1874-'75; and \$91,801,000 and \$86,074,500, respectively, in 1875-'76.

The values of the chief articles of export were as follows, in the years 1874-'75 and 1875-'76:

COMMODITIES.	Value in 1874-'75.	Value in 1875-'76.
Coffee.....	\$62,905,900	\$58,046,100
Raw cotton.....	9,952,850	5,731,600
Sugar.....	11,568,250	7,025,900
Mate (Paraguay tea).....	743,500	731,750
Skins.....	6,288,100	5,942,000
Tobacco.....	2,994,500	3,825,750
India-rubber.....	5,129,250	5,056,500
Diamonds.....	245,750	376,250

The shipping movements at the various ports of the Empire, in 1875-'76, are exhibited in the subjoined table :

Entered....	Sea-going vessels.....	Foreign.....	3,017, with an aggregate of 85,185 tons.
	Coasting vessels.....	Brazilian.....	1,770, " " 12,415 "
Cleared....	Sea-going vessels.....	Foreign.....	7,923, " " 97,984 "
	Coasting vessels.....	Brazilian.....	3,535, " " 72,864 "
			1,067, " " 25,120 "
			7,654, " " 120,241 "

At the commencement of 1877 there were 27 railway lines, with an aggregate of 1,431 miles open to traffic.

In April there were 3,893 miles of telegraph, the number of offices being 104.

The number of letters which passed through the Post-office in the year 1875-'76 was 13,161,297, of which 7,200,000 were by the way of Rio de Janeiro.

The political condition of Brazil is, in many respects, the most enviable in the South American continent. Peace and harmony at home, and cordial relations with all other nations—such is the ruling state of affairs in the Empire; and such has, with little interruption, been the state since the termination of the Paraguayan war. At no period of their history has a more friendly feeling existed between Brazil and the Argentine Republic, or a lesser tendency to political complication. The Paraguayan war, while it led Brazil and the Argentine Republic to an enormous expenditure of money, and a loss of life quite out of proportion to the merits of the question at issue, brought out, nevertheless, the true character both of Brazilians and Argentines, who fought side by side in that struggle, and learned to respect each other, a feeling that had not previously existed. The extirpation of the Lopez dynasty was essential to the welfare of the Plate provinces. How terrible has been the sacrifice, and how complete the prostration of Paraguay, may be judged by its abject condition and inability to help itself toward any practical solution of its difficulties.

The return of the Emperor and Empress to their capital, in September, was celebrated by such special festivities as afforded a touching proof of the genuine affection of the Brazilian people for a monarch who, for more than 40 years, has reigned over a prosperous and contented nation. The Hon. Mr. Hilliard, United States Minister to Brazil, arrived at Rio de Janeiro on October 14, 1877.

BRIGGS, CHARLES FREDERICK, died in Brooklyn, June 20, 1877. He was born in Nantucket in 1804, and early became a contributor to the magazines. He also wrote several popular novels, including "The Adventures of Harry Franco," and "The Trippings of Tom Pepper." In 1844, with Edgar A. Poe, he began the publication of *The Broadway Journal*, which proved a failure. In 1853 he became associated with George William Curtis and Parke Godwin in the management of *Putnam's Magazine*. He was afterward employed in the custom-house, and in 1870 he joined the editorial staff of the *Brooklyn Union*, of which he

became chief editor in 1874. In the latter part of 1874 he became a writer for the *New York Independent*, where he continued till his death.

BROWNLOW, WILLIAM GANNAWAY, an American clergyman, journalist, and politician, died at Knoxville, Tenn., April 29, 1877. He was born in Wythe County, Va., August 29, 1805. Left an orphan at an early age, he learned the trade of a carpenter. In 1826 he entered the Methodist ministry, and labored for ten years as an itinerant preacher. As early as 1828 he began to take part in politics in Tennessee, advocating the reelection of John Quincy Adams to the presidency; and while traveling a circuit in South Carolina, in which John C. Calhoun lived, he publicly opposed nullification. About 1837 he became editor of the Knoxville *Whig*, a political newspaper. In consequence of his trenchant mode of expression, he became known as the "Fighting Parson." In 1856 he published "The Iron Wheel Examined, and its Spokes Extracted," being a reply to attacks made upon the Methodist Church. In 1858 he held a public debate in Philadelphia with the Rev. A. Pryne, of New York, which was published in a volume entitled, "Ought American Slavery to be Perpetuated?" Mr. Brownlow taking the affirmative. When the movement of secession took place, he advocated the preservation of the Union as the best safeguard for Southern institutions. In December, 1861, he was arrested on charge of treason against the Confederacy, and detained till March, 1862, when he was sent within the Union lines. After this he made a tour through the Northern States, delivering speeches in the principal cities, and published a book entitled "Sketches of the Rise, Progress, and Decline of Secession," etc. In 1864 he returned to Tennessee, of which he became Governor in 1865; and in 1869 he was elected to the Senate of the United States for six years, after which he resumed the editorship of the Knoxville *Whig*.

BUCK, DR. GURDON, died in New York City, March 6, 1877. He was born on May 4, 1807. After pursuing his studies at Nelson's Classical School, in New York, he engaged in business for a time, but finally, after studying medicine under the late Dr. Thomas Cook, he was graduated from the College of Physicians and Surgeons in 1830. He first served the regular term in the medical department of the New York Hospital, and then went abroad to complete his professional studies, whence he returned in 1833, and began the practice of his profession in New York City, where he after-

ward resided. He was successful in performing many difficult operations in surgery, which was his specialty, and brought into general use the treatment of fractures, generally known as "Buck's Extension." He was one of the oldest hospital surgeons in New York, holding the position of Visiting Surgeon of the New York Hospital from 1837 till his death. He was also Visiting Surgeon of the St. Luke's and the Presbyterian Hospitals, Consulting Surgeon of the Roosevelt Hospital, and for ten years previous to 1862 he was the Visiting Surgeon of the New York Eye and Ear Infirmary. Be-

sides being a fellow of the Academy of Medicine from the time it was founded, and serving one term as its vice-president, he was connected with the New York Pathological Society, the American Medical Association, and at different times acted as a trustee of the New York Eye and Ear Infirmary, the College of Physicians and Surgeons, the New York Dispensary, and the New York Ophthalmic and Aural Institute. For 35 years he was a frequent contributor to medical journals. He also published an elaborate treatise entitled "Contributions to Reparative Surgery."

C

CALIFORNIA. The subject of Chinese immigration has occupied an unusual degree of attention during the year in California. The excited state of popular feeling led to several outbreaks of violence. On the night of March 14th, five Chinamen were murdered in the town of Chico, by members of an organization called the Anti-Chinese and Workingmen's Association. The persons concerned were immediately arrested, and it was ascertained that the object of the association was to deter Chinese from obtaining employment in that place, and that murder and arson were among the agencies to be used for the purpose. Not only the Chinese, but their employers, were to become objects of attack, unless they yielded to the demands of the association. The members were bound to secrecy, and sworn to obey all orders of the "Council of Nine." The exposure of its purposes led to the dissolution of the organization, its principal officers being indicted as accessory to the murder of the Chinese. The excitement occasioned in various parts of the country, by the railroad strikes in July, led to a riotous uprising of the lawless elements in San Francisco. Their demonstrations were directed almost wholly against the Chinese, and, on the night of the 25th, attacks were made upon several wash-houses and dwellings in the Chinese quarter, and fires were started in different parts of the city. A Committee of Safety had been previously organized to assist the authorities in suppressing disorder, and a large force of military and special police promptly checked the proceedings of the mob. The vigorous action of the city authorities, and of the Committee of Safety, which was made up of all classes of law-abiding citizens, speedily restored the city to a condition of quiet. Among the appeals made during the disturbances, was the following, by the Roman Catholic Archbishop:

In these days of trouble, when order, property, and life are threatened, I deem it not out of place to call upon all good citizens, the Catholics in particular, to stand by authority. Anarchy is the greatest fiend of society, and of the individual. Good sense, law, conscience, religion, and God himself, forbid sedition, and command subordination. Injuries are often

hard to bear; but it is never lawful to join a mob to obtain redress, even if the Government be slow in affording relief. No portion of our Republic has suffered more than the people of California from the flood of Asiatic immigration, supplanting gradually all kinds of labor and trades, and practically exiling from their own homes and country thousands of laborers and tradesmen. But the remedy lies not in the mad torch of anarchy. The people of the United States have the good sense, power, and will to have the evil corrected by legal means, and they will do it. But to seek redress by joining the wild fury of the rioters is most criminal, for it encourages and consummates the lawless destruction of property; it endangers, and frequently destroys, the lives of citizens; it entails untold misery and suffering, and not seldom it brings to a sad end the evil-doers. Our people of California are, as a rule, strictly subordinate to authority, although a few may occasionally be misguided by unprincipled leaders. Hence I feel it my duty, in these dangerous times, to counsel all to shun suspicious company, to listen to no declaimer conniving at the subversion of quiet and order, to participate in no unauthorized movement, and to sustain to their utmost the legally-constituted authorities.

July 25, 1877.

† J. S. ALEMANY,
Archbishop of San Francisco.

In writing to the chairman of the Committee of Safety, on July 31st, regarding the cause of the outbreak, Governor Irwin said:

There is no question that the actual rioters—the hoodlums, thieves, and internationalists—were encouraged to make the demonstrations which they did, by the knowledge they had of the discontent prevailing among the great body of the laboring men of the State on account of Chinese immigration and Chinese labor. The rioters hoped to be joined by the laboring men. This led them to believe that they might deplete on the property of the Chinese, or apply the torch to the property of those who employ Chinese, with impunity. And I need not stop to depict the disaster to both property and life which must have ensued if the hope of the rioters had been realized. Yet the small amount of property destroyed in the riots, and the few casualties which occurred in suppressing them, are due to the fact that the laboring people, though feeling most profoundly that they are the subjects of great wrongs, through the policy which admits the Chinese to free competition with them in the labor market, steadfastly refused to resort to violent or irregular methods to remedy their grievances. But can we hope that, with the same cause of complaint becoming more and more aggravated from year to year, they will always exhibit the same forbearance and splendid self-control which they have shown in the crisis just passed? I

need not attempt a statement of the evils which result from the policy of our Government on the Chinese question. That the Chinese have rapidly encroached on the white laborers in all branches of industry, except those requiring either great muscular power, or a high order of mechanical skill, need not be demonstrated; it is manifest to every one who will open his eyes and see. It is pretty clear that, in every branch of industry in which Chinese labor can be used at all—and there are few branches in which it has not already been introduced—it is only a question of time as to when all white labor shall be excluded from such industry.

As a preventive of future trouble, he made the following suggestion:

Now, what I have to suggest to the committee is, that it, in the interest of the future safety of the city and the State, and in the interest of a proper American civilization on this coast, make formal declarations: First, That, in its judgment, the present treaty relations between the United States Government and the Government of China ought to be modified so as to prevent the unlimited influx of the Chinese into this country; and, second, That it will employ all means legitimately at its command, to secure action in the premises on the part of the Federal Government.

About the end of October and the beginning of November a series of meetings was held in the streets of San Francisco, at which incendiary speeches were made, with intent to stir up the popular sentiment against the Chinese and to incite attacks upon them. An appeal was made to the mayor, by the presidents of the six Chinese companies, for the protection of their countrymen, and these meetings were dispersed by the police, several speakers being arrested.

The committee of the State Senate, which had been appointed in 1876 to investigate the subject of Chinese immigration, prepared a memorial, which was submitted to the Federal Congress at the extra session in October. This set forth in strong terms all the alleged evils of the influx of Mongolians. It represented that the Chinese shipped to California were of the most degraded class, and virtually the slaves of contractors; that they were in danger of overwhelming the white laborers with their numbers; that the cheapness of their labor had a ruinous effect on the native working classes; and that vice and crime were very prevalent among them. In conclusion, the memorial said:

The Chinese now here are protected by our treaty obligations and laws; and, that they will continue to receive that protection, the people and Government of this State will be responsible. If further immigration is prevented, they will gradually return to their own country, and the occupations in which they are now engaged will be supplied with laborers and immigrants of our own race. The temper of the people of California is such that the employment of Chinese will be, as it has to a considerable extent already been, discouraged, and this will effectually compel their departure.

As to future immigration, neither a total nor partial abrogation of the Burlingame Treaty will afford relief. The mass of—indeed, the entire—immigration comes from the port of Hong-Kong, a British colony. No alteration in our treaty stipulations with China could have the slightest effect upon the passenger trade of that port.

The British colonies of Australia have, like us, suffered under the incubus, and have recently endeavored, by hostile legislation, and, in some instances, by force, to effect the exclusion and obstruct the further ingress of Chinese. Those agitations, coupled with the earnest and uniform policy of Great Britain of suppressing any traffic resembling the slave trade, convince us that an appeal to that country would lead to the desired result. Indeed, we may well assume, in view of the amicable relations existing between the English Cabinet and people and the United States, that, in the absence of any urgent reasons addressing themselves pecu-

STATE CAPITOL, SACRAMENTO.

liarily to Her Majesty's Government, it would, upon proper diplomatic representations, cordially cooperate with our own Government in arriving at a satisfactory remedy.

With the Chinese Government there need be no difficulty. As will appear by the report, that Government is opposed to the emigration of its people, and, in our judgment, founded upon reliable evidence, would readily consent to a modification of existing treaties; and for this reason, also, such modification would not necessarily disturb in any manner our commercial relations with China.

We would, therefore, most respectfully suggest, as

the means of a final solution of this grave and ever-increasing difficulty: First, an appeal to the Government of Great Britain to coöperate with our own Government in the absolute prohibition of this trade in men and women; and, second, the joint and friendly action of the two countries with the Empire of China in the abrogation of all treaties between the three nations permitting the emigration of Chinese to the United States.

And, in the mean time, we earnestly recommend legislation by Congress limiting the number of Chinese allowed to be landed from any vessel entering the ports of the United States to, say, not more than 10.

This policy would, in a great degree, tend to a redress of the grievances that now sorely afflict our State, and threaten to overshadow her prosperity.

A counter-memorial was sent to Congress by the presidents of the six companies, denying most of the allegations of the Senate committee, and supporting the denial, in some measure, by evidence. Among other things, it was shown that, for the past year, instead of an increase of immigration, there had been more departures than arrivals at the port of San Francisco. It was also shown, from the

criminal statistics of the State, that there was a far smaller proportion of Chinese than of other classes of foreigners in the penal institutions. In his message to the Legislature of 1877-'78, Governor Irwin, speaking on this subject, said:

The presence of the Chinese in this State in large numbers, with steady additions thereto, through immigration, from the exhaustless hive in China, not only threatens an irrepressible conflict between the American and Chinese civilizations, but has actually initiated such conflict. If the right of unlimited emigration is conceded to the Chinese, as it is under the Burlingame Treaty, and if Chinese immigrants are guaranteed in all the rights that immigrants from the most favored nations are, as they are under the same treaty, what is to prevent the triumph of their civilization, in a modified form, in its conflict with ours? Every one conversant with the state of affairs in this State knows that, if the present conditions guaranteed by the Burlingame Treaty continue, there is imminent danger of precisely that result.

Nay, I may go further, and say that that result is as certain as any event can be which is yet in the future; but upon this condition only, that the Chinese shall enjoy perfect and absolute protection

NEW CITY HALL, SAN FRANCISCO.

here. Under the provisions of the Burlingame Treaty, their right to protection here is as perfect as is their right to come here. If, then, they shall be protected in their treaty rights—their right to come here and be protected while here—we shall most certainly be so far vanquished in the conflict that the resulting civilization will be essentially different in its character from the civilization of the Mississippi Valley and the Atlantic seaboard.

But it is not always possible for a government to do what it is legally and morally bound to do. It may be unable to furnish the protection which its treaty obligations and the laws of humanity require it to furnish. I have said, an irrepressible conflict between the Chinese and ourselves—between their civilization and ours—has already been initiated. Now, if the unrestricted right of immigration shall continue to be secured to the Chinese, and they shall continue to exercise the right, there is danger—great danger—that this conflict will become so sharp, bitter, and determined, that it will be difficult, or even impossible, for the Government—national or State, or both—to secure to them the protection to

which they would be entitled, both by treaty and the laws of humanity. We are in imminent danger of this contingency, and will continue to be, as long as the Chinese shall continue to exercise the rights guaranteed them by the Burlingame Treaty.

What, then, is the plain duty of the United States Government? It is, to secure the abrogation of the treaty provision which permits unrestricted Chinese immigration to this country. If the Government of China will not consent to such a modification of the treaty, then Congress should forthwith pass such laws, in disregard of the treaty, as will remedy the evil.

The following preamble and resolutions were promptly introduced in the Legislature, and were pending when that body adjourned over the holidays, at the end of the year:

Whereas, On the 3d of July, A. D. 1844, a treaty of peace, amity, and commerce, was concluded between the United States of America and the Empire of China, whereby the citizens of the United States

were permitted to frequent and reside at five cities and ports of the said Empire, and not elsewhere therein, for purposes of trade and commerce; and

Whereas, On the 18th of June, A. D. 1858, by a treaty of peace, amity, and commerce, then concluded between the said United States of America and the said Empire of China, the citizens of the United States were permitted to frequent and reside at seven cities and ports in said Empire, and not elsewhere therein, for purposes of trade and commerce; and

Whereas, The said treaties so made and concluded between the high contracting parties were mainly intended to open to the trade and commerce of the United States, to a limited extent, certain specified cities and ports of the Chinese Empire which had been theretofore closed to such commerce and trade; and the opening of which said cities and ports has been, and is, beneficial to the Chinese Government and its subjects, and to the United States and its citizens; and

Whereas, Nothing contained in the said treaties, either directly or indirectly or by implication, conferred or acknowledged any right, extended any invitation, or held out any inducement to the migration to the territory of the United States of the subjects of the Chinese Empire; and

Whereas, On the 28th of July, 1868, an additional treaty was entered into and ingrafted on the treaty concluded between the United States of America and the Empire of China, on the 18th of June, 1858, which additional treaty is commonly known as the "Burlingame Treaty," and under and by virtue of which, among other things, it is declared, in Article 5 of said treaty, that "the United States of America and the Emperor of China cordially recognize the mutual advantage of the free migration and emigration of their citizens and subjects respectively, from the one country to the other, for purposes of curiosity, of trade, or as permanent residents;" and again, in Article 6 of said treaty, "Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation;" and again, in Article 7 of said treaty, "Citizens of the United States may freely establish and maintain schools within the Empire of China, at those places where foreigners are, by treaty, permitted to live; and reciprocally, Chinese subjects may enjoy the same privileges and immunities in the United States;" and

Whereas, The said so-called Burlingame Treaty expressly sanctions and acknowledges the right of, and extends an invitation to, the subjects of China, to migrate to the United States, and to any port or portion of its territorial area, for purposes of curiosity, trade, or for permanent residence; while, by said treaty, for those and other purposes, the citizens of the United States are restricted to certain defined and limited portions of the Empire of China; and

Whereas, The State of California, from its geographical location and its easy access to the denizens of China, has received, and is receiving, large numbers of the people of that Empire in her midst; a people incapable of assimilation or affiliation with the religious, political, or social institutions of our country; whose manners, habits, and customs preclude the hope, if it were desirable, of ever converting them into a homogeneous race; and who, monopolizing the manual avocations of life, are rapidly shutting out from employment the white laboring classes of our State; and

Whereas, It is the sentiment of the Representatives of the people of the State of California, in Legislature convened, that continued emigration of the subjects of the Empire of China to our State is an evil of potent magnitude, exciting and intensifying, in the present, the hatred of the white working classes toward this heterogeneous race, and toward

those who employ them; and bearing with it, in the future, consequences of the gravest moment to this State and to the country; and believing that, when a dire political and social calamity is fastening itself upon the vitals of a State, and such State, by virtue of its relation with the Federal head, is powerless to remedy or eradicate such calamity by peaceful means and through the machinery of its laws, it is not only the right, but the duty, of the Representatives of the people of such State to appeal, with earnest and solemn voice, for assistance and relief: Therefore, be it

Resolved by the Senate, the Assembly concurring, That the Representatives of the people of the State of California, in Legislature convened, do hereby most respectfully, but most earnestly, urge upon the President of the United States, and upon the Senate and House of Representatives of the United States, the absolute necessity of the modification or abrogation of the so-called "Burlingame Treaty," in so far as it sanctions, authorizes, invites, or induces the subjects of the Chinese Empire to emigrate to the territory of the United States.

Resolved, That our Senators in Congress be instructed, and our Representatives be requested, to use their utmost exertions in obtaining executive, legislative, and diplomatic aid, to the end that the treaties now existing between the United States and the Empire of China may be so amended, revised, or rescinded, that the flow of Chinese immigration to our shores shall cease.

Resolved, That our Senators be further instructed, and our Representatives be further requested, to lay these resolutions before the President, Senate, and House of Representatives of the United States, and that his Excellency the Governor be requested to transmit these resolutions forthwith to each of our Senators and Representatives in the Congress of the United States.

The fiscal period covered by the last report of the State Controller consists of two years, ending with June 30th. The receipts and expenditures for that period were as follows:

RECEIPTS.	
1875-'76.....	\$3,651,895 39
1876-'77.....	4,549,258 30—\$8,201,153 69
EXPENDITURES.	
1875-'76.....	\$3,961,964 18
1876-'77.....	3,785,111 85—\$7,747,075 53
Excess of receipts.....	\$454,078 16

The receipts of the General Fund, for two years, were \$4,099,655.37; expenditures from the same, \$3,769,266.63. The School Fund, subject to apportionment for the support of common schools, from February 24, 1875, to February 21, 1877, was \$2,792,688.43. The apportionment per scholar was \$7.68 for the first year, and \$7.98 for the second. Particulars regarding the School Fund are as follows:

Balance in School Land Fund.....	\$12,911 61
Bonds held by State Treasurer in trust for School Fund.....	1,911,400 00
Which produce an annual interest of.....	122,538 00
Bonds held for University Fund.....	611,500 00
Yielding an annual income of.....	50,040 00
Drawn for support of University in the 27th fiscal year.....	92,690 88
Drawn for support of University in the 28th fiscal year.....	50,040 00

The following is a statement of the debt of the State:

Bonds.....	\$3,411,000
Of which the debt bearing interest is.....	3,396,500
Annual interest on same.....	209,745

As the State has guaranteed interest on railroad bonds, the amount to be raised is \$314,745. Deducting interest in Sinking Fund, the net bonded indebtedness of the State is \$3,819,061.43. Of the bonded indebtedness of \$3,411,000, the State itself holds \$2,665,000 for the benefit of the common schools and the State University. The amount of bonds in private hands, on June 30th, was only \$746,000. The rate of taxation, for the last year, was 73⁹/₁₀ cents on each \$100 assessed value of property. The number of acres of land subject to tax was 24,015,065, valued at \$454,641,311; the value of personal property taxed was \$140,431,866; total taxable property, \$595,073,177; amount of tax for State purposes, \$4,372,019.22; amount of county taxes, \$7,377,948.30; total taxation, \$11,749,967.52.

The amount of money expended for the support of schools, during the last school year, was \$2,749,129.46. The State University at Berkeley is represented to be in a very flourishing condition. The Agricultural College is in successful operation, and the College of Mechanic Arts is to be built at once.

On July 1st there were 1,195 patients in the lunatic asylum at Stockton, 201 having been admitted during the year preceding. The average daily cost of supporting them was 41 cents each. The asylum at Napa, on the same date, contained 395 inmates, and the average daily cost of support was 60¹/₂ cents each. The latter institution was not wholly completed at the end of the year. Its total cost will be about \$1,500,000, and it will accommodate 600 patients. The Institution for the Deaf, Dumb, and Blind, at Oakland, which was destroyed by fire, has been replaced, at a cost of \$90,000, the two buildings erected having accommodations for 250 pupils. Additions of workshops and a new cell-building have been made to the State prison at San Quentin, which has now a capacity for about 1,000 inmates.

The general election, held on the first Wednesday in September, was for the choice of local officers and members of the Legislature only. The question of having a convention held for the revision of the constitution of the State was submitted to a vote, and decided in the affirmative. The Legislature is required to provide for the election of delegates and the holding of the convention, which must meet within six months after the act is passed.

The 22d session of the Legislature of the State began on December 3d. On the 19th, James T. Farley was elected to the United States Senate for the term of six years, beginning March 4, 1879, receiving 28 votes in the Senate and 54 in the House, against 12 in the Senate and 24 in the House for M. M. Estee, the candidate agreed upon by the Republican members.

CAPE COLONY AND BRITISH SOUTH AFRICA. As stated in the ANNUAL CYCLOPEDIA for 1875 and 1876, a strong movement has been developed in favor of a close union

between the different British colonies and the independent states of South Africa. The area and population of the British possessions of South Africa was as follows in 1877:

COLONIES.	Square Miles.	Population.
1. Cape Colony, inclusive of British Caffraria.....	224,100	720,984
2. Basutoland.....		127,701
3. West Griqualand.....	16,632	45,277
4. Trans-Kei territory.....	16,031	195,000
5. Natal.....	18,750	826,959
6. Transvaal.....	114,353	40,000
Natives in the Transvaal.....		275,000
7. Namaqua and Herrero.....	142,433	44,000
Total.....	582,309	1,774,921

The census of 1875, in the Cape Colony, was the first held since 1865. *The Colonies*, of July 8, 1876, gave the preliminary results as follows:

Whites.....	236,788	Half-breeds.....	87,184
Caffres.....	214,133	Fingoes.....	73,506
Hottentots.....	98,561	Malays.....	10,817
Total.....			720,984

Of the total number, 369,628 were males, and 351,356 females.

The "Descriptive Hand-book of the Cape Colony," by John Noble, gives the following statement of the census of 1875. The total does not agree with the figures given above, nor is it a correct statement of the population of the different provinces, but the difference is not very great, and the table is interesting as showing the division of the colony into provinces adopted in 1874, and the approximate population of each:

PROVINCES.	Inhabitants.
1. Western provinces.....	86,399
2. Northwestern provinces.....	74,883
3. Northwestern provinces.....	81,446
4. Central provinces.....	71,057
5. Southeastern provinces.....	96,054
6. Northeastern provinces.....	50,610
7. Eastern provinces.....	231,559
Total.....	721,580

The total should be 722,508, instead of 721,580, but the result will probably be still more erroneous when the results of the census become known. In this table British Caffraria is included in the eastern provinces.

In the Cape Colony, the executive authority is vested in a Governor and a responsible ministry. The Legislature consists of a Council of 21 and an Assembly of 68 elected representatives. The Governor in 1877 was Sir Henry Bartle Edward Frere. He was assisted by the following ministry: Colonial Secretary and Premier, John Charles Malteno; Treasurer, Henry White; Attorney-General, Simeon Jacobs; Commissioner of Crown Lands and Public Works, C. A. Smith; and Secretary for Native Affairs, C. Brownlee. Natal is governed by a lieutenant-governor, Sir Henry Ernest Bulwer, and the government of the Transvaal was provisionally administered in 1877 by Sir Theophilus Shepstone.

The Cape Colony has done very much for education during the past decade. The entire

school-system is directed by a general superintendent of education, who is assisted by a number of school-inspectors. Schools may be established by any one, but, in order to receive aid from the Government, must adjust their course of study to that prescribed by the State, and can only employ teachers having the general superintendent's license. In very few cases the Government aids colored schools, even if they do not attain the requisite grade, but these cases are very exceptional. Indeed, some of the colored schools, whose number is very large, occupy a front rank among those of the colony with regard to efficiency. The Government establishes schools only where nobody else undertakes to do so—which is of very rare occurrence. The average salary of a primary school-teacher is £200 to £300, and that of a secondary school-teacher, £300 to £500. Large numbers of schools have been established throughout the colony, which have been supplied with teachers from England and Scotland. The academy, which had existed for several years in Cape Town, was changed into a university in 1876.

The administration of Cape Colony was changed in 1877. Sir Henry Barkly, who has

been Governor for some years, was replaced by Sir Bartle Frere, who arrived in Cape Town on March 31st, and immediately assumed the authority. On May 25th, he opened the Parliament, with a speech on matters of internal interest. The ministers submitted their minutes on Lord Carnarvon's Permissive Bill, i. e., a bill permitting the South African colonies to unite in one confederation. They were in favor of the union under one Legislature, rather than by confederation. The session was protracted by Sir Bartle Frere on August 8th. In his speech he referred to the annexation of the Transvaal as an important event, tending to insure peace, security, and prosperity, not only to the people of that country, but to South Africa generally. The most important measure of the session was the annexation of Griqualand West. The pledge given by the Parliament in 1871, on the faith of which the British Government assumed sovereignty over the diamond-fields and the country of the Griqua chief Waterboer, had thus been fulfilled. The territory is now to be incorporated with the Cape Colony, forming two new electoral divisions, returning four members to the House of Assembly, and one to the Legislative Council.

CAPE TOWN, FROM TABLE BAY.

The disputed land claims preferred by Waterboer and the early occupants of the country were being investigated by Captain Warren, R. E., who had already amicably settled the question of the boundary-line with the Orange Free State. The country situated between the eastern frontier of the colony and Natal had also been annexed. This embraced the chief part of the territory formerly known as Caffraria Proper, but now known as Fingoland and Nomansland. It is mostly occupied by natives who are not yet sufficiently advanced in civilization and social progress to be admitted to representation in Parliament. The Government, therefore, will be, as in Basutoland, under certain regulations and laws to be framed by the Governor in council, but subject to be repealed, altered, or varied by act of Parliament.

In September, a war broke out between two

native tribes in the Trans-Kei territory, the Fingoes and the Gallekas, the leading tribe of Amaxosa Caffres. The Fingoes had formerly been reduced to slavery by the Amaxosa Caffres; and their very name—Fingoes meaning dogs in the Caffre tongue—shows the scorn with which their victors regarded them. Unsuccessful wars and fanatical superstition broke the power of these Caffres 20 years ago. In obedience to the prophecies of a seer, the whole nation perpetrated, in 1857, a most extraordinary sacrifice, which consisted in destroying their cattle and corn and all their property, and leaving their fields untilled. They were deluded by the hope that, when this desolation was completed, their dead warriors would be restored to life, and the whole Caffre race endowed with strength and beauty, riches and power. A frightful famine was the result, which was alleviated by the charity of the

colonists and the exertions of the Government. The destruction of a great part of this misguided tribe induced Sir George Grey to settle the Trans-Kei territory with Fingoes and other friendly tribes, while the Caffres were pushed back into a narrow strip of territory along the coast. As the latter have increased in numbers, and become once more prosperous in recent years, they have raised clamors from time to time against the interloping Fingoes, and, in spite of the influence of their patriarchal chief, which for a long period is said to have been exercised in the cause of peace, the explosion was at last precipitated by an accidental squabble. An invasion of Fingoland by the Caffres ensued, and many cattle were "lifted" by the invaders. But up to this time there had been no breach with, and no defiance of, the British authorities. The Colonial Government, however unwilling to make a *casus belli*, could not decline to interfere, especially as the Fingoes had, in the interests of peace, been prevented from obtaining weapons, and from practising warlike arts. An inquiry was ordered by Sir Bartle Frere, in which both sides were admonished that only the guilty would be punished, while compensation would be rigorously exacted and fairly distributed, according to the justice of the case. The Caffre chief, it seems, was himself willing to submit, or pretended to be so, but he professed his inability to control the men of the younger generation. When the British resident warned the raiders back from the Fingo borders, they

finally appealing to arms, the Caffres sent the officials and missionaries over the frontier, out of harm's way—conduct singularly unlike their savage treatment of the white men upon the outbreak of the last native war. The Govern-

BUSHMEN.

at first obeyed; but after a council of war they resolved to go on with their enterprise, in spite of the intimation that the Government would resist the attack on the Fingoes to the utmost. It is remarkable, however, that, before

ment had, in the mean time, reënforced the Fingoes with a strong body of police, and had called out the volunteers and the burgher militia of the colony. A hasty attempt was made to arm and organize the Fingoes for resistance; but the insurgents were too prompt in their onslaught. The first engagement was on September 26th, between 200 frontier police with 2,000 Fingoes on one side, and some 3,000 Caffres on the other. The Fingoes, unused to fighting, showed some confusion, but many of them fought well. The police, aided by a single field-piece, administered a sharp chastisement to the enemy, and drove them away in flight for several miles. If the gun had not been damaged in its transit through a rough country, this success would have been more decisive. There were two or three subsequent conflicts, in each of which the Caffres were severely handled and driven back. In fact, the insurgents, while often showing great bravery, nowhere made a stand against the Europeans and Fingoes combined, though the latter were badly armed and untrained in warfare. These successes were achieved in the absence of the troops, which, on September 29th, were sent to Mazeppa Bay, in Krelis country, and of the volunteers and burghers who were hurrying to the front. Sir Bartle Frere's presence near the theatre of war, as well as the fact that he was accompanied by a member of the Cape ministry, saved much valuable time, and imparted a rapidity and energy to the conduct of the campaign which

could not fail to impress the native mind with a sense of the complete and inevitable character of the British triumph. Fighting continued throughout October, and even through November, although the Government in the early part of that month had declared the contest to be virtually over. Krelî was deposed, and his country annexed to Cape Colony. On April 6th, a South African exhibition was opened at Cape Town by Sir Bartle Frere. It was attended throughout with so great a success, that the Government proposed to hold another in 1878. Among the works of the year containing information on Cape Colony is "South Africa, Past and Present" (London, 1877).

CHARLES I., Prince of Roumania, the second son of Prince Charles Anthony of Hohen-zollern, was born April 20, 1839. In 1866 he was almost unanimously elected Prince of Roumania by a popular vote of the country. The task that awaited him was an extremely difficult one. He found the country in a wretched condition. Education was entirely unprovided for, the Treasury was empty, while no means were at hand to replenish it, and while, worst of all, the country was so torn by rival political factions that it seemed impossible to establish a stable government. It is generally admitted that during his reign the country has made decided improvements in all these respects. During the trouble that arose in 1875 between the Porte and her subjects in Bosnia and the Herzegovina, and which, in 1876, involved the tributary states of Servia and Montenegro, Prince Charles maintained an observant attitude, ready to take any measure which might seem best for the country. Upon the outbreak of the Russo-Turkish war, the time seemed to have come to proclaim the entire independence of the principalities from Turkey, and this was accordingly done by the Chambers. Prince Charles thus became the first sovereign of an independent Roumanian state. In 1869 he married Princess Elizabeth of Wied. The only child of this union, a daughter, died in 1874.

CHEMISTRY. *Liquefaction of the Gases.*—Three highly important communications were made to the Paris Academy of Sciences toward the end of the year, all having reference to the liquefaction of gases. The first of these was from M. Cailletet. He recounted the famous researches of Faraday on this subject, and remarked that since that time the question has hardly been discussed at all. As Andrews has observed, those elastic fluids which were not condensed by light pressure, were supposed to be capable of resisting any pressure whatever. When Cailletet began his researches there were six gases which had resisted all efforts to liquefy them; these were hydrogen, nitrogen, oxygen, oxide of carbon, bi-oxide of nitrogen, and marsh gas. In the course of his experiments with the bi-oxide of nitrogen, M. Cailletet found that, at the temperature of $+3^{\circ}$ Cent.,

it may be subjected to a pressure of 270 atmospheres and still remain in the gaseous state; but on reducing the temperature to -11° Cent., a pressure of 104 atmospheres suffices to liquefy it. M. Cailletet further found that, on subjecting marsh gas to a pressure of 180 atmospheres (temperature not stated), and then withdrawing the pressure, there appears a mist (*brouillard*) in the gaseous mass. Now, this mist can be nothing else but marsh gas liquefied by the extreme cold and the compression. The above communication from M. Cailletet was read in the meeting of the Academy held on November 26th. In publishing it, on December 1st, the editor of a scientific journal in Paris remarks as follows: "Everything goes to show that oxide of carbon and oxygen, whose laws of compression are analogous to those of the preceding bodies, will also yield to M. Cailletet's method." The prediction was quickly verified, and more than verified, if the expression may be used; for, at the meeting of the same Academy on December 24th, M. Cailletet announced the liquefaction of oxygen, and M. Dumas read a letter from Raoul Pictet, of Geneva, stating that he too had liquefied oxygen, though according to a method very different from that of M. Cailletet. The latter's communication was to the effect that, on subjecting oxygen simultaneously to a temperature of -29° Cent., and to a pressure of 270 atmospheres, and then suddenly withdrawing the pressure, the volume of oxygen is filled with a mist which, beyond a doubt, consists of oxygen in the liquid, if not in the solid, state. M. Pictet's note stated that, on December 22d, he had liquefied oxygen, but, as it would appear, on a larger scale. His apparatus consisted of a retort of wrought-iron, holding chlorate of potash, and communicating with a very thick and very strong glass tube. The oxygen, set free by heat, accumulates in the tube, and itself produces a pressure of 320 atmospheres. It is then cooled to 140° Cent. below zero by the following process: Liquid sulphurous acid is made to circulate around tubes containing liquefied carbonic acid, and this, in its turn, being reduced to an extremely low temperature, is made to circulate around the tube containing the oxygen. The circulation is effected by the aid of four pumps driven by a steam-engine of 15 horse-power, and they are kept working for several hours. If, now, the orifice of the tube containing the oxygen be suddenly opened, its release determines the appearance both of the "mist" mentioned by Cailletet, and also the production of a certain quantity of liquid, which remains in the tube. Both Cailletet and Pictet have since succeeded in liquefying all of the so-called "permanent gases."

The subjoined woodcuts illustrate the respective apparatus and *modus operandi* both of Pictet and of Cailletet. In Pictet's apparatus (Figs. 1 and 2) are two pairs of compound ex-

hausting and forcing pumps, one pair acting on a cylinder (*K*) holding liquid sulphurous acid; the other on the gasometer (*G*) containing carbonic acid gas. These pumps are driven by a steam-engine, and their purpose is to produce a temperature of -140° Cent. in the tube *A A'* (which contains the gas to be liquefied) by the

alternate vaporization and liquefaction of the sulphurous and carbonic acids. The various operations will be understood from an explanation of Fig. 2, which shows the apparatus in section. Here *K* is a howitzer shell, which contains 700 grammes of chlorate of potash, when oxygen is to be liquefied. *A A'* is a closed

FIG. 1.—PICTET'S APPARATUS (from a Photograph).

iron tube, in which the gas becomes liquid; this tube is 5 metres in length, and 214 millimetres internal diameter. At *B* is a cock, also a manometer graded to 800 atmospheres. The tube is immersed in liquid carbonic acid (*O*), reduced to the temperature of -140° Cent. by the action of the pumps. *F* is a wooden case, packed with some bad heat-conductor, and *H*

is a similar case. *D* is a reservoir of liquid carbonic acid, inclosed in a larger cylinder containing liquid sulphurous acid, the temperature of which is reduced by the action of the pumps. *G* is the gasometer, which holds carbonic acid gas; *K*, reservoir of liquid sulphurous acid; *P*, one of the 4 pumps; *A'*, cock, which may be opened to allow the liquefied gas to escape in

FIG. 2.—SECTION OF THE SAME

the direction shown by the arrows. The pumps are kept at work for several hours before the requisite temperature is attained, -140° Cent. The pressure in the oxygen tube, when all the oxygen has been liberated from the chlorate of potash by heat, is 320 atmospheres. These two conditions coinciding, the cock is turned, and a jet of vapor issues which is distinctly seen to consist of two parts, viz., a central part,

a few centimetres long, whose white color gives evidence of liquid or even solid elements, and an external part, whose blue color shows the return of the compressed and frozen oxygen to the gaseous state. But more palpable evidence still exists of the liquefaction of oxygen; for on substituting a very strong glass tube for the iron one, M. Pictet has been able to exhibit to the eye oxygen in the liquid state.

FIG. 3.—CAILLETET'S LARGE APPARATUS FOR LIQUEFYING GASES.
A, Screw-press for compression; *m*, flint-glass cylinder inclosing the glass tube in which the gas is liquefied.

By similar processes he has also liquefied the other "permanent gases," so called.

The agencies employed by Cailletet are low temperature and mechanical pressure. The steel cylinder *BB* is filled with water, intro-

duced through the funnel *G*, the lower orifice of which is opened and closed by a screw worked by the small wheel *O*. A piston, worked by the large wheel, compresses the water in the cylinder. The water in the cylin-

der passes through capillary metallic tubes to manometers (to show the pressure) and to a reservoir of mercury *a*, which is forced up into the glass tube *m*. This glass tube, which holds the gas to be liquefied, is surrounded by another containing a freezing mixture, and the whole is covered by a glass shade, on the floor of which is placed some substance which has strong affinity for moisture, and which prevents the deposit of vapor on the outside of the tube, hindering observation. The high pressure of the water forces the mercury up into the tube, thus compressing the gas. "If now," says M. Cailletet, "we inclose oxygen or pure carbonic oxide in the compression-apparatus; if we reduce these gases to a temperature of -29° Cent. by the aid of sulphurous acid at a pressure of about 300 atmospheres, both gases still retain their gaseous state. But if they be released suddenly [by reversing the small wheel *O*], so, according to Poisson's formula, producing a temperature of at least 200° below the starting-point, we at once see a heavy mist, caused by the liquefaction, or even, perhaps, the solidification, of the oxygen or carbonic oxide. The same phenomenon is observed in releasing carbonic acid and protoxide and binoxide of nitrogen, which have been subjected to strong pressure."

After having obtained these results, at a session of the Academy on December 31st, M. Cailletet announced that he had won a complete victory over the other permanent gases. M. Dumas informed the members present at the session that the able experimenter had succeeded in liquefying nitrogen, atmospheric air, even hydrogen itself, which would seem to have been the most refractory gas of them all.

The New Metals Davy and Neptunium.—M. Sergius Kern, of St. Petersburg, discovered, toward the middle of the year 1877, a new metal belonging to the platinum group, to which he gave the name of Davyum, in honor of Sir Humphry Davy. Dissolved in aqua regia, and treated with potassa, davyum yields a yellow precipitate, hydrate of davyum. Chloride of davyum, dissolved in a solution of potassic cyanide, yields, in crystals, a double cyanide of davyum and potassium. A concentrated solution of davyum chloride, with potassic sulphocyanide, gives a red precipitate, which, on being slowly cooled, yields large red crystals; if this precipitate be calcined, the sulphocyanureted davyum assumes the form of black powder. Davyum chloride forms double salts with chlorides of potassium and ammonium; these are insoluble in water, but highly soluble in absolute alcohol. The double salt of sodium and davyum is nearly insoluble in water and alcohol. Three experiments made to determine the density of davyum yielded, at temperature 24° Cent., these results, namely: 9.383, 9.387, 9.392. The author is of the opinion that the atomic weight of davyum is over 100—probably about 150 to 154.

Another new metal, discovered during the

past year, is Neptunium, found by Hermann in a mineral coming from Haddam, Conn. The history of this discovery is briefly stated as follows in the *American Journal of Science*, which publishes a synopsis of a communication from the discoverer to a German scientific journal. The mineral worked on was labeled "tantalite," but, on examination, it proved to be columbite and ferroilmenite in equal parts. The metallic oxides separated from the mineral consisted of Ta_2O_5 32.39, Cb_2O_7 36.79, Il_2O_3 24.52, Np_2O_5 6.30. To obtain the neptunium, the pulverized mineral was fused with hydro-potassium sulphate, the acid hydrates digested with ammonium sulphide and hydrochloric acid, washed well with water, dissolved in hydrofluoric acid, mixed with an equivalent quantity of potassium fluoride, and the solution diluted to 40 parts boiling water to one of fluoride. On cooling, tantalum-potassium fluoride crystallized in delicate prisms. On evaporation, columbium-potassium fluoride and ilmenium-potassium fluoride crystallized out, leaving an acid mother-liquid. This was diluted with 20 parts water, heated to boiling, and sodium hydrate added in excess. An amorphous precipitate of sodium neptunate was formed, mixed with minute crystals of columbate. The precipitate was collected on a filter, pressed out, and boiled with 25 parts of water. The columbate dissolved, the neptunate remained. The latter was fused with hydro-potassium sulphate, the fusion was treated with boiling water, and the undissolved residue of neptunic acid washed and dried over sulphuric acid. Neptunic acid resembles in general the other acids of the group, but is distinguished from columbic and ilmenic acids by the insolubility of the sodium double fluoride, and from tantallic acid by the ready solubility of its potassium double fluoride. Neptunic acid gives with phosphorus salt in the inner blow-pipe flame a wine-yellow bead, the sodium salt a gold-yellow glass; while tantallic acid gives no color, columbic acid gives blue, and ilmenic acid gives brown. With tincture of galls, the sodium salts give, on addition of hydrochloric acid, a sulphur-yellow precipitate with tantallic, orange with columbic, brick-red with ilmenic, and cinnamon-brown with neptunic acid. Boiled with tin and hydrochloric acid, neptunic acid gives, like columbic and ilmenic acids, a blue solution. From the pure crystallized double potassium fluoride, the atomic weight of neptunium was fixed as 118, its atomic volume as 18, and its specific gravity as 6.55. The formula of the acid is Np_2O_5 , $(H_2O)_{1.5}$. The sodium salt crystallizes in prisms. The author prepared metallic columbium and ilmenium in the pure form, and determined the amount of oxygen taken up by these metals on heating them in the air. Columbium required 20.49 and ilmenium 37.96 of oxygen; the amount obtained by Rose being 20.60, and by Marignac 38.00. Rose, therefore, it is clear, had pure columbium; while it is equally clear, according

to Hermann, that Marignac must have had nearly pure ilmenium. This is stated to be a necessary result from the method of preparation. After crystallizing out the tantalum-potassium fluoride, Marignac evaporated and recrystallized, obtaining a nearly pure ilmenium-potassium fluoride, from which he prepared his metal. Hermann's paper concludes with an account of his methods of separating the metals of this group, and descriptions of their compounds.

Sensitiveness of Silver Salts.—In continuation of his researches on the sensitiveness of silver salts (*American Journal of Science and Arts*, No. lxxvii.), M. Carey Lea recognizes three modes in which salts of silver may exhibit their sensitiveness to light, viz.: they may exhibit a visible darkening; or they may receive a latent image, and this may have a capacity of being rendered visible either by receiving a deposit of metallic silver, or by decomposition by alkalis in connection with reducing agents. In the former of these two last-mentioned modes, the image is produced entirely by the addition of silver not previously present; in the latter, no silver whatever is added, but that portion of substance which received the direct action of light undergoes decomposition by subsequent treatment. In both cases molecular change is set up by the action of light: the portions acted upon by light become, in the one case, more apt to attract a precipitate in the act of formation; in the other case they are more readily attacked by certain reducing agents. Now, while the silver compounds which exhibit the greatest tendency to form latent images by the action of light are the iodide, bromide, and chloride, Mr. Carey Lea finds that the same tendency is shared, though to a less degree, by other compounds, and that the latent images formed upon them may belong to either of the above-mentioned classes. In making his experiments, the author selected soluble salts of acids capable of forming insoluble or nearly insoluble salts with silver, and with them he impregnated the surface of very pure paper. After drying, the papers were floated on a solution of silver nitrate containing about 20 grains to the ounce, acidulated with half a drop of nitric acid (specific gravity 1.28), to the ounce of solution. The excess of silver nitrate having been worked out, one set of papers were then simply dried, and another set were soaked about a minute in a 10-grain solution of gallo-tanic acid, and then washed again. The salts thus formed on the paper were exposed to a strong diffuse light, some for 7, some for 12 seconds. They were next submitted to the action of a very weak solution of pyrogallol, ammonium carbonate, and potassium bromide, the latter being used to check the rapidity of the action of the other agents. The results were as follows:

Silver citrate and tartrate both gave rather weak images. The citrate showed a strong tendency to irregular reduction. Nothing of this appeared in the case of the tartrate.

Silver platinoeyanide gave quite a strong image—stronger than any other substance tried, except, of course, the silver bromide used for comparison.

Silver mucate gave a very faint image with much irregular reduction.

Silver pyrophosphate behaved in the same way.

Silver arsenite gave a moderately strong image, coming next to the platinoeyanide, and, like it, clear and free from all irregular reduction.

Silver sulphocyanide, an extremely faint image with much irregular reduction.

Silver antimonio-tartrate, a weak image entirely free from irregular action.

Silver fulminurate, weaker than the last mentioned, but also clear.

Silver nitrate, similar to the last.

Silver hippurate, an excessively faint image with much irregular reduction.

The following substances showed (with the above-mentioned exposures) no trace of a latent image:

Silver salicylate,	Silver tungstate,
“ valerate,	“ ferrocyanide,
“ succinate,	“ nitroprusside,
“ sulphite,	“ chromate,
“ resinate,	“ carbonate,
“ phosphate,	“ oxalate.
“ metaphosphate,	

As respects the action of tannin, which was separately investigated with every one of the above salts, it appeared that no substance insensitive in the absence of tannin acquired sensitiveness by its presence. It was also doubtful if in any case tannin increased the sensitiveness of any of these substances—a fact which, in view of the increased sensitiveness conferred by tannin on the silver baloids, is remarkable.

New Acids.—A new acid of phosphorus and oxygen, standing between phosphorous and phosphoric acid, has been discovered by Th. Salzer, of Worms. According to the old notation, this acid, which has been named hypophosphoric acid, consists of 1 atom of phosphorus and 4 atoms of oxygen. It forms a rather insoluble salt. Salzer finds that the *acide phosphatique* of Pelletier is a mixture of phosphorous and hypophosphoric acids.

C. Stahlschmidt has discovered a new organic acid, *polyporic*, occurring in certain fungi of the family *polyporus*, which grow on the stems of diseased or dead oaks. The empirical formula is $C_6H_7O_8$. This acid has a yellow color, and is so completely insoluble in water that the slightest trace of a soluble polyporate in water renders the liquid turbid on the addition of salt or of sulphuric acid. In virtue of this property the soluble polyporates may act as indicators in alkalimetry, the turbidity serving instead of the usual change of color. With all bases it forms well-defined salts, of which the soluble ones, those of the alkalies, form deep-purple solutions. On heating polyporate of potassium to redness in a combustion-tube along with zinc powder, benzol was obtained, which was identified by its conversion into nitro-benzol.

In a paper on the “Chemistry of Cocoa Butter,” Mr. C. T. Kingzett described two new

fatty acids, prepared by saponifying the butter, and decomposing the soaps with dilute sulphuric or hydrochloric acid; they were purified by recrystallization from alcohol, fractionating, etc. The new acids are represented by the formulæ $C_{12}H_{24}O_2$ and $C_{64}H_{128}O_2$. The first is the formula of lauric acid, but it melts at 57.5° (lauric acid melting at 48° Cent.), so it must contain some acid of a higher melting-point than lauric acid, and therefore the acid itself must be lower in the series $C_nH_{2n}O_2$ than lauric acid. The highest known acid in this series is melissic acid, $C_{30}H_{60}O_2$; the new acid has a formula not lower than $C_{64}H_{128}O_2$. The lower acid crystallizes in pearly plates or fine long needles. The higher acid—for which the author proposes the name of "Theobromic Acid"—crystallizes in microscopic needles or granules, melts at 72.2° Cent., at a high temperature distills apparently unchanged, and is somewhat electric when dry—a property which is possessed in a high degree by its silver salt. The total fatty acids of cocoa-butter contain about 20 per cent. oleic acid. The author, in conclusion, points out that text-books state that "cocoa butter yields, almost exclusively, stearic acid." From the present investigations it is clear that this statement is incorrect. It is based entirely on determinations of the melting-point of the fatty acids obtained.

Estimation of Alcohol in a Watery Mixture.

—Dr. Werner Siemens has contrived an ingenious apparatus, by which a stream composed of alcohol and water, mixed in any proportion, is so measured that a train of counter-wheels records the volume of the mixture, while a secured counter gives a true record of the amount of alcohol contained in it. The *modus operandi* is described as follows:

The volume of liquid is passed through a revolving drum, divided into three compartments by radial divisions, and not dissimilar in appearance to an ordinary wet gas-meter. The revolutions of this drum produce a record of the total volume of passing liquid. The liquid on its way to the measuring-drum passes through a receiver containing a float of thin metal filled with proof-spirit, which float is partially supported by means of a carefully-adjusted spring, and its position determines that of a lever, the angular position of which causes the alcohol-counter to rotate more or less for every revolution of the measuring-drum. Thus, if water only passes through the apparatus, the lever stands at its lowest position, and then the rotative motion is not communicated to the alcohol-counter, and this motion is rendered strictly proportionate to the alcohol contained in the liquid, allowance being made in the instrument for the change of volume due to chemical affinity between the two liquids.

Determination of Copper.—A new method of determining very small quantities of copper is offered by J. M. Merrick, of Boston. It is intended as a supplement to Bergeron and L'Hôte's colorimetric test, which fails to indicate a quantity of copper less than 0.5 milligramme. Mr. Merrick's method consists simply in concentrating to a very small bulk the solution suspected to contain copper, and

then depositing the copper, if present, upon platinum, by the battery. He uses for a depositing-cell a very small test-tube, on a foot cut off so as to give a vessel about $1\frac{1}{2}$ inch deep. Into this is introduced the solution acidified with sulphuric acid, and a platinum anode and cathode—each about an inch long and one-eighth of an inch or less wide—are hung face to face, and very close together; and, the circuit being completed, very satisfactory deposits of copper are obtained, with incredibly minute quantities of the metal. The amounts are determined by the increased weight of the cathode (which is provided with a platinum wire soldered on with gold, by which it can be hooked to a balance), and on the loss of weight of the same after washing with nitric acid. The platinum is polished and heated red-hot before the first weighing, and then gently heated before hanging in the solution. The contrast in color between deposited copper and bright platinum is, of course, striking and characteristic. In this way, 0.1 milligramme of copper may be, the author thinks, safely determined; while, for mere qualitative analysis, this method may be employed where the amount is even smaller.

Theory of the Formation of Saline Deposits.

—In a memoir on the origin of the boracic acid of the Tuscan *suffoni*, and sundry saline deposits, especially those of Stassfurt, L. Dieulafait (abstract of memoirs in *American Journal of Science*) lays down the general proposition that "all saline substances existing in mass, or in layers, in sedimentary formations were originally a constituent of a *normal sea*," i. e., of a sea of a constitution not essentially different from our present sea. To establish this proposition with regard to the borates, he, in the first place, gives experimental evidence that the water of the Mediterranean contains at least two decigrammes of boracic acid in each cubic metre, and further, that, in evaporating the brine, boracic acid accumulates in the bittern until after the deposition of the carnallite. In the second place, he insists that, in the very characteristic deposits of Stassfurt, the borates are found above the carnallite, as we should expect if these deposits were formed, as assumed, by the drying up of extensive salt lakes. Again, having confirmed the previous statements that the chief salt-beds of the world are found on two geological horizons, the Lias and the middle Tertiary, he gives evidence that, in the Maremma of Tuscany, where the *suffoni* occur, there is a saliferous basin of the Tertiary period; and he concludes that the *suffoni* are not properly volcanic vents, but that the surface-water percolating to the salt-beds—heated, it is true, by volcanic agency—determines well-known chemical changes, from which result the peculiar acid-vapors there discharged. But we can only give here the barest outlines of an argument which is worthy of careful study.

M. Dieulafait also contributes in his paper

some important facts in regard to the certainty and delicacy of three principal tests for boracic acid. He rejects the test with turmeric as unsatisfactory, in the presence of such a mass of salts as is found in bittern; and he finds the flame reaction by far the most sensitive as well as the most trustworthy of all the tests with which he has experimented. When the Bunsen lamp is supplied with pure hydrogen, he finds that the flame reaction will indicate the one-millionth of a gramme of boracic acid. His method of applying the test is as follows: The material to be tested is first mixed with an excess of oil of vitriol, and this paste, held in a loop of platinum wire, is brought near—say within four millimetres, but never nearer than two millimetres—to the visible mantle of the hydrogen flame, so that the flame may not be colored in the least by the sodium always present. If the assay contains boracic acid, the characteristic green coloration appears, which can be identified with absolute certainty by means of a spectroscope, and the coloration can be most delicately observed by looking through the mantle of the flame tangentially.

New Method of preventing Surface-Oxidation of Iron.—A method proposed by Prof. Barff for preventing the corrosion of iron consists in producing on the surfaces of the iron articles to be protected a coating of the black, or magnetic, oxide of iron. This he does by raising the articles, in a suitable chamber, to a temperature of from 500° to 1,200° Fahr., and then passing steam into this chamber, keeping the articles for 5, 6, or 7 hours, as the case may be, at that temperature, in an atmosphere of superheated steam. At a temperature of 1,200° Fahr., and under an exposure to superheated steam for 6 or 7 hours, the iron surface becomes so changed that it will stand the action of water, even though it be impregnated with the acid fumes of the laboratory. When the process is carried on at a lower heat, the iron articles will resist any amount of moisture with which they may come in contact in a house or building; but they will not permanently resist the action of the weather out-of-doors. The reason of this, is, that only a thin film of the iron, on its surface, is transformed into the black oxide. Iron pipes protected by this process may be used instead of lead pipes for conveying water through houses. Iron for architectural uses may be made to resist the weather; the process may also be employed to protect cast-iron statues, which would thus be rendered as enduring as those of bronze.

Reducing Action of Native Sulphurets.—From experiments made by Stanislas Meunier, it appears that native sulphurets, when brought into contact with metallic solutions, reduce the metal from the solution in the free state. For instance, a piece of galena (lead sulphuret), in a solution of silver nitrate, after 48 hours gave rise to beautiful plant-forms of metallic silver; and gold, mercury, platinum have been

reduced in the same way. In place of galena, we may substitute the native sulphurets of iron, copper, antimony, mercury, zinc, and even the monosulphide of sodium, which is of such frequent occurrence in mineral waters. These researches appear to throw some light upon certain phenomena observed in mining. Thus, suppose a vein of galena to be subjected, by percolation, to the action of sea-water—which always contains silver—all the silver in this water will be arrested and concentrated by the sulphuret. Some galenas contain native silver, which we may suppose to have been introduced in this way. Reactions of a like nature may take place in veins of pyrites and other sulphurets. As for sulphureted sodic waters, their agency must have a powerful influence on the production of certain metal-liferous ores.

Qualitative Determination of Potassa.—Carnot offers a new and simple process for the qualitative detection and determination of potassa, hitherto one of the most delicate operations of analytical chemistry. It is as follows: In a few drops of hydrochloric acid, one part of the subnitrate of bismuth—say half a gramme—is dissolved, and then, in a few cubic centimetres of water, are dissolved about two parts (one gramme to one and a quarter) of crystallized hyposulphite of soda. The second solution is poured into the first, and concentrated alcohol added in large excess. This mixture is the reagent. If brought in contact with a few drops of the solution of a potash salt, it at once gives a yellow precipitate. With an undissolved potassic salt, it produces a decidedly yellow coloration, easily recognized. All potassic salts with mineral acids are susceptible of this reaction; it is also very sensitive with the organic salts—tartrates, citrates, etc. The reaction is not interfered with by the presence of other bases, with which nothing analogous is produced. The character is therefore perfectly distinct. Baryta and strontia alone may occasion some difficulty, by reason of the white precipitates of double hyposulphites which they form with the same reagent; but it is very rare to meet them along with potassa, and they are very easily detected and removed.

Artificial Production of Corundum.—The artificial production of corundum was the subject of a communication to the Paris Academy of Sciences, by Messrs. Frémy and Feil. The authors dwelt specially upon the methods employed by them in producing crystallized alumina of various colors—rubies, sapphires, and other gems of the same class—in masses suitable for use by the watchmaker or the lapidary. Wishing to follow as closely as possible the natural conditions which, in all probability, attended the formation of corundum, ruby, and sapphire, the authors employed furnaces capable of producing a high temperature, of maintaining it for a long time, and of treating large quantities of material. They often had

in their furnace as much as 20 to 30 kilogrammes of material, which was subjected to the action of heat for 20 days at a time. The method which yielded the best result is described as follows: First, there is formed a fusible aluminate, which is heated to a bright red, with a silicious substance; in this way the alumina is gradually released from its saline combination in the presence of a flux, and it becomes crystallized. The aluminate of lead is found to yield the best results so far. On placing in a crucible of refractory clay a mixture of alumina and minium in equal weights, and keeping it for a sufficient length of time at a bright-red heat, there will be found, when it has grown cool, at the bottom of the crucible, two different layers—one vitreous, consisting chiefly of silicate of lead; the other crystalline, and often presenting geodes filled with fine crystals of alumina. These crystals are white; but if the rosy crystals of the ruby are required, there must be added to the mixture of alumina and minium from 2 to 3 per cent. of bichromate of potash. To produce the blue color of the sapphire, we must use a small quantity of cobalt oxide with a trace of bichromate of potash. The authors exhibited some crystals of their artificial gems to the Academy. These did not possess the brilliancy of the natural product, because they did not present to the lapidary faces suitable for change or cutting. The authors, however, hope to find, in the considerable amount of crystalline substance they have produced, some crystals capable of being cut and cleaved.

Purification of Hydrogen.—Since the time when Rose first proposed the use of hydrogen gas as a reducing agent in analytical operations, a method for its perfect purification has been a desideratum. Schobig has lately made certain experiments in this direction, employing a saturated solution of potassium permanganate, with results which appear to be satisfactory.

The impurities which were introduced were the hydrogen compounds of sulphur, phosphorus, arsenic, antimony, and carbon. The permanganate was used as neutral, acid, and alkaline solution, contained in a Bunsen wash-bottle. Careful examination of the gas after passing through a layer 10 centimetres thick of the solution, either when only a single impurity was present or when all were mixed together, failed to show a trace of foreign substance. Hydrogen sulphide was found to be best removed by an alkaline solution; the other substances by a neutral or acid one. Even coal-gas, after passing slowly through a thickness of 10 centimetres of the solution, deposited no carbon when passed through an ignited tube, the carbon being oxidized to carbon dioxide. As to the question whether hydrogen itself is not oxidized by the permanganate, the author made comparative experiments with neutral, acid, and alkaline solutions, which showed that oxidation does take place,

the maximum rate being about a third of a cubic centimetre per hour under the conditions employed, and this in the neutral solution. With the hydrogen thus perfectly purified the author succeeded in reducing a silver solution, in the dark, and in the absence of organic matter. In dilute solutions the silver separated as a fine powder; in concentrated ones, it formed a mirror.

Sources and Determination of the Proteids.

—The doctrine now generally held, that animals do not produce the protein substances which enter into the composition of their bodies, but obtain them from their food, makes the determination of the amount of protein compounds in vegetables a matter of great physiological, as well as practical, importance. The method usually employed is to deduce the amount of proteids from the percentage of nitrogen found in the food, by ultimate analysis. Profs. Wanklyn and Cooper criticise this method as not only difficult in practice, but one that yields very inaccurate results; and, as a substitute for it, they propose to measure the protein constituents of vegetables by the amount of ammonia which the vegetables generate when they are subjected to the action of a boiling solution of potash and permanganate of potash; and, in fact, have made a special adaptation of the well-known ammonia process of water analysis to the case of vegetable protein. They proceed as follows:

Into a litre-flask a carefully-weighed gramme of the vegetable substance to be analyzed is placed, and 20 cubic centimetres of decinormal solution of caustic potash is added, and then water is added until the litre-mark is reached by the level of the liquid. The contents of the flask are then shaken up so as to insure thorough mixture. In this manner we obtain a liquid of such a strength that each cubic centimetre contains one milligramme of the flour or other vegetable substance to be operated upon. Ten or 20 cubic centimetres of this liquid (i. e., 10 or 20 milligrammes of the vegetable substance) are convenient quantities to work with.

The next step is to get the retort in order as for a water-analysis, and to place in it 300 or 500 cubic centimetres of good drinking-water, and to add 50 cubic centimetres of a solution containing 10 grammes of potash and 0.4 gramme of permanganate of potash, and to distill until the residue in the retort no longer yields the slightest trace of ammonia. That having been done, 10 or 20 cubic centimetres of the liquid containing the vegetable substance are to be added, and the distillation proceeded with. The vegetable substance will then be attacked, and its protein will yield ammonia, which will distill over, and may be measured by means of the Nessler test.

It was shown, some years ago, that egg-albumen yields about one-tenth of its weight of ammonia when submitted to such a process as the foregoing, and that solutions containing different quantities of egg-albumen yield ammonia exactly proportional in amount to the strength of the solutions of albumen. The experiments of Wanklyn and Cooper show a parallel result in the case of vegetable protein, as will be seen from the subjoined table, where the ammonia, multiplied by 10, gives a fair

approximation to the actual quantity of vegetable protein in the different samples.

As will be observed, the experiments include many descriptions of wheaten flour, pea, rice, maize, oats, barley, malt, rye, and arrowroot. The last named is important, as showing a very small proportion of protein.

Samples of wheaten flour:

NAME OF SAMPLE.	Percentage of Ammonia.
1. Cambridgeshire extra-superfine.....	1.10
2. Other samples.....	1.00
3. Household flour, Waterloo Bridge.....	1.13
4. Country flour.....	1.03
5. Huntingdonshire.....	1.05
6. Suffolk.....	1.00
7. Hungarian.....	1.10
8. Another Hungarian.....	1.05
9. ".....	1.07
10. Darblay, Paris.....	1.05
11. Vienna.....	1.03
12. Australian.....	0.92
13. Californian.....	1.13
14. American.....	1.14
15. Another American.....	1.17
16. ".....	1.09
Pea-flour.....	2.30
Rice ".....	0.62
Maize ".....	1.03
Oats.....	1.00
Barley.....	1.10
Malt.....	0.50
Rye.....	1.45
Arrowroot.....	0.08

In looking through this table the reader will be struck with the constancy of the quantity of protein substances in wheaten flour. If one of the American samples (No. 15) be excluded, it will be seen that the highest percentage of ammonia given by any sample of flour is 1.14; and, excluding the solitary sample of Australian flour, the lowest yield of ammonia is 1.00. Wheaten flour would therefore seem to yield between 1.00 and 1.13 per cent. of its weight of ammonia when subjected to the above process; and, according to the rule above given, would seem to contain from 10.0 to 11.3 per cent. of protein compounds. Maize, oats, and barley, as will be seen, very closely resemble wheaten flour in the yield of albuminoid ammonia. Rye, on the other hand, is exceptionally rich in protein. Apparently it is the most nitrogenous cereal.

The high percentage of ammonia from pea-flour will attract attention; and, applying the rule, pea-flour contains 23.0 per cent. of protein, which accords with what is known of the pea. The protein in rice amounts to about half as much as in wheaten flour.

New Process for the Detection and Determination of Thein.—Mr. A. Winter Blythe publishes the following as an improved process for the detection and quantitative determination of thein, either as a means of identifying minute fragments of thein-bearing plants, or estimating the percentage of the alkaloid that such plants contain: The leaf or fragment is boiled in a very small quantity of water, and the little decoction is transferred to a watch-glass, a minute quantity of calcined magnesia added, and the whole evaporated nearly to dryness on the water-bath; the extract is next

transferred to the surface of a thin circular disk of microscopic covering-glass; on this again is placed a thickish ring of glass, which is covered with a second circular disk of thin glass, the whole forming what may be called "the subliming cell;" the subliming cell is placed on the surface of an iron plate, which carries a cup of mercury in which is inserted a thermometer, and the plate is fitted in the ordinary way to a retort-stand. This method of sublimation, in all its essential features, is identical with the one proposed and employed years ago by Dr. Guy. On heating the iron plate, first, moisture is given off and condenses on the cover of the subliming cell, and this cover may be removed and replaced by a second; in a very short time after it has become dry, a light mist is seen on the upper disk, and this mist the microscope resolves into beautifully distinct little crystals of thein—they may be identified as "thein" by resubliming, when it will be found they will rise to the upper disk at about the temperature of 101° Cent. The subliming temperature of the extract itself is rather variable; the extract should be heated, if no mist or crystals become visible, up to as high as 220° Cent., and, if still no crystals are obtained, the substance most certainly contains no thein. For a quantitative determination, not less than one gramme, or more than two grammes of either tea or coffee, in its undried state, is as finely powdered as possible, and treated in a flask, with 70 c.c. of water; the flask is attached to a reversed Liebig's condenser, and the liquid boiled for one hour; the decoction, including the powdered substance, is transferred to a porcelain dish; about the same weight of calcined magnesia as the substance originally taken is added, and the whole evaporated down nearly to dryness; the powdery extract is now transferred to the iron subliming plate already spoken of, and covered with a tared glass funnel, the edge of which must be accurately ground, and the tube of which must be several inches long. The substance should form a very thin equal layer within the circle of the funnel, which may be easily accomplished by a series of gentle taps. The heat at first should not exceed 110° Cent.; then, when the substance appears thoroughly dry, it may be gradually raised to 200° Cent., and toward the latter stages up to 220° Cent. If the heating has been properly regulated there will be no distillation of empyreumatic products, but the alkaloid sublimes, in the cool part of the funnel, in a compact coating, cone-shaped, of beautifully white silky crystals. In order to ascertain when the sublimation is complete, the tared funnel may be cooled and weighed at intervals, or a series of tared funnels may be kept on hand, and changed until no more thein is extracted. The funnel, as well as the thein, as may be expected, at the end of the process is perfectly dry, and the increase of weight is thein pure and simple. From one to two grammes may be considered by some too small

a quantity for an accurate assay, and, if so, there is no reason why very much larger weights should not be used; indeed, the process is well adapted for working on a large scale, and, if there ever should be any great demand for the alkaloid, would probably be employed.

New Unit of Light for Photometry.—In a paper read before the chemical section of the British Association for the Advancement of Science, at its last meeting, Prof. A. Vernon Harcourt proposes a new unit of light for photometric purposes; the unit or standard in present use being, according to his view, neither scientifically accurate, nor a sufficiently close approximation to accuracy for practical requirements. This unit, as fixed by act of Parliament—"a sperm candle of six to the pound consuming 120 grains of sperm per hour"—is objectionable, because of its great liability to variation in illuminating power, both from the varying composition of the sperm and the structure of the wick; and it is only by a free use of averages that it can be made to yield approximately trustworthy results. According to the author:

Three conditions need to be fulfilled for the production of a standard flame: 1. The combustible must be of known and definite composition. 2. The conditions of burning must be of a simple and definable character. 3. The nature of the combustible and of the conditions of burning must be such that atmospheric changes may produce a minimum of effect upon the light. A fourth condition might be added as highly desirable—namely, that the operator should be able to verify for himself the composition of the combustible he employs. No chemist, at least, would willingly spend time upon a quantitative operation for the accuracy and significance of which he was dependent upon the care exercised by the workmen of the best maker of candles or refiner of oil.

For reasons of another kind, it is desirable that a new unit of light should be made to correspond to the average value of the existing unit, the light given by a sperm candle consuming 120 grains of sperm per hour. No change in the nomenclature of photometry would thus be required; the unit of light might still be called a candle, and gas which is described as 14-candle gas or 16-candle gas would retain its appellation, yielding, when burned under standard conditions, the light of 14 or 16 of the new units.

After trying many different plans, he at last chose for the standard combustible a mixture of air with that portion of American petroleum which, after repeated rectifications, distills at a temperature not exceeding 50° Cent. This liquid consists almost entirely of pentane, the fifth member of the series of paraffins.

To prepare the gas (writes the author), I draw into the gas-holder the required volume of air, chosen according to the capacity of the holder, and corrected for pressure, temperature, and tension of aqueous vapor. The volume may be measured either by means of a meter, or by a scale upon the gas-holder. Then the corresponding proportion of pentane is poured into the gas-holder from a measuring-flask, connected by means of glass and caoutchouc tubing with a tap in the upper plate. If the liquid pentane comes in contact with the plug of the tap, it acts on the grease which is used to lubricate the plug, and is liable thus to cause leakage. Contact is easily prevented by placing in the mouth of the tap a piece of caoutchouc holding a glass tube, which can slide,

air-tight, up or down. The upper end of this glass tube is connected with the flask charged with pentane; the tap is opened, and the glass tube pushed down through the opening. When the contents of the flask have been poured through, and a minute or two allowed for drainage, the glass tube is drawn up until the tap can be closed, and then the flask and connecting-tubes are removed. The proportion which I propose to maintain between the air and the pentane is 600 volumes of air to 1 volume of pentane, measuring the liquid at or near 60° Fahr.; or, measuring both as gases, 20 of air to 7 of pentane, the vapor-density of pentane being such that it occupies as gas, under the normal conditions of 60° Fahr. and 30 inches barometric pressure less the tension of aqueous vapor at 60°, 210 times the volume which it occupies as a liquid.

When the pentane is poured upon the water in the gas-holder with thrice its vapor-volume of air above, it volatilizes rapidly and completely. A few minutes are sufficient for the volatilization of the liquid, and a few hours suffice for perfect diffusion. It is clearly essential to the uniformity of the air-gas thus made that the liquid should be free from any admixture with non-volatile hydrocarbons, which would accumulate on the surface of the water, and dissolve or give up portions of the gaseous hydrocarbons; but the fulfillment of this condition is insured by the repeated rectifications which are necessary to separate pentane from the hydrocarbons of higher boiling-point. It is also essential that this vapor of gas should be so slightly soluble in water that the proportion in the air-gas standing over the large volume of water in the tank of the gas-holder may not be appreciably affected by changes in the temperature of the water. Fortunately the gaseous paraffins are most sparingly soluble in water. I have inclosed the vapor of pentane at the tension of 261 millimetres over boiled-out water in an eudiometer for 24 hours, and 100 volumes of water dissolved only 0.92 volume of the gas. No doubt the first sample of gas made in the gas-holder filled with fresh water would suffer—and I find that it does suffer—some diminution in the proportion of pentane; but the error, if standard gas is kept in store for photometry, fresh portions being made from time to time over the same water, would only be such as could arise from the difference between the solubility of gaseous pentane, under a pressure of a quarter of an atmosphere, at one temperature and at another; and this error, though real, is likely to be infinitesimal. Many, and, as far as I know, all other substances, which otherwise might be used as the luminous ingredients of a standard gas, such as olefiant gas, or ether, or benzine, are excluded by the necessity of storing and measuring gas over water, and the comparative solubility of these substances in water.

The product is a perfect gas not suffering condensation except under conditions that would not occur in practice.

Another problem remained, namely, to devise a fitting burner. Prof. Harcourt exhibited a burner consuming standard gas at the rate of half a cubic foot an hour, and producing a flame whose height from the surface of the burner to the luminous tip, which in still air is almost as fixed and definite as the ivory point marking the level of the mercury in the reservoir of a barometer, is $2\frac{1}{2}$ inches. Not only is the height of the flame serviceable as a check on the preparation of the gas, but the regulation of the height of the flame is more important for the production of a fixed amount of light than the regulation of the rate of consumption.

The unit which I propose, and which has been adjusted to correspond to the light of "a sperm candle consuming 120 grains of sperm per hour," is: "The light given by a mixture of 7 volumes of pentane gas with 20 volumes of air, burning from a $\frac{1}{2}$ -inch orifice at the rate of half a cubic foot per hour, under the standard conditions of 60° Fahr. and 30 inches

pressure." For gas-photometry it is convenient to use two such units in order to increase the distance between the disk and the standard light.

Salicylic Acid as an Antiferment in Wine.—To prevent fermentation, a wine-grower in New Jersey added to a 12-gallon keg of new wine about 1 gramme of salicylic acid, or a very little more than the minimum quantity as given by Neubauer. Soon the wine lost its natural flavor, and acquired a flavor something like that of camphor. A sample of this altered wine having been submitted to Dr. Endemann for examination, he at once referred the new flavor to the presence of salicylic ether. In a communication to the American Chemical Society, Dr. Endemann writes:

The formation of this ether may be understood if we regard the circumstances. The wine was only one year old, and could not be considered ripe and ready for sale, and should therefore have received not the minimum quantity but rather more salicylic acid, to entirely prevent after-fermentation. The quantity, therefore, being insufficient, salicylic acid came in contact with alcohol *in statu nascendi*, which caused this abnormal action. Wine-growers are naturally very suspicious of chemicals, and are therefore very apt to make the same mistake—that is, they prefer to use the minimum quantity; and I should not be surprised if similar experiences had followed the application of this substance in other places.

CHILI (REPÚBLICA DE CHILE), an independent state of south America, extending from latitude 24° to 56° south, and from longitude 70° to 74° west. It is bounded on the north by Bolivia; on the east by the Argentine Republic and Patagonia, from both of which it is separated by the Cordillera of the Andes; on the south by Cape Horn (as claimed by the Chilean, though contested by the Argentine Government) and the South Pacific; and on the west by the same ocean. Of the present state of the boundary question with the Argentine Republic, and the events recently transpired in connection therewith, a notice has been given in the article on that country in this volume; and for the area, territorial division, and population, reference may be made to the ANNUAL CYCLOPEDIA for 1876.

The President of Chili is Señor Don Aníbal Pinto (inaugurated September 18, 1876).

The Cabinet is composed of the following ministers: Interior, Señor Don José V. Lastarria; Foreign Affairs, Señor Don José Alfonso; Finance, Señor Don R. Sotomayor; Justice, Public Worship, and Public Instruction, Señor Don J. M. Amunátegui; and War and the Navy, Señor Don Belisario Prats.

The Council of State, composed of the cabinet ministers, three senators, three deputies, one member of the courts of justice, one ecclesiastical dignitary, one general, the director of one of the departments of Finance, and an ex-minister or ex-intendant, is presided over by the Chief Magistrate of the Republic.

The President of the Supreme Court of Santiago is Señor Montt.

There is a Court of Appeals at Santiago, Con-

cepcion, and La Serena. The Auditor-General of Accounts is Señor Don A. Tagle, and the Postmaster-General is Señor Don R. L. Irrarázobal.

The Archbishop of Santiago is the Right Reverend N. V. Valdivieso; and the Bishops of La Serena, Concepcion, and Ancud, are M. Orrego, J. H. Salas (elevated in 1854), and Francisco de Paula Solar (1857), respectively.

There is at present no Chilean Minister accredited to the United States. The functions of *Chargé d'Affaires* are exercised by Señor Don E. N. Zanartu.

The Chilean Consul at New York is C. R. Flint, Esq.

D. J. Williamson, Esq., United States Consul at Valparaiso, was discharging the duties of *Chargé d'Affaires ad interim*.

The standing Army was composed of 10 generals, 11 colonels, 37 lieutenant-colonels, 52 majors, 126 captains, 29 adjutants-major, and 232 lieutenants—497 officers; and the following corps:

Two regiments of horse.....	686 men.
Five battalions of foot.....	1,875 "
Artillery regiment.....	604 "

Total..... 3,165 men.

As vacancies occurring in the regular Army are made up by volunteers from the National Guard for a limited period of service, the regulation strength of 3,573, fixed by law in 1875, is rarely attained. The force of the National Guard for the year already mentioned is exhibited in the subjoined table:

NATIONAL GUARD.	Horse.	Foot.	Artillery.	Total.
Commanding officers....	80	32	4	66
Subaltern officers.....	47	508	80	935
Men.....	1,235	19,569	1,370	22,674
Total.....	1,312	20,409	1,954	23,675

The Navy, in the same period, comprised the following vessels:

VESSELS.	Horse-power.	Cannon.	Marines.	Crew.
2 Iron-clad frigates....	2,000	12	541	4,064
5 Corvettes.....	1,440	32	733	4,240
2 Schooners.....	434	6	122	1,551
2 Transport steamers..	220	..	62	594
2 Pontoons.....	24	1,673
13 Vessels.....	4,094	50	1,432	12,127

There were in the Navy 1 vice-admiral, 2 rear-admirals, 5 first-class, 13 second-class, and 8 third-class captains, 32 lieutenants, 37 midshipmen, and 10 cadets; 15 commissaries, 5 surgeons, 41 engineers (including the inspector-general of machines), and 6 pilots; and 1 battalion of marines, commanded by 1 colonel, 1 lieutenant-colonel, 4 captains, and 19 lieutenants. There is also a battalion of marine artillery at Valparaiso, forming a part of the *guardia civil*, and comprising 808 men, officered by 1 colonel, 1 lieutenant-colonel, 6 captains, and 24 lieutenants.

The national revenue for the year 1875 (esti-

mated at \$19,440,000, including \$3,000,000 of the last dividend of the 1873 loan) amounted to \$25,732,961, as follows:

Ordinary receipts.....	\$16,250,119
Receipts extraordinary.....	7,081,881
Balance from 1874.....	2,351,461

Total..... \$25,732,961

The expenditure for 1875 was:

Ordinary.....	\$17,107,912
Expenditure extraordinary.....	8,625,680—25,733,592

Surplus..... \$49,369

In the budgets for 1876 and 1877 the revenue was estimated at \$24,561,670* and \$16,805,831, respectively; and the expenditure at \$24,622,966 and \$16,892,810, respectively.

From the report of the Minister of Finance for 1876, it would appear that there was, on December 31st of that year, a deficit of \$634,393.61. The revenue† for 1877 was estimated at \$17,506,000, including a loan of \$2,000,000; while the expenditure for the same period was computed at \$18,040,808, showing an anticipated deficit of \$534,800. Should this last eventuate, the deficits for 1876 and 1877 would reach \$1,169,193.61.

The foreign debt, on January 1, 1876, was set down at \$40,168,000, comprising seven loans, with interest ranging from 3 to 7 per cent. ‡; and the home debt at \$10,509,600, in seven loans, with interest varying from 3 to 8 per cent. The railway branch of the debt amounted, in June, 1876, to \$35,000,000.

The custom-house returns for April, 1877, gave the receipts for that month at Valparaiso at \$432,235.10, against \$784,004.12 for the corresponding month in 1876. The receipts for May amounted to \$467,299.47.

A decree had been issued, calling for tenders for an internal loan of \$3,000,000, to pay off the floating debt created by the law of August 18, 1876. The bonds were to bear date of March 1, 1877, with interest at 8 per cent. per annum, payable half-yearly, and were to be of the denomination of \$100, \$500, and \$1,000, half payable on September 1st, and half on November 15th. Treasury bonds emitted in accordance with the before-mentioned law would be accepted in payment; no offers would be considered that were under 8 per cent.

Chili, in common with most of the South American countries, and chiefly with the Argentine Republic, showed a considerable depression in its foreign commerce in 1874, as compared with 1873; and the falling off, though in a somewhat lesser degree, was still apparent in 1875. The year 1876 was marked by a decided improvement. The imports, in the mean time, varied but little from their usual average, and that little with a tendency to increase.

* Including a foreign loan of \$4,742,564, and a home loan of \$3,050,000.

† For table showing the growth of the national revenue from 1831 to 1875 inclusive, see ANNUAL CYCLOPEDIA for 1876, p. 104.

‡ According to the Finance Minister's report, already referred to, this debt stood at \$38,809,000, on December 31, 1876.

The annexed table exhibits the total value of the foreign commerce of Chili in 1873, 1874, 1875, and 1876:

YEARS.	Exports.	Imports.	Total Foreign Commerce.
1873.....	\$38,810,271	\$37,928,427	\$76,738,698
1874.....	36,541,000	38,810,000	75,351,000
1875.....	35,928,000	38,138,000	74,066,000
1876.....	37,771,139	39,215,415	76,986,554

About two-thirds of the Chilean exports are to England, and almost one-half of the entire foreign trade of the Republic is with Great Britain. The total value of the annual trade with France is, in the mean, about \$10,000,000; that with Peru, about \$8,000,000; that with Bolivia and Germany, about \$5,000,000; and that with the United States, though it has three times in 20 years exceeded \$5,000,000, and once exceeded \$6,000,000, has not averaged quite \$3,700,000 during that period. This is mainly to be accounted for by similarity of *staple* exports—breadstuffs, cattle, bullion.

The following table shows the total value of the Chilean exports to, and imports from, the United States for each of the 20 years therein expressed:

YEARS.	Exports to United States.	Imports* from United States.	Total Commerce.
1837.....	\$3,742,439	\$2,907,185	\$6,649,624
1838.....	2,655,263	1,972,541	4,627,804
1839.....	2,646,800	1,967,324	4,614,124
1840.....	2,072,912	3,268,673	5,341,585
1841.....	3,186,052	2,626,652	5,812,704
1842.....	1,670,280	1,176,896	2,847,176
1843.....	1,966,918	1,810,846	3,777,764
1844.....	1,353,106	1,653,514	3,006,620
1845.....	1,583,487	1,740,141	3,323,628
1846.....	740,250	1,161,384	1,901,634
1847.....	1,287,176	8,615,010	4,902,186

There were, in 1876, some 940 miles of railway in actual traffic, and 2,650 miles of telegraph lines.

From the report of the Minister of Foreign Affairs, it would appear that a postal treaty will probably be established between Chili and Great Britain. The latter country has suggested that, instead of entering into a separate treaty, Chili should join the general postal union signed at Berne, but defer doing so till July 1, 1878; since then, England being free from the contract now existing with the Pacific Steam Navigation Company, she would make an agreement with Chili on the following basis: 1. The English Post-Office to defray the cost of carrying the mails of that

* In these are included the domestic and foreign merchandise shipped from the United States to Chili.

country to this, and the Chilian office similarly to pay for the conveyance of its mails to the United Kingdom. 2. The land and marine tariff not to exceed that agreed upon by the Berne Convention, the rate collected in England being 6*d.* for half-ounce letter; 2*d.* for papers not exceeding 4 oz. in weight; and 2*d.* for each 2 oz. of books, packets, and samples. 3. All the mails brought by the English steamers to any port in Chili to be delivered to the local post-offices, the consulate post-office agencies being discontinued.

The Minister of Public Instruction continues with unabated ardor and enthusiasm introducing improvements in the important branch intrusted to him. One of his measures, which justly deserves commendation, is a circular addressed to the rectors and professors of the National Institute, in which he manifests his desire to establish evening classes for adults, where artisans may receive the instructions they stand in need of. The idea met with general approbation, and it was decided that the new institution should be forthwith inaugurated. The public in general, and particularly the working classes, highly approved of the idea, and its author received the felicitations of the press and the manifestations of the artisans of Santiago.

Institutes similar to that just mentioned were to be established in all the provincial lyceums.

The new lyceum for girls in Valparaiso was to be opened on April 24, 1877. Similar lyceums for girls were about to be opened in Concepcion, Valdivia, Serena, San Felipe, and Copiapó, and it was said that the example would shortly be followed in Talca, Santiago, Chilian, and Cauquenes.

Señor Amunátegui had sent a circular to the provincial and departmental authorities, advising the establishment of elementary agricultural schools.

The amount expended on public instruction in 1875 was \$2,035,412, or more than one-eighth of the entire national revenue.

The Government has decided that Chili "shall not be represented in the Paris exposition of 1878, from motives of economy, the expense that would be incurred being estimated at \$30,000. The news has been received with great regret. Chili and Germany are perhaps the only two nations of the civilized world that will not be represented at that grand event. There is no doubt that this absence will be greatly preju-

VALPARAISO.

dicial to us, and that Chili will lose a brilliant opportunity of making herself known as a progressive nation; but it is also certain that, to figure worthily at the French exposition, a considerable outlay would be necessary, which, it would be scarcely possible to face under present circumstances."

CHINA, an Empire in Asia. Emperor, Kwang-Liu, formerly called Tsaeteen, born in 1872, a son of Prince Ch'un, and grandson of the Emperor Tan-Kwang, who died in 1850; succeeded to the throne in 1875. The area of China proper is 1,554,000 square miles; the population, 404,946,514; the area of the dependencies, 2,419,300 square miles, and the population 28,500,000, making in all 3,973,300 square miles, with a population of 433,500,000.

The customs returns from the treaty-ports of China for 1876 show a steady increase in the foreign trade. There had been fluctuations, of course, during the 14 years which were exhibited for purposes of comparison, but the gross result was that the total for 1876 was two-thirds greater than that for 1864, as will be seen from the following figures:

YEAR.	Imports.	Exports.	Total Commerce.
1864	46,210,431 taels	48,654,512 taels	94,864,943 taels
1876	70,269,574 "	80,850,512 "	151,120,086 "

The total for 1876 was swollen, perhaps abnormally, by the great rise in the value of silk, owing to the failure of the European product; but even making allowance for this exceptional increase, the figures compared favorably with those of any previous year.

The share taken by England and her colonies in this trade was more than three-fourths of the whole, 118,867,000 taels, England alone figuring for 56,141,000 taels, Hong-Kong for 41,843,000 taels, India for 16,801,000 taels, the Straits for 1,463,000 taels, Australia for 2,378,000 taels, and New Zealand, South Africa, and

British America for 233,600 taels collectively. The apparently large share of Hong-Kong must also be credited chiefly to England and India, as the island itself is unproductive, and goods are landed there as at a free port, for storage and subsequent distribution. The trade employed 2,070 ships, representing 1,132,550 tons; or, rather, that is the number of entries which the returns exhibit, and in which, of course, several vessels appear several times; and of these, again, 1,491 vessels, representing 800,000 tons, were British. Germany, with 217 vessels, representing 82,570 tons, ranks next, and America, France, and Japan next in the order named; Austria coming last, with one ship, measuring 290 tons.

There were in China, in 1875, 3,607 foreign residents, of whom rather more than half were British, 536 American, 362 German, and 298

French, more than a dozen different nationalities contributing their quota to the remainder. The Chinese population of the 14 ports open to foreign trade was estimated at 4,751,000; of which Canton alone was estimated to contain 1,500,000, Tientsin coming next with 950,000, Hang-chow and Foo-chow next in order with 600,000 each, and Shanghai fifth with 278,000.

China was again, during 1877, the scene of a terrible famine. The scenes of the chief distress were in the north and east, in the extreme north of Kiangsu, in Shantung, in Chihli, and in Shansi; and from Shantung, especially, the accounts were extremely heart-rending. The whole tract of country in question suffered from a severe drought in the summer of 1876, which nearly destroyed the crops; and the peasantry, having used what little grain they

HONG-KONG.

had in store, or were able to gather, were in the beginning of 1877 reduced to the last stage of want. Mr. Richards, one of the Protestant missionaries distributing alms in Shantung, writes as follows of the suffering prevailing:

Having finished their corn, the people are now eating grain-husks, potato-stalks, and elm-bark, buckwheat-stalks, turnip-leaves, and grass-seeds, which they gather in the fields. When these are exhausted they pull down their houses and sell the timber, and it is reported everywhere that many eat the rotten sorghum-stalks from the roof, and the dried leaves of which they usually burn for fuel. Of their eating fuel-leaves there is no doubt; thousands eat them, and thousands die because they cannot get even that. They sell their clothes and children. Having no clothing left to protect them from the cold, many take refuge in pits built underground to keep themselves warm by the fetid breath of the crowd. In the east suburb of Ching-chow city there

are four such pits. One-third of the number (240) originally put into them are now dead within six weeks, and no sooner is a corpse carried out than a crowd are struggling for the place. Villages of 500 families report 300 dead of starvation; villages of 300 report 100 persons dead.

The Government did little to relieve the suffering, and that was frequently very ill-advised. A native firm at Lai-chow, for instance, had begun importing grain, when the officials ordained a price which compelled it to sell at a loss, and of course immediately stopped further supply from private sources. The suffering increased as the year advanced, and in the summer a famine fever broke out in the afflicted districts. This disease, which also made its appearance in the Deccan, had been previously noticed among the sufferers in the Irish

famine, and in the districts rendered noisome by the German-French war.

The afflicted provinces have been so completely exhausted that they have lost the power of early recovery, even with favorable seasons. The Government showed some recognition of the liberal contribution of foreigners for the relief of its distressed subjects, by addressing the following private circular letter to each of the foreign ministers:

We have recently noticed a statement in the newspapers that foreigners of all nationalities have raised contributions, which have been sent for distribution to the famine districts of Shantung, to the relief of the sufferers, thus manifesting their delight to do good and grant aid to all men without regard to race.

We have been exceedingly gratified at what we have heard, and now beg to return to them, through you, our expression of appreciation and thanks.

The Sungarian revolt in the extreme west of China was finally subdued in 1877, after a campaign which had extended through many years.

More than 14 years ago, Sungarians, a tribe of Chinese Mohammedans, affected by the rebellion in Yunnan, engaged in a religious war, and the struggle for independence spread to the Turkish-speaking inhabitants of Western China. The Chinese in quelling the rebellion proceeded very systematically, beginning with the Sungarians. For 10 years this war has been conducted, with all imaginable mistakes. Unexampled cowardice was followed by the most unheard-of barbarities, and a battalion of European soldiers would have sufficed to put to flight the two armies, numbering hundreds of thousands of men.

In 1876, the Chinese succeeded, by force of arms and by strategy, in securing the cities of Soo-chow (not to be confounded with the city of this name in China proper), Komul, Barkul, and Gutchen—that is, a region forming the boundary between Turkistan and China—and then marched on Uruntchi and Manas. The two latter cities the Amir Yakub Khan had annexed to his Empire in 1874, and the attack of the Chinese was therefore meant as much for him as for the Sungarians. A body of Kashgarian troops, 700 strong, under the command of Beg Kuli, Yakub Beg's son, had an engagement with the Chinese. The latter having, in spite of their cowardice and the absence of anything like discipline, the advantage of their enemies by reason of their superior arms, enjoyed also the aid of those Chinese fugitives who, having been driven 12 years ago by the Sungarians into the mountains, had now gathered under the leadership of Shu-sha, one of their chiefs, to aid their approaching countrymen. On November 10, 1876, Manas surrendered, in which city 1,500 Sungarians were murdered in cold blood by the Chinese. Similar cases also occurred at other places. The Sungarians, reduced by famine, were forced to surrender, and were then in most cases murdered, without regard to sex or age. With this victory the Chinese have again secured their supremacy in the eastern part of the Amir's territory, in which this fortunate adventurer had always expected danger, and had therefore for years attempted to form an alliance with the Sungarians. To-day the Sungarian revolt may be considered at an end. Famine and the

MACAO.

Chinese soldiers have reduced their numbers fully one-half, while, of those that have escaped with their bare life, many have sought refuge in Russian territory. This brought the Chinese to the borders of Yakub Khan's territory, and the war that will ensue between these two will have an important bearing on the rivalry between British and Russian interests in Central Asia.

For an account of the war between Kashgar and China, *see* KASHGAR.

The foreign ministers in Peking were received at the Tsungli Yamen on February 22d, the Chinese New Year, with festival ceremonies, by Prince Kung and numerous high officials.

In August, the Government issued an edict condemning the use of opium, and sanctioning

all efforts of the provincial authorities to suppress it. It was pretty well understood among the natives that the Chekiang Futai intended imitating the Viceroy of Nankin, in trying to root out opium-smoking. This he hoped to do by shutting all shops except on the main thoroughfares, restricting these to doors three feet high, forbidding the use of beds, and compelling smokers to lie on the floor. He feared an uprising, it was said, were he to shut up all the shops at once. But, by thus making opium-smoking disreputable from the surroundings, he hoped to deter all who have any regard for respectability.

The railroad from Shanghai to Woosung, which was opened in 1876, and which at first met with great opposition, soon gained the favor of both the people and the Government. On the Chinese New Year, February 22d, the road transported great numbers of excursionists, while on other occasions it soon came to be largely used by all classes of the population. The Government accordingly, in the beginning of the year, made an agreement with the company that the latter should have control for another year, and that the road should then become the property of the Government, in consideration of 265,000 taels. The latter also intended to introduce railroads in other parts of the Empire, particularly on the island of Formosa, which contains valuable deposits of coal and petroleum. On October 31st, the railroad passed into the hands of the Government, when it ceased running.

On April 1st, United States Consul Sheppard, of Hankow, opened the new port of Ichang. On the same day Wuhu, Wen-chow, and Pakkoi were opened by the British consular agents. The value of Ichang consists chiefly in its being at the extreme head of the Yang-tse-Kiang, a terminus for steamer traffic; but Wuhu, Wen-chow, and Pakkoi are all places of considerable trade, well situated as outlets and ports of supply for considerable and fertile districts.

A General Conference of the Protestant missionaries in China was held in Shanghai, beginning May 10th, and lasting through 10 days. About 100 missionaries were present, and participated. Two chairmen were elected—the Rev. Dr. Nelson, of the Protestant Episcopal Mission, Shanghai, and the Rev. Dr. Douglas, of the Scotch Presbyterian Mission, Amoy. The second day's service was opened with the reading of a paper by the Rev. Dr. Williamson, of the Scotch United Presbyterian Mission, on "Our Field of Labor in all its Magnitude." It treated of the extent of the Chinese Empire, its immense population, and the great intellectual capabilities of the people. It was followed by a paper by Dr. Legge, on "Confucianism in Relation to Christianity," in which the author maintained that the Confucian books teach plainly the existence of a God and the moral and spiritual qualities of man, although they say nothing of his immortality. These positions were disputed by other mem-

bers of the Conference. The next subject was "The Popular Aspects of Buddhism and Taoism," and was introduced in a paper by the Rev. Dr. Edkins, of the London Mission, Peking. Papers followed on "The Practice of Binding the Feet of Chinese Girls," by Miss J. H. Woolston, of the Methodist Episcopal Mission at Foo-chow, and "Woman's Work for Woman," by the Rev. A. P. Hopper, D. D., of Canton, and Mrs. Crawford, of Tung-chow-Foo, after which the different modes of work for women were discussed, as day-schools for girls, boarding-schools for girls, training-schools for Bible-women, industrial classes, visitation from house to house, and medical service from qualified woman-physicians. A high appreciation was expressed of the value of the work of the women. The fifth day was devoted to the subject of schools and their relation to mission work. Papers were read on the subject by the Rev. R. Lechler, of the Basel Mission, Hong-Kong, and the Rev. O. W. Mateer, of the American Presbyterian Mission, North, Tung-chow-Foo. The importance of scientific teaching by the missionaries was insisted upon in the former paper. Other papers were read on "Day-schools," by Mrs. Gough, of the Church Mission, Ningpo; "Boarding-schools for Boys," by the Rev. D. Dodd, of the American Presbyterian Mission, North, Hang-chow; and "Girls' Boarding-schools," by Miss M. Lawrence, of the English Church Mission, Ningpo. The sixth day was given to the subject of literature. The papers were: "Christian Literature—What has been done, and what is needed," by the Rev. C. O. Baldwin, of the American Board Mission, Foo-chow, in which the relative advantages of the use of the classical language, the Mandarin and the colloquial dialects, were fully discussed; "Secular Literature," by the Rev. W. A. P. Martin, D. D., LL. D., and the Rev. Young J. Allen, of the Methodist Episcopal Church, South. The Superintendent of the Presbyterian Mission Press mentioned the continued demand for scientific works published or for sale at that office. It was also stated that during the last 10 years about 50 books on Western science had been translated or written in Chinese at the instance of officials. The seventh day was given to the consideration of the interests of the "Native Church." Papers were read on "The Conditions to be required for Admission to Full Membership of the Church," by the Rev. J. N. Lambuth, of the Methodist Episcopal Mission, South, Shanghai, and the Rev. O. A. Stanley, of the American Board Mission, Tientsin; on "The Methods to be used for Raising the Spiritual and Moral Tone of the Native Church," by the Rev. F. F. Gough, of the English Church Mission, Ningpo, and the Rev. H. L. Mackenzie, of the English Presbyterian Mission, Swatow; and on "The Means by which Foreigners in China can assist in the Work of Evangelization," by Dean Butcher, of the English Cathedral, Shanghai. On the eighth day, the subjects

were discussed of "Self-support of the Native Church," by the Rev. S. L. Baldwin, of the Methodist Episcopal Mission, Foo-chow, and the "Native Pastorate," by the Rev. H. Corbett, of Chefoo, and the Rev. J. Butler, of Ningpo, both of the American Presbyterian Mission, North. On the ninth day, papers were read on "The Advantages and Disadvantages of the Employment of Native Assistants," by the Rev. T. P. Crawford, of the Southern Baptist Mission; "How shall the Native Church be stimulated to more Aggressive Christian Work?"

by the Rev. R. H. Graves, M. D., of Canton; and "The Opium Question," by the Rev. A. E. Merle, of the English Church Mission, Hang-chow. On the 10th day, papers were read on "Ancestral Worship," by the Rev. M. T. Yates, D. D., of the Southern Baptist Mission, Shanghai; "Questionable Rites connected with Marriage and Funeral Ceremonies," by the Rev. C. Hartnell, of Foo-chow, and the Rev. D. Z. Sheffield, of Toang-chow, both of the American Board; and "The Treaty Rights of Native Christians," by the Rev. J. A. Layen-

GREAT WALL OF CHINA.

berger, of the American Presbyterian Board, North, Ningpo. The Conference issued an appeal to the Protestant Christians of the world for help in extending the missions, stating that there were still eight provinces in the Chinese Empire in which there was not one resident missionary, while in other provinces there were only two or three, calling attention to the vast extent of the Empire, the vigor and enterprise of her people, and their disposition to emigrate to other parts of the world.

Among the works of the year having information on China is F. von Richthofen's "China, Ergebnisse eigener Reisen und darauf gegründeter Studien" (vol. i., Berlin, 1877).

CHRISTIAN CONNECTION. The *Christian Almanac* for 1878 gives the names of 56 conferences of the Christian Connection, with 1,250 ordained and 201 unordained ministers. The ordained ministers are distributed, by States, as follows: California, 2; Illinois, 115; Indiana, 193; Iowa, 120; Kansas, 27; Kentucky, 10; Maine, 66; Massachusetts, 40; Michigan, 55; Missouri, 33; Nebraska, 8; New Hampshire, 37; New Jersey, 10; New York, 146; Ohio, 215; Pennsylvania, 65; Rhode

Island, 17; Vermont, 22; Virginia, 10; West Virginia, 4; Wisconsin, 37; Canada, 18. The *Christian Publishing Association* is at Dayton, Ohio, where it has a business house, and publishes a weekly general paper and a Sunday-school paper. The *Almanac* includes Antioch College, at Yellow Springs, Ohio, among the denominational institutions. The other literary institutions are: Union Christian College, Merom, Sullivan County, Ind.; Proctor Academy, Andover Centre, N. H.; the Eaton Family School, Middleborough, Mass.; Christian Biblical Institute, Stanfordsville, Dutchess County, N. Y.; Starkey Seminary, Eddytown, Yates County, N. Y.; Weaubleau Christian Institute, Hickory County, Mo.; and Denver College and Normal School, Denver, Ind.

COAL. The annual report made by *The Engineering and Mining Journal* shows that the production of anthracite coal in 1877 was about 21,323,000 tons (2,240 lbs.), or 2,323,000 tons more than in 1876. The production of bituminous and post-carboniferous coals in 1877 probably amounted to more than 28,500,000 gross tons, making the total production of coal in the United States nearly 50,000,000 tons.

The most extensive and valuable coal-mines in America are in Pennsylvania. The coal-fields cover an area of 12,744 square miles, including the anthracite basin, of 470 square miles, in Eastern Pennsylvania. Of the 66 counties of the State, 24 in the southeast part, and Erie in the northwest, contain no coal. The anthracite beds are chiefly in Dauphin, Schuylkill, Carbon, and Luzerne Counties, and extend into Northumberland and Columbia Counties. Semi-anthracite coal is found in Dauphin, Sullivan, and Wyoming Counties. Bradford, Lycoming, Tioga, Huntingdon, Bedford, and Fulton, contain detached fields of semi-bituminous coal. Forty-one counties in the north and northwest produce bituminous coal. In Mercer County, on the west border of the State, are deposits of the most valuable coal in the United States. It is a species of semi-cannel coal, with a slaty structure, and a dull, jet-black lustre, with a thickness of from 3 to 4 feet. It is known as block coal, and is specially adapted to the smelting of iron. The annual production is about 500,000 tons.

The production of anthracite coal in Pennsylvania since 1860 has been as follows:

YEARS.	Tons of 2,240 lbs.	YEARS.	Tons of 2,240 lbs.
1860.....	9,508,118	1869.....	16,875,678
1861.....	9,147,461	1870.....	17,819,700
1862.....	9,095,081	1871.....	17,379,855
1863.....	10,953,077	1872.....	22,084,083
1864.....	11,631,400	1873.....	22,880,921
1865.....	10,783,032	1874.....	21,667,386
1866.....	14,092,837	1875.....	20,643,509
1867.....	14,345,644	1876.....	*19,000,000
1868.....	15,310,466	1877.....	*21,323,000

The production of 1877 was mined in the following regions: Wyoming region (Luzerne County), 8,300,000 tons; Lehigh region (Carbon, Columbia, and Luzerne Counties), 4,400,000 tons; Schuylkill region (Schuylkill, Northumberland, Columbia, Dauphin, and Lebanon Counties), 8,600,000 tons; and Loyalsock region (Sullivan County), 23,000 tons.

The amount of anthracite produced in Pennsylvania prior to 1820 was about 18,000 tons. The aggregate production since that year amounts to 381,887,832 tons, including 151,475,872 tons mined in the Wyoming region, 72,422,227 in the Lehigh, 157,776,236 in the Schuylkill, and 213,497 in the Loyalsock.

The coal production of the United States in recent years has been as follows, in tons of 2,240 lbs.:

STATES.	Census Report, June 1, 1870.	Year ending December 31, 1874.	Year ending December 31, 1875.	Percentage of the Whole, 1875.

In reviewing the anthracite trade for 1877, the authority above quoted remarks that the low prices which ruled throughout the year increased the consumption of anthracite more than 2,000,000 tons, and that a continuance of low prices will create a demand for between 2,000,000 and 3,000,000 tons more in 1878 than was consumed in 1877. This would increase the production to between 23,000,000 and 24,000,000 tons, which is nearly the full

capacity of the mines in their present condition.

The winter of 1876-'77 was a very severe one, and large quantities of coal were consumed despite the great economy practised. During the early part of the year shipments were much interfered with by the great accumulation of ice at the several ports. In December, 1876, the Philadelphia Railroad Com-

* Approximate.

pany made arrangements to ship coal from South Amboy—a movement which resulted in increasing the winter competition by about 100,000 tons, the amount shipped by this company during the period that general inland navigation was closed. As a consequence, prices steadily weakened and stocks accumulated. On the opening of navigation there was a much better demand for coal; but the production increased so rapidly that prices continued their downward course, which was only checked by the strikes in the Wyoming region, which began in July.

At this time there had been shipped to market over 3,000,000 tons more coal than for the corresponding period of 1876, and there were very liberal stocks, which, with a fair production from the regions still working, and under advanced prices, sufficed to supply the requirements of the market until work was fully resumed in the middle of October. After this, and under the demoralizing influences of the auction sales, prices began to decline, reaching in November, at the Delaware, Lackawanna, and Western Railroad Company's auction sale, an average of \$2.35½ per gross ton, the lowest price ever recorded in the New York market; the nearest approach having been at an auction sale by the same company in the previous June, when an average of \$2.37 per ton was reached.

These ruinously low prices lent intensity to the movement for a renewal of the coal combination, which had been discussed from time to time since the resumption of work at the mines, and the somewhat widely-held belief that such a combination would be effected, resulting in steadily advancing prices, and, at the same time, decreasing the demand for coal.

The very open fall enabled shipments to be continued to an unprecedentedly late date; and although prices advanced at the last of the year, and new orders were not liberally given, yet the desire to have all old orders filled resulted in brisk shipments to the last, and, as a consequence, cleared the order-books, and left lighter stocks of coal on hand at the end of the year than has been the case for several years past.

Early in the year a large number of season contracts were made on terms which indicated that there was to be a war in prices. The Philadelphia & Reading Railroad Company clearly showed that its policy was to do a large business without reference to the other companies. To accomplish this, its management shrewdly foresaw that the best prices obtainable at the beginning of the year would be very liberal ones later in the season, and it took large orders at prices then ruinously low, but which have since appeared very good. After exhausting its regular markets, this company was found, "pushing the war into Africa," and taking orders along the Hudson River, passing the shipping wharves of the Pennsylvania Coal Company and the Delaware & Hudson Canal Company.

The next step was naturally to compete with the Northern companies in the markets along the line of the Erie Canal and on the great lakes, which it did successfully. But more than this, it opened an office in New Haven, Conn., and distributed its coal throughout every portion of the New England States, opening many markets previously supplied exclusively from the Lackawanna and Lehigh basins. By this bold and well-defined policy the Philadelphia & Reading Company demonstrated clearly that it was able to compete successfully in any and all the markets supplied by its Northern rivals, or, in combination term, that all the markets are "competitive." It also demonstrated to the satisfaction of consumers that, since the operators in the Schuylkill region have taken the same pains as their neighbors in the preparation of their coals for market, there is so little choice between the coals of the different fields that, for many purposes, a difference of a few cents a ton will change the market from one to the other. So dangerous a rival was, of course, vigorously opposed by the companies already in possession of these profitable markets, and a war in prices ensued, which resulted in rates so extremely and unnecessarily low as to leave no profit to any concerned.

"The course of the anthracite trade during the year," continues the *Journal*, "has afforded some important lessons. With a consumption more than 2,000,000 tons greater than in 1876, the prices have steadily declined throughout the year; and though they have been so low as to be quite inadequate to meet the 'fixed charges' of nearly all the large coal companies, and have been but little above cost of production to the most economical and lightly loaded of the producers, yet even these minimum prices have not succeeded in driving bituminous coal from the market, though they have, no doubt, checked the growth of that trade. Had the price of anthracite been as high during the year 1877 as it was under the combination—when, as events have proved, the companies were rapidly drifting to bankruptcy—the amount marketed would not have been within 3 or perhaps 4 million tons as great as it has been, while the consumption of bituminous coal would have largely increased. A large part of the manufacturing and productive industry of the country has grown far beyond the requirements of our domestic markets, and must seek in foreign countries an outlet for our surplus production. The ability to do this is largely dependent, in more ways than one, on a supply of cheap fuel. The growing competition of bituminous coal will also act as a check on the exaction of high prices for anthracite. From these and other reasons it would seem, therefore, that the average price of anthracite in future will range lower than in the past, and it is to large production and economy, rather than to high prices, that the companies must look for profit."

The recent annual production of coal throughout the world has been as follows:

COUNTRIES.	Years.	Gross Tons.	Per cent. of Total.
Great Britain.....	1875	181,867,105	47.62
United States.....	1875	47,513,235	17.16
Germany.....	1774	46,658,000	16.85
France.....	1876	17,047,761	6.15
Belgium.....	1876	15,011,880	5.42
Austria and Hungary.....	1875	12,852,048	4.64
Russia.....	1874	1,846,900	.49
Nova Scotia.....	1876	709,646	.26
New South Wales.....	1874	1,804,567	.47
Spain.....	1873	570,000	.21
India.....	1875	500,000	.18
Turkey in Europe and Asia.....	1874	150,000	.05
Japan.....	1874	890,000	.14
Chili, China, New Zealand, and other countries.....	1,000,000	.36
Total.....		276,920,592	100.00

COLOMBIA (ESTADOS UNIDOS DE COLOMBIA), an independent state, occupying the southeastern portion of Central and the northwestern of South America, and extending from latitude 12° 21' north to 1° 20' south, and from longitude 68° 52' to 83° 5' west. Its boundaries are: on the north, the Caribbean Sea; on the northeast and east, Venezuela; on the southeast, Brazil; on the south, Ecuador; and on the west; the Pacific Ocean and Costa Rica.

The present state of the question of limits pending with Brazil is set forth in the article on that Empire in the present volume.

For the territorial division, population, etc., of Colombia, reference may be made to the ANNUAL CYCLOPEDIA for 1874 and 1876.

The President of the Republic is Señor Aquileo Parra, inaugurated April 1, 1876.

The Cabinet is composed of the following members: Minister of the Interior and of Foreign Affairs, Dr. Manuel Ancizar; of Finance and Public Works, Dr. C. N. Rodriguez; of Treasury and Credit, Señor Luis Robles; and of War and Marine, Señor Rafael Niño.

The chief magistrates of the nine states were as follows, respectively:

STATES.	
Antioquia.....	Señor R. de Villa.
Bolivar.....	" R. Nuñez.
Boyacá.....	" E. Neira.
Cauca.....	" C. Conto.
Cundinamarca.....	" J. Sanchez.
Magdalena.....	" M. Dávila García.
Panamá.....	" R. Aizpuru.
Santander.....	" M. A. Estrada.
Tolima.....	Genl. Córdoba.

The Colombian Consul-General in New York is Señor Miguel Salgar.

The American Minister resident at Bogotá is the Hon. W. L. Scrugge.

From the following tables, exhibiting the various branches and amounts of the national finances for the fiscal year ending August 31, 1877, it will be seen that almost two-thirds of the entire revenue is derived from the customs, and that the cost of the Post-office department is \$198,088 in excess of the yield:

REVENUE.	
Customs.....	\$1,971,555
Salt monopoly.....	728,721
Panamá Railway.....	168,750
Post-office.....	61,125
Telegraphs.....	23,070
Mint.....	5,808
National property.....	21,710
Church property.....	108,211
Sundries.....	26,169
Total.....	\$3,114,619
EXPENDITURE.	
Ministry of the Interior.....	\$252,404
Finance.....	301,038
War and Marine.....	412,146
National debt.....	1,054,571
Public works.....	193,725
Foreign affairs.....	74,164
Treasury.....	70,994
Public instruction.....	119,722
Pensions.....	41,488
Post-office.....	259,213
Total.....	\$2,779,410

By comparison of the foregoing tables, a surplus will be observed of \$335,209, against \$1,725,596 for the fiscal year ending August 31, 1877.

For details concerning the national debt of Colombia, reference may be made to the ANNUAL CYCLOPEDIA for 1875 and 1876. Fears were entertained in London financial circles, at the end of 1876, that Colombia would be unable to meet her engagements with the desired promptness, in the matter of the installment to fall due in February, 1877, as will appear from the subjoined extract from a London financial publication, under date of December 30, 1876:

We very much regret to say that the apprehensions lately expressed regarding the service of the Colombian Loan are likely to be realized. We have received a communication from the Council of Foreign Bondholders, that, in consequence of the civil war in Colombia, the Government have been obliged to discontinue temporarily the monthly payments for the service of the debt made to the agent of the bondholders at Bogotá. There is not, therefore, enough of money in the hands of the bankers to pay the coupons of the 1st of January. £7,700 have been remitted to the bankers; £7,300 are still in the hands of the agent at Bogotá (who is unable to obtain means of remittance), so that one-third of the coupon has still to be provided for.

A more encouraging aspect of affairs is presented by the author of the subjoined sketch, which, giving as it does a view of the present condition of Colombia in more than one respect, will not be out of place here. The date of the publication is August, 1877:

There is nothing which affords us more real pleasure than to witness evidences of improvement in the condition of this country. It is our greatest delight to believe that the Colombian Union possesses all the elements of national success, and that it only requires a long and uninterrupted season of peace to insure the development of these elements and the secure establishment of unbounded prosperity. The boundaries of few countries embrace so splendid a realm. Few lands can boast of so liberal endowment of natural resources. Its geographical position, its diversity of climate, its fine rivers, rich soil and mineral wealth, cannot be excelled by any other on the face of the globe. It is no wonder that Colombianos are proud of their country, and enthusiastic about its future. They may well be pardoned

any and every exhibition of love and loyalty that springs from motives of patriotism, so long as they do not lose sight of the one great paramount consideration, that peace and tranquillity are absolutely necessary to their prosperity. There never was a people in many respects more favored; and if they would only in good and loyal earnest beat their cannon into ploughshares and swords into pruning-hooks, what a grand spectacle the swift mutations of time would soon reveal to the admiring gaze of the world!

These reflections have been suggested by the pe-

rusal of the subjoined letter, lately published in a leading British financial journal, and from the pen of an economist of note. Coming from such a source, the expression of confidence is exceedingly gratifying; it is an evidence that Colombia is now regarded with exceptional favor in London, and that such effort as she has made to maintain her credit will indeed serve her well. It may be accepted as a sign of most encouraging future promise:

"There have been too few opportunities and too little inclination to act on the spirit of the recommendation of the concluding paragraph of Mr. Go-

CATHEDRAL OF PANAMÁ.

sen's late letter on Egyptian affairs, but I think the present chance should not be let slip of calling attention of all foreign stockholders to the prompt action taken under difficulties by the United States of Colombia to restore their credit, suspended, although not lost, by the civil war that has lately raged in that part of South America. On the 14th April last the agent of the Committee of the Colombian Bondholders announced the termination of the civil war that had been waged between the clerical party and the Liberals in those states, and it became his duty to urge the Government to take steps for the resumption of monthly payments for the interest of the foreign debt. He found the Government not only prepared to listen to his request, but anxious to comply with it, and that with an almost empty Exchequer; but by the 6th of June he is able to telegraph the resumption of monthly payments in July, with arrears to be paid in four quarterly payments, commencing in October next, and this morning comes an announcement of his receipt of £7,500. When efforts like these are made so promptly, and under circumstances of great difficulty, I think they ought to be brought prominently forward, not only to the honor of the state making those efforts, but as an encouragement to other states, not those of South America alone, to go and do likewise. I doubt not that New Granada, as it used to be called, will find in the future that this effort, greater than we realize in this favored land, will serve her well."

The regulation strength of the Colombian Army in time of peace is 1,500; in time of war each state is held to furnish a contingent of 1 per cent. of its population.

The annexed table will, with the details contained in the *ANNUAL CYCLOPEDIA* for 1876 (p. 116), serve to give a fair idea of the present state of public instruction in the Republic:

STATES.	Population.	Pupils.
Antioquia	850,000	16,987
Bolívar	175,000	5,000
Boyacá	456,000	6,000
Cauca	497,000	11,000
Cundinamarca	392,000	16,000
Magdalena	100,000	2,666
Santander	174,000	8,243
Panamá	496,000	8,000
Tolima	261,000	4,800
Total *	2,881,000	73,696

In the absence of official reports of the foreign commerce of the United States of Colombia, since those published in our volume for 1876, we subjoin a few tables of imports

* These were taken before the beginning of the late war.

and exports through the port of Barranquilla, from October 11 to November 10, 1877:

IMPORTS.		Packages.
From Europe.....	7,720

Fustic (tons).....	16	
Specie.....	\$1,275	

From the following decree it will be observed that the revolution, begun toward the end of 1876, was finally put down in August, 1877, on the 16th of which month Dr. Aquileo Parra resumed charge of the Executive power of the nation:

DECREE 470 OF 1877 (AUGUST 7TH),

By which the reestablishment of public order is declared.

The President of the United States of Colombia, considering:

1. That there does not exist in the Republic any armed enemy of its institutions;
2. That the authority of the Federal Government and that of the several States is obeyed without resistance; it is decreed:

ARTICLE 1. Public order is declared reestablished in all the territory of the Union.

ART. 2. By a separate decree, the Army will be reduced to a peace footing.

ART. 3. The Presidents, Governors, and chief officers of the States, and the Prefects of the Territories, will dictate the necessary orders by which the present decree shall be immediately published by proclamation in all parts of the country. Signed by

SERJIO CAMARGO, Acting President.

EUSTORJIO SALGAR, Sec. of the Interior.

LUIS BERNAL, Sec. of Hacienda.

J. M. QUIJANO W., Sec. of the Treasury.

SANTOS ACOSTA, Sec. of War and Marine.

General Trujillo, after having long and obstinately striven for preëminence as candidate for the Presidency of the Republic, relinquished his pretensions in that direction, and contented himself with the candidacy for President of the State of Antioquia, which event was regarded as a guarantee of continued peace.

COLORADO. At the election in Colorado on the 2d of October, only a Judge of the Supreme Court, and county and other local officers, were chosen. By agreement of the executive committees of the two parties the candidate for judge was selected by the Bar

of the State, and no opposition candidate was put in nomination. Wilbur F. Stone was the person selected, and he received 22,047 votes, out of a total of 22,342, the rest being scattered among several candidates. The constitution had provided for submitting to a vote of the people the question of requiring the Legislature to pass an act extending the right of suffrage to women. A vigorous canvass was made on this question, in which prominent advocates of female suffrage from all parts of the country participated. The total vote on the proposition was 20,665, of which 6,612 were in the affirmative and 14,055 in the negative, so that it was defeated by a majority of 7,441.

The valuation of property in the State, as determined by the Board of Equalization, was \$45,756,170.36.

A case was decided by the Supreme Court in December, involving the question of the power of the State Board of Equalization to increase the total valuation of property as reported from the various counties. The conclusions of the Court are stated in the following passages of the decision:

Looking, then, to the provisions of the constitution and the statute, we are clearly of the opinion that the power to fix and determine the valuation of taxable property is lodged by them in the Assessor and the Board of County Commissioners of the several counties of the State, and that, when they have under the law performed this duty and exercised this power, the sum of the valuations of the several counties so by them found must be taken as the aggregate valuation of all the property in the State, and is conclusive and final as against the State Board of Equalization. The State Board may, for the purpose of adjusting and equalizing, increase the aggregate valuation of one county and decrease the aggregate valuation of another, but they have no power to increase the sum of all the valuations of the several counties of the State. That aggregate valuation has been found for them, and fixed by the authority and in the mode prescribed by the law. This view is not only sanctioned by the force of the general provisions of the statute, considered as a whole, but also by the phraseology of the sections under consideration. The board is to adjust and equalize the valuation. This term "valuation" here imports values already estimated and fixed, and must be referred, for the measure of its force and meaning, to the mode prescribed by law for estimating and fixing valuations. The aggregate material with which the board can deal is thus limited; they may adjust and equalize it among the several counties, but they cannot add to its value.

The extension of the Colorado Central Railroad, from Longmont to Cheyenne, connecting Denver with the Union Pacific at the latter point, was completed on the 1st of November.

The State University of Colorado was opened at Boulder on the 5th of September, and Dr. Joseph A. Sewall was installed as its first president. This institution was originally provided for in an act of the Territorial Legislature in 1861; but no appropriation was made, and no action taken to carry out the purpose of the law. On the revision of the laws in 1868, it was in substance reenacted. In 1870 the

subject was brought up in the Legislature again, and an attempt made to remove the location. The people of Boulder, however, by subscribing a large amount toward the erection of a proper building, secured its retention there. In 1874 the Legislature appropriated \$15,000 for the construction of the building, on condition that an equal amount be raised by the people of Boulder. This was immediately pledged, and the trustees began operations, securing plans and making a contract for the work in 1875. The corner-stone was laid on the 20th of September of that year; and in the fall of 1876 the building was accepted by the trustees. It is of brick, 112 feet by 81, and four stories high. Its whole cost was about \$110,000. It is under the charge of a board of regents, of which L. W. Dolloff is president, and Junius Berkley secretary. President Sewall, when chosen, was Professor of Natural Sciences in the State Normal School of Illinois. He is a native of Scarborough, Me., and received a medical education in Boston, Mass. He afterward pursued a course of study in the Lawrence Scientific School of Harvard University. The Professor of Latin and Greek in the new University is Justin E. Dow, a native of Newbury, Mass., and a graduate of Dartmouth College.

The present State government consists of John L. Routt, Governor; Lafayette Head, Lieutenant-Governor; Wm. M. Clark, Secretary of State; D. C. Crawford, Auditor; George O. Corning, Treasurer; J. C. Shattuck, Superintendent of Public Instruction; and A. J. Sampson, Attorney-General. The first Legislature closed its session in March. Its principal work was the preparation and adoption of a code of laws, which was printed in English, German, and Spanish. Three new counties were formed—Routt, Gunnison, and Custer—making the whole number 30. The total valuation of property is \$40,882,412.36, of which \$23,552,397.01 is real estate, and \$17,330,015.35 personal. Taxes are paid on 1,552,774 acres of cultivated land. The State has no bonded debt, and the floating indebtedness, in the form of warrants selling at about 95 cents on the dollar, will probably be liquidated from the tax levy of the year. The product of gold and silver bullion for the year was about \$7,500,000; the value of agricultural products was about \$3,192,500; cattle and horses, \$7,410,000; wool, \$750,000. There are valuable deposits of coal in Colorado, and considerable progress has been made in mining it. The product of the year is put at \$611,563. There are three varieties of coal found in the State: the ordinary lignite of the northern part of the State, the semi-bituminous or gas coals of Cañon City and Trinidad, and the so-called semi-anthracites of the Gunnison and Lower Bear River. There are seven lines of railroad in the State, six of which have a terminus at Denver. The following statement shows the number of miles operated in the State:

BROAD GAUGE.	
Kansas Pacific.....	268
Atchison, Topeka, and Santa Fe.....	138
Denver Pacific.....	166
Boulder Valley.....	28
Colorado Central.....	185
Total broad gauge.....	675
NARROW GAUGE	
Denver and Rio Grande.....	297
Colorado Central.....	66½
Denver and South Park.....	17
Total narrow gauge.....	880½
Total railroad miles.....	1055½

During the year 182 miles of road have been built by the Colorado Central and the Denver and Rio Grande companies.

A complete system of public education has been established under the law passed by the first Legislature. A State Superintendent is elected by the people every two years; and there is a county superintendent chosen in each county. Besides the State University at Boulder, which has a permanent endowment of 75,000 acres of land granted by the national Government, and is supported by a tax of one-fiftieth of a mill on the dollar of all the taxable property in the State, there is a School of Mines at Golden, and an Institute for the Deaf and Dumb at Colorado Springs; while an Agricultural College has been provided for, and will be speedily established at Fort Collins.

COMMERCE, INTERNATIONAL. For four or five years the entire commercial world has been laboring under one of those periodical crises which seem to be the unavoidable drawback of modern times. These crises are, indeed, caused by the very activity and elasticity of commercial enterprise in the modern world, and their extent and gravity are augmented by the very closeness and complexity of the mercantile ties and influences which connect communities and nations with each other, and which are, under normal circumstances, the source of their economic prosperity. The late period of depression has probably extended more widely, and will have a longer duration, than any similar one. The causes of the mercantile paralysis and social misery were different in different countries and in different industrial branches; but all of them—the exhaustion of war, the fever of speculation, the undue stimulation of certain industries and the squandering of labor in useless works, the inflation of nominal values and uncertainty of prices in countries having a paper currency, besides the natural causes of the failure of crops, inundations, conflagrations, and other disasters, and the political causes of changing governments, uncertain policies, and rumored wars—culminated when the period of contraction set in, and the financial shock was communicated from industrial centre to industrial centre, and from land to land. Great Britain, possessing the firmest foothold in the markets of the world through her useful mechanical productions, has not suffered as much as other countries; yet the growth of commer-

cial enterprise in central Europe and America before the period of contraction, and the very struggle to maintain the new industries during that period, have, no doubt, seriously and permanently reduced the dominion of British commercial supremacy. The returns of French commerce show a great shrinkage in the foreign trade; but the greater decline in the importations than in the exportations is a new proof of the proverbial prudence and frugality of the French; and the volume of their commerce is still enormous, and sufficient to maintain the most expensive public administration—save that of Great Britain, if we include the expenses of local government in the latter—with a costlier military establishment than that of any other non-belligerent power, and to preserve the national credit under the heaviest public debt in the world. The collapse of speculative enterprise in Austria, and afterward in Germany, after they had received a stimulus from the influx of the French war-forfeit of five milliards, subjected those countries to a severe revulsion; but the commercial enterprise and ambition thus awakened in Germany may bear lasting fruit in the growth of industrial branches formerly pursued only in France and England, and in the increase of the foreign depots for German wares. It is Germany and England especially which have been impelled, by the contraction of trade, to seek new markets for their goods; and the opening up of new currents of commerce may be counted among the indirect benefits of the hard times. There are various reasons why America has not taken a proportionate share in the rivalry for the world's market. The advantage of shipping owned and controlled in the country, and sailing regular courses to foreign ports, favors England in the race, and Germany, who

possesses the next largest carrying-trade on the high seas. The imposts on raw and partly manufactured materials prohibit competition in many articles. The higher rates of wages prevailing in the United States are not in every case synonymous with dearer production; but the traditions of American trade which lead the merchants to expect larger returns or more immediate returns on their capital than the undertakers of other countries, and their want of mercantile connections and an acquaintance with the conditions and requirements of foreign markets, are serious hinderances, while, moreover, the tide of exchanges does not set in favorably until the new commercial channels have been opened. The mind of the European business world has been considerably taken up this last year with several changes in commercial treaties. Most of the new provisions are in the direction of free trade, although every concession has been opposed by representatives of powerful interests and violent prejudices. Another question which has forced itself in an unpleasant way on the attention of the commercial community is the silver question; Germany's forcible adoption of the single gold standard, effected at the cost of many millions, having seriously disturbed the foreign trade of India, China, Chili, and other silver-paying countries, and placed embarrassing obstacles in the way of specie resumption by the French Government, and the Government of the United States (*see* article CURRENCY). Before the season of comparative stagnation now existing there was an active development of industrial facilities and commercial connections in all countries, as may be seen in the subjoined table presenting the exports of different countries, both agricultural and industrial, per head of the population, for the years 1868-'74:

COUNTRIES.	1868.	1869.	1870.	1871.	1872.	1873.	1874.
United States.....	\$7 61	\$7 72	\$10 61	\$12 73	\$12 00	\$14 10	\$15 82
Great Britain.....	36 00	37 44	38 53	44 82	49 72	49 14	47 04
France.....	20 60	22 12	18 16	18 14	26 34	26 52	26 04
Austria.....	8 23	8 67	8 19	9 79	8 66	9 07	9 80
Italy.....	6 52	6 52	6 37	9 06	9 57	9 75	8 15
Belgium.....	53 39	61 73	68 03	85 23	87 00	89 67	85 75
Russia.....	2 13	2 56	3 47	3 56	3 16	3 52	4 16
Sweden.....	7 55	7 87	9 63	10 16	12 79	14 00	14 38

The allowances to be made, in considering the above statement, for the imperfections of statistical returns and for the general diminution of the purchasing-power of money, it is impossible to determine. It is sure, however, that the improvements in the agents of production and in the means of communication have been such that many commodities are much cheaper; and the quantities in which they are produced, and the ability to purchase of the people of many countries, are vastly greater than they were a few years ago.

The report of the British Commissioners of Customs for 1876 showed an excess of merchandise imports over exports of £125,968,263, or 44 per cent. of the total imports. This is the

largest excess of imports in any year, although for 22 years—ever since the revenue returns were first compiled—the imports have invariably exceeded the exports, and by annual amounts of 50 millions sterling and more. The commissioners explain this constant excess of imports as the result of English investments made abroad, the profits of which, with the earnings of British vessels, are returned to England in the shape of imports. A cause of the large increase in this balance may be accounted for by the fact of British capital having been called home within the past couple of years from abroad, the investments proving no longer sufficiently profitable. Another factor in this calculation, less satisfactory to English pride,

is undoubtedly the sharper competition with British manufactures. The fall in the prices of many staples within 10 years is noteworthy, cotton sinking in price from £4 12s. 2d. per cwt. to £3 0s. 5d., the quantities imported having greatly increased. America resumed its position as chief source of supply in 1876, India furnishing 965,000 cwt. less than in 1875. The imports of wool have largely increased, the whole increase being supplied by Australia. The manufactures in which importations have increased are principally cotton fabrics, woollens, and iron and steel products. The total importations amounted to £374,004,000, against £373,941,000 in 1875, showing an increase of £63,000. Of articles of consumption, there was a large increase in the importation of necessities: live animals and bacon, £800,000 increase; butter, £1,200,000 increase; Indian corn, increase £4,600,000; hams, eggs, potatoes, pork, spirits, wine, and tobacco, £3,700,000 increase. Wheat, on the other hand, showed a decrease of £4,300,000, and the imports of barley and oats also were less. Articles of consumption of secondary importance showed the influence of the hard times, the falling off being about £5,000,000 in cheese, coffee, rice, sugar, tea, spices, etc. In materials for the staple manufactures, there was an improvement toward the end of the year in the importations of cotton, wool, jute, hides, flax, and silk. The cotton was nearly the same in quantity, but £6,000,000 less in value than in 1875. There was a decreased importation of hemp, flax, lead, nitre, pyrites, tin, and quicksilver, and an increase in wool, timber, jute, silk, and many minor articles. In timber the increase was £4,000,000. The increase of £2,300,000 in the value of raw silk imported was largely owing to a rise in price. In silk manufactures there was a decline; but in woollen and cotton textiles the increasing importations are ominous. The fact that American cotton goods, preferable in texture and price to the domestic fabrics, are on sale in the shops and on the markets of London and Manchester, has been frequently commented upon with misgivings by the English press within the past year or two. The increased balance against England in the trade of 1876 is owing almost entirely to an enormous shrinkage in the export trade. This was for the greater part attributable to the contraction of trade all over the world, and to the overstocking of foreign markets with British goods in previous years; but the more active competition of foreign manufactures, before which British industry is abating its supremacy year by year, is an important and significant item in the account. For several years past the English mind has been filled with gloomy forebodings for the future of their country's trade. It is not that they have yet suffered any serious decline, for the staple character of their products and their immense reserves of capital have enabled them to sustain the recent contraction of consumption bet-

ter than the younger competing industries of other countries. But the fact that the Continental nations, where wages are lower and mechanical production has lately been extensively introduced, and the United States, where mechanical methods are generally shorter, and where, as an offset for higher wages, the workmen are more laborious, are now paying especial attention to the industries which have been the main-stay of English prosperity and have been monopolized by her industrialists, gives England cause to fear that she is passing the turning-point in her fortunes. As regards America, British producers have long ceased to assert themselves in that market in many branches of industry; while they are becoming more and more dependent on America for many necessities. In 1865, according to the British customs returns, English exports to the United States amounted to 122 million dollars and the imports from there to 84½ millions. In 1876, England exported not more than 98 millions to the United States, and imported from there 367 millions. Not only are Europe and America fast becoming independent of England in the textile industries, although her cotton goods are still a necessity in all countries, and her spinners furnish the yarn for many of the Continental fabrics, but in the iron industries, in which the British kingdom has always been *facile princeps*, great improvements have been made not only in America but on the continent of Europe, and now even the English themselves prefer French locomotives, common bars and girder-iron from Belgium, German scissors, and American edge-tools. Many examples might be given of foreign manufactures which have supplanted the English ware in their own island, or threaten to supplant them, such as leather, hardware, watches, locks, machinery from America, German paper, Belgian and French jewelry, etc. In some cases this is owing to actual deterioration in the British products, as, for instance, the unimportant but significant article, the common house-clock, which, on the authority of Sir E. Beckett in the "Encyclopædia Britannica," has so deteriorated, in spite of the improvements in machinery, that it is fast being driven out of the market by the American plain and French and German ornamental clocks. The steady decline of English exports since 1873, with the concurrent and remarkable increase in the imports and in the balance against the country, is shown in the tabulated survey of the total commerce for the last seven years, given below:

YEARS.	Imports.	Exports of British Produce and Manufactures.	Total Exports, British, Foreign, and Colonial.	Excess of Imports over Exports.
1870...	£308,257,493	£199,586,822	£244,080,577	£59,176,916
1871...	331,015,480	223,066,162	258,574,700	47,440,780
1872...	354,693,624	256,257,947	314,588,584	40,104,790
1873...	371,257,372	255,164,603	311,004,576	60,282,796
1874...	370,082,701	232,558,121	297,650,464	72,432,237
1875...	373,939,577	234,465,963	251,612,323	92,327,254
1876...	375,154,708	200,639,204	256,776,602	118,378,101

The chronicle of prices in the London markets for the first six months of 1877 shows an increasing depression and continued sinking of prices, with the exception of breadstuffs and foods, and the single material saltpetre, whose rise was from the same cause which operated in a contrary manner on other commodities—the Russo-Turkish war. The cotton market was weak and inactive, with a constant decline, notwithstanding the shortness of the American crop. The wool trade was but a trifle firmer, with a decline of prices, which were kept from further sinking by the competition of foreign buyers in the London and Liverpool auctions. The iron industries suffered severely, and Scotch pig was quoted in the middle of the year at 54s. 3d. the ton—just half its price four years before; while coal had fallen from 29s. to 19s. since 1873. The report of the Board of Trade for the first three-quarters of 1877 shows a further increase of imports and decrease of exports compared with the same portion of the previous year. Total imports for nine months: 1877, £292,528,000; 1876, £282,217,000. Total exports: 1877, £147,664,000; 1876, £151,035,000. The returns for September gave a bad augury for trade. There was a decrease in the importations of cotton, flax, and raw silk, and a decline in both the quantities and values of the principal exports compared with the same month the year before. The export of British textile yarns during the first seven months of 1877 showed a decline of 25 per cent. since 1875, while the export of piece-goods declined in a similar ratio. The loss of European markets for cottons was partly made good by large shipments to the new markets of China, Bengal, and Java. There has been a decline in the English exports of woollen stuffs for the last three or four years, which is out of all proportion with the contraction in the same business in France, Germany, and other countries. Another indication of the successful competition of the continent in this industry are the increasing quantities of Australian wool, generally uncombed, bought on foreign accounts. The importation of wool from the Australian colonies has assumed huge proportions, and the production is fast increasing. The export of colonial wool from England for nine months, in thousands of pounds, in three years has been: To Germany—1875, 18,601; 1876, 19,673; 1877, 21,620. To Belgium—1875, 34,428; 1876, 28,066; 1877, 31,791. To France—1875, 66,202; 1876, 74,016; 1877, 71,188.

In France, as in England, the financial ebb and its pressure upon the people did not set in until the shock had prostrated business in several other countries; and the immediate cause of the hard times in both lands was the decrease of their export commerce rather than any internal financial derangements. But the seeds of the disease had been sown in these countries, as in others, long before the symptoms appeared; the productive facilities in

particular branches of trade had been rashly extended beyond their proper proportions in the economy of commerce, and a numerous portion of the people were drawn into occupations which could not be maintained; while, notably in England, in the rush and flood of an over-stimulated commerce and apparent prosperity, the industrial and other classes were encouraged in extravagant habits of consumption and capricious indulgences, which again occupied the labor of other workers uselessly, who might otherwise have contributed to the solid welfare of the nation. Such aberrations can be cured in England by the corrective of hard times; but graver burdens, inflicted by the authority of the governments, weigh down the productive powers of France and other Continental countries. The debts of several states have been largely increased of late years, partly, however, for useful purposes, the effect being to insure a life of idleness and luxurious indulgence to those who enjoy the interest of the public loans, and impose a tribute upon the productive classes in increased taxes; the taxes being still further augmented, while the productive ability of the people is at the same time diminished alarmingly, by the maintenance of enormous military establishments. Furthermore, chiefly in consequence of the modern militia system, which now oppresses like an incubus the industry of most European nations, frequent rumors of coming war depress the spirit of industrial enterprise.

Among the surest criteria of temporary prosperity or distress among a people are the changes in their habits of daily consumption. Of all nations, the French people are, perhaps, the readiest to contract their expenses at the prospect of adverse times, and are capable of carrying their economy the farthest without privation. The large exportations of certain preserved and prepared foods to Europe, especially from America (*see* COMMERCE (FOREIGN) OF THE UNITED STATES), have chiefly arisen from the necessities of the times for cheaper foods. The sale, in Paris, of 9,271 horses, asses, and mules, for food, in 1876, or 2,406 more than in 1875, is an instructive commentary on the times. The export of the novel and singular article of commerce called "oleomargarine," or "butterine," from New York, is alike significant. Of this artificial butter, during the seven months ending March 31, 1877, there were 3,549,629 lbs., amounting to \$481,747, shipped from New York to Europe: 2,355,250 lbs. of this went to France, and 991,329 lbs. to England. Very little of the article is consumed in the United States. This industry has grown to considerable dimensions with remarkable rapidity.

The diminishment of the capacity for consumption in all parts of the Western world may be judged from the following tables, showing the imports of raw materials and exports of manufactures for the first half of the last three years in England and France:

The foreign commerce of France has steadily increased since the German war, in spite of the extra burdens which the war imposed upon the people, and in spite of deficient harvests in 1872 and 1873, until in 1876, owing to the

diminished demand in other countries, her foreign exports began to decline. The special commerce from 1870 to 1876 was, in millions of francs and fractions of millions, as follows:

	1870.	1871.	1872.	1873.	1874.	1875.	1876.
Imports.....	2781.5	3393.2	3447.4	3554.8	3713.1	3672.3	3675.8
Exports.....	2860.2	2865.6	3679.1	3787.3	3877.7	4022.1	3823.0
Total.....	5641.7	6258.8	7126.5	7342.1	7590.8	7694.4	7508.8

The principal countries, and trade with each in millions of francs, with the increase or decrease likewise in millions, in parentheses, were, in 1876, as follows: Imports—England, 650 (+27); Belgium, 405 (—35); Italy, 415 (+92); Germany, 389 (+40); United States, 265 (+75). Exports—England, 1,033 (—34); Belgium, 446 (—81); Germany, 431 (+4); Switzerland, 279 (—36); United States, 230 (—31); Italy, 216 (—3).

In 1877 the exports continued to decline, while the aggregate importations showed a further increase. The returns for the first eight months of 1877 in juxtaposition with those of the same portion of 1876 were, in francs, as follows:

The account stood, at the end of ten months: Imports, 3,080,447,000 francs, against 3,284,861,000 francs in 1876; of these, 778,550,000 francs articles of food, against 764,714,000 francs. Exports, 2,853,385,000 francs, against 3,012,682,000 francs.

The principal imports which showed an increase over the first eight months of 1876 were: Sugar, increase from 71 to 82 millions; meat, 15 to 26; tallow, 26 to 36; flax, 27 to 38; wool, 205 to 217; oil-seeds, 65 to 82; ore, 20 to 30. Among the imports showing a decrease, the chief ones were: Breadstuffs, 147 to 116 millions; wines; coffee, 71 to 63; silk, 313 to 142; cotton, 159 to 154; coal; copper; woolen cloths, 55 to 50; cotton goods, 53 to 48. The exports showing a gain were: Leather, 48 to 53 millions; jewelry, 35 to 41; chemicals, 19 to 25; breadstuffs, 83 to 138; wines, 138 to 141; eggs, 33 to 35; butter, 63 to 70; wool, 45 to 54. A decline was shown in the following: Silk fabrics, 214 to 186; woolen goods, 206 to 200; leather goods, 104 to 97; tools, 46 to 40; small wares, 95 to 93; hops, 58 to 54; refined sugar, 99 to 66; spirits, 74 to 41; raw sugar, 22 to 3. The principal fluctuations are traceable to a failure in the silk crop and in the

domestic sugar crop, and to a fair harvest succeeding a deficient one. The returns of the production of sugar give, for the year ending August 31, 1877, 245,000 tons, against 463,000 in the previous season.

A depression in the Lyons silk-weaving establishments, which had existed for eight months, showed signs of relief in May, 1877, when 800 looms, which had been idle, commenced work again, and the dyers were again employed full-time who had been on half-time. About the end of June, 1876, when it became apparent that the silk crop was not greater than one-third the usual production, the prices of manufactured silks rose rapidly, the advance on some descriptions being over 100 per cent. These prices were to a large extent speculative, and, consumption declining greatly, they fell again, reaching a point about 10 per cent. above the initial rates, in the spring of 1877. The European silk crop was again a failure in 1877, being about half an ordinary crop.

In France, as well as in Germany, the protectionist spirit has been rife among the manufacturers. A proposition to revise the commercial treaty with England, reducing the 15 per cent. duties on cotton manufactures, raised a great outcry. The French Government insisted on a reciprocal reduction in the English wine-duties. There was a pressure brought upon the Government for a higher protective tariff on cotton yarn.

In consequence of the French commercial treaty, in accordance with which French duties on English manufactures were reduced to 30 per cent. or under in 1860, and to a maximum of 25 per cent. *ad valorem* in 1864, while the English duties on silks and other French manufactures were abolished and the wine imposts reduced, the English imports from France increased from about 17 millions sterling to about 47 millions, and the exports to that country increased 185 per cent.

The foreign trade returns of Italy for the first half of 1877 exhibit an increase of imports from 611,914,709 lire in the first six months of 1876 to 638,366,006 lire, and a decrease of exports from 573,196,524 lire to 488,830,575 lire. The wine-exports diminished 24 million lire; silk, 37 millions; and breadstuffs, 16 millions. The imports in the same three classes increased, on the other hand, 8 millions, 25 millions, and 16 millions respectively. The foreign commerce of Italy has shown a remarkable development since the date of the national unification. The volume of trade has increased from 1,300 million lire in 1861 to 2,546 millions in 1876—nearly double; while the export side has constantly gained upon the imports, although the balance has remained constantly

against Italy, the growth being from 479 million lire in 1861 to 1,216 millions in 1876, and that of the imports from 821 to 1,329 millions. This increase in exports is due in great measure to improvements in agriculture. The exportation of raw silk was at a low ebb in the earlier part of the period, the crop falling in 1864 to 1,731,000 kilogrammes; but owing to the successful treatment of the silk-worm disease, which threatened to destroy the silk culture in Europe, the crops increased to about 3 million kilogrammes, until in 1876 and 1877 the re-appearance of the malady, with unfavorable weather, reduced the yield to one-third the usual quantity in the first year, and one-half in the second.

A severe financial crisis experienced in Portugal in 1876 was attributed by the British consul-general to the large increase in the number of banks, the nominal capital in joint-stock banking institutes having grown from 26½ million dollars in 1871 to 63½ millions by the end of 1875. There were large and reckless transactions on the exchange in Spanish 3 per cents. which led to a call on the banks for money, which, after the suspension of one or two banks in the north, changed to a panic and general run on all the banks, which culminated on the 18th of August, some of the oldest and most esteemed banks in the kingdom stopping payment. The Government then intervened with an order delaying payment 60 days, and, with repayments of advances and loans of additional sums, it assisted the banks, and restored confidence to a considerable extent.

The causes of the financial crisis in Germany and Austria, where the bursting of the bubble of speculation and inflated values first occurred, are not far to seek. The French Government paid over to the German Government the exacted war-indemnity with wonderful rapidity. This amounted to 5,567,067,277 francs, less 325,098,400 francs, the purchase-money of the Alsace-Lorraine railway. It was paid in drafts on Frankfort and other German cities, London, Holland, and Belgium, and German and French notes and coin. This enormous amount was applied in paying up the debts of the single states, in building fortresses and ships, and other military expenses, in paying war-claims and donations, in establishing an invalid fund of 187 million thalers, and in an entire recoinage, and the transformation of the currency to a gold basis. The repayment of the public debts and the displacement of other investments left great amounts in the hands of the people, who, dreaming of a new industrial era, invested them in newly-started manufacturing, mining, and credit establishments. The number of joint-stock companies was trebled. The people were drawn in thousands to the factories, away from their useful agricultural occupations. A rage for building and speculation in town-lots prevailed in all the cities. On the bourses the wildest stock-gambling helped to conceal the weakness of the thousand

new companies, while sharp swindlers formed more companies on paper, and palmed off their bogus shares on the credulous public. Money was in rapid circulation, and consumption was stimulated and novel desires awakened among the people. Large excesses of importations appeared on the trade balance-sheet every year, in part for plants and raw material for the brand-new industries, but in great part also for unaccustomed luxuries consumed by the people. Then, to add fuel to the flames, the German Government had inflated the currency by issuing the new coinage faster than the old had been withdrawn, this inflation amounting, in October, 1874, to 254 million thalers, or about 50 per cent. of the former volume of the currency. The new gold coinage streamed out of the country, the old silver being still legal tender, while its bullion value was 3 per cent. below par; but as many of the gold pieces as the French received were sent back in payment of the milliards. The American consul-general in Berlin, in tracing the history of 381 stock companies with an aggregate par capital stock of 125 million dollars, established since 1870, which are quoted on the Berlin Exchange, found that 210 of them had ceased to pay dividends in 1874, and 260 in 1875. The average dividends paid by 95 banks, whose stock was quoted at 11 per cent. above par in 1872, and whose average dividends in that year were 10½ per cent., were, in 1875, 2.10 per cent., and their quoted value 35 below par. The average quotations of 58 mining and smelting companies changed similarly from 1.17 to .28, and their dividends from 10½ to 1½ per cent. The market-price of the shares of 225 industrial companies, of various characters, sank from .97 to .26, and their average dividends from 10.38 to 1.86 per cent. The whole number of stock companies founded in Prussia in the three years 1871 to 1873 was 945, the greatest number in 1872; their aggregate capital stock amounted to 1,062 million thalers. The day of reckoning was not brought about in Germany by a general crash and epidemic bankruptcy as in Austria, but when, in 1873 and 1874, the inevitable period of contraction came, the utter uselessness of many of the new productive concerns doomed them to a slow death, while those which could survive were subjected to a painful and struggling existence.

The idle German capitals found in many cases a vent in Austria, where the mania for founding companies, and all the vices of stock-jobbing, were already in full career; they arrived to stimulate the mad speculation which had succeeded the war of 1866, and the inflation of the paper currency, and to expand the unsubstantial structure of a national industry which only existed in the illusions of dreamers, or, oftener, in the mendacious promises of bourse swindlers, until, in 1873, a swift and sudden collapse occurred, which shook the whole financial world. The crisis began in the month of May, between which date and

the beginning of 1867 there had been incorporated in Austria 1,005 joint-stock associations, with a nominal capital stock of 4,000 million florins. Of these, only 682 received the necessary amount of subscribed capital, 32 per cent. of their nominal capital. These 682 commenced existence with a paid-up capital stock of 850½ million florins, and a par capital of 2,577 millions. These shares were driven up to speculative prices on the exchange, and when the crash came, it was found that the common people had exchanged large amounts of their savings for these worthless scraps of paper. An illustration of the speculative fever of the times is furnished by the Vienna building associations, which purchased, at high prices, more lots than would meet the requirements of the population at the highest possible rate of increase for a hundred years. The amount of capital actually laid out in industrial enterprises was about 1,350 million florins, the greatest part in the years 1872 and 1873. This would not be a large amount of capital to place in the same time in England or France, but the results prove the uselessness of so rapidly extended a productive capital in Austria at that time. By September, 1874, 166 of the 682 new companies, with a capital of 360½ millions, had ceased to exist; and by the end of that year, 143 companies, with a capital of 343½ million florins, had passed through bankruptcy. The increased external commerce of Austria, which nearly doubled between 1866 and 1873, is a proof that the productive resources of the country were really increased in this period; while the gradual change from a favorable balance of 111½ million florins in 1866, to an adverse one of 225½ millions in 1872, when the imports were nearly treble those of 1866, marks the course of this period of over-speculation and stimulated consumption. The imports and exports of Austro-Hungary were, from 1866 to 1873, in millions of florins, as follows: 1866—imports, 217.9; exports, 329.5; 1867—imports, 294.3; exports, 407.4; 1868—imports, 387.4; exports, 428.9; 1869—imports, 418.9; exports, 438.1; 1870—imports, 431.9; exports, 395.4; 1871—imports, 540.8; exports, 467.6; 1872—imports, 613.7; exports, 388.0; 1873—imports, 583.0; exports, 423.6. The progress of the import and export trade of Germany also shows the effects of the era of speculation, as well as the partial success of the young industrial enterprises. The imports from Great Britain, as a representative example, attained their highest point in 1872 (above 158 million dollars), since which year they have decreased regularly, to 116 millions in 1875, while the exports to Great Britain have as steadily increased from 96 millions in 1872 to 109 millions in 1875. The German duties on iron were abolished at the beginning of the year 1877, and the imports were largely increased in consequence, being, for the first quarter of this year, in manufactured iron, 1,106,000 cwt., against 410,000 cwt. for the same quarter in 1876; while the

imports of raw iron and exports of manufactures were considerably greater at the same time, owing to the temporary demand for rails and other articles in Russia. Count Frankenberg stated in the Reichstag, in an argument for retaining the iron duties, that the 32 principal iron-works in Germany lost 7 million marks in the one year of 1876, on their aggregate capital of 362 million marks. The report of the Chamber of Commerce of Cologne attributed the depression in the iron and coal trades to the unjustifiable extension of the works after the rise in prices, which attained as much as 100 per cent., and afterward sank to the original level. The iron and coal industries are the ones which have suffered most in the late depression in all countries. In England, of 962 furnaces, only 531 were at work in the summer of 1877; in Germany, out of 465, about half; in Belgium, 17 out of 54; in Luxemburg, 9 out of 23.

The commercial relations of Sweden and Norway have extended rapidly in the last few years. The imports increased from 141,686,000 rigsdalers (about \$39,360,000) in 1870 to 306,810,000 rigsdalers (\$90,558,000) in 1874. The exports, as is usual in a rapid development of the resources of a country, did not keep pace with the imports, but yet increased from 152,502,000 to 233,332,000 rigsdalers, or from \$42,360,000 to \$64,814,000. One-fourth of the imports in the latter year were British goods, and two-thirds of the exports, consisting of timber, oats, and iron, were to Great Britain.

The returns of the Russian Finance Bureau exhibited, in the beginning of 1877, a decrease in all kinds of importations, except fuel, and a considerable increase in the exports of the raw products of Russia, with a very large increase in the exportation of spirits. The condition of trade in Russia was far from prosperous before the beginning of the war. The failure of Strousberg brought on a crisis in the banks in 1875. At the end of 1876 there were large exports of grain, but the year 1877 opened gloomily, with a succession of failures all over the country. The decrease in the imports into Russia, from the effect of the war, was extraordinary. The only increase was in coal and steel rails, evidently imported for war-purposes. The returns for the first eight months of 1877, compared with the same portion of the preceding year, show a decline in tea, coffee, oil, and fish, of at least 50 per cent.; in salt, of 66 per cent.; of nearly 80 per cent. in wines, of two-thirds in tobacco, of 56 per cent. in textile fabrics, and nearly half in textile materials, except cotton, and a similar decrease in every other class of imports. The imports of raw cotton fell off over 40 per cent., although there has sprung up a considerable new trade with the Asiatic khanates in cotton goods, which had been delivered in Khiva and Bokhara to the value of 3 million rubles in November, and a still larger in importations of

raw cotton thence over the Orenburg Railway, which had forwarded already, in November, 1,150,000 cwt., 36 million lbs. having been brought from Khiva and Bokhara in the three months preceding. The export trade from Russia was greatly stimulated by the war, and by the debased currency. The exports of grain in the same period increased nearly one-quarter; of spirits, nearly one-half; exports of tobacco nearly trebled; those of flax more than doubled; and those of hemp, hides, sheep and cattle, wool, and many such products, increased in an astonishing ratio. The sugar-culture, owing to special protective measures and a favorable crop, attained a development almost magical in this period, and, instead of an import of 414,000 poods and an export of 1,000 in the preceding year, there were, in 1877, no imports, but an export of 3,256,000 poods. A conference, called by the Government of Russia, to consider the probable effect of a blockade on the grain trade, reported that the average grain exports had lately increased to 143 million bushels.

There has been a gradual increase in the exports from India for many years, which was abnormally quickened by the recent fall in the European silver market. In the year 1872-'73 the quantity of wheat sent abroad was 320,000 cwt.; in 1875-'76 it had increased to 2,156,000 cwt., and in 1876-'77 to 4,839,000 cwt. The cultivation of the tea-plant has increased much in late years. New industries have also been introduced, such as the culture of the cinchona plant. The exports of India are usually about 50 per cent. in excess of the imports. In 1875-'76 the imports amounted to about 212 and the exports to 300 million dollars. Not over 11 per cent. of the exports were manufactured articles; an increase in the exports of the latter class, notably of cotton and jute manufactures, and of leather and tanned hides, is observed. A large increase in the tea culture is noticeable. The tea exports of 1875-'76 were 24 million lbs., amounting to 10½ million dollars.

The export of silk from Japan rose suddenly in the latter half of 1876, owing to the failure of the silk crop in Europe, to nearly double the quantity exported in the same period the year before. The value of the exports amounted to \$12,770,000, which was more than the entire exportations of any year since 1869-'70. The high prices brought out the accumulated stocks in the interior. But, aside from this exceptional activity, there are signs that the silk culture in Japan is at present extending, and that the soil and capital employed in the production of tea for the American market are, owing to the depressed condition of the tea-trade, being turned into the cultivation of silk. The Japan teas exported to America increased from 6,500,000 lbs. in 1862-'63 to 24,893,000 lbs. in 1875-'76. The foreign trade of Japan for the year 1875-'76 was reported at 24½ million dollars imports, one-half of them from Great Britain, and 16½ millions exports, nearly 7 mil-

ions to the United States, 6 millions of which was in tea.

The customs returns for the treaty-ports of the Chinese Empire show a gradual extension of the foreign trade, the total exports for 1876 being two-thirds greater than the total for the year 1864; though the large exports, and high prices of silk in 1876, made the total, 151,120,086 taels, considerably higher than it would otherwise have been. More than three-fourths of this trade was with the British Empire and colonies; more than three-fourths also of the shipping in which the goods were exported was British, German shipping ranking next, and then American, French, and Japanese in order. The exports of raw silk, stimulated by the recent failures of the European crops, will probably remain an important branch of Chinese commerce. The particulars of the Chinese imports in 1875, compared with 1874, indicate an increased demand for European manufactures and East Indian products, with the exception of opium. The decline in this article, from nearly 43 million dollars to 38 millions, is accounted for by the increased production of China, and partly, no doubt, by the efforts of the Government to restrain its use. The increase in cotton goods was from under 27½ million to 30 million dollars; in woolens, from 6 to 6½ millions; in metal goods, from 5½ to 6½ millions; and in sundries, from 14½ to over 20 millions. The aggregate imports increased from \$96,541,296 to \$101,704,870. The increase in the values of the exports was from \$100,069,302 to \$103,369,893; the increase in the quantities was, however, considerably greater; a growing demand is observable for many peculiarly Chinese manufactures, and a progress in industries of modern introduction, as in refined sugar, tobacco, etc. The net imports of opium increased steadily from 53,915 piculs in 1868 to 67,468 piculs in 1874, and then fell off to 66,461 piculs in 1875. The total exports of tea from China were: 1875-'76—green, 8,023,601 lbs.; black, 66,396,663 lbs.; 1876-'77—green, 9,476,624 lbs.; black, 76,113,084 lbs. The exports in 1875 amounted to 192,054,568 lbs. of black, 27,172,647 lbs. of green, and 22,281,150 lbs. of brick, and the total shipments to 242,754,664 lbs. The export of green teas has declined since 1872; that of the black and brick varieties is steadily increasing. The total exports in 1866 summed up 159,150,423 lbs. Besides the above quantities, there are large amounts transported overland to Siberia and Mongolia, to the value of a couple of million dollars a year. The land-shipments are increasing, and were, in 1875, nearly 20 million lbs.

The industrial condition of the countries of South and Central America is steadily improving, though amid many drawbacks. Large amounts of European capital have been employed in opening up the resources of this part of the world, yet its natural wealth is still very far from being fully developed. Some of

these countries have, however, already a considerable and increasing foreign trade, and stand on a respectable economical level. The Argentine Confederation received, in 1875, imports to the value of about 55 million dollars, they having increased from 47½ millions in 1871, and exported 45 million dollars' worth—an increase of 10 millions in four years. It stands in communication with all the chief maritime powers, England and France leading. The main articles of export are wool and tallow, and other animal products. Bolivia has a trade of about equal dimensions. Brazil's average imports, during the period mentioned, amounted to some 95 million dollars, about one-third coming from England and one-fourth from France; her exports, 112½ millions, one-third to England and one-fourth to the United States. Chili imported in 1875 about 38 millions' worth, and exported 34½ millions, over 16 millions in copper to England, whence most of her imports are brought. Peru's average imports were 25 millions, and her exports 30 millions, consisting chiefly of guano and cubic nitre, with the minor articles alpaca and sheep's wool, sugar, etc. Uruguay's enterprising and active trade fell away in 1875 to 14½ millions imports from 16½ in the preceding year, and from 15 to 14½ millions exports, which consist mainly of animal produce—hides and skins, grease, bone-ash, etc. One-half of her commerce is with England. Venezuela's commerce, in which Germany takes a leading part, amounted to 4½ millions imports, and 5½ millions exports. The commerce of the United States of Colombia, owing to internal political disturbances, decreased in 1875 to less than 7 millions imports, from over 11 millions the previous year; the exports, about 10 millions, also declining a little. Great Britain, with France and Germany, commands this commerce.

In the foreign trade of Mexico and the West Indies the United States takes a more or less predominant part. In the year 1873 the commerce of Mexico amounted to 33 millions exports, 24 millions being in coined silver, and 29 millions imports; in 1874, 25½ millions exports, 15 millions in silver, and 28½ millions imports. The annals of the Mexican mints make the aggregate coinage, during the colonial period of 300 years, about 2,200 millions, and during the period of independence of 53 years, about 854 millions; in all, 3,054 millions of dollars. The coinage in the fiscal year 1875 was 20 millions. The commerce of Cuba, Hayti, and Santo Domingo is chiefly with the United States. Owing to the inferior and deficient out-turn of the Cuban tobacco crop since 1873, other countries, in Europe as well as in America, have given such attention to the tobacco culture that a very fair leaf for cigars is grown in various portions of the world. The Mexican and South American tobacco is constantly improving. The Dutch East Indies are also extending the cultivation of the plant.

The effect of the war on the European stock market was at first depressing; and when the market again hardened, the average prices were lower, in spite of vast amounts of money seeking investment. Before the declaration of war there had been a steady advance in the prices of first-class investment stocks since 1874. The advance in the values of an aggregation of stocks, both governmental securities and corporate, amounting to over five billion dollars, was computed to be a little over 5 per cent. in the 12 months ending March, 1877. At the outbreak of the war there was a rapid decline, which was not afterward recovered, the ruling prices averaging, in June, 1 or 2 per cent. below those of March. The rise in the prices of good securities was owing to the stagnation of trade and discredit of new enterprises, and the consequently large amounts of idle money, which condition was also evidenced by the low rate of the minimum discount of the Bank of England (2 per cent.), which had prevailed in July, 1877, for more than 12 months, while the rates in the open market were considerably lower during the same period, latterly in Paris as well as in London. A rise in the value of the most credited Government obligations, like English consols, French rentes, and, in an inferior degree, American bonds, in comparison with other stocks, has made itself remarked of late years. This is easily accounted for by the fact that the annual dividends of the stock companies are generally lower by 2 or more per cent. than they were a score of years ago.

Up to the middle of 1876 there was an influx of gold into England, the excess of imports for the first seven months being £9,024,000. In August of that year the tide turned, and at the end of the year the excess was reduced to £6,960,000, and during the first seven months of 1877 there was an excess of exports of £3,136,000. A part of the time the state of the exchanges with Paris caused an efflux thither of gold. The *rationale* of gold-movements between England and other countries is given by Ernest Seyd, as follows: Par of (short) exchange between London and New York, Paris, Berlin, Australia, £1 = \$4.867, 25.22½ francs, 20.43 marks, £1. When the exchanges deviate from these p^{ar}s, they indicate the indebtedness of one country to another. When the exchange in New York on London sinks to \$4.82½, or .08 per cent. below the par, there is a flow of gold to New York; when it rises to \$4.89, or .05 per cent. above the par of exchange, the flow is the other way. The same occurs when exchange in Paris sinks 4 per mille to 25.12½ francs, or rises 4 per mille to 25.32½ francs; or when German exchange falls 5 per mille to 20.32 marks, or rises 5 per mille to 20.52 marks. The normal outflow of gold from the Bank of England can, however, be checked by raising the discount-rate. This occurred in the autumn of 1877. The imports of gold into England were, for the first nine months of 1877,

£11,710,000, or 7 millions less than in the corresponding months of the previous year. The exports were £16,363,000, of which £7,250,000 went to Germany and £5,390,000 to France, while comparatively little was sent to the United States. Only £2,047,000 of the gold importations came from the United States, against £4,347,000 in the previous year, and £3,227,000 in 1875. The silver importations for the same period were for £10,920,000 from Germany; and the exportations to India, £10,844,000; to China, £1,839,000. The effect of the decline in the silver market caused in India a rapid influx of silver. When silver touched the lowest figure in London, in July, 1870 (48½*d.*), and gold was dearest in Bombay, there commenced an extensive exportation of gold, which reached its flood in August; while the subsequent rise of silver in England to 57½*d.*, in January, 1877, was followed by a corresponding reflux of gold into India. The export of silver from England to India amounted to £13,368,000 for the 12 months ending June 31, 1877; the annual shipments for four years previously had only averaged £4,100,000. The exports to China were proportionately larger during this period. According to the reports of Dr. Linderman, the excess of exports over imports of silver in America has declined since 1872, the excess being, in that year, \$35,302,543; in 1873, \$26,953,869; in 1874, \$23,636,216; in 1875, \$17,947,241; in 1876, \$17,386,508. Considerable silver has been shipped from San Francisco to China lately on British account. The value of the silver coin withdrawn up to the end of September, in Germany, was estimated, at the former mint-price, at about 220 million dollars, over two-fifths of which was used for the new coinage. The German produce of silver amounts to about 7½ million dollars per annum. The exportations of silver to England were about 10 millions sterling from 1872 to 1876, and about 11 millions in the nine months of 1877. The rest of the old thaler coinage to be withdrawn was estimated at the same date at 112½ million dollars. The total new coinage was, up to October 27th: Gold, 1,527,313,885 marks; silver, 144,022,704 marks; nickel, 35,160,344 marks; copper, 9,595,930 marks.

The effect of the Eastern war upon the wheat market was to stimulate speculation and inflate the prices, which soon subsided considerably after the first excitement was over. Red spring wheat stood at \$1.54 per bushel in New

York; English red, 52*s.* per quarter in London on the 6th of April, 1877; May 3d, the prices had risen to \$2.09 and 67*s.*; June 9th, they had ebbed again to \$1.90 and 61*s.* 6*d.* During the period of inflation there were large sales in England, and large importations from Russia and the Danubian provinces, and from French and German stocks. The American exportations were, however, not as large at that time, both farmers and speculators holding on for a further advance. The highest price obtained in the English market was 68*s.* 9*d.*, on May 19th. The fluctuations in the English wheat market were considerable, owing to varying weather and political reports; at the end of the first half of 1877 it stood at 64*s.* 6*d.* per quarter, against 52*s.* 3*d.* at the beginning of the year, and 48*s.* 2*d.* a year previous. In Germany the crops were of average size, in Hungary above the average, and in France fine, but smaller than had been expected. The quotations in the summer months for delivery in October, November, and December, were 5 to 10 per cent. below current prices; in New York, also, dealers speculated for a lower market, and frequently sold 10 per cent. under the market for forward delivery. In Austro-Hungary there was an excess of about 4 million quarters over the average yield, and a surplus for exportation of 3½ million quarters. France imports large quantities of grain every year, and exports usually still greater quantities manufactured into flour; her imports, in 1876, amounted to 38 million dollars, and her exports to 43 millions; these imports are almost entirely from her commercial allies, the United States taking no part in this trade. The dependence of the British population on foreign countries for its food-supplies has become much greater within a few years, and within a similar period the United States have won the position, before held by Russia, as the chief purveyor to its immense and growing wants. In 1867, Russia supplied 44 per cent. of the English wheat importation, and America 14 per cent.; in 1873, 44 per cent. came from the United States. Holland and Belgium also depend, though to a less considerable extent, upon America for their grain-supplies (see article COMMERCE (FOREIGN) OF THE UNITED STATES). The extent and sources of the supplies of foreign wheat imported into England are shown in the following statement of the imports of wheat and flour into Great Britain for five years and seven months of the year 1877:

The imports in 1875 were not all consumed the same year; but of the stock of 1876, none to speak of was carried over to this year. The acreage under wheat has been diminished from 3,630,000 acres in 1874 to 2,994,000 acres in 1876, in the British Isles: Mr. Stephen Bourne has calculated that, "of the 33 million inhabitants of the United Kingdom, 18 millions are sustained on food grown at home, and 15 millions on that received from abroad." Herr Neumann-Spallart, an Austrian statistician, has estimated the total corn-produce of the principal grain-growing countries at 2,400 to 2,450 million hectolitres (830 million quarters, or 6,640 million bushels), of which total Russia contributes 27 per cent., America 22 per cent., Germany 11 per cent., France 10 per cent., Austro-Hungary 7 per cent. The European lands which usually produce more than they consume are: Roumania, Denmark, Russia, Prussia, France, Hungary, Bavaria, Sweden.

The cotton industry has been very much depressed for the last year, the result of excessive production; and when, at the beginning, a favorable tendency began to be felt, the commencement of the war suddenly arrested the rising movement. The English manufacturers have suffered serious losses from competitive prices. By working the mills part time, and during a long strike of the operatives at Bolton, provoked by a reduction of their wages, the large surplus stock has been greatly diminished, and in October, 1877, the mills were again in full operation. In Russia the manufacture has been favored by the condition of exchanges and high duties, discouraging importation. In Norway and Sweden, also, the factories have yielded a profit. In France the ministerial crisis had a very depressing effect, and also in the neighboring states. From Germany the reports are most discouraging, and, unless matters change, the production in Saxony, Prussia, and Alsace must be diminished. The number of spindles now employed is calculated at 39½ millions in Great Britain for 33 lbs. each, 19½ millions on the Continent of Europe for 53 lbs. each, and in the United States 10 millions for 63 lbs. each. The consumption is, in the English factories, 1,303½ million lbs.; on the Continent, 1,033½ million lbs.; in America, 630 million lbs. The last season's crop falls short of the usual requirements of the spinners by some 70 or 80 million lbs. Yet, owing to the slackness of trade, no higher prices were obtained than usual; the market hardened, however, in England late in the autumn, and large quantities were removed from Liverpool for manufacturing requirements. The export of cotton goods from Great Britain has steadily increased from 2,980 million yards in 1868 to 3,803 millions in 1877; and of yarns, from nearly 130 million lbs. to nearly 230 millions. Production has increased in an equal or greater ratio in several other countries, probably faster within the last few years than the increased demand, great as it is, will

at present justify. Messrs. Ellison's estimate of the probable importations into Europe in the season 1877-'78 is as follows: American, 1,314,000,000 lbs.; East Indian, 472,500,000 lbs.; Egyptian, 270,450,000 lbs.; Brazilian, 65,600,000 lbs.; Mediterranean, 35,000,000 lbs.; Peru, West Indies, etc., 18,450,000 lbs.: total, 2,176,000,000 lbs.

COMMERCE (FOREIGN) OF THE UNITED STATES. The United States, like all the chief commercial nations, has been passing through a period of commercial stagnation and contracted consumption for the last four years. The depression has, fortunately, not diminished the volume of their export trade. The domestic exports reached, in 1876-'77, the unprecedented magnitude of \$589,669,490, having increased from \$525,582,247 in 1876, and \$499,284,100 in 1875. The exports of 1873-'74 (\$569,433,421) were exceptionally large, they having been 505 millions the previous year, with a steady increase from 269 millions in 1868. The import trade increased gradually from about 345 millions in 1868 to \$624,689,727 in 1872-'73, in which year the disturbance in business began to be felt. The contraction then set in with a sudden falling off of 74 millions, the balance in the merchandise trade turning out in favor of the United States for the first time in 27 years, with the exception of a slight balance in 1858. In 1874-'75 there was a further decline in imports of nearly 32 millions, with, however, owing to a falling off of 70 millions in exports, a balance of about the same amount as in the foregoing year (19 millions) on the other side. In 1875-'76 there was a further decline in imports of 73 millions, and a favorable balance of over 79½ millions, which was nearly doubled in 1876-'77, being 151 millions. The amount of the imports in the latter year was \$438,510,996, having declined about 7½ millions further. The volume of the total commerce in 1876-'77—over 1,128 millions—was only exceeded by that of three former years, it being within 10 millions as great as in 1872, when the largest balance (over 182 millions) stood against the United States, and about 100 millions less than in 1873 and 1874, in which years the balance changed from 119 millions against the United States to nearly 19 millions in their favor. The above statements take account of merchandise only, and do not include the exports of specie, which, however, belong by right in the same account, being a product of the country, and an important one; yet its enumeration with the merchandise in any single year might give a false idea of the commercial movement of that year. The net exports of coin and bullion for the last 7 years have been nearly 55 millions per annum, and the aggregate net exports since 1850 have been about 1,500 millions, or 47½ millions a year. In the aggregated commerce for the last 7 years there has been an excess of domestic exports, including specie, over the net imports, of nearly 222½ millions; and in the ag-

gregated commerce since 1790 there is a balance against the United States of 667½ millions, according to the official returns. The extension of railroads has enabled this country to export vast quantities of food-materials, which now rank beside cotton in the external commerce of America; yet the ill-considered haste and rivalry in the development of these highways was one of the principal causes of the commercial derangement and exhaustion from which the nation has lately suffered. The sudden arrest of railroad construction affected materially the international balance-sheet, a great portion of the material having been brought from abroad, mostly from England. The following two tables show the extent of the entire foreign commerce in dollars for each year, from 1870 to 1877, inclusive:

Exports (reduced to gold values) from the United States.

YEARS.	MERCHANDISE.		Specie and Bullion.	Total Exports.
	Domestic.	Foreign.		
1870...	376,616,473	16,155,295	58,155,668	450,927,434

Imports into the United States.

YEARS.	MERCHANDISE.		Specie and Bullion.	Total Imports.
	Dutiable.	Free.		
1870...	415,817,622	20,140,786	26,419,179	462,377,587
1871...	488,635,947	36,587,737	21,270,024	541,498,708
1872...	579,927,864	47,267,213	18,748,669	640,388,766
1873...	497,320,326	144,815,884	21,490,937	663,617,147
1874...	415,924,580	151,481,762	28,454,906	595,861,248
1875...	386,725,509	146,279,927	20,900,717	553,906,153
1876...	320,379,277	140,361,913	15,986,681	476,677,871
1877...	310,527,540	140,788,452	40,774,414	492,090,406

It may be seen from the above statements that the entire excess of exports over imports was, in 1877, \$166,547,317; in 1876, \$120,213,102; in 1875, \$50,668,700; in 1874, \$57,052,197; before the latter year there was an excess of imports of about 11½, 1, 116½, and 56½ millions in 1870, '71, '72, and '73 respectively. There was an adverse balance on the whole account from 1864 to 1873 inclusive, save in the one year 1868; and before 1864, a favorable balance since 1855, save one heavy deficit in 1861 of 87 millions, 40 millions of which was specie imported. Before 1855 the balance stood, with few exceptions, against the United States. The average volume per annum of the commerce proper of the country, including the net imports and domestic exports, with the net exports of specie since 1850, was approximately, in millions of dollars, for the decade ending 1830, 110; 1840, 192½; 1850, 222½; 1860, 548; 1870, 601½; and for the 7 years following, 1,089½. During the period of an exclusively paper currency, larger quantities of the precious metals have been exported, of course, than would have been

under normal conditions; but the amount taken from the circulation of the country was not great compared with the products of the mines, which have very much increased of late years; so that the net exports of the last seven years have averaged nearly 8 millions more than the ten years from 1861 to 1870, in which the average was about 5 millions more than that of the preceding decade.

The values for which the different classes of merchandise enter into American commerce can be seen in the tabular statement on pages 122 and 123, showing the net imports into the United States during the three years ending June 30, 1875, 1876, and 1877.

Among the unmanufactured exports, the class called "other articles" includes whale and animal oils (over 1½ million dollars each year), quicksilver (increased export of from 1 to 1½ million), wool, tan-bark, ice, etc. Among the unspecified manufactured exports are books and paper (over 1½ million dollars in 1877), jewelry and watches, paintings and engravings, cordage, and vessels sold out of the country. Among the finished articles imported not enumerated are clothing (1½ million in 1877, and half a million more the first year), paintings and other pictures (1 to 1½ million), paper manufactures (over 1 million), furniture and musical instruments, and hemp and cordage, all of them decreasing.

The superiority of many American manufactures is receiving a substantial acknowledgment in the form of orders which have come of late years from all parts of the world. The Centennial Exhibition attracted the attention of Europeans to the higher productions of American skill and invention. In spite of the difficulties of gaining new depots in foreign countries, which are greatly enhanced by the unfortunate decadence of the maritime industry in America, and by peculiar expenses of production, the American manufactures are winning their way in the contested markets of the world. The fact that American mechanical products are preferred in some of the Spanish-American countries, and still more decidedly in the British colonies, and that American makers are winning away customers from the wealthy manufacturers of Birmingham, Sheffield, and Manchester, is regarded with not less alarm in England than gratification in America. On the Continent of Europe, also, certain American manufactures are being introduced, while British products are losing ground before the progressive native industries. The exports of metals and metal goods from the United States during the first 9 months of the calendar year have increased from 14 million dollars in 1876 to 21 millions in 1877. The exports of cotton goods have increased nine-fold in 5 years, that is, from 11,704,079 yards in 1872 to 105,831,694 yards in 1877, and the values from \$2,304,330 to \$10,180,984; the proportion of the colored goods has remained nearly the same—24 per cent. to 76 per cent. white. The propor-

tion of the manufactured to the raw articles is hardly a criterion of the prosperity of the United States. This proportion has probably diminished in late times, owing to the great development of the natural resources of the country; so that a comparison on this score with the time when the leading exports were cotton

and tobacco, and when the entire export was often no greater than the present export of manufactures, would not be edifying. The advance of America as a great food-exporting country has, however, probably insured the preponderance of the agricultural class for ages to come. The proportion of the division of

finished manufactures in the above tables to the entire exportation of merchandise is, for the three years, about 12.1 per cent., and for 1877 about 12.3 per cent., or, including specie, 11.57 per cent. Taking manufactured and partly manufactured commodities on one side, including provisions, and the products of the soil and mines which have received little improvement on the other, such as breadstuffs, coal, cotton, petroleum, tobacco, oil-cake, crude turpentine, train-oil, hides, tallow, etc., the proportion of manufactures to the total exports, including specie, was about 36 per cent., and not including specie, 45.2 per cent. for 1877, and 30.9 per cent. for the three years. The proportion was something like 25 per cent. for the last eight years, and has increased within a few years. A progressive though fluctuating increase is observable in nearly all the natural products for the last eight years. The fluctuations in the foreign consumption of some of the articles depends greatly upon the prices at which they can be exported, as they have to compete with cheaper substitutes; such is the case, for instance, with petroleum and dried fruits. The grain-exports are governed by the state of the crops in different parts of the world. The demand for some, like that for most manufactured articles, depends upon the temporary prosperity and spending power of the people of other countries. All of the different kinds of prepared provisions have been exported in larger quantities each successive year; they are cheaper than the same articles produced in Europe, and so their consumption is steadily increasing in continental and colonial countries, among the richer classes in times of depression and among the poorer in times of prosperity. In regard to products of that sort, the present financial depression affords some compensating benefit to the American producer, in helping him to a market which is much easier to retain than to acquire in the first place. The principal national markets of some of the classes of exports above enumerated, with the quantities or numbers taken by each in thousands, were for the year 1876, the latest reported, as follows (the values in thousands of dollars are given in parentheses):

Animals: British America, Cuba, Mexico. Tan-bark: Great Britain (125), France (53), Germany (27). Breadstuffs: Indian-corn—Great Britain, 42,500 bushels; wheat—Great Britain, 42 million bushels (52½ million dollars), Canada, Holland, Belgium, Portugal; flour—Great Britain, Brazil, Canada, Hayti (7, 4, 1, and 1 million dollars respectively). Coal: Canada. Cotton: British Empire, France, Germany, Russia, Spain, Holland, Italy, and Belgium (955, 203, 108, 80, 47, 34, 23, 15 million lbs. respectively). Fruits: Dried apples—Australia, Germany, Canada; ripe apples—Great Britain (120), Canada (36), Cuba (18), Brazil (7); canned fruit—Great Britain (113), Australia (24), British Possessions (36), Germany (18), Spanish America, Hong-Kong, China, France. Gin-

seng: Hong-Kong, England. Hay: West Indies. Hides and fur-skins: England, Germany, France, Belgium. Hops: England (1,296), Australia (62). Ice: East and West Indies. Manure: Canada, England, France. Naval stores: Resin and turpentine—Great Britain (1,230), Germany (262), Netherlands (177), Russia, Austria, Belgium, Canada, Australia, Brazil, Italy; tar and pitch—Great Britain, British America, Italy. Mineral oils: Crude—France (15 million gallons), Germany (3 million gallons), Belgium, Cuba; naphthas—England, France, Belgium, Germany; illuminating—Germany, Belgium, Great Britain, Holland, Italy (66, 32, 25, 12, and 10 million gallons respectively), and other countries in exceedingly diverse proportions. Animal and vegetable oils went mostly to Great Britain, except lard-oil, which went to the British colonies, and fish-oils, partly to France, and essential oils (Germany, 163; England, 77). Oil-cake: British Empire. Provisions: Bacon and hams—Great Britain (34 million dollars), Germany, Cuba, Belgium; of the exported beef, Great Britain took over 2 million dollars, and the American Continent and West Indies, with Germany, the Low Countries, and France, the remainder; butter—West Indies, Great Britain (418), Germany (39), Japan (19), South America; of the cheese, Great Britain received the great bulk (11¼ million dollars), while Germany took 84 thousand dollars' worth, and America the rest; condensed milk went chiefly to England and the colonies, and a portion to Japan; smoked fish—Hayti (467), French and Dutch West Indies, British Provinces, Cuba; fresh fish—Cuba (72); pickled fish—Hayti and San Domingo, Australia, Nova Scotia, and New Brunswick; other cured fish—England (1,123), Hong-Kong (440), Australia (177), Cuba (80), Germany (53), France (42), Hayti (30); lard—Germany (48 million lbs.), Great Britain (50 million lbs.), Belgium (15 million lbs.), Cuba (13 million lbs.), France (10 million lbs.), Colombia, Brazil, Netherlands (over 4 million lbs. each); preserved meats—England (542), France (155), and West Indies; oysters—England (99), Canada (50), Australia (20), Germany (7); pork—England (1,318), and Hayti (1,071); vegetables—Cuba and West Indies. Quicksilver: Hong-Kong (1,117), Mexico (365), Australia, Japan, South America. Cotton-seed: Great Britain. Clover-seed, etc.: England and Scotland (698), Germany (424). Tallow: England (4,561), France (951), Germany (304), Venezuela (221), Netherlands, Italy, Belgium. Leaf tobacco: Germany (59 million lbs.), Great Britain (56 million lbs.), France (28 million lbs.), Italy (22 million lbs.), Spain (21 million lbs.), Holland (15 million lbs.), Belgium (11 million lbs.), Austria (3 million lbs.). Lumber of different kinds found the greatest average demand in Cuba and England, and whole timber in Germany and England. Wool to the value of 203 thousand dollars was taken to Canada and England.

The principal, and in many cases almost the sole, European customers for the manufactured articles were England and Germany, England taking usually much larger quantities. The following is a list of the principal purchasers of the above enumerated exported manufactures, with the values taken by some of the countries, England and Germany being designated by their initials. Cotton goods: E. (5,275), G. (1,697), Belgium (1,121), Holland (585), Chili (490), Mexico (373), Hayti (203), China (768), Africa (680), and other Spanish-American states, East Indies, Hong-Kong, Asiatic Turkey, and some of the British-American colonies large amounts. Leather: Of tanned leather, E. (5,275), G. (1,697), Belgium (1,121), and Holland (121), took nearly the entire exportation; of morocco and fine leathers, nearly all went to England (918); boots and shoes and saddlery went to American countries. Iron: Pigs and bars to the value of three-quarters of a million went to the British provinces; castings to the same market, and Cuba and Great Britain mostly; car-wheels to England and Spanish America; stoves to American countries and the East, and a few to the Netherlands; 44 locomotives were exported, of which Brazil took 15, Russia 11, Cuba 10, Peru 5, and British provinces 3; 57 stationary engines went to American countries, and 3 to the Netherlands; general machinery was distributed all over the world—E. (415), G. (206), British Provinces, Cuba (395), Mexico (280), etc.; nails went to American countries; and miscellaneous manufactures to the value of nearly 4 millions were distributed. Steel manufactures: Edge-tools—E. (69), G. (20), Australia (131), Colombia (112), Brazil (61), Mexico (52); guns and pistols—E. (428), G. (10), Turkey (1,563), Russia (369), British Possessions, Mexico (322), Cuba (103), Colombia (160). Sewing-machines: E. (699), G. (367), Belgium (16), France (57), Australia (103), Colombia (90), Cuba (87), Mexico (75), Venezuela (58), Brazil (29). Agricultural implements: Mowers and reapers—E. (596), G. (348), France (115), Sweden and Norway (40), Netherlands (37), Russia (30); other farming implements—Great Britain, Germany, France, British colonies, and South America. Carriages and carts: Australia, E., British and Spanish America; railway cars—Chili, Peru, E., Sweden. Ordnance-stores: Cartridges and fuses—Colombia (192), Mexico (146), China (97); shot and shell—Turkey (1,747), Venezuela (158). Clocks: E. (438), G. (94), Japan (89), China (34), Australia (82), Hong-Kong (69). Musical instruments: Organs and melodeons—E. (235), G. (105), Australia (67), Canada and Nova Scotia (95); pianos—G. (38), E. (27), Canada and Nova Scotia (135), Mexico (27). Paper: Cuba, British America, E. (75), G. (15), Brazil and Spanish America. Perfumery: Argentine Republic, Brazil, and Spanish America. Paintings and engravings: E. (133), Brazil (72), Belgium, France, G., etc.

Books, etc.: E. (97), G. (37), Canada, Brazil (58), Colombia (43). Copper: France (1,766), G. (782), E. (316), Holland (70), Hong-Kong, Japan; copper manufactures—Spain (149), E. (91). Brass: Turkey (153), Cuba (61), E., Japan. Glass: Canada, Cuba, Mexico, and Spanish America, Japan, China, Australia, and small amounts to Europe. Hemp manufactures: E., G., Portugal, Belgium; cordage—Nova Scotia, Cuba, and Spanish America. Drugs, etc.: E. (614), G. (156), Belgium (54), France (34), Australia (296), Colombia (278), Brazil (152), and Cuba, Venezuela, and Mexico similar amounts. Dyes: G. (527), E. (224), Netherlands (48). Gutta-percha wares: Canada, G., Cuba. Jewelry: Canada, E. Watches: E., Canada. Plated ware: Canada, E., G. Hats: Canada. Wool manufactures: Canada. Clothing: E. (164), G. (82), Sandwich Islands (60), China (32), etc. Furniture: E. (156), G. (80), British Provinces (360), Australia (257), France (13), Argentine Republic (78), Cuba (66), Colombia (69), Hayti (56), Chili (67), etc.; wooden ware and other wood manufactures—E. (334), G. (238), Australia (197). Sugar (refined): E. (3,356), G. (46), Uruguay (490), Chili (435), Argentine Republic (363), etc., Netherlands (36). Molasses: E. (777), G. (323). Spirits (distilled): France, South America, and the East. Spirits of turpentine: E. (1,127), G. (81), Belgium (140), Mexico (149). Soap: Hayti (287), San Domingo (64), Colombia (138). Starch: G. (176), E., (47), Canada (51), Netherlands (34), Belgium (29), Uruguay (68), Argentine Republic (76), etc. Tobacco: E. (1,060), G. (184), Australia (329), Belgium (93), France (88), Colombia (115), Hayti (87), Cuba (60), British colonies, etc. The great reduction in the values of imports in the last couple of years finds its explanation in great part in the disturbance in business and reduction of the spending power of the people. That was the principal cause of the falling off of one-quarter in 1876, which increased to one-third in 1877 in the importations of gold and silver wares and jewels; and of the decline of 20 per cent. in furs in 1877, and of about a million dollars a year, or 25 per cent. in the two years, in fancy goods. The consumption of tea, coffee, and sugar, is usually regarded as indicative of the straitened or prosperous condition of the people. The consumption of tea has fallen off in regular stages from about 23 million dollars in 1875 to 20 millions in 1876, and 16 millions in 1877 notwithstanding the removal of the duty on that article and coffee. The latter increased from 51 millions in 1875 to 57 millions in 1876, and receded again to 54 millions in 1877. The rise of sugar has apparently not diminished, the imports of sugar and molasses having been 85 millions in 1875, 66 millions in 1876, and 93 millions in 1877. The great falling off in 1876 was owing to the unusually large yield of the Louisiana plantations. The imports of raw tobacco have been remarkably even in the

three years; those of manufactured tobacco have fallen off one-third. The importation of spices has declined nearly one-third in the two years; that of fruits and nuts about one-fourth. The decline in metals and metal wares is remarkable, namely, from 37 millions in 1875 to 27 millions in 1876, and 23 millions in 1877; the principal cause of this reduction of over 38 per cent. in two years is undoubtedly the increased production in the country. The importation of leather and leather manufactures declined from 10 millions in 1875 to 8 millions in 1876 and 1877, while that of hides increased in the latter year, after having fallen off a quarter the year before, the cattle importations, however, showing a constant increase; these facts accord with the reports of an increased export of leather in 1876, and a decline in 1877 to about the same amount as in 1875, and show that this promising branch of industry is advancing amid difficulties. The imports of dyes have constantly increased. Those of hemp have declined, while the exports of manufactures have considerably increased. The imports of raw wool show a decrease of one-third in two years. The decline in the two years of cotton fabrics from 28 to 23 and 19 millions, of woollens from 45 to 33 and 26, of silks from 24 in the first two years to 22, and of linens from 17 to 14 and 12 millions—of the total textile manufactures, therefore, from 114 to 94 and 79 millions, that is, over 30 per cent. in two years—is ascribable to three concurrent causes: to the decline in the prices, to the decrease in consumption, and (not the least cause) to the improvement in the domestic industries. The export of cotton manufactures has, indeed, during the same brief period mounted from 4 to 10 millions, and the wished-for time is probably near at hand when America will become entirely independent of the Old World in this, the most anxiously fostered of her textile industries.

The decline in the imports of unwrought wool, noticed above, may be in a good measure due to the advance in American sheep culture. The total wool clip of the United States formed last year about 14 per cent. of the total estimated product of the world.

The wool clip of the United States for 1876 was about 200 million pounds; of England, Ireland, and Scotland, about 162 million pounds, mostly combing; of the Continent of Europe, about 463 million pounds; of Australasia, about 350 million pounds; of Buenos Ayres and River La Plata, about 207 million pounds. These are the principal wool-growing countries of the world, and produce 1,382 million pounds out of the estimated 1,419 million pounds produced on the entire globe. The selling value of the total clip would probably aggregate 450 million dollars.

The share of each country in the export and import commerce of the United States in the year 1876, the latest reported, is exhibited in the following table:

COUNTRIES.	Total Imports into the United States.	Total Domestic Exports.
Argentine Republic.....	\$3,602,736	\$1,519,190
Austria.....	949,869	1,554,819

Great Britain, with its dependencies, received nearly two-thirds of the total exports (\$422,416,533), and furnished about three-eighths of the imports (\$176,279,227).

Of American manufactures a good portion go to Europe, and this portion is becoming constantly larger. The articles exported thither are generally dearer than the same lines of goods manufactured there, but are preferred on account of their ingenious designs and peculiarly practical forms and uses, as in the case

of machines, tools, and utensils; or on account of the excellence and solidity of their workmanship, as in the case of leather, muslin, etc.; or they are produced by some mechanical process which has superseded manual work, and are therefore cheaper and often superior, as in the case of watches, and many other articles; or they are staple American products improved by mechanical means, such as tobacco, turpentine, starch, drugs, etc. There is a large trade with the neighboring countries of the American Continent, for which the United States are favored by their geographical position. The imports from all the countries of North and South America, and domestic exports to them, were, for the last four years, in millions of dollars: 1874—imports 224, exports 110; 1875—imports, 206, exports 97; 1876—imports 184, exports 94; 1877—imports 198, exports 96. To the same countries were sent foreign exports to the amounts of 10, 13, 8, and 9 millions in these years. A great portion of the imports consist of coffee (of which Brazil alone furnished 40½ million dollars' worth in 1876), and of sugar—about 50 millions' worth of unrefined sugar and molasses coming from Cuba alone the same year. There are also many raw materials imported from the countries of Spanish America, which are improved in American factories. The exports and imports to and from the Dominion of Canada average 35 and 31 million dollars respectively for the last four years. There is a very large export trade over the border to Canada which is not reported in the American Government returns, the main portion of which consists of manufactured articles. This unreported trade in 1876, according to Canadian reports, amounted to 10 million dollars, 8 millions of which was in finished articles. The Canadian returns of imports from the United States for 1875 and 1876 make them 50 and 46 million dollars. The imports from Spanish America, or all the countries on the American Continent and the West India Islands, average 172 millions for four years, and the exports to those countries only 64 millions. Nearly all of the exports are finished manufactures, a good part of them consisting of rude and bulky wares, such as soap, candles, household furniture and utensils, hardware, and other articles such as America does not export to other countries; they consume, also, finer American manufactures. The commercial relations of the United States with the different states are of very different degrees of intimacy. In the foreign trade of Cuba and Porto Rico they take the lead; with nearly all of the continental countries their share is secondary. Over two-thirds of the trade is in the hands of the English, while each of the commercial nations of Europe bears away some portion of the remainder. England's trade with the entire Western Continent amounted, in 1874, to over 1,000 million dollars, nearly one-third of her total commerce; and her trade with Spanish America amounted to 362 million dollars—above

one-third of the total commerce of the United States. The total foreign trade of the countries on the American Continent lying south of the United States amounts to about 520 million dollars a year, in which the United States share to the extent of some \$112,850,000. Their share in the navigation is much less, not over one-third of their own commerce with the Spanish-speaking countries being carried under the American flag. The American trade with Asia and the Pacific islands resembles that with Spanish America, in that the imports largely exceed the exports, and that these imports consist principally—almost exclusively in this case—of articles of consumption; and also in the fact that the exports consist almost entirely of finished products. In the Australian trade alone is the balance in favor of the United States. In the trade of China and Japan the balance is very largely in favor of those countries, although England nearly balances her large imports with the products of her manufactures; and if the trade of the British colonies with China and Japan is coupled with that of Great Britain, there is a large balance on the other side. America takes a considerable share in the carrying-trade of those countries, and in the whole navigation of the Pacific Ocean. Their share in the navigation of Japan is nearly 50 per cent. of the whole; that of England, 30 per cent.; their proportion in the Chinese carrying-trade is not half as great as that of England, but more than that of all other countries together. Of the exports of Japan, 37½ per cent. consisted of tea shipped to the United States in 1876.

The interest of the United States in the total foreign trade of Great Britain has been, for the last few years, about 11 per cent. About 9 per cent. of the British exports go to America, the chief articles being iron, woollens, cottons, and linens; in all of which there has been a steady and serious decline since 1872, iron manufactures falling off from 44 million dollars in that year to 18 millions in 1875, and cotton goods from 29 to 16 millions. The imports into Great Britain from the United States, forming about 13 per cent. of the entire import trade, consist chiefly of cotton, wheat, bacon, and hams; Indian corn and cheese have largely increased within a few years. The chief articles which show a steady progress from 1871 to 1875 are wheat (39 to 60 million dollars), bacon and hams (9 to 26 millions), Indian corn (13 to 23 millions), cheese (9½ to 13½ millions), lard (6 to 7 millions), oil-cake (4½ to 6 millions), lumber (3 to 5 millions), petroleum (3 to 4 millions), skins and furs (2 to 3 millions) hides and leather (1½ to 8 millions), turpentine, and fish. In 1864 and 1865 the balance in the trade with England was against the United States. The balance in favor of the United States has since 1866 been steadily growing, and amounted, in 1875, to 215½ million dollars—nearly half of the enormous surplus of imports over exports in Great Britain for that year. Among the

raw products of the United States which have a prospect of a more extensive consumption in Great Britain are notably maize, petroleum, and fresh meat and fruits. The increase in the consumption of maize in the British islands for the last few years has been remarkable. In 1857 there were only 125,000 tons of Indian corn imported into Great Britain, and there was no considerable augmentation in the importations until, in 1868, in consequence of the poor harvest, the quantity was doubled, and in 1875 it had risen to 600,000 tons. In 1876, after another failure of the wheat crop, it suddenly rose again to 1,300,000 tons. The possibilities of the trade of America with Great Britain and with the rest of Europe in this article, which furnishes a wholesome food at a little more than half the cost of wheaten bread at present prices, are attracting attention on both sides of the Atlantic. The usual crop in the United States is more than 20 times the large importation into the British isles in 1876. The consumption of petroleum in England is rapidly increasing, the importations for the first seven months of 1877 being £940,000, against £523,000 in 1876, and £334,000 in 1875, during the same period. The business of shipping dressed meat to England by steamships in large refrigerators commenced in April, 1876, and reached its largest development in the same month of the succeeding year, when 11,708 beeves were shipped. The enterprise has been watched with much interest on both sides of the Atlantic. The arrangements of the cool-air chambers were costly, so that the business became unprofitable after a rise in beef. Many live cattle were afterward shipped. The meat was liked by the English, and the hopes of the Western stock-growers for a larger market, and of the English public for cheaper meat, were awakened, although the dressed cattle could not bring the price of fresh-killed beef. Another method of preserving meat, in dried air without refrigeration, has been successfully tried in a voyage of 112 days from the river De la Plata, in South America, to Havre. Another business which may be greatly improved by superior appliances for transportation is the export of ripe fruit; the shipments of apples from the large crop of 1876 were seven-fold the quantity sent the preceding year, and there is a steady demand in England for the entire surplus of the finer varieties of this fruit; other fruits can now be shipped, and a market will probably be found for them. The export of canned fruit is also on the increase. The export of dried fruit, especially of apples, attained, in the last fiscal year, unprecedented dimensions, being 20 times as great as in 1876; this extension was on account of the cheapness of the fruit, five to seven cents per pound exporting-price. The whole fruit-export in 1876-'77 exceeded by over 75 per cent. that of any previous year, and has grown from less than one-quarter of a million in 1862 to nearly 3 million dollars.

American trade with Germany has shown a favorable balance of about 10 million dollars on an average for the last five years. In the year 1876 the imports from that country amounted to \$35,488,117, and the exports thither to \$51,107,147—about 5 per cent. of the total import commerce of the Zollverein—leaving a balance of 15½ millions in favor of the United States. Very gratifying is the growth in the exportation of manufactures, which class has increased from \$1,550,000 in 1872 to \$5,246,000 in 1876. The consul-general at Berlin reports, among the articles whose sale is increasing: Hickory wheels, ventilators, steam-pumps, gas-fittings, portable steame-engines, clocks, and kitchen-utensils. Among the salable articles are fine castings, edge-tools, saws, augers, and other hand-implements, although generally dearer than the German makes, pressed glass-ware, and shoes and leather. The attention of the German public has been attracted to the American leather industry and shoe-making machinery since the Philadelphia World's Fair, and newly through an international exposition of leather products held at Berlin in 1877. The market for American agricultural machinery is of old standing, but it has been damaged of late by the sending of inferior articles. The American consul at Leipsic mentions, among the products of American industry which are sought after there, tools, gold pens and fancy writing-utensils, shirting, and silver-plated ware. Among the imports into the port of Hamburg from the United States for the calendar year 1875, amounting to over 20 million dollars, the following are the chief items: Lard, cotton, leather, furs and skins, raw tobacco, machinery, cured meats, cigars, petroleum, sewing-machines, copper, clover-seed, tallow, coffee, logwood extract, resin, hides. Of these, lard figures for about 3½ millions; cotton, 2 millions; leather, 1½ million; salt meats, over 1 million; furs, machinery, cigars, and petroleum, under 1 million; sewing-machines, about half a million. The exports from Germany to the United States, declared at the consular agencies, cover a wide range of manufactured products, the chief classes being, in 1876, hosiery, dress-goods, leather wares, ribbons, woollens, silks, velvet and plush, chemicals and dyes, and gloves. The consul reported that the trade between the port of Hamburg and the United States had increased considerably in the year 1877.

American trade with France differs from that with the two countries above mentioned, in that it invariably shows an adverse, though at present a declining, balance, which has averaged 4 million dollars in an average total trade of 102 millions in the last four years. As is the case with Germany, and, in a somewhat less degree, with England, the largest part of the imports from France are fine manufactures and duty-paying commodities. The dutiable and free imports from France, in 1876, were 47 and 4 million dollars respectively; from Ger-

many, 32 and 2 millions; from England, 99 and 15 millions. Whether the balance would remain in favor of France if a treaty of commerce, such as exists between her and several leading powers, were concluded with the United States, is doubtful; but it is certain that the export of most American manufactures is impossible under the prohibitive duties which they must now pay. In the year 1875, nearly 93 per cent. of the imports into France from the United States consisted of the following crude articles, some of which were certainly returned in the manufactured state afterward: Cotton (25 million dollars), hides and skins (2½ millions), petroleum (2½ millions), lard and tallow (1½ million), tobacco (one million), copper (\$700,000), meat (half

a million). In the same year 71½ per cent. of the exports from France to the United States consisted in the following highly-finished manufactures: Silks (15½ millions), woollens (9 millions), leather manufactures (8½ millions), prepared skins (2 millions), wines (2 millions), feathers, mercury, buttons, and straw-goods (3½ millions).

The commercial relations of the United States with other countries may be seen in the following tabular survey of the *pro-rata* participation of each country and of the general divisions of the globe, in the export and import trade, giving the percentage of the total domestic exports taken by each, and the percentage of the net imports furnished by each for the last four years:

The returns for the cotton trade for the year ending August 31, 1877, give a total crop of 4,485,423 bales. (*See COTTON.*)

The average wheat-crop in the United States for the last eight years has been 278 million bushels, and the average exports 64 million bushels. The crop of 1877 is estimated at 325 million bushels, or 17 millions more than any former crop. The excess over the average domestic consumption is therefore 111 million bushels.

In the returns of the British Board of Trade for the first seven months of 1877 there are promising indications of an improving tone in American affairs, in the character of the articles exported to the United States. In cotton and linen manufactures there was an advance

of 19 and 28 per cent. respectively in the quantities shipped to America, over the quantities shipped in the same part of 1876. The exports of manufactures of wool have increased from 172,936 lbs. to 953,281 lbs., which was about one-quarter of the entire British export, which, taken in connection with the facts that the exports of wool-mixed goods fell off 36 per cent., and of carpets 43.7 per cent., confirms the hopeful accounts given of the improvements in American wool-manufactures. American carpets have recently been introduced into Germany at Leipsic. Another raw material which shows a great advance is tin, of which was exported to the United States 22 per cent. more in plates, and 153 per cent. more in the unwrought state, than in the preceding year.

The returns of the Bureau of Statistics for the first quarter of 1877-'78 are as follows: Exports—domestic merchandise, \$128,123,212, against \$122,669,372 in 1876-'77, and \$97,805,742 in 1875-'76; foreign, \$2,684,184, against \$2,987,679 and \$2,975,723; specie—domestic, \$3,102,696, against \$12,932,609 and \$12,231,349; foreign, \$1,468,357, against \$1,711,674 and \$1,051,530. Imports—merchandise, \$114,774,783, against \$97,986,372 and \$123,210,282; specie, \$6,300,840, against \$4,855,352 and \$4,347,989. The increase in imports has reduced the balance in favor of the United States to \$16,032,613 from \$27,670,579 in the same quarter of 1876-'77; yet it is still better by 38 million dollars than the adverse balance of 22 millions in the same quarter of 1875-'76; which improvement is owing to a decrease of imports of about 8½ millions, and an increase of exports of 30 millions, over the corresponding quarter two years before. The net exports of specie have declined from \$9,788,931, in 1876-'77, to \$3,270,213, and for the month of September the rare phenomenon occurred of an excess of imports.

CONGREGATIONALISTS. The following is a summary of the statistics of the Congregational churches in the United States, as they were given in the *Congregational Quarterly* for January, 1877:

STATES.	Churches.	Ministers.	Church Members.
Alabama.....	13	8	649

In addition to the regular ministers, the number of licentiates was 244. Of the churches, 2,713 were supplied with settled or acting pastors, and 796 were vacant. Of the ministers, 2,374 were engaged in pastoral work, as pastors or acting pastors, and 959 were not in pastoral work. The number of baptisms of adults during the year was 10,466; of baptisms of infants, 5,388; of additions to the churches by profession, 20,844; number of persons in Sunday-schools, 415,092. The amount of benevolent contributions during the year, from 2,635 churches which reported the same, was \$1,278,252.10; amount of home expenditures of 1,584 churches reporting, \$2,584,166.28. The benevolent contributions were distributed among the different objects as follows: for Foreign Missions, \$456,862.24; for Home Missions, \$383,632.08; for the American Missionary Association, \$168,813.51; for the American Congregational Union, \$46,386.11; for the American College and Education Society, \$63,154.88; for the Congregational Publishing Society, \$5,110.05. Miscellaneous contributions of 2,635 churches reporting the same, \$415,183.36. The net increase of churches during the year was 71; increase of membership, 12,345; increase of persons in Sunday-schools, 13,254; increase of benevolent contributions, \$37,237.71. Florida was in this year, for the first time, added to the States reporting.

The 24th annual meeting of the *American Congregational Union* was held in Boston, Mass., May 31st. The total resources of the Union for the year had been \$32,069.09. It had made grants to the amount of \$21,156.59. During the 24 years of its operation, the society had received \$324,078, had aided 953 churches, and built 981 houses; had paid to churches the sum of \$654,248, and had paid for pastors' salaries \$4,673.

The anniversary of the *American Home Missionary Society* was held in Boston, Mass., May 31st. The receipts of the Society for the year had been \$293,712, and the expenditures \$310,604. The receipts were \$16,315 less than those of the previous year. During the year, 996 missionaries had preached in 32 States and Territories, in the English, Welsh, German, Swedish, and French languages, and had had in charge 2,196 pulpits or stations; they had organized 72 Congregational churches, and 27 of the churches formerly organized under the Association had reached a condition of self-support; the Sunday-schools numbered 86,300 pupils; and 5,448 members had been added to the churches on profession.

The *American Congregational Association* has as its object the maintenance of the Congregational Library and Congregational Publishing House at Boston, Mass. Complaint was made at its anniversary in May, of the indifference of the churches to its work and purposes. The contributions of the churches during the year past had been less than \$8,000. Help was asked in discharging the second mortgage of

\$50,000 which rested upon the house, after paying which it was believed the income of the Association would meet the interest on the remaining mortgage and other expenses. The library had received valuable accessions during the year, and, it was claimed, contained by far the best collection of strictly Congregational literature in the United States.

The receipts of the *American College and Education Society* for 1876 were \$57,000.50, of which a little more than \$34,000 was designated for college purposes, leaving a smaller sum than usual to be applied to young men preparing for the ministry, so that the Society had not been able to make its usual appropriations to them. Its roll of beneficiaries contained the names of 412 men, of whom 112 were new men. President Morrison, of Drury College, Missouri, one of the speakers at the anniversary meeting, referred to the fact that of the 317 ministers who attended to the National Council of the Congregational Churches in 1865 as delegates, about two-thirds had been conducted into their work by the aid of this Society.

The third triennial meeting of the *National Council of the Congregational Churches of the United States* was held at Detroit, Mich., beginning October 17th. The Hon. William B. Washburn, ex-Governor of Massachusetts, was chosen President. The Secretary of the Council, the Rev. A. H. Quint, D. D., made a report that the present number of Congregational churches in the United States was 3,509, showing an increase of 184 since 1874; and the number of members was 350,658, showing an increase of 26,078 since 1874. At his suggestion, a committee was appointed to consider the subject of uniform statistics of the churches. Statements were made in behalf of the various missionary and benevolent societies in which the Council is interested. The *American Congregational Union* was suffering from a decrease in its receipts. Steps had been taken to reduce its expenses, and a committee had been appointed to examine its affairs and management, and ascertain how they could be improved. Consolidation with the Home Missionary Society had been proposed, but was objected to. The Council appointed a committee to coöperate with the committee of the Union in investigating its affairs. Of the *American College and Education Society*, it was stated that the amount raised for the colleges was secured principally by the colleges themselves, with the approval of the society. The funds came chiefly from New England, but the larger part of the beneficiaries of the society were from elsewhere. Hereafter grants of aid would be limited to students taking a full college course. This policy was approved by the Council, and the society was commended to the churches. The *Congregational Publishing Society* required a working capital of \$100,000, and needed a better support; the transference of the Sunday-school work of this society to

the American Home Missionary Society, in accordance with the recommendation of the previous Council, had resulted, temporarily at least, in a falling off of contributions for the Sunday-school work. The work of the *American Missionary Association* was now directed to the instruction and elevation of the colored people, and to missionary and educational work among the Indians and Chinese of the United States. It was hoped that eventually the continent of Africa would be Christianized, as one of the direct results of the efforts now making among the negroes of the South. The report adopted by the Council in reference to this society placed especial emphasis on the importance of giving attention to the Chinese immigrants. The *American Home Missionary Society* had enjoyed great prosperity during the last three years, its receipts within that period having been more than \$900,000, or \$60,000 more than the receipts for the preceding three years. The number of missionaries was now about 40 per cent. of the number of Congregational pastors in the country who were over other than home missionary churches, and 26½ per cent. of all the additions to church-membership in the denomination during the past three years had been to home mission churches. Attention was called to the fact that the ability of the New England churches to assist the society was declining, as, in consequence of the changes of population, they had more and more work to do at home, while the Middle and Western States were constantly calling for more help. It appeared that the churches were not self-supporting in any of the Western States except Ohio; the Council advised that those churches do more for themselves and the cause. The *American Board of Commissioners for Foreign Missions* had 256 churches under its care, which reported an increase of 1,882 members during the year. The contributions of the churches for its support represented an average of one dollar for each member. Reports were presented from the *Theological Seminaries* at Andover, Mass., Hartford, Conn., Oberlin, O., and Chicago, Ill. A committee appointed by the previous Council to consider and report upon the question of the "Parish System," presented a report reviewing the history and principles of the system, and suggesting reforms to make its workings more satisfactory. It declared that in all cases the relations of the society and the Church should be so adjusted that the Church should be supreme; held out the idea of a loyal coöperation so arranged as not to impair this supremacy as desirable; referred to the legal changes which would be needed in some of the States to make such an adjustment secure; and presented the form of a constitution for a society to be organized in conformity to the suggestions it offered. The subject was again referred to a committee, with instructions to report to the next Council. A special committee was appointed to inquire into the facts and the vari-

ous usages of the denomination respecting ministerial responsibility and standing, and report to the next triennial Council with such recommendations as they may deem advisable; pending which inquiry and report, the churches were advised to ascertain carefully before employing any minister that he had a regular standing in some recognized ecclesiastical connection. A minute was adopted on the subject of Sabbath observance, which, while it did not attempt a specific definition of the work necessary to be done on the Sabbath, and which has therefore to be considered justifiable, declared that such labor "should be reduced to a minimum, and should be able to plead in justification a clear social necessity." A paper prepared for the meeting by the Rev. Dr. Leonard Woolsey, on "The Bible in Schools," formed the basis for action, in which the Council declared that, "whatever system of schools is adopted by the State, there is a necessity and a duty of teaching moral duties;" and that "in the practical teaching of such duties ethics cannot be altogether dissociated from religion;" and expressed itself opposed to a division of school-funds among various sects, but willing to make concessions, either by the substitution of acceptable versions of the Bible for Roman Catholic pupils, or by the use of a volume of selections from the Scriptures, "which should contain nothing obscure in meaning, or archaic in style, or open to sectarian construction, or some other possible adjustment," to meet the difficulties raised by Roman Catholic parents. A paper was read by the Rev. Dr. Henry M. Dexter on "Churchless Pastors and Pastorless Churches," which was referred, with a resolution to the effect that measures should be taken to secure a feasible scheme for the support of all pastors in the denomination, to a committee, to report upon the subject to the next Council. Other papers were read on "Woman's Place in the Religious Work of the Times" (Rev. C. L. Goodsell), "Fellowship Meetings" (Rev. Arthur Little), "The Sunday-school" (Rev. Henry Clay Trumbull), on all of which subjects the Council took action, commendatory of the ideas expressed. A report was adopted declaring that the Sunday-school "is not an organization independent of the Church, but is one form of Church work," emphasizing the importance of instructing the scholars in the great principles of religion and the doctrines and policy of the churches, and commending the Sunday-school work of the American Home Missionary Society. A resolution was adopted declaring it to be the true policy of the churches, *first*, thoroughly to endow the colleges already founded by them in the several Northwestern States, before adding to their number; and, *second*, to unite cordially in the support of State universities where they have been established, and, in connection with it, a report was approved showing that there was no necessary antagonism between the de-

nominal colleges and the State universities. A memorial was presented from the General Association of New Jersey, expressing disapproval of national Councils meeting statedly to give advice in denominational matters, as subversive of Congregationalism, and expressing the conviction that such a body should meet only on special call in given emergencies. The Council resolved, unanimously, in reply, that the objects of its being, as defined in its constitution, were of commanding importance, and that it had faithfully and vigorously addressed itself to their prosecution, "illustrating the wisdom of its establishment, and vindicating its right to live."

A resolution was adopted approving the erection of a monument, in the name of the Council, over the remains of John Robinson, at Leyden, in Holland, and a committee was appointed in aid of the object. Action was taken urging each State body of the churches to effect an organization for promoting the relief of disabled ministers and ministers' families. A committee was appointed to take the same subject into consideration, and report at the next session of the Council. The Publishing Committee were instructed to report to the next Council concerning some uniform system of dealing with nonresident members, and members who have received letters of dismission concerning whom the Church has received no advices or has no knowledge; and with members who have been for a long time absent, and yet refuse to request letters of dismission. A resolution was adopted expressing opposition to the use and sale of intoxicating liquors as a beverage, and urging upon ministers and churches activity in favor of agencies to discourage drinking habits, and effect the removal of the external temptations which foster them.

The annual meeting of the *Congregational Union of Ontario and Quebec* was held at Guelph, Ontario, beginning June 6th. The Union represents about 100 churches, with a membership of 6,189, to which 1,036 additions had been made during the year. Ninety-eight Sunday-schools were reported, with 953 officers and teachers and 7,893 scholars. The Canadian Congregational Missionary Society reported 36 missionaries engaged in the field, 81 churches and preaching-places supplied, and few churches vacant. The accounts of the year showed a deficit of \$800, which the society would attempt to liquidate by a special collection. The College of British North America, at Montreal, had been attended by 12 students; its income for the year had been \$3,500, and its expenditure \$4,300. The Widows' Fund had invested \$18,045, and the Retiring Pastors' Fund, which had just gone into operation, \$2,378. These funds were under the care of the Provident Fund Society. The magazine, the *Canadian Independent*, was paying its way. It had a circulation of 1,250 copies monthly; 1,500 copies of the *Year-Book* were published yearly.

BRITISH CONGREGATIONALISTS.—The *Congregational Year-Book* gives the following statistics of the Congregational ministers in Great Britain, the colonies, and the British Congregational mission-fields: Ministers in England, and English ministers in Wales, 2,074, of whom 481 were without pastoral charge; Welsh ministers, 422, of whom 50 were without pastoral charge; ministers in Scotland, 120, of whom 23 were without pastoral charge; ministers in Ireland, 26, of whom 2 were without pastoral charge; ministers in the Channel Islands, 8; English ministers on the Continent of Europe, 8, of whom 2 were without pastoral charge; ministers in the colonies, 301, of whom 61 were without pastoral charge; missionaries of the London Missionary Society, 148; native ordained missionaries, 98: total, 3,205. The total number of churches was: In England, 2,014 churches, 247 branch-churches, 844 preaching-stations, 209 evangelistic stations; in Wales, 731 Welsh chapels, 117 English chapels, 84 preaching-stations; in Scotland, 109 churches; in Ireland, 28 churches; in the islands of the British seas, 18 churches; in Canada and Newfoundland, 118 churches; in Australia, 157 churches, 104 preaching-stations; in New Zealand, 16 churches; in Natal, 4 churches, 7 preaching-stations; also, in countries which are mission-fields, churches independent of the London Missionary Society: in the Cape Colony, 19; in Jamaica, 9; in India, 6; in China, 2. The number of churches partly sustained by the London Missionary Society was about 300. Total number of Congregational churches and branch-churches in Great Britain and the colonies, 3,895; number of preaching-stations, 1,039; of evangelistic stations, 209; of vacant churches, 332. The statistics of the Congregational colleges were: In England, 10 colleges, with 32 professors and 280 students; in Wales, 3 colleges, 8 professors, 112 students; in Scotland, 1 college, 3 professors, 9 students; in the colonies, 3 colleges, 9 professors, 29 students; total, 17 colleges, 52 professors, 430 students. There were also ten institutions in heathen lands belonging to the London Missionary Society, training about five hundred native students. The *Year-Book* gives a large list of local institutions and benevolent societies of various kinds, connected with the several associations, and of 3 annual, 1 quarterly, 22 monthly, and 4 weekly periodicals in England; 1 monthly each in Ireland and Scotland; 1 annual, 1 quarterly, 5 monthly, and 2 weekly periodicals in Welsh; 1 annual and 2 monthly periodicals in Canada; 1 annual, 2 monthly, and 1 weekly periodicals in Australia—all published by Congregationalists; 5 French, 3 Italian, and 1 Spanish periodicals, published by members of Continental societies in communion with the Congregational Church.

The *Congregational Union of England and Wales* embodies in its constitution, as the fundamental principle of its organization, that "the Union recognizes the right of every in-

dividual church to administer its affairs free from external control, and shall not, in any case, assume authority, or become a court of appeal." It has connected with it 41 county associations and unions. Affiliated with it are the Union of the Welsh Independents, with 15 associations; the Congregational Union of Scotland, with 8 associations; the Congregational Union of Ireland, the Unions of the Colonies of Ontario and Quebec, Victoria, New South Wales, Tasmania, Western Australia, South Australia, Queensland, New Zealand, Natal, South Africa, and the Congregational Union of Madagascar.

The 47th annual meeting of the *Congregational Union of England and Wales* was held in London, May 8th. The Rev. J. Baldwin Brown was unanimously elected chairman for the year. The report of the committee presented an account of a number of subjects which had been acted upon during the year, among the most important of which was the setting on foot of inquiries into the spiritual condition of the country, and the provision which existed for a pure and Scriptural ministry of the Gospel. A scheme of questions was in preparation relating to this subject, and ere long a plan of inquiry would be submitted to the county unions. An annual meeting of the secretaries of these associations would form a part of the programme of the autumnal sessions, at which the subject would be considered in consultation. In regard to the scheme of finance which had been before the Union for several years, steps had been taken to promote a thorough discussion of the subject. Of 24 counties where conferences had been held, 20 were, in the main, favorable to the proposal. A number of gentlemen who held diverse views in regard to the scheme had been added to the committee, and it was proposed to reconsider the whole question at a conference of delegates of the county associations to be held in September, in the hope of their formulating a plan which would secure unity of feeling and action in carrying it into effect. The requisite power was given to the Special Finance Committee to summon another representative conference on the subject. The trustees of the Memorial Hall reported that the income of the institution for the year had been £1,623, which was in excess of the estimate; the expenditure had been £1,372, and the indebtedness was £4,000. The total amount of outlay upon the Hall had been £75,457. The library of the Hall had been enriched by a gift of about 10,000 volumes from the widow of the late Mr. Joshua Wilson. A report was presented on the subject of temperance, which recommended an annual temperance sermon in every church; a consideration of the results of recent scientific researches as to the value of alcoholic beverages; the removal of friendly societies from public-houses to school-rooms; petitions for increased restrictions and limitations upon pub-

lic-houses and places for the sale of liquors; and that encouragement be given to movements for the opening of places of refreshment to be conducted on temperance principles, and for the improvement of the conditions of life among the poor, with a view of obviating their liability to intemperance. A petition to Parliament in favor of the Sunday-closing of public-houses was approved. Resolutions were also adopted condemning the traffic in opium. A resolution was adopted approving the course which Mr. W. E. Gladstone, M. P., had pursued upon the Eastern question. A petition was adopted against the "Burials Bill" of the Government, which was under consideration in Parliament.

The 83d annual meeting of the *London Missionary Society* was held in London, May 10th. The Earl of Northbrook presided. The ordinary income of the society for the year had been £63,664, against £62,563, the income of the previous year. Special contributions of £5,398 had been received for the Central African Mission, in addition to the £5,459 contributed the previous year, making the whole amount given for this purpose so far £10,857. The amount received from legacies had been several thousand pounds less than usual, so that the directors, instead of having a balance on hand, were called upon to face a deficiency of £3,848. The expenditures had been unusually heavy, amounting to a total of £117,445. Several of the special objects of the care of the society had, however, already been provided for by special contributions invested on their behalf in previous years. An increase in the interest felt in the work of the society at home was reported, 35 divinity students having offered their services during the year. Four hundred adults had been baptized in China. The Medical Mission had promoted the establishment of hospitals at Hankow, in China, and Travancore, in India, with dispensaries at most of the stations. Good results had accrued from the work of the Woman's Mission, in the teaching to the women of the mission-fields domestic economy and habits of industry, as well as reading and writing. "During the last ten years," says the report, "a great change has been in progress in the position occupied by the English missionaries. Before that time, in not a few cases, they had charge of churches, English and native, which could no longer fairly claim such aid from a missionary society. In 1866 there were seven English churches in our mission-field, supplied by missionaries of the society, which now are wholly independent of its care. There were also 43 native churches, which were then under the direct charge of English missionaries, which now are taught entirely by native pastors, or by English or other ministers, also independent. The work once carried on by the society's missionaries in these 50 cases still exists, is strong and vigorous, and, indeed, may justly be regarded as having

reached a higher stage of Christian life. But that elevation and advance have left 50 English missionaries free to take other forms of service, and specially the aggressive side of missionary life. The Tahitian group of stations has three missionaries, where it had six; the Harvey Islands have two, instead of five; Samoa six, instead of ten; the Loyalties three, instead of five. No church has been given up, no station has been abandoned. On the contrary, the out-stations are more numerous than ever, and their character stands deservedly high. Nor is this all. While this readjustment has been going on year by year, new ground has been occupied, and the old stations in great cities have been strengthened." Continued prosperity had attended the operations of the society's agents in Madagascar. Several model churches had been completed, and the agencies for promoting education had been greatly multiplied. The number of trained evangelists and school-teachers was steadily on the increase. The colleges and the normal schools were in efficient operation. The statistics of the congregations showed about sixty thousand professed members among a quarter of a million of adherents and worshipers. The mission in New Guinea had been reduced by disease, caused by the unhealthy nature of the coasts of the island. A resolution was adopted, recommending its continued prosecution with energy. The opening of the new mission in Central Africa, and the undertaking of it in coöperation with the schemes of the Presbyterian Churches and of the Church Missionary Society, were approved.

The 41st anniversary of the *Colonial Missionary Society* was held in London, May 10th. Mr. S. S. Marling, M. P., presided. The income of the society for the year had been £3,005, and its expenditures about £2,500. Reports were made of the operations of the agents of the society in Canada, the Australian Colonies, New Zealand, and South Africa.

The 58th annual meeting of the *Home Missionary Society* was held in London, May 8th. Mr. Samuel Morley, M. P., presided. The total income of the society had been £4,127 13s. 5d., and the total expenditure £4,433 13s. 4d. The income was supplemented by the total receipts of £20,614 by the associations which coöperated with the society. The report stated that 3,500 Christian workers were connected with the stations of the society; 18,000 children were enrolled in its Sunday-schools, and 2,500 young persons in its Bible-classes.

The 68th annual meeting of the *American Board of Commissioners for Foreign Missions* was held at Providence, R. I., beginning October 2d. The report of the Prudential Committee showed that the receipts of the year had been: From ordinary donations, offerings for the debt, and centennial offerings, \$341,216.44; from legacies, \$92,763.38; from other sources, \$7,411.63: total income, \$441,-

391.45. The total expenditures for the same period had been \$458,327.17, leaving a deficiency in the treasury of \$16,935.72. The debt of the board, which at the beginning of the year was \$31,050.22, had increased by the 1st of September to \$47,985.94. A statement was presented in the report, showing the comparative annual receipts of the board, by decades, since its organization, as follows: For the first decade, the average receipts were, \$18,660.06; for the second, \$68,818.14; for the third, \$180,511.04; for the fourth, \$254,953.28; for the fifth, \$320,813.96; for the sixth, \$455,037.10. For the seventh decade, the first seven years have elapsed, and the average thus far is \$452,564.01; or, uniting these seven years with the preceding decade, the average for the past seventeen years is \$454,018.20. For the last five years the total receipts had averaged \$458,592.67, and the total expenditure \$471,430.63, per annum. The contributions of the Woman's Boards to the general treasury had been, since 1871: In 1871-'72, \$34,184.26; in 1872-'73, \$42,559.93; in 1873-'74, \$47,509.73; in 1874-'75, \$58,633.71; in 1875-'76, \$75,283.91; in 1876-'77, \$75,514.74.

The following table gives a summary view of the condition of the missions of the board:

MISSIONS.	
Number of missions.....	17
Number of stations.....	81
Number of out-stations.....	531
LABORERS EMPLOYED.	
Number of ordained missionaries (seven being physicians).....	151
Number of physicians not ordained.....	7
Number of other male assistants.....	6
Number of female assistants.....	227
Whole number of laborers sent abroad.....	891
Number of native pastors.....	125
Number of native preachers and catechists.....	255
Number of native school-teachers.....	522
Number of other native helpers.....	270
	1,172
Number of laborers connected with the missions.....	1,563
Pages printed.....	6,498,100
Number of churches.....	256
Number of church-members, so far as reported.....	13,425
Added during the year, so far as reported.....	1,832
Number of training and theological schools.....	16
Number of boarding-schools for girls.....	26
Number of common schools.....	658
Number of pupils in training and theological schools and station-classes.....	551
Number of pupils in boarding-schools for girls.....	827
Number of pupils in common schools.....	24,562
Other adults under instruction.....	1,022
Whole number of pupils.....	26,962

A subscription was taken up during the meetings of the board to raise means to pay the debt of the society, the result of which was that the whole amount of \$48,000 was pledged in the course of a single evening.

A special committee was appointed by the trustees of the American Congregational Union, September 25th, to consider what measures could be adopted to increase the resources of the Union, its efficiency, and its acceptableness to its constituents. This com-

mittee met at New York City on the 21st of November, with a committee which had been appointed by the National Congregational Council in October for the purpose of the conference, to devise measures for carrying out the object sought by the Union. The joint committee, after deliberation, recommended that the specific work of church-building be made distinctive in the name and constitution of the society, and that other work not contemplated in the constitution be transferred to more appropriate agencies; that steps be taken to change the name of the Union to that of the *Congregational Building Society*; that there be but one secretary, and the expenses of the society be brought down to the lowest point compatible with efficiency; that "special gifts" to aid in church-building, which do not pass through the treasury of the society, be not, as heretofore, reckoned among its receipts, but be reported by themselves. These recommendations were approved by the trustees of the Union at a meeting held for the purpose of passing upon them. A recommendation for connecting the officers of the society with those of the American Home Missionary Society, so that it could be aided in its work by the secretaries of the same, was referred to the latter body for consideration.

In France, most of the Congregational churches belong to the Union of Evangelical Churches, which was formed in 1849, and in 1877 embraced 7 churches in Paris, 38 in the departments, and 14 stations. The Union does not exclusively consist of Congregational churches, but each church, on entering the Union, preserves the liberty of determining for itself its own constitution, according to its convictions and necessities. It regulates, accordingly, its own discipline, and the form of its internal government. A general synod of the pastors and delegates of the churches is held every two years. The last meeting was held at Lyons, in October, 1877. Besides the Congregational churches which are in connection with the Union of Evangelical Churches, there are 8 Independent churches in France not connected with the Union. The "Evangelical Society" of France, which was established, in 1833, for the diffusion of evangelical truth without regard to differences of ecclesiastical polity, has gradually, like the London and Home Mission Societies of England, become almost identified with churches that are independent of state support and control. During the year ending March 31, 1877, the expenditure of the Society was £5,760, and 52 agents were aided by its funds, of whom 24 were pastors or evangelists, and 28 teachers and colporteurs. An institution for training evangelists is connected with the Independent Church of Nice. It was opened in November, 1874, and commenced with 12 students. It had, in 1877, three professors.

Switzerland has Independent churches in the cantons of Geneva, Vaud (45), Neuchâtel (21), and Berne (7).

CONGRESS, UNITED STATES. The 2d session of the 44th Congress* commenced on December 4, 1876. (For President's Message see ANNUAL CYCLOPEDIA, 1876, PUBLIC DOCUMENTS.)

* The following is a list of members at the 2d session of the 44th Congress:

SENATE.

Alabama—George Goldthwaite, George E. Spencer.
Arkansas—Powell Clayton, Stephen W. Dorsey.
California—Aaron A. Sargent, Newton Booth.
Colorado—Jerome B. Chaffee, Henry M. Teller.
Connecticut—William H. Barnum, William W. Eaton.
Delaware—Eli Sansbury, Thomas F. Bayard.
Florida—Simon B. Conover, Charles W. Jones.
Georgia—Thomas M. Norwood, John B. Gordon.
Illinois—John A. Logan, Richard J. Oglesby.
Indiana—Oliver P. Morton, Joseph E. McDonald.
Iowa—George G. Wright, William B. Allison.
Kansas—James M. Harvey, John J. Ingalls.
Kentucky—John W. Stevenson, Thomas C. McCreery.
Louisiana—J. Rodman West (vacancy).
Maine—James G. Blaine, Hannibal Hamlin.
Maryland—George R. Dennis, William Pinkney Whyte.
Massachusetts—George S. Boutwell, Henry L. Dawes.
Michigan—Thomas W. Ferry, Isaac P. Christy.
Minnesota—William Windom, Samuel J. R. McMillan.
Mississippi—James L. Alcorn, Blanche K. Bruce.
Missouri—Lewis V. Borg, Francis M. Cockrell.
Nebraska—Phineas W. Hitchcock, Algernon S. Paddock.
Nevada—John P. Jones, William Sharon.
New Hampshire—Aaron H. Cragin, Bainbridge Wadleigh.
New Jersey—Frederick T. Frelinghuysen, Theodore F. Randolph.
New York—Roscoe Conkling, Francis Kernan.
North Carolina—Matthew W. Ransom, Augustus S. Mer-
 rimon.
Ohio—John Sherman, Allen G. Thurman.
Oregon—James K. Kelly, John H. Mitchell.
Pennsylvania—Simon Cameron, William A. Wallace.
Rhode Island—Henry B. Anthony, Ambrose E. Burnside.
South Carolina—Thomas J. Robertson, John J. Patterson.
Tennessee—James E. Bailey, David M. Key.
Texas—Morgan C. Hamilton, S. B. Maxey.
Vermont—Justin S. Morrill, George F. Edmunds.
Virginia—John W. Johnston, Robert E. Withers.
West Virginia—Henry G. Davis, Frank Hereford.
Wisconsin—Timothy O. Howe, Angus Cameron.

HOUSE.

Alabama—Jeremiah Halafsey, Jeremiah N. Williams, Taul
 Bradford, Charles Hays, John H. Caldwell, Goldsmith W.
 Hewitt, Burwell B. Lewis, William H. Forney.
Arkansas—Lucien C. Gause, William F. Slemons, William
 W. Wilshe, Thomas M. Gunter.
California—William A. Piper, Horace F. Page, John K.
 Luttrell, P. D. Wigginton.
Connecticut—George M. Landers, James Phelps, John T.
 Wait, Levi Warner.
Delaware—James Williams.
Florida—Jesse J. Finley, William J. Purman.
Georgia—Julian Hartridge, William E. Smith, Philip Cook,
 Henry R. Harris, Milton A. Candler, James H. Blount, Wil-
 liam H. Felton, Alexander H. Stephens, Benjamin H. Hill.
Illinois—Bernard G. Caulfield, Carter H. Harrison, J. V.
 Le Moine, Stephen A. Hurlbut, Horatio C. Burchard, Thomas
 J. Henderson, Alexander Campbell, Greenbury L. Fort,
 Richard H. Whiting, John C. Bagby, Scott Wike, William M.
 Springer, Adlai E. Stevenson, Joseph G. Cannon, John R.
 Eden, William A. J. Sparks, William R. Morrison, William
 Hartzell, William B. Anderson.
Indiana—Benoni S. Fuller, James D. Williams, Nathan T.
 Carr, Jephth D. New, William S. Holman, Milton S. Robinson,
 Franklin Landers, Morton C. Hunter, Thomas J. Cason, Wil-
 liam S. Raymond, James L. Evans, Andrew H. Hamilton,
 John H. Baker.
Iowa—George W. McCrary, John Q. Tufts, Lucien L. Ains-
 worth, Henry O. Pratt, James Wilson, Ezekiel S. Sampson,
 John A. Kasson, James W. McDill, Addison Oliver.
Kansas—William A. Phillips, John E. Goodwin, William
 R. Brown.
Kentucky—Andrew R. Boone, John Young Brown, Charles
 W. Milliken, J. Proctor Knott, Henry Watterson, Thomas L.
 Jones, Joseph C. S. Blackburn, Milton J. Durham, John D.
 White, John B. Clarke.
Louisiana—Randall L. Gibson, E. John Ellis, Chester B.
 Darrall, William M. Levy, William B. Spencer, Charles E. Nash.
Maine—John H. Burleigh, William P. Frye, Edwin Elye,
 Harris M. Plaisted, Eugene Hale.
Maryland—Philip F. Thomas, Charles B. Roberts, William
 J. O'Brien, Thomas Swann, Eli J. Henkle, William Walsh.

Thomas W. Ferry, of Michigan, the Presi-
 dent *pro tempore*, presided in the Senate, and
 Samuel J. Randall, of Pennsylvania, was elect-
 ed Speaker of the House, to fill the vacancy.

In the House, on December 7th, Mr. McCra-

Massachusetts—William W. Crapo, Benjamin W. Harris,
 Henry L. Pierce, Josiah G. Abbott, Nathaniel P. Banks,
 Charles P. Thompson, John K. Tarbox, William Wirt War-
 ren, George F. Hoar, Julius H. Seelye, Chester W. Chapin.

Michigan—Alpheus S. Williams, Henry Waldron, George
 Willard, Allen Potter, William B. Williams, George H. Durand,
 Omar D. Conger, Nathan B. Bradley, Jay A. Hubbell.

Minnesota—Mark H. Dunnell, Horace B. Stratt, William S.
 King.

Mississippi—Lucius Q. C. Lamar, G. Wiley Wells, Hernan-
 do D. Money, Otho R. Singleton, Charles E. Hooker, John R.
 Lynch.

Missouri—Edward C. Kehr, Erastus Wells, William H.
 Stone, Robert A. Hatcher, Richard P. Bland, Charles H. Mor-
 gan, John F. Phillips, Benjamin J. Franklin, David Rea, Rezin
 A. De Bolt, John B. Clark, Jr., John M. Glover, Aylett H.
 Buckner.

Nebraska—Lorenzo Crounse.

Nevada—William Woodburn.

New Hampshire—Frank Jones, Samuel N. Bell, Henry W.
 Blair.

New Jersey—Clement H. Sinnickson, Samuel A. Dobbins,
 Miles Ross, Robert Hamilton, Augustus W. Cutler, Frederick
 H. Teese, Augustus A. Hardenbergh.

New York—Henry B. Metcalf, John G. Schumaker, Sim-
 eon B. Chittenden, Archibald M. Bliss, Edwin R. Meade,
 Samuel S. Cox, Smith Ely, Jr., Elijah Ward, Fernando Wood,
 Abram S. Hewitt, Benjamin A. Willis, N. Holmes Odell, John
 O. Whitehouse, George M. Beebe, John H. Bagley, Jr.,
 Charles H. Adams, Martin I. Townsend, Andrew Williams,
 William A. Wheeler, Henry H. Hathorne, Samuel F. Miller,
 George A. Bagley, Scott Lord, William H. Baker, Elias W.
 Leavenworth, Clinton D. MacDougall, Elbridge G. Lapham,
 Thomas C. Platt, Charles C. B. Walker, John M. Davy, George
 G. Hoskins, Lyman K. Bass, Nelson I. Norton.

North Carolina—Jesse J. Yeates, John A. Hyman, Alfred
 M. Waddell, Joseph J. Davis, Alfred M. Scales, Thomas S.
 Ashe, William M. Robbins, Robert B. Vance.

Ohio—Milton Sayler, Henry B. Banning, John S. Savage,
 John A. McMahon, Americus V. Rice, Frank H. Hurd, Law-
 rence T. Neal, William Lawrence, Early F. Poppleton, Charles
 Foster, John L. Vance, Ansel T. Walling, Milton I. Southard,
 Jacob P. Cowan, Nelson H. Van Vorhes, Lorenzo Danford,
 Laurin D. Woodworth, James Monroe, James A. Garfield,
 Henry B. Payne.

Oregon—Lafayette Lane.

Pennsylvania—Chapman Freeman, Charles O'Neill, Sam-
 uel J. Randall, William D. Kelley, John Robbins, Washington
 Townsend, Alan Wood, Jr., Heister Clymer, A. Herr Smith,

ry, of Iowa, offered the following resolution relative to counting the electoral votes:

Whereas, There are differences of opinion as to the proper mode of counting the electoral votes for President and Vice-President, and as to the manner of determining questions that may arise as to the legality and validity of returns made of such votes by the several States;

And whereas, It is of the utmost importance that all differences of opinion and all doubt and uncertainty upon these questions should be removed, to the end that the votes may be counted, and the result declared by a tribunal whose authority none can question, and whose decision all will accept as final: therefore—

Resolved, That a committee of five members of this House be appointed by the Speaker, to act in conjunction with any similar committee that may be appointed by the Senate, to prepare and report without delay such a measure, either legislative or constitutional, as may in their judgment be best calculated to accomplish the desired end, and that said committee have leave to report at any time.

It was referred to the Committee on the Judiciary.

On December 14th the committee reported back the resolution, with the recommendation that the following substitute be adopted:

Whereas, There are differences of opinion as to the proper mode of counting the electoral votes for President and Vice-President, and as to the manner of determining questions that may arise as to the legality and validity of returns made of such votes by the several States;

And whereas, It is of the utmost importance that all differences of opinion and all doubt and uncertainty upon these questions should be removed, to the end, therefore, that the votes may be counted, and the results declared by a tribunal whose authority none can question, and whose decision all will accept as final: therefore—

Resolved, That a committee of seven members of this House be appointed by the Speaker, to act in conjunction with any similar committee that may be appointed by the Senate, to prepare and report without delay such a measure, either legislative or constitutional, as may in their judgment be best calculated to accomplish the desired end, and that said committee have leave to report at any time.

Resolved, That a committee of seven members be appointed by the Speaker of this House to ascertain and report what are the privileges, powers, and duties of the House of Representatives in counting the votes for President and Vice-President of the United States, and that said committee have leave to report at any time.

The resolution, as amended, was adopted without debate, and notice thereof sent to the Senate.

On December 18th the Senate notified the House of the passage of the following resolution:

Resolved, That the message of the House of Representatives on the subject of the presidential election be referred to a select committee of seven Senators, with power to prepare and report, without unnecessary delay, such a measure, either of a legislative or other character, as may in their judgment be best calculated to accomplish the lawful count of the electoral vote, and best disposition of all questions connected therewith, and a due declaration of the result, and that said committee have power to confer and act with the committee of the House of Representatives named in said message, and to report by bill or otherwise.

The committee appointed on the part of the Senate by the President *pro tem.* were: Messrs. Edmunds, Morton, Frelinghuysen, Conkling, Thurman, Bayard, and Ransom.

In the House, the committee to ascertain and report what are the privileges, powers, and duties of the House of Representatives in counting the votes for President and Vice-President of the United States were: Messrs. Knott of Kentucky, Sparks of Illinois, Tucker of Virginia, Maish of Pennsylvania, Burchard of Illinois, Seelye of Massachusetts, and Monroe of Ohio.

Committee to meet with the Senate committee as to the counting of the electoral votes for President and Vice-President: Messrs. Payne of Ohio, Hunton of Virginia, Hewitt of New York, Springer of Illinois, McCrary of Iowa, Hoar of Massachusetts, and Willard of Michigan.

In the Senate, on January 13th, Mr. Edmunds, of Vermont, from the select committee on counting the electoral votes, submitted, by direction of the committee, a report with an accompanying bill. With one exception, the report was signed by all the members.

The bill to provide for and regulate the counting of the votes for President and Vice-President, and decision of questions arising thereon, for the term commencing March 4th, A. D. 1877, was read the first time at length, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Senate and House of Representatives shall meet in the Hall of the House of Representatives at the hour of one o'clock P. M. on the first Thursday in February, A. D. 1877, and the President of the Senate shall be their presiding officer. Two tellers shall be previously appointed on the part of the Senate, and two on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, all the certificates and papers purporting to be certificates of the electoral votes, which certificates and papers shall be opened, presented, and acted upon in the alphabetical order of the States, beginning with the letter A; and said tellers, having then read the same in the presence and hearing of the two Houses, shall make a list of the votes as they shall appear from the said certificates; and the votes having been ascertained and counted as in this act provided, the result of the same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote, and the names of the persons, if any, elected, which announcement shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, and, together with a list of the votes, be entered on the Journals of the two Houses. Upon such reading of any such certificate or paper, when there shall be only one return from a State, the President of the Senate shall call for objections, if any. Every objection shall be made in writing, and shall state clearly and concisely, and without argument, the ground thereof, and shall be signed by at least one Senator and one member of the House of Representatives before the same shall be received. When all objections so made to any vote or paper from a State shall have been received and read, the Senate shall thereupon withdraw, and such objections shall be submitted to the Senate for its decision; and the Speaker of the House of Representatives shall, in

like manner, submit such objections to the House of Representatives for its decision; and no electoral vote or votes from any State from which but one return has been received shall be rejected except by the affirmative vote of the two Houses. When the two Houses have voted, they shall immediately again meet, and the presiding officer shall then announce the decision of the question submitted.

SECTION 2. That if more than one return or paper purporting to be a return from a State shall have been received by the President of the Senate, purporting to be the certificates of electoral votes given at the last preceding election for President and Vice-President in such State (unless they shall be duplicates of the same return), all such returns and papers shall be opened by him in the presence of the two Houses, when met as aforesaid, and read by the tellers, and all such returns and papers shall thereupon be submitted to the judgment and decision, as to which is the true and lawful electoral vote of such State, of a commission constituted as follows, namely:

During the session of each House, on the Tuesday next preceding the first Thursday in February, 1877, each House shall, by *viva voce* vote, appoint five of its members, who, with the five associate justices of the Supreme Court of the United States, to be ascertained as hereinafter provided, shall constitute a commission for the decision of all questions upon or in respect of such double returns named in this section.

On the Tuesday next preceding the first Thursday in February, A. D. 1877, or as soon thereafter as may be, the associate justices of the Supreme Court of the United States now assigned to the first, third, eighth, and ninth circuits, shall select, in such manner as a majority of them shall deem fit, another of the associate justices of said court, which five persons shall be members of said commission; and the person longest in commission of said five justices shall be the president of said commission. The members of said commission shall respectively take and subscribe the following oath:

"I, ———, do solemnly swear (or affirm, as the case may be) that I will impartially examine and consider all questions submitted to the commission of which I am a member, and a true judgment give thereon, agreeably to the Constitution and the laws: so help me God!" which oath shall be filed with the Secretary of the Senate.

When the commission shall have been thus organized, it shall not be in the power of either House to dissolve the same, or to withdraw any of its members; but, if any such Senator or member shall die or become physically unable to perform the duties required by this act, the fact of such death or physical inability shall be by said commission, before it shall proceed further, communicated to the Senate or House of Representatives, as the case may be, which body shall immediately and without debate proceed by *viva voce* vote to fill the place so vacated, and the person so appointed shall take and subscribe the oath hereinbefore prescribed, and become a member of said commission: and, in like manner, if any of said justices of the Supreme Court shall die or become physically incapable of performing the duties required by this act, the other of said justices, members of the said commission, shall immediately appoint another justice of said court a member of said commission; and, in such appointments, regard shall be had to the impartiality and freedom from bias sought by the original appointments to said commission, who shall thereupon immediately take and subscribe the oath hereinbefore prescribed, and become a member of said commission to fill the vacancy so occasioned.

All the certificates and papers purporting to be certificates of the electoral votes of each State shall be opened, in the alphabetical order of the States, as provided in section 1 of this act; and when there shall be more than one such certificate or paper, as

the certificates and papers from such State shall so be opened (excepting duplicates of the same return), they shall be read by the tellers, and thereupon the President of the Senate shall call for objections, if any. Every objection shall be made in writing, and shall state clearly and concisely, and without argument, the ground thereof, and shall be signed by at least one Senator and one member of the House of Representatives before the same shall be received. When all such objections so made to any certificate, vote, or paper, from a State shall have been received and read, all such certificates, votes and papers so objected to, and all papers accompanying the same, together with such objections, shall be forthwith submitted to said commission, which shall proceed to consider the same, with the same powers, if any, now possessed for that purpose by the two Houses acting separately or together, and, by a majority of votes, decide whether any and what votes from such State are the votes provided for by the Constitution of the United States, and how many and what persons were duly appointed electors in such State, and may therein take into view such petitions, depositions, and other papers, if any, as shall, by the Constitution and now-existing law, be competent and pertinent in such consideration; which decision shall be made in writing, stating briefly the ground thereof; and signed by the members of said commission agreeing therein; whereupon the two Houses shall again meet, and such decision shall be read and entered in the Journal of each House, and the counting of the votes shall proceed in conformity therewith, unless, upon objection made thereto in writing by at least five Senators and five members of the House of Representatives, the two Houses shall separately concur in ordering otherwise; in which case such concurrent order shall govern. No votes or papers from any other State shall be acted upon until the objections previously made to the votes or papers from any State shall have been finally disposed of.

SEC. 3. That while the two Houses shall be in meeting, as provided in this act, no debate shall be allowed, and no question shall be put by the presiding officer, except to either House on a motion to withdraw; and he shall have power to preserve order.

SEC. 4. That when the two Houses separate to decide upon an objection that may have been made to the counting of any electoral vote or votes from any State, or upon objection to a report of said commission, or other question arising under this act, each Senator and Representative may speak to such objection or question ten minutes, and not oftener than once; but after such debate shall have lasted two hours, it shall be the duty of each House to put the main question without further debate.

SEC. 5. That in such joint meeting of the two Houses seats shall be provided as follows: For the President of the Senate, the Speaker's chair; for the Speaker, immediately upon his left; the Senators in the body of the hall upon the right of the presiding officer; for the Representatives, in the body of the hall not provided for the Senators; for the tellers, Secretary of the Senate, and Clerk of the House of Representatives, at the Clerk's desk; for the other officers of the two Houses, in front of the Clerk's desk and upon each side of the Speaker's platform. Such joint meeting shall not be dissolved until the count of electoral votes shall be completed and the result declared; and no recess shall be taken unless a question shall have arisen in regard to counting any such votes, or otherwise under this act; in which case it shall be competent for either House, acting separately, in the manner hereinbefore provided, to direct a recess of such House not beyond the next day, Sunday excepted, at the hour of ten o'clock in the forenoon. And while any question is being considered by said commission either House may proceed with its legislative or other business.

SEC. 6. That nothing in this act shall be held to impair or affect any right now existing under the Constitution and laws to question, by proceeding in the judicial courts of the United States, the right or title of the person who shall be declared elected or who shall claim to be President or Vice-President of the United States if any such right exists.

SEC. 7. The said commission shall make its own rules, keep a record of its proceedings, and shall have power to employ such persons as may be necessary for the transaction of its business and the execution of its powers.

The Chief Clerk read the report, as follows:

The committees of the Senate and House of Representatives appointed under the following several resolutions:

HOUSE RESOLUTION.

Whereas, There are differences of opinion as to the proper mode of counting the electoral votes for President and Vice-President, and as to the manner of determining questions that may arise as to the legality and validity of returns made of such votes by the several States;

And whereas, It is of the utmost importance that all differences of opinion and all doubt and uncertainty upon these questions should be removed, to the end therefore that the votes may be counted and the result declared by a tribunal whose authority none can question and whose decision all will accept as final: therefore—

Resolved, That a committee of seven members of this House be appointed by the Speaker, to act in conjunction with any similar committee that may be appointed by the Senate, to prepare and report without delay such a measure, either legislative or constitutional, as may, in their judgment, be best calculated to accomplish the desired end, and that said committee have leave to report at any time.

SENATE RESOLUTION.

Resolved, That the message of the House of Representatives on the subject of the presidential election be referred to a select committee of seven Senators, with power to prepare and report, without unnecessary delay, such a measure, either of a legislative or other character, as may, in their judgment, be best calculated to accomplish the lawful counting of the electoral votes, and best disposition of all questions connected therewith, and the due declaration of the result; and that said committee have power to confer and act with the committee of the House of Representatives named in said message, and to report by bill or otherwise—
beg leave to report to their respective Houses that they have considered the subject named in said resolutions, and have had full and free conference with each other thereon, and now report the accompanying bill and recommend its passage. The substance of the bill embraces:

1. Provisions for the meeting of the two Houses, as required by the Constitution, and the general course of proceeding, and the declaration of the result.

2. Provisions for the disposition of questions arising in respect to States from which only one set of certificates has been received; that each House shall consider the question, and shall only decide against a vote by concurrent, affirmative action.

3. Provisions for so-called double returns from a State; that such conflicting returns and papers shall be submitted to the consideration of a commission, composed of equal numbers of members of the Senate and of the House of Representatives and of the Supreme Court of the United States; that this commission shall be organized and sworn and have power to consider and decide, according to the Constitution and law, what is the constitutional vote of the State in question: and that such decision shall govern the disposition of the subject, unless both Houses shall determine otherwise.

4. It is provided that the act shall not affect either way the question of the right of resort to the judicial courts of the United States by the persons concerned as claimants to the offices in question.

We have applied the utmost practicable study and deliberation to the subject, and believe that the bill now reported is the best attainable disposition of the difficult problems and disputed theories arising out of the late election. It must be obvious to every person conversant with the history of the country and with the formation and interpretation of the Constitution that a wide diversity of views and opinions touching the subject, not wholly coincident with the bias or wishes of the members of political parties, would naturally exist. We have in this state of things chosen, therefore, not to deal with abstract questions, save so far as they are necessarily involved in the legislation proposed. It is, of course, plain that the report of the bill implies that in our opinion legislation may be had on the subject in accordance with the Constitution, but we think that the law proposed is inconsistent with few of the principal theories upon the subject. The Constitution requires that the electoral votes shall be counted on a particular occasion. All will agree that the votes named in the Constitution are the constitutional votes of the States, and not other; and when they have been found and identified, there is nothing left to be disputed or decided; all the rest is the mere clerical work of summing up the numbers, which being done, the Constitution itself declares the consequence.

This bill, then, is only directed to ascertaining, for the purpose and in aid of the counting, what are the constitutional votes of the respective States; and, whatever jurisdiction exists for such purpose, the bill only regulates the method of exercising it. The Constitution, our great instrument and security for liberty and order, speaks in the amplest language for all such cases, in whatever aspect they may be presented. It declares that the Congress shall have power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof." The committee, therefore, think that the law proposed cannot be justly assailed as unconstitutional by any one, and for this reason we think it unnecessary, whatever may be our individual views, to discuss any of the theories referred to. Our fidelity to the Constitution is observed when we find that the law we recommend is consistent with that instrument.

The matter then being a proper subject for legislation, the fitness of the means proposed becomes the next subject for consideration. Upon this we beg leave to submit a few brief observations.

In all just governments both public and private rights must be defined and determined by the law. This is essential to the very idea of such a government, and is the characteristic distinction between free and despotic systems. However important it may be, whether one citizen or another shall be the Chief Magistrate for a prescribed period, upon just theories of civil institutions, it is of far greater moment that the will of the people, lawfully expressed in the choice of that officer, shall be ascertained and carried into effect in a lawful way. It is true that in every operation of a government of laws, from the most trivial to the most important, there will always be the possibility that the result reached will not be the true one. The executive officer may not wisely perform his duty, the courts may not truly declare the law, and the legislative body may not enact the best laws; but, in either case, to resist the act of the Executive, the courts, or the Legislature, acting constitutionally and lawfully within their sphere, would be to set up anarchy in the place of government. We think, then, that to provide a clear and lawful means of performing a great and necessary function of government, in a time of much public dispute, is

of far greater importance than the particular advantage that any man or party may in the course of events possibly obtain. But we have still endeavored to provide such lawful agencies of decision in the present case as shall be the most fair and impartial possible under the circumstances. Each of the branches of the Legislature and the judiciary is represented in the tribunal in equal proportions. The composition of the judicial part of the commission looks to a selection from different parts of the republic, while it is thought to be free from any preponderance of supposable bias ; and the addition of the necessary constituent part of the whole commission, in order to obtain an uneven number, is left to an agency the farthest removed from prejudice of any existing attainable one. It would be difficult, if not impossible, we think, to establish a tribunal that could be less the subject of party criticism than such a one. The principle of its constitution is so absolutely fair that we are unable to perceive how the most extreme partisan can assail it, unless he prefers to embark his wishes upon the stormy sea of unregulated procedure, hot disputes, and dangerous results, that can neither be measured nor defined, rather than upon the fixed and regular course of law, that insures peace and the order of society, whatever party may be disappointed in its hopes.

The unfortunate circumstance that no provision had been made on the subject before the election has greatly added to the difficulties of the committees in dealing with it, inasmuch as many of the people of the country, members of the respective political parties, will perhaps look with jealousy upon any measure that seems to involve even the possibility of the defeat of their wishes; but it has also led the committees to feel that their members are bound by the highest duty, in such a case, to let no bias of party feeling stand in the way of a just, equal, and peaceful measure for extricating the question from the embarrassments that at present surround it.

In conclusion, we respectfully beg leave to impress upon Congress the necessity of a speedy determination upon this subject. It is impossible to estimate the material loss that the country daily sustains from the existing state of uncertainty. It directly and powerfully tends to unsettle and paralyze business, to weaken public and private credit, and to create apprehensions in the minds of the people that disturb the peaceful tenor of their ways and mar their happiness. It does far more : it tends to bring republican institutions into discredit, and to create doubts of the success of our form of government, and of the perpetuity of the republic. All considerations of interest, of patriotism, and of justice, unite in demanding of the law-making power a measure that will bring peace and prosperity to the country, and show that our republican institutions are equal to any emergency. And in this connection we cannot refrain from the expression of our satisfaction that your committees, composed of equal numbers of opposing parties, have fortunately been able to do what has been attempted in vain heretofore, almost unanimously agree upon a plan considered by them all to be just, wise, and efficient. We accordingly recommend the proposed act to the patriotic and just judgment of Congress.

GEO. F. EDMUNDS, FRED'K T. FRELINGHUYSEN, ROSCOE CONKLING, A. G. THURMAN, T. F. BAYARD, M. W. RANSOM, H. B. PAYNE, EPPA HUNTON, ABRAM S. HEWITT, WILLIAM M. SPRINGER, GEO. W. McCRARY, GEO. F. HOAR, GEORGE WILLARD.		Senate Committee.
		House Committee.

Mr. Edmunds, of Vermont, said: "Mr. President, as a fitting commencement of the consideration of this bill, I ask the Secretary to read the twelfth article of the amendments to the Constitution of the United States, which the bill proposes to execute."

The Secretary read as follows:

The electors shall meet in their respective States and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each; which lists they shall sign and certify, and transmit, sealed, to the seat of government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted: the person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March, next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed; and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

Mr. Edmunds: "Under this article of the Constitution, Mr. President, some eight or ten millions of the citizens of the United States, authorized by the laws to select a Chief Magistrate in the way prescribed in this article, have endeavored to execute that duty; and by a very evenly-balanced number of voices, when you take them as a whole, they are understood to have expressed their preference for two different persons, representing opposing policies of legislation and of government, greater or less in principle, and greater or less in degree, that it is not necessary for me to refer to. And the contest has been so close, when measured by the constitutional standard of voting by States for electors, that it becomes a matter of serious dispute, either rightly or wrongly, between these five millions of voting citizens upon one side and five millions upon another—I express it merely in round numbers

for convenience—which of their respective candidates has been constitutionally elected. And without any provision of law for the execution of what remains to be done under the Constitution in ascertaining what person has received the highest number of electoral votes being a majority of the whole, we are brought face to face with the question of what means are left for deciding the dispute. Undoubtedly a large proportion of the people of the United States on either side of the question sincerely believe that their candidate has been elected, and sincerely believe that if it be not so finally ascertained a great wrong will have been done, not only to their personal rights and wishes, but to the cause of constitutional government.

“So, then, Mr. President, it has appeared to us who have been charged with this most onerous and responsible and unpleasant duty that if the Constitution authorized us to lay down a line of procedure that should be clear and definite in itself, and should lead to any result—and I use the words with deliberation—that should lead to any result, no matter which one, through the calm and orderly progress of the administration of law and through the calm and orderly judgment of a tribunal bound by the most solemn obligations to decide according to the Constitution and the law, it would be a beneficent act for the republic; and, if on the other hand we should fail to do this, our posterity under this form or some other form of government (no man can tell which) would feel that we had failed in the hour of great need in performing a plain duty.

“This, then, Mr. President, is the situation; and under this state of things the committee, with almost absolute unanimity, have reported this bill. Opposing political opinions, opposing political educations, warm wishes, partisan feelings, have subsided on both sides, and what all of us, of all opinions, educations, wishes, and feelings, solemnly unite in reporting to you as a just and upright and lawful way, we recommend to your consideration. What is it that we recommend? I will state:

“The first section of this bill provides in the first part of it for the simple ceremony of the necessary union of the two Houses, or meeting, to state it more exactly, on the occasion of determining who has the highest number of votes of the electors for President and Vice-President of the United States. It then proceeds to provide for the cases in which only one set of papers or returns, as they are called, shall have appeared; and in respect of those cases it provides, substantially, and I do not know but literally, what the bill introduced by my honorable friend from Indiana (Mr. Morton) a year ago, and which passed the Senate, although it was brought back on a motion to reconsider, provided, that no return from a State about which a question should arise, there being only one return, should be left out of the count unless the two Houses should separately agree that it ought to be left out.

“Then we come to the second section, which covers the difficulties that we have to encounter in the present condition of affairs. The second section provides that, if more than one return or paper purporting to be a return from a State shall have been received by the President of the Senate, purporting to be the certificate of the electoral votes given at the last election, all those returns shall be opened by the President of the Senate, just as the Constitution says in terms that all the certificates shall be opened by him in the presence of the two Houses. They shall be read by the tellers, which the bill provides for the appointment of, according to the universal practice from the foundation of the Government, only, I believe almost always hitherto one teller has been appointed on the part of the Senate and two on the part of the House of Representatives, and this bill provides that there shall be two tellers, an equal number, appointed by each House. Having been read by the tellers, the bill then proceeds to declare that all these double, disputed papers ‘shall thereupon be submitted to the judgment and decision, as to which is the true and lawful electoral vote of such State, of a commission.’ You will observe, Mr. President, precisely the question that is to be sent to this tribunal for its consideration. It is to inquire which of the papers of the conflicting ones is the paper that the Constitution calls for; that is, the electoral vote of a State in the Union, as the Constitution says, as it need scarcely have said, but some language must have been employed. It is the constitutional vote of the State, the voice of the State in the manner prescribed by its Legislature in the selection of electors who have voted for President, that is to be sought for; and it is the person who has the highest number of those votes—I am not now quoting the language of the Constitution, but what everybody understands it to mean—who is to be the President. Therefore this tribunal, or commission, as it is styled in the bill more accurately, is called upon to determine one single question between two conflicting papers purporting to be the constitutional certificates, and that is, they are to determine which of them is in conformity with the Constitution and which of them is not. It then provides for the appointment of the commission, its method of selection; and I shall have something more to say upon the subject of what they are to decide when I come to a later part of the bill which again refers to what they are to do.

“The bill then comes to the selection of the commission. It provides that each House on the Tuesday preceding the first Thursday in February—which changes the day for this occasion to an earlier period than that fixed by the general law, which is the second Wednesday in February—on the Tuesday preceding that day, which I believe in this case is the 30th of January, each House shall by a *viva voce* vote select five members to compose a part

of this commission. Nobody, probably, would criticise the propriety of this mode of selection, if you are to say that the commission is to be composed at all of members of either House, for the whole world is to know how each individual Senator and how each individual member of the House of Representatives has performed his responsible duty in the selection of a person who is to become the sworn judge in as great a dispute as probably ever existed in the world under the law.

"These ten Senators and members of the House of Representatives selected in that way, with five of the associate justices of the Supreme Court of the United States, are to compose a commission of fifteen. The judges of the Supreme Court of the United States, as we all know, are composed now of nine persons; and in order that there might be a certain symmetry of equipoise, of relation, it was thought, after much consideration by the committee, that it was advisable to take an equal number of Senators and an equal number of members of the House of Representatives and an equal number of the persons composing the justices of the Supreme Court to form this commission. So five came naturally to be the number referred to. If it had been thought wise to have made the total number of the commission less, nine for instance, as had been suggested, then there would have been three Senators and three members of the House of Representatives and three judges of the Supreme Court; but it appeared to us, after much consideration, that fifteen was, on the whole, the best number, so large as to produce every variety of intellectual capacity and learning, and as to produce confidence against any possible attempt that might be made—scarcely conceivable, to be sure—to unduly influence any one or two or three of this whole number by any of the motives that sometimes, as we know in the history of the world, have been led to influence people who are called upon to discharge high trusts, and at the same time to leave the commission so limited in numbers as that it should be capable of prompt, effective consultation, and deliberate and orderly procedure and decision.

"Then the next step was to ascertain in what manner these five gentlemen out of the nine—all, of course, preëminent in legal learning and in legal experience; all, of course, preëminent in their knowledge and study of the Constitution and the laws of our country; all, of course, equal in that deep respect which they receive from the people of every part of the Union, as in every part of it and for every part of it they daily administer law—should be selected. Of course it was a difficult task, because to select a particular five by name might seem to imply that there was some reason, personal or other, that the other particular part, four, should not be selected. And so, in analogy to what has always been a wise custom in this good Government of ours, it appeared

to us that a distribution of these gentlemen to the various parts of the republic would be a just reason for particular selections. So one named, the justice of the first circuit, comes from the far-off borders of New England, the northeastern part of the country; another, the justice of the third circuit, has his residence and exercises his judicial functions in the centre of the great commercial populations of our Union; a third, he who administers justice in the eighth circuit, has his home and residence in the great Northwest; and the fourth, the justice of the ninth circuit, has had his habitation and has administered justice for many years (except, of course, when attending here and administering justice in the Supreme Court) on what has been said to be the golden slope, that great far-off portion of our republic so rapidly growing in wealth and in everything that makes the material prosperity of a self-governing people. We name them to compose four. Then there was the odd number to be obtained; and in order to guard against prejudice—and I beg Senators to observe my words—to guard against prejudice in the minds of these ten millions of active voters in what has taken place, not to guard against prejudice in judges, not to guard against prejudice in Senators or members, but to do that wise and wholesome thing, to leave no fault-finder in the country a right to complain, we say these four men shall choose the fifth from among their own associate numbers. In the intense criticisms that have been made upon this bill, in the very few days that it has been known, by the extreme upholders of party wishes upon both sides, I have never observed any criticisms upon the absolute fairness and justice of such a mode, provided we could get over the constitutional objections that these newspaper writers and intense politicians seem so suddenly to have discovered and with which no doubt they are so very familiar.

"That then composes a commission of fifteen persons to whom these double returns are to be referred. The bill provides, as we think with great fitness, that the oldest of these associate justices in commission—the venerable Judge Clifford it will be if the bill should pass—shall be the president of it; and it then provides what also I hope that partisans as well as Senators and Representatives will carefully consider, that—

The members of said commission shall respectively take and subscribe the following oath:

I, ———, do solemnly swear (or affirm, as the case may be) that I will impartially examine and consider all questions submitted to the commission of which I am a member, and a true judgment give thereon, agreeably to the Constitution and the laws: so help me God.

"Having thus constituted the tribunal, we have committed to them this duty: After providing for cases of vacancy, etc., that I need not take your time to speak of, we have committed to them this duty: Objections having

been made to these double returns, or either of them, in writing, in a formal way, stating the ground of them and without argument, this commission 'shall proceed to consider the same, with the same powers, if any, now possessed for that purpose by the two Houses acting separately or together, and, by a majority of votes, decide whether any and what votes from such State are the votes provided for by the Constitution of the United States.'

"That is what they are to decide upon these papers, to ascertain which of the conflicting claimants, as you may say, to the right to have exercised a voice in this election is the constitutional organ of the State. Is not that exactly what the Constitution requires should be ascertained by somebody, and in some way? Of course every one will agree that it is, that it is the sole question in a case of dispute, and that no other is conceivable. Whatever constitutional voice a State in this Union has sent to you the Constitution declares shall have its weight, without the right of anybody to impugn or to disregard it. So, as I say, the sole question under the Constitution is, what is the constitutional vote of the State? and so, what is the paper, if any, of the two presented that speaks the constitutional voice of that State according to the methods prescribed by the Constitution itself?

"Then it proceeds to say 'and how many and what persons were duly appointed electors in such State.' This was necessary because in a certain event, of no person having a majority of all the electors appointed, the House of Representatives is called upon by the Constitution to exercise the function of electing the President of the United States. And so it was thought necessary that this tribunal having these papers before it should make a distinct report upon the number of electors that had been lawfully appointed. Of course the words 'what persons' would have meant exactly the same without the other words, because, if they decided for one of the two double returns rather than the other, the paper itself would show which were the persons who were named in it. But, as a mere matter of convenience of phraseology, the language is in.

"Then it provides, what has been greatly criticised upon both sides of the partisan view of the subject—if I may use that phrase without offense to anybody, and I think I may, for I am a partisan myself—then it provides what has been the subject of criticism, and equally intense, as far as I have observed, from both points of view. Those who wish one of the candidates elected condemn it because it grants too much; those who wish another of the candidates elected condemn it in equally fierce terms because it grants too little; it holds aloft the scale of justice in absolute equipoise, and gives nothing to either. What does it say?

And may therein—

✓ "That is, in the decision which is committed

to them as to what is the constitutional vote of a State—

take into view such petitions, depositions, and other papers, if any, as shall, by the Constitution and now existing law, be competent and pertinent in such consideration.

"There is one party in this country, five millions of these voters to whom I have referred, who desire (I do not say think it can be done, but who desire) that this commission, if created, shall descend below the action of the State authorities and ascertain how many votes were given for this man and that man and the other, with a view, of course, to the success, as they suppose, of their own candidate, if that were done. The other five millions, treating them as a mass, in the same way desire that the law shall be so that they cannot descend behind the action of the authorities of a State, be that action right or wrong, lawful or unlawful. In that state of opposition of claim, what is the simple and obvious principle, not merely of justice and fair play, but of constitutional law, that would apply to such a case?

"The election of the President of the United States for the next four years took place on the first Wednesday in December; that is, upon the supposition that some one had a majority of all the electors appointed, taking that for granted; and the simplest provisions of the law, as it appeared to me and to us all to be, should be those that provided that that dispute touching that election which took place on the first Wednesday in December should be decided by the law as it was on the first Wednesday in December; and if by the law as it was on the first Wednesday in December (and of course it is the same now), as we say, 'now existing law,' the candidate of one party, his rights measured by that law, is entitled to the office, he ought to have it. This would be a strange republic of law indeed, if after, according to one law, the candidate of one party had been elected, the Congress of the United States or anybody else should make a new law by force of which the candidate of some other party got elected. Of course it would be an outrage upon the principles of government. So that we felt perfectly free, not only free but more than free, we felt it to be our bounden duty, that no right should be affected in respect of the candidates of either of these great parties by the law that we pass, and that the right of A or B to this great office must be determined by the law as it stands on the date of the passage of this act. All that we designed this act to do, and all that it does do, is to provide merely the method, by regular steps of lawful procedure, of ascertaining what the law and the fact was on that first Wednesday in December, 1876.

"It has been said by some that this commission, if this law passes, having the powers of the two Houses conferred upon them, may go behind the returns, as the common phrase is. Well, if

the two Houses now possess the constitutional power to do that thing, they also possessed it on the first Wednesday in December, and we have only changed the method in the first instance of taking that step. If the two Houses, by the Constitution of the United States, on the first Wednesday in December and now, have no constitutional right to overhaul the action of a sovereign State in its selection under the Constitution of its electors, then this commission has no right to do it.

"Now, what are we to do? Some say that the two Houses—or any tribunal that is to pass upon a dispute—have the right to go to the bottom, to disregard the action of State authorities, to say that they have exceeded their jurisdiction, or, acting within it, that they have not rightly and purely exercised it. Others say exactly the reverse, and that it would be a far greater injury to the republic that Congress should assume the power of overhauling the action of States than it would be that once or twice, or a dozen times, by the unjust action of the authorities of some State, one President rather than another should be elected. So each side would desire that this law should be framed to meet its particular views, the one side to have it say in explicit terms, 'You shall have authority that this act gives to you, because the act gives it to you, to go down and inquire.' The other would be glad to have it say in explicit terms, 'You shall not go down and inquire, whether the law before you authorized any one to go down and inquire or not.' What could we do? We could do that just, that simple thing, we thought, that we have done, and that is to say that this presidential election must be settled, and settled only upon the Constitution and the principles of law as they existed when it took place.

"Who is to decide what they were when it took place? Exactly the tribunal that must decide everything in the end—whatever tribunal the Constitution and the law constitutes for the purpose of such a decision. This law constitutes a tribunal to decide that very thing, among others. In other words, it is commanded to decide what is the constitutional vote of a State; and, in doing that, it may take into view any evidence of any kind that the Constitution and the law, as it is now, makes appropriate to that subject, and not any other. Can anything be more just than that? Would it not be a departure from every principle of justice, and of constitutional procedure, to do anything else? There we leave it. It must be left somewhere; and it can be left nowhere, under ordinary principles of government, except in the court (if I may call it a court for the purposes of this illustration) that is bound to decide upon the cause. If you are to leave it to the two Houses, as the bill that passed this body less than a year ago did, without any limitation whatever, with as wide a jurisdiction as it was possible to exist, what have

you then? You have large bodies of men, and we all know that, just in proportion as you have large bodies of men, you have a departure, when they are acting together, from that personal sense of individual responsibility to decide according to your intellect and judgment rather than to act with the swift current of warm debate and warm feeling; and you commit the right of these persons in this great contest and controversy, therefore, to a tribunal that is much less likely to be governed by the principles of constitutional law than it is by the feeling and intensity of party wishes and party bias."

Mr. Morton, of Indiana, said: "Mr. President, as the member of the committee who did not agree to this bill, I have thought it proper that I should make a brief statement of the grounds on which I did not concur with my colleagues.

"I regard this bill, Mr. President, as a compromise. It will take its place alongside of the compromise of 1820, and the compromise of 1850. By the compromise of 1820, all the territory south of 36° 30' was given over to slavery; and, when the time came to settle the territory north of that line, the compromise was destroyed. By the compromise of 1850 the institution of slavery got the immediate benefit of the fugitive-slave law, which gave it such prestige, power, and confidence as made it aspire to the complete conquest of the country.

"I believe that Rutherford B. Hayes has been elected President of the United States; he has been elected under the forms of law and according to law, and that he is elected in the hearts of the people; and I believe that if he should be counted in, as eighteen Presidents were successively counted in from the beginning of this Government, he would be inaugurated and there would be no violence and no revolution.

"I brought forward a bill some two years ago, which was afterward reported by the Committee on Privileges and Elections, for the purpose of having a law for the counting of the electoral vote. I did not claim that that bill was perfect. It was not in view of any contingency or case. It, however, was in one respect a safe bill, and that is, leaving out of view who should count the vote, whether the President of the Senate or the two Houses, it contained no word by which the two Houses could be authorized to go behind the returns of a State, to go behind the decision made by the returning officers of the State appointed by the State for that purpose; and the bill of 1800, if I remember correctly, expressly provided that the two Houses should not go behind the returns so far as to count the votes for electors. I am not an advocate for State sovereignty; I never have been; but I have been a consistent advocate of State rights as I am now. The Constitution of the United States confers upon the States the power to appoint electors in such way as the Legislatures of the

States may prescribe. This is the absolute right of each State. The mode of appointment is left to the Legislature of the State. The determination as to who have been appointed is left entirely to the State.

"Should Congress assume to determine who have been appointed so far as to go behind the action of the officers of the State appointed by the laws of the State for that purpose, Congress would absorb to itself the entire power, would become a grand returning board, without limit and without restraint. The very moment we undertake to go behind the determination of the officers of the State as to the result of a State election and to count and determine the result for ourselves, that moment we establish a revolution which ultimately will be the end of presidential elections. I am not now referring to the certificate of the Governor, which is prescribed not by State laws but prescribed by the act of Congress; but I am referring to that determination of the result of elections as prescribed by the laws of the States. The States have the right to appoint electors; the Legislature has the right to prescribe the method; and the evidence as to the appointment, as to who has been appointed, is left to the States as absolutely and as completely as the appointment itself.

"I listened to the very able speech of the Senator from Vermont (Mr. Edmunds) with great interest. He made a distinction, I believe, which is correct, that there are two classes of powers conferred by the Constitution. Where a power is conferred directly upon any department of the Government by the Constitution, that power cannot be taken from that department; that power cannot be delegated; but where the Constitution simply imposes a duty, but does not vest any particular department with the performance of that duty, then Congress may by law determine who shall discharge that duty.

"If I understood the Senator aright, he took the ground that the counting of the votes was a duty imposed by the Constitution, but that the Constitution had not located it, had not said who should do it. He denied that the duty was imposed upon the President of the Senate. He said the President of the Senate was directed to open all the certificates, but he was not directed to count them. He was directed to open them 'and the votes shall then be counted.' The power and duty to count were not located in the two Houses; the Constitution did not say that any more than it said the President of the Senate should count them. It said the votes should then be counted. Assuming, for the sake of the argument, his position to be true that there is nothing in the Constitution, any part of it, that indicates that the President of the Senate shall count the votes as well as open them; assuming it to be true that the Constitution simply imposes a duty to count the votes, but does not say by whom the duty shall be performed, and therefore that

Congress is left free to impose the performance of that duty upon a commission and upon any person it sees proper to put in that situation, his position would be tenable.

"The position of the Senator is that the Constitution created the duty to count the votes, but did not locate the power or duty anywhere, and that Congress, under the general power to pass all laws necessary and proper to carry into execution the powers given to any department or to the Government of the United States, may by law devolve that duty upon a commission or upon any person.

"I understand this position of his to be necessary to another part of his argument, because if the power to count the votes, which I believe he expressly disclaims, is lodged in the two Houses by the Constitution and is not a general power to be executed by law, then this power must be exercised by the two Houses only and cannot be delegated; whereas if it is simply a duty imposed to count the vote, then Congress may locate that duty wherever it sees proper by law. The position of the Senator is that neither the President of the Senate is vested with this power nor are the two Houses of Congress, that neither can exercise it in the absence of a law passed for that purpose; and this brings us then to a very great fact, which is that for eighty-four years Presidents were counted in and inaugurated without any authority in point of law by any person. The President of the Senate had no power to do it because there was no law authorizing him to do it. The two Houses had no power to do it because there was no law authorizing them to do it. It was a part of the Constitution which had not been carried into operation by legislation. Now, sir, is it true that for eighty-four years Presidents were counted in and inaugurated without authority of law? That would be a very great discovery if it were true.

"I believe that this power is vested somewhere, located somewhere, that if it does not belong to the President of the Senate it belongs to the two Houses. It is in one place or the other. But whatever may be the location, in theory, that the two Houses cannot exercise this power without legislation I think is correct.

"I do not intend now to go into an argument as to the right of the President of the Senate to count this vote against the powers of Congress. I am simply stating what I have heretofore understood to be the general doctrine, that in the absence of legislation the President of the Senate must count this vote; that if now we fail to agree upon a bill we should simply leave this question where it has been left for eighty-four years; and that the President of the Senate in counting this vote would be guilty of no greater usurpation than he has been guilty of for three-quarters of a century.

"We are discussing this bill in the presence of a case. We are discussing it in the presence of an actual condition of things. I shall be

anxious to have a fair bill adopted. I was exceedingly anxious to agree with the committee in the recommendation of a fair proposition; but when we are preparing a bill in the presence of a case made up, ready to be tried, the papers all signed and in due order, I insist that it shall be a fair bill under which the condition of things shall not be unfairly changed.

"I wish to say a few words in regard to this bill. If the power to count this vote is vested in the two Houses, and is not in the President of the Senate, then the duty must be performed by the two Houses; it cannot be delegated. This was the precise point, as I understood it, of the argument of the Senator from Vermont, because if he were to admit that the power is vested in the two Houses under the Constitution, he would be compelled to admit, good lawyer as he is, that that power cannot be delegated; but by placing it as a floating power, that is located nowhere until it is located by an act of Congress, then Congress would have the right to deposit this power with a commission.

"The commission created is a mixed commission, partly inside and partly outside, five Senators, five Representatives, and five judges. The judges are taken, not because they are judges, not because they are members of the Supreme Court, but because they are men of eminent character who happen to occupy that position. Four of them are chosen by circuits. The Senator from Vermont hardly did himself justice on Saturday when he argued that they were chosen by circuits on account of geographical distribution. They were chosen by circuits, as I understand it, not because of geographical distribution, but because of the political antecedents of the men who preside in those circuits. When the bill, instead of naming the judges, names the circuits, it presents a harmless little sham that deceives nobody.

"Four judges are taken by the bill because of their political antecedents, two on each side. In other words, the four judges are selected upon political grounds, equally divided, it is said, in order to make the bill a fair one. Nevertheless, selection is made in the Supreme Court on political grounds. If we are to deal with the Supreme Court—and I confess I looked upon that proposition with more favor than the other—I thought we ought to have taken the whole court, and not admit by any form of provision that we believed politics entered into the court; not divide it up on political grounds; not assume that the duties of that court are liable to be influenced by their political prepossessions, but take the whole court as a court. I thought that the least objectionable. It is true the other day, when there was a constitutional amendment here referring this matter to the Supreme Court, I voted against it; but I did so chiefly because it reenacted the electoral college and reenacted an election of President by the House of Representatives by States. But if we are to take an outside

tribunal it seemed to me to be far better that we should take the court and take it as a court, take all the judges, and not pick around among them to get an equal number on political grounds. I thought that was a blow at the court and would do it more injury than any course that could be taken. They are to take a fifth. Four judges are to select a fifth.

"Here is a very grave question presented, right at the threshold: What is the character of these commissioners? Are they officers? They are sworn; the very highest duty is imposed upon them, the decision of the greatest case that can arise under our institutions. If they are officers, are they not to be appointed as other officers under the Constitution of the United States are appointed? Can we take four men by name and authorize them to appoint the fifth and submit to this court thus organized this great case? Is it not a court to all intents and purposes? You call it a commission, but names are nothing. It is a court invested with the very highest jurisdiction to decide both law and fact, expressly charged with deciding the question, What are the powers of each or of both Houses of Congress? and expressly charged with finding the fact as to who have been elected electors for President of the United States. If it is a court, should it not be appointed as the Constitution requires other courts to be, and if these men are public officers, should they not be appointed as officers of the United States are required to be appointed? This is a contrivance, to use the very mildest words, a contrivance, a patched-up thing, five Representatives, five Senators, four judges first, and they to choose a fifth, and thus this tribunal is to be created that is to make a President of the United States. There are no analogies for it in our Constitution or in our laws or in our history. We have no tribunals made up in that way.

"It is a fundamental principle of law, in connection with the election of a President, in preserving and defining the rights of the States, that the action of the States shall be received unquestioned by the Congress of the United States, or by that power, whatever it may be, that shall count the vote; and any authority conferred upon this commission, or that might be conferred by an act of Congress upon the President of the Senate or any other agency selected to go behind the returning board of a State and count the votes, would be, in my judgment, a gross violation of the spirit and letter of the Constitution, revolution, and the end of presidential elections under our system.

"I wish briefly to call the attention of the members of the Senate to this bill. I speak of the jurisdictional part, that part conferring jurisdiction upon this commission, and it is the vital part of the bill. We need not deceive ourselves for a moment about this business. We know that both parties are looking intently to that question and at that particular point. We may affect to be oblivious of it

here, but we understand that the decision of this presidential question depends absolutely upon that question; for if the principle shall stand that the action of the State authorities, those that are appointed to count the votes and to say by State laws who are elected, Rutherford B. Hayes is elected, and Mr. Tilden cannot be counted in except by overturning that principle. It is all in that, and the able lawyers of the Democratic party on this floor and everywhere understand that just as well as we do. I call attention to that part of this bill which gives the jurisdiction to this tribunal:

Every objection shall be made in writing, and shall state clearly and concisely, and without argument, the ground thereof, and shall be signed by at least one Senator and one member of the House of Representatives before the same shall be received. When all such objections so made to any certificate, vote, or paper from a State shall have been received and read, all such certificates, votes, and papers so objected to, and all papers accompanying the same, together with such objections, shall be forthwith submitted to said commission, which shall proceed to consider the same, with the same powers, if any, now possessed for that purpose by the two Houses acting separately or together—

“I may here remark that the bill proceeds upon a theory different from that of the Senator from Vermont in his argument. He assumes that the Constitution does not locate this power anywhere, but that it is to be located by law, while this bill goes upon the hypothesis that this power is located in the two Houses, and that this commission shall have what the two Houses have, more or less—

which shall proceed to consider the same, with the same powers, if any, now possessed for that purpose by the two Houses acting separately or together, and, by a majority of votes, decide whether any and what votes from such State are the votes provided for by the Constitution of the United States, and how many and what persons were duly appointed electors in such State, and may therein take into view such petitions, depositions, and other papers, if any, as shall, by the Constitution and now existing law, be competent and pertinent in such consideration.

“First, they are required to find what were the constitutional votes of a State. They are required to do a thing there which in my opinion the Constitution does not authorize, whether the power to count the votes be vested in the President of the Senate or in the two Houses. They are required to find, for example, under that provision whether the electors were eligible or ineligible as to their qualifications, while I maintain there is no time or place under the Constitution when the votes are counted for an inquiry of that kind. The duty is short and simple. The President of the Senate shall open the certificates in the presence of the two Houses and the votes shall then be counted. There is but one thing to do, and that is to count the votes. There is no time, there is no place, to try the question of the eligibility of the electors.

“This bill requires this commission to find

the facts, whether these electors were duly appointed. We will just put the word ‘elected’ instead of ‘appointed,’ for in this connection it means the same thing. They are required to find were these electors duly appointed? They are not required to find whether they have been duly certified by the State authorities as having been elected. No, sir; but they are required to find the fact were they duly appointed or elected? If it had said that this commission shall find how many electors there were, and whether they were duly certified as having been elected by the State authorities or the returning board created for that purpose, we could understand that; but they are required to find the fact as to who was elected, and thus, as I apprehend this bill, they are required to go behind the returns from the States. If it was intended that they should find who had been certified by the States as having been appointed or elected, that would be simple and easily understood; but the bill quietly and innocently requires the commission to find the fact as to who was duly elected. Then it provides that for that purpose they—

May therein take into view such petitions, depositions, and other papers, if any, as shall, by the Constitution and now existing law, be competent and pertinent in such consideration.

“In finding the fact as to who was duly elected, they are authorized to take into consideration petitions, unsworn evidence, depositions, papers of all kinds, reports, everything that may be put in for the information of Congress. If these things are not to be considered in determining who has been elected, then the reference is useless. If this commission is to be controlled by the State authorities, by those who have been certified as elected by the returning officers of the several States, then they have no occasion to look at these petitions, memorials, and reports. The bill invites them to look at these papers, invites them for a purpose, and there can be no use in looking at them if the other principle of law is to be observed, that they are to be governed by the returns made by the officers of the several States.

“Now, Mr. President, I think I do the intelligence of these distinguished Democratic Senators but justice when I say that they would not go for this bill except that it gave them a chance for the only thing that can count Mr. Tilden in, and that is, to go behind the returns. Outside of that he has no chance, no possible hope; and that these distinguished and eminent lawyers go for a bill which at the very beginning cuts off and shuts out this their only hope, I must be excused for saying that I do not believe it.”

Mr. Conkling, of New York, said: “I have heard it suggested that something in this bill implies, that going behind the faculties of the States, going behind the lawful exercise of that power which the Constitution reposes in the States, and wherewith the Constitution crowns

them, this commission may inquire at large, by canvassing the votes cast in parishes or even precincts, by going into the question whether those who voted were all that should have voted, whether they voted as they wished to vote—in short, that the commission may become a national ‘returning board.’ The law has this ancient maxim—‘that is certain which can be rendered certain.’ We say in this bill, ‘take the Constitution as it stands; that is your guide; there you will find the boundaries of your power; you shall not overpass them; execute the Constitution, and stop.’

“But, says one Senator, why does not the bill specify all the things these men are to do? To ask the question is to suggest unnumbered answers. Answers spring up as the army of Roderick Dhu sprang from the heather, when a whistle garrisoned a glen. In the first place, there is an irreconcilable difference of opinion as to the nature and extent of the power of the two Houses, or either, to pry into or penetrate the act of the States. In the next place, were all agreed, it would be impossible in a bill to embody a treatise or commentary which should provide for every contingency or possibility. It was Dean Swift who made a written schedule for his attendant of all the things he was to do; each and several his duties were set down; but on a Sunday Dean Swift fell into a ditch and called for assistance, but the attendant produced his schedule and said he found nothing there which required him to help anybody out of a ditch on Sunday. It was supposed by the committee, as the sense of its members was only finite, and very finite, that when they called, in addition to five picked men of each House, five experts in the law, men who had been selected from the great body of the nation for their training and adaptation to exploring legal distinctions and ascertaining legal truth, it was hardly worth while to attempt to accompany this trust of provisional authority with a minute bill of particulars of all the things which might be done, and how, and what in detail must not be done.

“It might have been possible, by restraint and exclusion, to put fetters on these fifteen members. Every Senator who hears me knows that any attempt to run the exact boundaries of the power to admit evidence, any attempt by the concurrent action of the two Houses to agree upon a universal solvent, to come to that exact unit of accuracy in defining jurisdiction and pertinence of evidence which all would approve in advance, although a possibility in theory, would be impossible in reality.

“The Senator from Massachusetts (Mr. Dawes), in a tone which few beyond me hear, inquires whether I mean that they have no limit in this bill. Mr. President, I had supposed that the Constitution had raised not only a hedge and fence, but a wall of limit to the powers it confers. I supposed that, when five of the most largely-instructed and trusted

members of the Senate, and five of the most largely-instructed and trusted members of the House, were authorized to meet five judges of the highest and most largely-instructed judicial tribunal of the land, we might trust to them to settle what a court of oyer and terminer settles whenever it is called upon to determine whether it has jurisdiction to try an indictment for homicide or not. I supposed that, giving it the instrument by which its jurisdiction is to be measured, we could trust this provisional tribunal of selected men to run the boundary and fix the line marking their jurisdiction, and to blaze the trees. I hear a voice ask, ‘Where they please?’ This cannot have been the voice of the Senator from Massachusetts. That Senator is a lawyer, and he knows that judges cannot lawfully do anything because they please. They must stop where the law stops.

“I have repeatedly insisted that the Constitution and the existing law is the boundary; and I believe the act of 1792 is the only statute applicable. No, I am wrong; the act of 1845, touching the choice of presidential electors, may also have a bearing. Inasmuch as the Constitution, the law, and the acts of Congress, of which I think there are but two, prescribe the power; inasmuch as we make the existing law the guide-board; inasmuch as we command and conjure the commission to go according to the Constitution, and to keep within its limits, I supposed it could not be a roving commission to traverse at large the realms of fact, superstition, and fiction.”

Mr. Dawes, of Massachusetts, said: “I hear the Senator state distinctly that this commission is to be bound by the Constitution; but I hear him state just as distinctly that, in his opinion, this commission, being bound by the Constitution, could not invade what I deem to be the prerogatives of the States to settle the title of their own electors. If I could hear him and all of the members of that committee make the same clear and unequivocal assertion I should be greatly comforted. My discontent and apprehension arise from the fact that, while I hear him make this equally unequivocal expression of his own opinion of what the boundary is, I hear others with equal distinctness, and clearness, and positiveness, say that, though they also believe this commission to be bound by the Constitution, they believe the Constitution authorizes them to go into and settle questions which, in my mind, belong exclusively to the States to settle. That is what troubles me, and the Senator will pardon me for interrupting him in the way I have in order to get as distinctly as I could from the members of this committee, not only what I knew before every one of them would say, that the commission would have to limit the exercise of their power by the Constitution, but, inasmuch as one member of this committee believes the Constitution will stop them at one point, and another member of the committee believes it will not, I suggest to the Senator, would it not

be safer for us by a statute to limit them? Then we shall know where the boundary is."

Mr. Conkling: "The boundary of this power is not only one of the bones of contention, but the very marrow of it. If there were no doubt in that regard, we should need no bill. If the two Houses, and the members of the two Houses, were clear and concurrent in their views, we should need no commission. It is because of an irreconcilable conflict of opinion that we propose to execute the Constitution in this way; and, if I have not so said before, I want now to say that, in my opinion, it is not only a competent execution of the Constitution, but one substantial, effectual, and compliant with its spirit strictly. But the Senator from Massachusetts says he has heard the Senator from New York say something, and the Senator from somewhere else say something; may I remind my honorable friend that what I may say in this regard, or even what he may say, is only a puff of air? The commission is to say, on the oaths of its members and subject to our review, what by the Constitution is committed to it. If the Senator from Massachusetts shall be of this commission, what he might think, or if I were to be of it what I might think, would then be of great moment. I submit to him, it is anise and cummin, and not of the weightier matters of the law, to consider what may be thought by this Senator, or that Senator, of the range and province within which this commission may move. They must ascertain for themselves. If the question in the State of New York is whether the Court of Oyer and Terminer only, or also the Court of Sessions, has power to try indictments for homicide, no matter whether it be more or less probable that A B or C D may be convicted in one court or the other, the court passes upon the question of its jurisdiction. So this court of first instance, if it holds for example that it has no power to go behind the certificate of the Governor of Oregon; that, although he certified three men were electors, one of whom confessedly—I say confessedly in the popular sense—never received a majority by which alone he could be chosen; suppose they hold that that certificate is a barrier which neither House can pass, and that the three votes are to be counted, as certified by the Governor of Oregon, so be it; and the two Houses are brought to say whether they will approve, or will disapprove, that decision. On the contrary, suppose they say, 'We will go behind the certificate; we will go behind the certificate in Louisiana, not to inquire about the weight of evidence, not to find out whether the returning board found rightly or wrongly, not even to inquire whether they found honestly or corruptly, but we will go behind the certificates merely to inquire as a jurisdictional question whether the returning board of Louisiana had before it, and was authorized to act upon, the evidence of the popular will.' They so report, and the honorable Senator from Massachusetts, having one vote,

and a potent voice, will pass upon the report. On the contrary, suppose they say they have a right to go a little further than that, and to ascertain whether the returning board of Louisiana, or the Governor of Oregon, was moved by corrupt motive. Suppose they hold that they may search even so far, and condemn what has been done in Oregon because greed or corruption moved the hand that held the pen when the certificate was written. Upon such a ruling the Senator from Massachusetts, sitting as a member of the court of review, is to pass on his oath and on his responsibility as a representative of a State."

Mr. Dawes: "I am sincerely anxious to understand the whole scope of this bill; and, if I understand the Senator aright now, he states that there was in this committee an irreconcilable difference as to how far—"

Mr. Conkling: "The Senator must pardon me there. I did not so state. I spoke of nothing in the committee; I spoke at large, saying that there is an irreconcilable difference of opinion. I avoided saying anything about the committee."

Mr. Dawes: "I think the Senator is right. The Senator has corrected me properly. The Senator says the committee recognized an irreconcilable difference upon how far the Constitution will permit this commission to go into an investigation of matters that belong to the States. To meet that irreconcilable difference, as I understand him to say, they propose in the bill to take the construction of the Constitution from this commission."

"When I pressed the Senator from New York to tell me what he understood to be its limit, how far this court could go in its jurisdiction, I drew out from him the confession that this bill has been so framed that the commission will have no other limit than what its discretion shall put upon this court. At first the Senator from New York told me that they had defined this court as every court in the State of Massachusetts was defined in the limitation of its jurisdiction; but when I called his attention to the fact that the first great prominent feature of a court in Massachusetts was a limit by law to its jurisdiction, the Senator felt it necessary then to treat the State of Massachusetts as out of the pale of any sort of construction which it was proper or good or wise to put upon the jurisdiction of this court. I say to him that, in the object and purpose of this commission, the people of the State of Massachusetts are in sympathy with the committee, and are ready to support it; but they are not ready to create a court that shall go into Massachusetts and take up the work, which they by law have confided to their Governor and Council, to count and determine the vote by which Massachusetts has appointed her electors."

"The Senator says that, if everybody were as perfect as Massachusetts, the electoral vote would count itself. I only wish to say that,

after the debate of to-day, I believe that Massachusetts would hold me responsible if I did not make some effort to define by law the jurisdiction of this court, so that it might not take jurisdiction of that which belongs to the State of Massachusetts, to the State of New York, and to all the States. However much I might have hesitated, before this debate commenced, to undertake to offer any amendment to the work of the committee, so anxious was I to see the bill become a law, yet after the debate of to-day has put upon the record that the phraseology of this bill has been so framed as to put no limit whatever upon the jurisdiction of this court except that which the court itself shall set to its jurisdiction, I beg to offer an amendment to the bill. Therefore, at the end of the eighty-sixth line, on the sixth page, I move to insert the following, and I will only say that it is the language taken from the bill of 1800 as it was reported to the Senate:

Provided, That no petitions, exceptions, or other paper shall be considered by said commission which has for its object to dispute or draw into question the number of votes given for an elector in any of the States, or the fact whether any elector was chosen by a majority of the votes of said State."

Mr. Bayard, of Delaware, said: "It will be observed that this bill is enacted for the present year, and no longer.

"This is no answer to the alleged want of constitutional power to pass it, but it is an answer, in great degree, where the mere policy and temporary convenience of the act are to be considered.

"In the first place the bill gives to each House of Congress equal power over the question of counting, at every stage.

"It preserves intact the prerogatives, under the Constitution, of each House.

"It excludes any possibility of judicial determination by the presiding officer of the Senate upon the reception and exclusion of a vote.

"The certificates of the electoral colleges will be placed in the possession and subject to the disposition of both Houses of Congress in joint session.

"The two Houses are coördinate and separate and distinct. Neither can dominate the other. They are to ascertain whether the electors have been validly appointed, and whether they have validly performed their duties as electors. The two Houses must, under the act of 1792, 'ascertain and declare' whether there has been a valid election, according to the Constitution and laws of the United States. The votes of the electors and the declaration of the result by the two Houses give a valid title, and nothing else can, unless no majority has been disclosed by the count; in which case the duty of the House is to be performed by electing a President and of the Senate of electing a Vice-President.

"If it be the duty of the two Houses 'to ascertain' whether the action of the electors

has been in accordance with the Constitution, they must *inquire*. They exercise supervisory power over every branch of public administration and over the electors. The methods they choose to employ in coming to a decision are such as the two Houses, acting separately or together, may lawfully employ. Sir, the grant of power to the commission is in just that measure, no more and no less. The decision they render can be overruled by the concurrent votes of the two Houses. Is it not competent for the two Houses of Congress to agree that a concurrent majority of the two Houses is necessary to reject the electoral vote of a State? If so, may they not adopt means which they believe will tend to produce a concurrence? Finally, sir, this bill secures the *great object* for which the two Houses were brought together: *the counting of the votes of the electoral college*; not to elect a President by the two Houses, but to determine who has been elected agreeably to the Constitution and the laws. It provides against a failure to count the electoral vote of a State in event of disagreement between the two Houses in case of single returns, and, in cases of contest and double returns, furnishes a tribunal whose composition secures a decision of the question in disagreement, and whose perfect justice and impartiality cannot be gainsaid or doubted.

"The tribunal is carved out of the body of the Senate and out of the body of the House by their vote *viva voce*. No man can sit upon it from either branch without the choice openly made by a majority of the body of which he is a member that he shall go there. The five judges who were chosen are from the court of last resort in this country, men eminent for learning, selected for their places because of the virtues and the capacities that fit them for this high station.

"Mr. President, objection has been made to the employment of the commission at all, to the creation of this committee of five Senators, five Representatives, and five judges of the Supreme Court, and the reasons for the objection have not been distinctly stated. The reasons for the appointment I will dwell upon briefly.

"Sir, how has the count of the vote of every President and Vice-President from the time of George Washington and John Adams, in 1789, to the present day been made? Always, and without exception, by tellers appointed by the two Houses. This is without exception. Even in the much commented case of Mr. John Langdon, who, before the Government was in operation, upon the recommendation of the Constitutional Convention, was appointed by the Senate its president for the sole purpose of opening and counting these votes. He did it, as did every successor to him, under the motion and authority of the two Houses of Congress, who appointed their own agents, called tellers, to conduct the count, and whose count being reported to him was by him declared.

"From 1793 to 1865 the count of votes was

conducted under concurrent resolutions of the two Houses, appointing their respective committees to join 'in ascertaining and reporting a mode of examining the votes for President and Vice-President.'

"The respective committees reported resolutions fixing the time and place for the assembling of the two Houses, and appointing tellers to conduct the examination on the part of each House respectively.

"Mr. President, the office of teller or the word 'teller' is unknown to the Constitution, and yet each House has appointed tellers and has acted upon their report, as I have said, from the very foundation of the Government. The present commission is more elaborate, but its objects and its purposes are the same, the information and instruction of the two Houses who have a precisely equal share in its creation and organization; they are the instrumentalities of the two Houses for performing the high constitutional duty of ascertaining whom the electors in the several States have duly chosen President and Vice-President of the United States. Whatever is the jurisdiction and power of the two Houses of Congress over the votes and the judgment of either reception or rejection, is by this law wholly conferred upon this commission of fifteen. The bill presented does not define what that jurisdiction and power is, but it leaves it all as it is, adding nothing, subtracting nothing. Just what power the Senate by itself, or the House by itself, or the Senate and the House acting together, have over the subject of counting, admitting, or rejecting an electoral vote in case of double returns from the same State, that power is by this act, no more and no less, vested in the commission of fifteen men; reserving, however, to the two Houses the power of overruling the decision of the commission by their concurrent action.

"The delegation to masters in chancery of the consideration and adjustments of questions of mingled law and fact is a matter of familiar and daily occurrence in the courts of the States and of the United States.

"The Circuit Court of the United States is composed of the district judge and circuit judge, and the report to them of a master is affirmed, unless both judges concur in overruling it.

"Under the present bill the decision of the commission will stand unless overruled by the concurrent votes of the two Houses.

"I do not propose to follow the example which has been set here in the Senate by some of the advocates as well as the opponents of this measure, and discuss what construction is to be given and what definition may be applied or ought to be applied in the exercise of this power by the commission under this law.

"It will be observed that all the questions to be decided by this commission are to be contained in the written objections. Until those objections are read and filed, their contents must be unknown, and the issues raised by

them undescribed. But whatever they are, they are submitted to the decision of the commission. The duty of interpreting this law and of giving a construction to the Constitution and existing laws is vested in the commission; and I hold that we have no right or power to control in advance, by our construction, their sworn judgment as to the matters which they are to decide. We would defeat the very object of the bill should we invade the essential power of judgment of this commission and establish a construction in advance and bind them to it. It would, in effect, be giving to them a mere mock power to decide by leaving them nothing to decide.

"I heard the question asked of the honorable Senator from Ohio (Mr. Sherman), by his colleague (Mr. Thurman), the other day, why it was that he should have been condemned a year or so ago for not giving a construction to a certain act entitled 'An act to provide for the resumption of specie payments.' Why, sir, that act was, in all its terms, mandatory. It commanded the Secretary of the Treasury to do a certain act. Now, what we meant him to do was what we should have expressed; and when an order was given by Congress, it was reasonable to ask, 'What construction do you put upon your own order?' And it was such a question the honorable Senator (Mr. Sherman) declined to answer, or to say what he meant in his orders to the Secretary of the Treasury. But in the present case we submit the decision as to the matters in question to a certain tribunal, and we command them to do nothing *but exercise their own judgment*. What that judgment will be we cannot foretell, and we have no right to ask. It is *their* judgment we seek. What does this commission decide? It is to pass upon cases of double returns. As to single returns there is no submission to it. What does it decide? That a certain one of two returns is the true return from a State. This decision being made, the returns are reduced in number to a single return. The case assumes the condition contemplated by section 1 of the bill, relating to votes from any State from which but one return has been received, and which can be rejected only by the affirmative vote of the two Houses; the power of the two Houses is precisely the same in either case, and under both sections of the bill nothing more of their power is relinquished in one case than in the other.

"Mr. President, there are certainly very good reasons why the concurrent action of both Houses should be necessary to reject a vote. It is that feature of this bill which has my heartiest concurrence; for I will frankly say that the difficulties which have oppressed me most in considering this question a year or more ago, before any method had been devised, arose from my apprehensions of the continued absorption of undue power over the affairs of the States; and I here declare that the power, and the sole power, of appointing the electors

is in the State and nowhere else. The power of ascertaining whether the State has executed that power justly, and according to the Constitution and laws, is the duty which is cast upon the two Houses of Congress. Now, if, under the guise or pretext of judging of the regularity of the action of a State or its electors, the Congress, or either House, may interpose the will of its members in opposition to the will of the State, the act will be one of usurpation and wrong, although I do not see where is the tribunal to arrest and punish it except the great tribunal of an honest public opinion. But, sir, that tribunal, though great, though in the end certain, is yet oftentimes slow to be awakened to action; and, therefore, I rejoice when the two Houses agree that neither of them shall be able to reject the vote of a State which is without contest arising within that State itself, but that the action of both shall be necessary to concur in the rejection.

"If either House may reject, or by dissenting cause a rejection, then it is in the power of either House to overthrow the electoral colleges or the popular vote, and throw the election upon the House of Representatives. This, it is clear to me, cannot be lawfully done unless no candidate has received a majority of the votes of all of the electors appointed. The sworn duty is to ascertain what persons have been chosen by the electors, and not to elect by Congress."

Mr. Morton: "I should like to ask the Senator, if it does not interrupt him, whether he regards the five judges acting on this commission as acting in their character as judges of the Supreme Court, if that is their official character, and that this bill simply enlarges their jurisdiction in that respect?"

Mr. Bayard: "Certainly not, Mr. President. They are not acting as judges of the Supreme Court, and their powers and their jurisdiction as judges of the Supreme Court are not in any degree involved; they are simply performing functions under the Government not inconsistent, by the Constitution, or the law, or the policy of the law, with the stations which they now hold. So I hold that the employment of one or more of the Supreme Court judges in the matter under discussion was appropriate legislation. We have early and high authority in the majorities in both House and Senate in the bill of 1800, in both of which Houses a bill was passed creating a commission similar to that proposed by this bill, and calling in the Chief-Justice of the United States as the chairman of the grand committee, as they called it then, a commission as we term it now."

Mr. Thurman, of Ohio, said: "Mr. President, it has been said that this bill is novel. It is novel neither in principle nor in its framework; and he who thinks it is novel must think so because he has not carefully studied the Constitution of his country or read its history with profit. Again, it has been said that it goes outside of the Constitution. It does

not go outside of the Constitution, unless the opinions of the most eminent men who have lived since the Government was formed are worthy of no regard. Again, it is said that it constitutes a court to decide a single and existing case. Why, sir, if that were true, the case to be decided by it is one of such transcendent importance, one upon which the interest and prosperity, and perhaps the peace of forty-odd millions depend, a question so transcendent that the very perpetuity of the republic itself may depend upon its peaceable solution—if it were so that the bill constitutes a court for the decision of a single case, there never was greater reason to constitute a court. Before the importance of this subject other jurisdictions sink into comparative insignificance. If the tribunal to be created by this bill shall render a judgment that in the opinion of enlightened history shall be a sound, and honest, and just judgment, it will be one of the grandest tribunals in the minds of students and in the reverence of the people of this republic that ever sat in this land.

"Again, it is said that it will give the making of the President to one man. Assuming that the five Senators who are chosen will be so partisan, that the five Representatives who are chosen will be so partisan, that the five judges who may be on that tribunal may be so partisan and corrupt that every one of them, disregarding his honor, disregarding his obligations to his country, disregarding his obligation to truth and to law and to justice, disregarding the solemn oath that he is to take as a member of the commission, will be so corrupt that he will have no other guide for his decision than the behest of party, it is said that the decision will be that of one man, as the fifteenth member happens to be a Democrat or a Republican. I say with the Senator from Michigan that if the public men of this country have reached that depth of corruption and degradation, our institutions have lasted too long.

"It has been further said that this bill infringes the prerogative of the President of the Senate. After the argument of the Senator from Vermont and of the Senator from New York I shall certainly not speak upon that point. I have one single remark, however, to make to those who are talking about adhering to precedents, and who say that we want no law, that all we have to do is to go on as we have done for eighty years or more. I want to say to them that I defy any man to show me one single instance in which the President of the Senate ever decided a disputed question in respect to an electoral vote. You cannot find in all our history one single instance. The only time that ever there was an expression by a President of the Senate upon that subject was the positive disclaimer by Mr. Mason that he had any such authority. So much for that.

"Now I come to the amendment of the Sen-

ator from Massachusetts (Mr. Dawes). Really I should have liked very much better if the Senator from Massachusetts had come out boldly against the bill, for his amendment is a dagger-thrust at the heart of the bill, and nothing less. He says that this bill is framed because of conflicting views. He is entirely right about that. If there had been no conflicting views in respect to the interpretation of the Constitution among the members of the Senate and the members of the House of Representatives, and between the two Houses, there would be no necessity whatever for the bill. If both Houses were agreed that no vote should be counted unless both Houses concurred in receiving it, there would be no necessity for a bill. If we were all agreed that no vote should be rejected unless both Houses concurred in rejecting it, there would be no necessity for a bill. It is simply because there are these conflicting opinions, and that in the present position and posture of affairs these conflicting opinions are likely to plunge the country into discord, to paralyze business, paralyze trade, unsettle the habits and opinions of the people, destroy respect for the Government, and jeopard the best interests of the republic, that a mode of getting out of this difficulty is provided by the bill. Have Senators reflected how numerous are the points upon which there are conflicting opinions on this subject? Let me enumerate a few of them. I will not say a few, either, but not all by any means.

"When your committee got together, after a free and friendly conversation and discussion of the subject, and the reading of no small amount of history, it was soon discovered that to frame a bill upon the idea of defining by law what the Constitution means, settling that by law would be a simple impossibility, and that no such bill could pass; for you could not frame a bill according to the one theory or the other opposite theory without its being supposed that it gave advantage to one party or to the other party. In the present circumstances of our country, and as the majorities of the two Houses are of different politics, it was perfectly clear that any bill that gave the least advantage, ay, the weight of the dust in the balance, to either party, could not become the law of the land. Therefore it was that we did not attempt to do what the Senator from Massachusetts thinks is so easy to do, namely, to interpret the Constitution in a statute. It would have been the most idle work that ever sane men attempted had we tried to do any such thing. All that we could do was to constitute a tribunal as honest and impartial and fair as we could make it, as likely to be intelligent and learned and honest as we could find, and as likely to command the respect of the country as any we could frame, and submit to that as we submit to our supreme judicial tribunal, the Supreme Court of the United States, the constitutional questions that are involved

in this subject. Is there anything strange or novel in that? Is there a constitutional question, or can there be one, that we do not submit to the final arbitrament of the Supreme Court of the United States? In a case like this, where there is no opportunity of any such submission, where such a submission would be of doubtful constitutionality in view of the power conferred by implication at least upon Congress, is there anything strange in getting the aid, the advice, the judgment of a tribunal so carefully framed to make it honest, to make it able, to make it learned, to make it command the respect of the country, as the tribunal provided for in this bill? Is there anything strange in that, and especially is there anything strange in it when the two Houses of Congress, being charged with this great duty, reserve the power to overrule the decision of that tribunal and to decide otherwise, if the two Houses consider its decision to be wrong? I should like to know where there is anything that is justly subject to censure in a proposition like that.

"But I said that I would state some of the conflicting opinions upon the interpretation of the Constitution to show with what your committee had to grapple, and to show what would be the field of inquiry upon which we should have to enter if we were to take the suggestion of the Senator from Massachusetts and proceed to interpret the Constitution by statutory provisions. Let us see what they are. One proposition is, that both Houses must concur to count the vote. That is a proposition very strongly and very logically supported by able men. On the other hand, it is said that the true interpretation is that both Houses must concur to reject a vote. Right upon that fundamental question, so important, there is a direct antagonism of opinion. That is number one.

"Let us go to number two. It is said that the two Houses act as one body, as a joint convention, in counting the vote, and the opposite opinion is that they act as separate organized bodies; the first opinion having the sanction of the great name of Mr. Jefferson and nearly all his supporters in 1800; the second proposition, directly antagonistic to the first, having the support of the more practical men of later times, and, indeed, it had the opinion of the party in the majority in 1800 in the Government. There is the second case of directly antagonistic opinions.

"Let us proceed to a third, that the House of Representatives is the sole judge whether there has been an election, and the opposite opinion is that the House is not the sole judge, but that the Senate has an equal right to decide. What more important question than that was or could be mooted? What question more fundamental in its character could be considered? And yet here are the most antagonistic opinions upon it. Writer after writer—men who have been Chief-Justices of the Supreme

Courts of their States—men who have held positions in the highest judicial tribunals of the land, are out in elaborate opinions on one side or the other side of that great question. How are you to decide that in a bill, and expect it to pass both Houses of Congress?

"That is the third. Let us proceed to the fourth: that touches the amendment. It is, that it is competent to go behind the certificate of the Governor; and the directly opposite opinion, that it is not competent to go behind the certificate of the Governor.

"The fifth is, that it is competent to go behind the decision of a canvassing or returning board, and, in opposition, that it is not competent to do so. Are you going to decide that question, and are you going to decide that in a bill? The Senator from Massachusetts intimates that if his amendment be put in the bill, there are certain Senators here who will not vote for it. He is quite right. He knows he is right. He knows it would not get one vote on this side of the Chamber, and it would not get one vote of a particular party in the other end of the Capitol, and yet he urges it, and still he talks about being in favor of the bill. Why, sir, upon that question, and upon other questions, we are obliged to submit in the first instance to this tribunal, composed as it is, to decide, reserving to ourselves power to reverse its decision if the two Houses can agree to reverse it.

"This question of going behind a returning board has a great many points in it. The Senator from Massachusetts seems to think that the only point in going behind a returning board is, whether we can go clear to the bottom and find out how seven millions of people vote. If he says that he is opposed to that, I say, So am I. But that is one thing. Going behind the decision of a returning board is quite another thing. And that brings me to notice this point of difference. It is held by some that the decision of a returning board may be impeached for want of jurisdiction, and by another set that it cannot be. I commend that to my friend from Massachusetts, who is a lawyer. On the one side, it is said that every act done by any tribunal, from the highest court in the country to that of a single individual, if it is beyond his jurisdiction, is utterly null and void, and that returning boards are no exception to this rule; and if they, beyond their jurisdiction, *ultra vires*, undertake to disfranchise people, every act of disfranchisement is utterly null and void. On the other hand, this proposition is denied. Let me submit to my friend from Massachusetts that the decision of the proposition the one way or the other does not take him down to the seven millions of voters who cast their votes at the last presidential election, nor one step toward it. Furthermore, let me tell him that that does not even touch the integrity of the returning board; for, if these returning boards had been composed of the eleven apostles after

Judas Iscariot had hung himself, and were they as pure as human tribunals could be, yet if they went beyond their jurisdiction, in the opinion of some men their acts would be utterly void.

"Then, sir, comes another question: Supposing them not to have gone beyond their jurisdiction, but to have acted fraudulently, some say that their decision may be impeached for the fraud, because fraud vitiates everything, even the decision of a court; and others say that no such inquiry is admissible at all.

"Then it is said that, if the decision of a returning board can be reviewed, the decision of all other election officers may in like manner be reviewed; and so you would have to review the decision of the one or two or three hundred thousand election officers in all the United States, and see whether they complied with the law or not. On the other hand, it is said that no such absurdity follows. That is the eighth case of conflicting opinion.

"Then the ninth case is this: It is said that, if the acts or omissions of election officers can be reviewed, the qualifications of the voters, the people themselves, and all the circumstances of the election, of bribery, intimidation, etc., may be inquired of; and that proposition is denied on the other side.

"Then the tenth case is: That the decision of the highest State court as to the powers of her returning board is conclusive. The opposite opinion is that it is not conclusive.

"Then the eleventh case of antagonism is: That, in adjudicating what are electoral votes, the strict rules of courts of law must govern in the reception of testimony; and the opposite opinion that a broader rule, the parliamentary rule of evidence, is the true rule.

"Now, sir, not to fatigue the Senate with further illustrations, here are eleven clear and well-stated propositions upon which the most directly antagonistic opinions are held; and the decision of any one of these propositions in this bill, if it could be made, would most probably decide the present contest in regard to who is President-elect. How, then, could anybody expect that your committee would undertake a task that would make their bill a *felo de se*—that would be certain to defeat it, and hold them up as mere partisans, or as men without sense in the conduct of public affairs?

"Sir, we took the only course that was open to us. We provided a tribunal, just as individuals who cannot settle their controversies must go to the courts, in order that they may be settled by a judicial tribunal. Just so, when these two Houses cannot agree, they must call in the benefit of an honest, an able, and a learned tribunal, and weigh its decision before they ultimately decide; and that is all that this bill does. Therefore it is that this bill leaves every question to this tribunal with the power, as I said before, of review and reversal by the two Houses. I will speak more about that presently. It decides not one of

them; it does not intend to decide one of them, except one single one: that is, it puts an end to the pretension that the President of the Senate is the sole judge who is to determine whether States are in the Union, and whether this body of men or that body of men are the electors of President or Vice-President of the United States.

"Mr. President, what are the advantages of this bill? I can only enumerate them; I cannot dilate upon them. In the first place, it does just what I have said: it puts an end to the pretension that the President of the Senate is the sole judge. In the second place, it requires him to produce everything purporting to be a return; for if it did not require him to do that, it would in effect leave him to be the sole judge, by keeping one return in his pocket and producing the other only. In the third place, it requires him to produce the returns in the alphabetical order of the States.

"I do not mean it to be understood, from anything I am saying here, that I have the slightest idea that the present occupant of the chair would do any unfair thing—not the slightest in the world. It is from no want of confidence in him that these provisions are put in the bill, but it is because they are right, and will be of good example. In fact, they are taken from the bill of the Senator from Indiana, which passed the Senate at the last session, long before it was known there would be any such contest as now exists in reference to the election of President. That had, therefore, sir, not the slightest reference to you.

"It requires him to produce the returns in the alphabetical order of the States—a very proper provision, and that ought long ago to have been adopted; for otherwise, if this country should be and the Senate should be cursed with an unscrupulous President, if he had the discretion to produce the returns just in such order as he saw fit, he might give a manifest advantage to one side or to the other.

"In the fourth place, it gives time for the consideration of objections; and in respect to that, I beg leave to say that I wholly dissent from the remarks of the Senator from New Jersey the other day, and from those of my colleague, too, who drew an inference as to the meaning of the Constitution from the want of time to consider these objections. This bill does give time to consider them, and to consider them with a reasonable degree of certainty and intelligence.

"In the next place, it provides for the meeting of the two Houses in a given place, and prevents any conflict between them as to the place of meeting.

"Sixthly. Ascending from these smaller matters, it provides for a tribunal as fair and competent as could be devised. If any man can find a fairer tribunal consistent with the Constitution, I beg him to propose it. But no such proposition has yet been made.

"In the next place, it secures a regular and

orderly mode of procedure; and next, it secures a decision, and thereby avoids a resort to violence. At the same time, it leaves the circumstances of the election open to future and legitimate criticism. In the mean time, it tends to bring peace and prosperity to the country, and to strengthen and preserve our republican institutions.

"These, sir, are the advantages of this bill, and they can scarcely be overestimated. I shall indulge in no rhetoric upon them. If the bare statement of them does not impress every Senator, it would be vain in me to attempt to do it by elocution. Then, sir, if this bill is advantageous, the only remaining question is, Is it constitutional?

"Upon that subject let it be granted that the Constitution contemplates that the votes shall be counted by the two Houses—which is certainly my understanding of the Constitution; yet it must be admitted that no mode of procedure is prescribed. That is left to the law-making power. The case, in its present condition, comes within the express provision of the concluding paragraph of section 8 of Article I. of the Constitution—the familiar paragraph, that Congress shall have power to make all laws necessary and proper, etc. Congress may, according to its best judgment, prescribe the mode; and this bill does nothing more.

"But it has been asked, May the concurrence of both Houses be required to admit or to reject a vote? Certainly, if the two Houses are to count, there must be some rule on this subject. It cannot be that the concurrence of the two Houses is required to accept, and that the concurrence of the two Houses is not required to reject. Those propositions cannot very well stand together. It must be that there is some rule which necessity requires to be adopted; and who is to prescribe that rule? Who can prescribe it but the law-making power? The Constitution has devolved a duty here, just as we devolve a duty on two judges who hold our Circuit Court. The court is held by two judges. What do we do in the case of the Circuit Court? The circuit judge and the district judge constitute the court. What do we do in such a case, but prescribe a rule of decision? and that rule is that, where they differ in opinion, the opinion of the circuit judge shall prevail."

Mr. Eaton, of Connecticut, said: "Under the Constitution the electoral vote of the country has been counted once in four years since 1789—nearly a century. Then, sir, there must have been, somewhere, a well-defined power. Where is that power? Either, first, in the President of the Senate; or, second, in the House of Representatives; or, third, in the two Houses, acting either jointly or concurrently.

"A great deal has been said here—I am not going to read books to-night—to show that the President of the Senate has not the power, under the Constitution, to scrutinize, investi-

gate, and determine the electoral votes. One Senator has said that he had no greater power than the Sergeant-at-Arms. I shall not be led into a lengthy argument on that subject. I simply want to state my view. I read from Article XII. of the amendments to the Constitution :

The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted.

"I will read a little further :

The person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed ; and if no person have such majority, then from the persons having the highest numbers, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President.

"I want to comment on this for a moment ; a mere statement of the case will save elaboration. It is utterly impossible that the framers of that instrument could have intended that the President of the Senate should be the conscience-keeper of the House of Representatives. It is an absurdity. Under a certain contingency the House of Representatives are then and there 'immediately' to elect a President of the United States. Upon the count of the President of the Senate? Not so, sir ; but upon their own scrutiny, their own investigation ; not anybody else's—neither that of the Senate nor that of the President of the Senate. How will they exercise that great duty which is devolved upon them under this contingency, except by making the scrutiny themselves, then and there? And that, let me tell the honorable Senator from Ohio, and the honorable Senator from Delaware, is the reason why this contrivance of theirs ought to sink into the earth. I shall allude to that in another connection.

"Great reliance has been placed here by my honorable friend from Indiana upon a certain, not opinion—it is not to be called an opinion—but a certain remark made by Chancellor Kent in one of his lectures. It is not an opinion. It lacks everything that goes to make up an opinion. I read from Kent, vol. i. :

The President of the Senate, on the second Wednesday of February succeeding every meeting of the electors, in the presence of the members of both Houses of Congress, opens all the certificates, and the votes are then to be counted. The Constitution does not expressly declare *by whom* the votes are to be counted and the result declared. In the case of questionable votes and a closely-contested election, this power may be all-important ; and I presume, in the absence of all legislative provision on the subject, that the President of the Senate counts the votes and determines the result, and that the two Houses are present only as spectators, to witness the fairness and accuracy of the transaction, and to act only if no choice be made by the electors.

"No lawyer of the eminence of Chancellor Kent could, with thought and reflection, give an opinion of that character. If, by the Constitution of the United States, the power is

placed in the President of the Senate, then it is to be exercised by him, no matter what is the character of the certificates which he has opened or of the votes which are there. Therefore this presumption of Chancellor Kent is not worthy of the opinion of a lawyer of his character. Then, I think, as I had the honor of saying here a year ago—and I have not found it necessary to change my opinion—that the scrutinizing, the counting, and the determining of votes is not a part of the duties of the presiding officer of the Senate.

"Now I come to the second point : Is it lodged in the House of Representatives? A very strong argument can be made, and has been made, that the very fact that, under a certain contingency, the House of Representatives is immediately called upon to elect a President of the United States, is sufficient evidence that they are to determine whether a President has been elected. In my judgment, that does not follow. They are to be satisfied by the examination which they make, as one of the Houses, that there has been no President elected ; and, then and there, immediately after they have satisfied themselves of that fact, the duty is devolved upon them by the Constitution of the United States to elect a President of the United States. Perhaps I ought to say here, not to take up much time, that it seems to me absolutely necessary, by the very terms of the instrument, that they must have the power to determine for their own satisfaction the existence of the fact.

"Then, I say, I differ with very eminent lawyers, now residents of this city, who have placed that position before the public mind, while I agree that the House, by its own action, must be satisfied that no candidate for President has a majority of appointed electors. If such be the opinion of the House, obtained by a scrutiny of the votes after you, sir, have opened the certificates, it is their duty to proceed then and there to elect, and they, and they only, can determine. What does the Constitution of the United States mean when it says that, unless a President is elected, then 'immediately' the House of Representatives shall proceed to elect? It means that the House must take action—that the House must determine whether a President has been elected ; and, if not, then to perform the duty which the Constitution devolves upon it.

The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted.

"When? Let us see whether you can contrive a commission and put this business into their hands. 'The votes shall then be counted.' When? 'Then.' Then it goes on further to say that, if a President is not elected by the electoral colleges, the House of Representatives shall choose 'immediately ;' and 'immediately' does not mean next week ; 'immediately' does not mean until after it has had this matter in hand. It means then, instantly—

when the House and Senate have determined on the subject; not the Supreme Court, not a committee, but the House and the Senate. When they have determined the count, if there be no election, then the House is to proceed at once to elect the President of the United States.

"Now, I say that, in my judgment, this power to count and determine is, by the Constitution, conferred upon the two Houses, to be executed by joint or concurrent action. I think Mr. Jefferson said—I have it not at hand before me—that it should have been done by joint action. I think that was his view. However, the practice of eighty years would govern in that matter. Whether it should or should not, there is one pregnant fact that I desire every Senator to take into his mind, and that is this: The number of Representatives and Senators is just exactly the number of your electoral vote.

"Concurrent action has been the rule and precedent for nearly a hundred years; but I now desire to assert—and I have not yet heard it denied by any Senator who favors this bill—that the power to count, scrutinize, and determine the electoral vote is conferred by the Constitution upon the two Houses, and must be by them exercised until the instrument is amended. I know that my honorable friend from Ohio sought to take shelter under the eighth section of the first article, which confers on Congress power 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or office thereof.'

"Now, permit me to say right here, that that section does not refer to a conferred power which can be executed by the officer or the body on whom it is conferred, any more than you can legislate upon an absolute power conferred by the Constitution upon the President of the United States to be Commander-in-Chief of the Army and Navy. You cannot make him lieutenant-general or rear-admiral. No sort of legislation can do it. If this power is absolutely conferred, either directly or by implication, it does not come under that section of the Constitution at all. It executes itself, as the ballot executes itself."

Mr. Thurman: "Does the Senator mean to say that Congress cannot control the power of the President as Commander-in-Chief of the Army and Navy?"

Mr. Eaton: "No, I did not say so. I meant to say that you cannot take from him that position; and I meant to say, that, if you and I have the authority to count and scrutinize and determine these votes, no power on earth can take it from us, and we cannot divest ourselves of that power. That is just what I mean to say, if it be so—and it is my opinion that it is so; I believe it is so. On my constitutional oath I believe that I have that power, and

therefore I cannot vote with you for this bill. I should sacrifice my honor as a man and a gentleman in doing it. The men who believe differently will vote differently. I cannot. I believe this power is vested in the Senate and House of Representatives, and it is for us to exercise it, not dodge nor shirk nor avoid it, but do our duty under it. I shall, so far as I am able."

Mr. Thurman: "Those are hard words—'dodge' and 'shirk.' What does the Senator mean?"

Mr. Eaton: "I beg the Senator to understand that I meant this: I cannot dodge or shirk a power that I believe is vested in me by the Constitution. I had before that said I should be dishonored to do it. God forbid that I should say that my honorable friend here or my honorable friend there should be dishonored in carrying out what they believe to be their constitutional power. I speak for myself, for nobody else.

"Mr. President, I am giving my reasons why I cannot vote for this bill. I do not suppose anybody will conceive that they are of the slightest value, but they are to me. Two new factors are introduced by this bill, entirely unknown before. First, outsiders—five men not known; the very committee, who say (not, perhaps, all of them, but many of them) that the House and Senate have absolute power over this matter—bring in a new factor in the shape of five judges of the Supreme Court. The next factor they bring in is the President of the United States. What business has he in this matter? You cannot make a bill; you cannot pass a law; you cannot legislate upon this subject, unless the President of the United States agree with you, without having two-thirds of the House and two-thirds of the Senate; and it will take two-thirds of both Houses under this bill in order to count an electoral vote, unless the gentleman at the other end of the Avenue agrees to it. It is an absolutely new factor. Heretofore a majority of each House has had the power to count and determine; but the committee say, under this bill, that they must have two-thirds, unless they can get another factor with them—the President of the United States.

"Under this bill the power of the House is taken from it which is conferred by the Constitution. The House, as I said before, under certain contingencies, is to elect the President of the United States. By this bill the House cannot determine whether that contingency arises; it is to be determined by somebody else, not the House.

"I do not care to elaborate on this matter. The measure, in my judgment, is in violation of the Constitution; in violation of that power which is vested in the two Houses, and cannot by them be delegated to any other body or class of men. Therefore I cannot vote for this bill."

The President *pro tempore*: "The amend-

ment of the Senator from Massachusetts (Mr. Dawes) is withdrawn."

Mr. Morton: "I offer the following amendment, to come in at the close of the second section of the bill:

Provided, That nothing herein contained shall authorize the said commission to go behind the finding and determination of the canvassing or returning officers of a State, authorized by the laws of the State to find and determine the result of an election for electors."

Mr. Edmunds: "As the possible effect of that amendment, if rejected—as I hope it will be—might be to raise in the mind of some doubtful Senator or judge an implication that, by refusing to adopt such an amendment, we had intended to confer the power to do what is there negated, I move to amend the amendment by striking out, after the word 'provided,' the negative words, so that it will read, 'Provided, that this tribunal shall be authorized to go behind the returns.' I shall vote against that amendment to the amendment, as a matter of course; for the object of the committee, I believe, successfully and undeniably attained, was to have this great cause tried upon the law as it is now, and not to declare that it should be tried upon some new principle of law, whichever way we might think we would be glad to have a new principle of law. In order, therefore, to guard against the slant which the rejection of this amendment might in some minds produce in respect of the opinions of the passers of this bill, I move to amend the amendment so that it will read conferring authority to do the thing that my friend does not wish to have them do, and which I do not wish to have them do. I shall vote against my own amendment, and I shall ask everybody else to do it; and then I shall vote against the amendment itself, and that, being rejected, will leave it without any implication."

The President *pro tempore*: "The amendment to the amendment will be reported."

The Chief Clerk: "It is moved to strike out of the amendment the words 'nothing herein contained shall authorize,' and insert after the word 'commission' the words 'shall have authority;' so as to read:

That the said commission shall have authority to go behind the finding and determination of the canvassing or returning officers, etc."

The President *pro tempore*: "The question is on the amendment of the Senator from Vermont to the amendment of the Senator from Indiana."

The question, being taken by yeas and nays, resulted as follows:

YEA—Mr. Cooper—1.

NAYS—Messrs. Alcorn, Allison, Barnum, Bayard, Blaine, Boggy, Booth, Boutwell, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chaffee, Christiancy, Clayton, Cockrell, Conkling, Conover, Cragin, Davis, Dawes, Dennis, Dorsey, Eaton, Edmunds, Frelinghuysen, Goldthwaite, Gordon, Hamilton, Hamlin, Howe, Ingalls, Johnston, Jones of Florida, Jones of Nevada, Kelly, Kernan, Mc-

Creery, McDonald, McMillan, Maxey, Merrimon, Mitchell, Morrill, Morton, Paddock, Patterson, Price, Randolph, Ransom, Robertson, Sargent, Sherman, Stevenson, Teller, Thurman, West, Whyte, Windom, Withers, and Wright—61.

ABSENT—Messrs. Anthony, Ferry, Harvey, Hitchcock, Logan, Norwood, Oglesby, Saulsbury, Sharon, Spencer, Wadleigh, and Wallace—12.

So the amendment to the amendment was rejected.

The President *pro tempore*: "The question recurs on the amendment proposed by the Senator from Indiana."

The question, being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Boutwell, Bruce, Cameron of Pennsylvania, Cameron of Wisconsin, Clayton, Dawes, Dorsey, Hamilton, Hamlin, Ingalls, Mitchell, Morton, Paddock, Patterson, Sargent, Sherman, Teller, and West—18.

NAYS—Messrs. Alcorn, Allison, Barnum, Bayard, Blaine, Boggy, Booth, Burnside, Chaffee, Christiancy, Cockrell, Conkling, Conover, Cooper, Cragin, Davis, Dennis, Eaton, Edmunds, Frelinghuysen, Goldthwaite, Gordon, Howe, Johnston, Jones of Florida, Jones of Nevada, Kelly, Kernan, McCreery, McDonald, McMillan, Maxey, Merrimon, Morrill, Price, Randolph, Ransom, Robertson, Saulsbury, Sharon, Stevenson, Thurman, Wallace, Whyte, Windom, Withers, and Wright—47.

ABSENT—Messrs. Anthony, Ferry, Harvey, Hitchcock, Logan, Norwood, Oglesby, Spencer, and Wadleigh—9.

So the amendment was rejected.

Mr. Sargent: "I offer the following amendment: After the word 'therein,' in line 89, page 6, to insert:

And said commission shall sit with open doors, except when in consultation on questions pending before it."

Mr. Edmunds: "I hope that amendment will not be adopted. If you cannot trust to these people, like any other committee or commission, to determine what the fitness of things is about such a matter, you had better not have it."

The President *pro tempore*: "The question is on the amendment of the Senator from California."

The yeas and nays were ordered, and, being taken, resulted as follows:

YEAS—Messrs. Blaine, Cameron of Pennsylvania, Clayton, Dorsey, Hamilton, Hamlin, Mitchell, Morton, Patterson, Sargent, Sharon, Sherman, and West—18.

NAYS—Messrs. Alcorn, Allison, Barnum, Bayard, Booth, Boutwell, Burnside, Cameron of Wisconsin, Chaffee, Christiancy, Cockrell, Conkling, Conover, Cooper, Cragin, Davis, Dawes, Dennis, Eaton, Edmunds, Frelinghuysen, Goldthwaite, Gordon, Howe, Ingalls, Johnston, Jones of Florida, Jones of Nevada, Kelly, Kernan, McCreery, McDonald, Maxey, Morrill, Price, Randolph, Ransom, Robertson, Saulsbury, Stevenson, Teller, Thurman, Wallace, Whyte, Windom, Withers, and Wright—47.

ABSENT—Messrs. Anthony, Boggy, Bruce, Ferry, Harvey, Hitchcock, Logan, McMillan, Merrimon, Norwood, Oglesby, Paddock, Spencer, and Wadleigh—14.

So the amendment was rejected.

The yeas and nays were ordered on the

passage of the bill, and, being taken, resulted as follows:

YEAS—Messrs. Alcorn, Allison, Barnum, Bayard, Boggs, Booth, Boutwell, Burnside, Chaffee, Christianity, Cockrell, Conkling, Cooper, Cragin, Davis, Dawes, Dennis, Edmunds, Frelinghuysen, Goldthwaite, Gordon, Howe, Johnston, Jones of Florida, Jones of Nevada, Kelly, Kernan, McCreery, McDonald, McMillan, Maxey, Merrimon, Morrill, Price, Randolph, Ransom, Robertson, Saulsbury, Sharon, Stevenson, Teller, Thurman, Wallace, Whyte, Windom, Withers, and Wright—47.

NAYS—Messrs. Blaine, Bruce, Cameron of Pennsylvania, Cameron of Wisconsin, Clayton, Conover, Dorsey, Eaton, Hamilton, Hamlin, Ingalls, Mitchell, Morton, Patterson, Sargent, Sherman, and West—17.

ABSENT—Messrs. Anthony, Ferry, Harvey, Hitchcock, Logan, Norwood, Oglesby, Paddock, Spencer, and Wadleigh—10.

So the bill was passed.

In the House, on January 25th, the bill from the Senate was taken up and read twice, and referred to the Select Committee on counting the electoral vote. The committee immediately reported the same back, and recommended its passage.

Mr. Hewitt, of New York, said: "Mr. Speaker, although I think that this bill transcends in importance any measure which is likely to come before Congress during the present generation of men, if I were to consult my own inclinations I would be quite content to refrain from taking any part in the debate, and to let the question be decided upon its intrinsic merits, with the clear light which has been shed upon it by the conclusive arguments of the members of the committee who have preceded me. But, unhappily, circumstances which I never could have anticipated have placed me in such a position, with reference to one of the great parties of the country, as to give to four or five millions of voters the right to ask me a question which I am bound to answer; and I may as well admit that they are exercising this right with unbounded liberality, by post and by telegraph. They have acquired this right because I have assured them of my belief that the election in November last resulted in the choice of the Democratic candidates for President and Vice-President. As nothing has occurred since, which could otherwise than strengthen this conviction, as well in their minds as in my own, they are naturally led to ask me why, as a member of the joint committee which has reported this bill, I have given my assent to a measure which departs from the 'ancient ways' by which the result of twenty-two presidential elections have been determined, and which, if adhered to, would surely result in the formal declaration of the election of our candidates. This question I propose to answer fully, freely, and without any reserve whatever.

"The main opposition which we had to meet in the late election was the influence of the Administration, exerted in the organization of its partisans, in the use of patronage, in the control of the personal services of the office-holders, in the levying of assessments, in the direc-

tion of the press, and in countless other channels, which a party long in power knows well how to use. After their defeat in November there still remained intact the organization, and the powerful will to direct it to its own preservation and perpetuation. The electoral votes necessary to insure the success of its candidates were claimed without delay, and the means taken to have them counted, through the agency of State administrations and returning boards under the control of the Republican leaders in Florida and Louisiana. With the disputed votes in Oregon, 185 votes were thus nominally secured for Hayes and Wheeler, with *prima facie* certificates more or less regular to sustain the claim.

"It only remained to find some means by which these votes could be counted and declared under the existing statute regulating the time and manner of opening the certificates and declaring the result. The plan for effecting this object was speedily agreed upon. The twenty-second joint rule, under which the results of the three last presidential elections had been ascertained and declared, was repealed by the Senate. This deprived the House of the right, previously existing, to throw out the vote of a State by an objection to its validity. Thus the votes of Florida and Louisiana, no matter how fraudulent might be the returns and worthless the certificates based thereon, were made secure to the Republican candidate. But, in order that they might be counted at all, it became indispensable to assert the claim of the Vice-President not merely to open, but to count the votes, first deciding upon their validity in all cases where there were duplicate certificates or disputed elections. This claim was therefore promptly set up, and during this week has been boldly maintained in the Senate Chamber by the men who have been most conspicuous in the management of the late election.

"The scheme was thus complete for counting Tilden out, and counting Hayes in. I became satisfied that, unless this scheme should meet with opposition from the more conservative members of the Republican party, it would be executed; that the President of the Senate *would* count the votes and declare the result; and that the President of the United States would deliver up his high office to the successor so declared, and, by the use of the troops already concentrated in Washington, see that he was duly inaugurated.

"Of course, the House of Representatives would not be silent and passive spectators of this programme. They would insist upon their constitutional right to participate in the counting of the vote, and the ascertainment and declaration of the result. They would count the votes of Florida and Louisiana for Tilden and Hendricks, and would record the result on the Journal, and make the formal declaration of their election to the offices of President and Vice-President. This duty, made incumbent upon them by the Constitution and their oaths

of office, they could not, from any fear of the consequences, refuse to perform.

"Thus would result two Presidents and two Vice-Presidents claiming each to be lawfully chosen, and demanding recognition at home and abroad.

"The logical result of such a state of affairs is civil war; or possibly—but hardly, in the light of contemporary experience among our neighbors—one or the other party might content himself by asserting his rights upon paper, and be satisfied with the empty honors of a *pronunciamento*. But such a course is scarcely to be expected from a race which carried on the wars of the Parliament, which executed Charles I., deposed James II., threw off its allegiance to George III., and preserved the Union against attempted secession, at a countless cost of blood and treasure. But if acquiescence were possible, it would not be peace, prosperity, and plenty for the people. Usurpation never brings contentment or confidence. The springs of industry would be dried up, and the fountains of capital cease to flow. But, what would be worse, the respect for the Constitution, essential to free government, would be destroyed in the minds of more than half the voters of the country. It would be generally accepted that usurpation was to be the law of succession, and by common consent we would be glad to take refuge in military despotism as the only panacea 'for all our woes.' The experiment of free government would thus utterly fail at the close of the first century of its existence—thus confirming the experience of all history as to the ultimate decadence of free nations.

"But if the usurpation were not acquiesced in, civil war with all its horrors would ensue, and the strife would penetrate into every household in the land. The end no man could foresee, save the refuge, sooner or later, in the all-embracing guardianship of an imperial ruler.

"In either event, then, the objects which the Democratic party had most at heart in the recent struggle would be utterly lost. These objects were not the election of any man to the presidency, or the establishment of any special financial policy as contrasted with that of our opponents. In fact, the platforms of the two parties were scarcely distinguishable from each other in principle. What we aimed to secure was—

"First, reform in the Administration, by which the *personal* character it had of late years assumed should cease to exist, and public offices filled by men who could comprehend and act upon the old-fashioned principle, which has been better formulated in the constitution of Massachusetts than elsewhere within my knowledge, that 'government is instituted not for the profit, honor, or private interest of any one man, family, or class of men.'

"The second and still more important object, underlying, indeed, all other motives, was to preserve the Constitution from being destroyed by the use of the military power in the

elections, or in the maintenance, in the several States, of government not resting upon the will of the people.

"A series of statutes doubtless the inevitable fruit of the war of the secession had been enacted, under color of which the Federal authority had been used in a manner which excited the alarm and called for the condemnation of patriotic and thoughtful men without regard to party. Especially in the State of Louisiana, in 1872, had been enacted a scene unprecedented in our history, filling the minds of men with fear for the permanence of constitutional government. By the order of a drunken judge, signed in the dark hours of the night, away from the domicile of justice, the lawful government of a sovereign State had been rudely overturned, and the usurping power which had taken its place was sustained by the arm of Federal power, acting through files of soldiers invading the halls of legislation, and dragging from their seats the representatives of a people to whom a republican form of government had been guaranteed by the Constitution of the United States.

"The pretended and fraudulent government thus created had been kept in its place only by the military power of the Federal Government; and when once overthrown by a sudden breath of popular discontent, it had been promptly restored by the orders of the President of the United States, through his Secretary of War, the military and not the judicial branch of the Government. Against this violation of the Constitution the best men of all parties did not hesitate to protest; and yet, when the late election came to pass, this fabricated government still existed in Louisiana, controlling all the machinery of justice, of legislation, and of election. Its returning board possessed an odor peculiarly its own, with which every voter in the United States was familiar. Many of these, who had heretofore acted with the Republican party, perceived that, if this practice of military interference should become incorporated, by the tacit consent of the people, into the permanent fabric of the Government, the Constitution would be destroyed, the principles of liberty undermined, and the way prepared for the early establishment of a military despotism. Hence, reluctantly, but moved by convictions of conscience, they joined themselves to the Democratic party, and engaged, as they believed, in a death-struggle for the preservation of their rights and liberties.

"Now these rights and liberties, for which we had made so gallant and successful a fight, would equally perish whether a President should come in by usurpation, even if acquiesced in by the people, or whether, if not acquiesced in, civil war should be the result.

"There was no escape from this deplorable position except by agreement between the conservative and patriotic men of both parties, who prefer the good of the country to the success of party, upon some method by which the incom-

ing President should be accepted by all parties as the lawful Executive of the General Government. For one, partisan as from my position I was supposed to be, but patriotic as I hope henceforth to be regarded, I deemed it my plain duty to labor zealously toward the attainment of some just and constitutional plan, whereby but one President should be declared, and by a title which all citizens would respect, and no considerable number of voters would dispute. It was essential to the formation of such a plan that it should be constitutional; that it should be so absolutely fair between the two political parties, that neither could possibly claim or take any advantage by reason of its provisions; that the scales of judgment should be so evenly poised that the dust in the balance would incline the beam. Such a plan, in my judgment, the committee were able to agree upon and have presented to Congress, and this plan has already received the sanction of the Senate by a majority so overwhelming as to indicate its triumphant passage through this House. No man can predict who will become President by virtue of its operation, but all men can predict that it will be the man who is *lawfully* entitled to be President. If the law should violate the equity of the case, it is ground for the amendment of the law, but not of rebellion against its decrees.

"Unconstitutional! Why, the very spirit and essence, the pineal gland of the Constitution is in the proposed measure. The old Saxon love of liberty and order is there. It contains the genius of Magna Charta, the great petition of right, the settlement of 1688, the Declaration of Independence. It substitutes law and order and right for strife, anarchy, and wrong. It means that whoever shall hold the Executive office, shall hold it by the consent and with the support of all the people of this land. It means that the wheels of business shall again be put in motion, and the welcome hum of vast industries shall again be heard; that the waiting laborer shall have work, and his wife and children bread. It means the supremacy of the civil to the military power, teaching the needed lesson that the soldier is the servant, and not the master, of the people, who pay his wage—the drone in the human hive, to be dispensed with when he becomes troublesome to the workers. It means the preservation of the autonomy of the States, and the right of the people therein to regulate and administer their local affairs, without interference from any quarter. Lastly, it means oblivion of all the bitterness of the past, security for the present, hope for the future."

Mr. Springer, of Illinois, said: "This measure is not a compromise. No litigant compromises any of his rights by submitting his case to an honorable arbitration. It is a fair, a constitutional, and a peaceful method of settling a serious political complication. Let us pass it unanimously. The people, without regard to party, favor it. The business interests of the

country demand it. It will reassure all hearts. It will firmly establish the capacity of the American people for self-government. We have already set a good example to the world in the peaceful arbitration of a great international dispute with Great Britain. Let us settle our domestic differences with like honorable and peaceful methods.

"When this measure becomes a law, as it surely will, there will be a feeling of relief all over the country. A great threatening calamity will have been averted. The revival of trade and commerce will be assured; the hum of industry will again be heard in the land; and our posterity will realize the fact that

'Peace hath her victories
No less renowned than war.'

Mr. Garfield, of Ohio, said: "The radical and incurable defect of this bill is, that it puts a vast, cumbrous machine in the place of the simple, plain plan of the Constitution; it adopts a method which invites and augments the evils from which we now suffer. That there are difficulties in the present situation, I freely admit; that there may be doubt—honest doubt—in the minds of honest men as to who is elected President, I admit. But I think the bill introduced by my colleague from Ohio (Mr. Foster), which provides for submitting to the Supreme Court those questions of constitutional law about which we differ, would be far better. To the adjudication of that great and honored tribunal all would bow with ready obedience; but this novel, dangerous, and cumbrous device is, in my judgment, unwarranted by the Constitution. If we adopt it, we shirk a present difficulty, but, in doing so, we create far greater ones for those who come after us. What to us is a difficulty, will be to them a peril."

Mr. Lamar, of Mississippi, said: "If I am right in the proposition that the duty to be performed in counting the electoral vote does not attach to the character of the Senate and House as the National Legislature, but is the single function of a special organization provided by the Constitution, I think it cannot be doubted that Congress may by law prescribe the means and agencies whereby the assemblage may perform its function with facility and efficiency. If, in order to perfect the machinery of that special organization, Congress by law supplements it with this commission, it cannot be objected to unless it violates some constitutional provision as to its character. The power given to this commission is not the power intrusted to the Senate and House thus assembled of determining who has received a majority of votes, but is simply the power to test the genuineness of a certain class of contested votes, the result of which the two Houses finally determine. Has Congress not the power to do this? Why, sir, the law of 1792 provides the means by which the President of the Senate shall be guided in receiving the electoral certificates, and requires that the

certificate of the vote from each electoral college shall be attested by the Governor of each State. Does that law substitute the Governor for the Senate and House, or infringe upon their power? So, where two returns come from the same State, this bill submits them to the scrutiny of the commission, and requires its attestation to the genuineness of the one which is to be counted, unless the Senate and House determine to reject the finding of the commission.

"As I understand the measure, it rests on three propositions: First, that the President of the Senate has not the right to decide what votes to count and what to reject. Second, that both the Senate and the House have the right to decide and direct what is an honest count of legal votes. Third, that, as neither can surrender this right to the other, and as there are differences of opinion as to the extent of this power—whether it is limited to the ascertainment of the authenticity of the certified returns, or extends to the right of going behind them—it provides for a tribunal to decide these questions in cases of conflicting returns, and to determine which return is the true and which of the controverted votes are the proper ones to be counted. In other words, they will take the advice of a commission, the character of which will guarantee a thoroughly-considered and impartial opinion. Upon that opinion the two Houses assembled will finally act.

"Now, sir, if I had doubts of the wisdom of this plan—which I have not—I would accept it in preference to the alternative which is now before us. If no mode of adjusting or reconciling the present differences can be found, what is the result? Why, that the next President will have to be inaugurated by a method and through processes and agencies advocated and pressed by one party alone, with the view to a single object; and that is, the consummation of its own triumph, to which it believes itself entitled. However this presidential contested election may be ended, unless this bill passes, one or the other party must determine to submit to what it believes to be a fraudulent perversion of law, Constitution, and right, or to resist by force. Either of these results would be an incalculable calamity. In case of submission, the whole moral force of the Government would be destroyed. Both to those who win and those who lose, the Constitution will have become a mere weapon of party warfare, and the manipulation of a venal and corrupt popular vote will be perfected in the hands of bold and bad political adventurers, and in all succeeding elections the forms of constitutional procedure will be more and more recklessly disregarded, until finally the result will be determined, not by the ballot, but by sword and bayonet."

Mr. Payne, of Ohio, said: "Mr. Speaker, it is with inexpressible relief to me that I now approach the moment of the consummation of this great measure of statesmanship and public

policy. From the hour when, under the direction of this House, the Speaker assigned six others with myself—to act with a similar committee of the Senate—to the important duty of considering whether there were some legislative or constitutional mode of adjusting the difficulties and the perils that oppress and environ the nation, I have known no moment of ease or rest. From the moment when I first met in that committee with those gentlemen, distinguished as they are for their position in this House and before the country, knowing that, as public men and as partisans, we have differed widely, but with conscientiousness and with firmness; when I saw that the hopes of the nation were centred upon this joint committee of Congress, and that upon their wisdom, their forbearance, their patriotism, their statesmanship, hung the stability of society and of business from one end of this country to the other, I have felt a weight upon my spirits, and have seen no relief until this hour of deliverance, under the blessing of God, has at last come.

"To my friends here who would go on and count the vote in the old way, let me say a word. You propose that the two Houses shall have nothing to say about it, except to grace the proceeding with their dignified presence; they have nothing to say about the count of the votes.

"As to the claim that the President of the Senate, against the protest of both Houses of Congress, can count the votes and declare the result, and that the successful candidate is to be inaugurated as President, it ought to be a sufficient answer to say, that the great majority of the people of the United States would regard that as a bold and unjustifiable usurpation of power; and, unless compelled by the strong arm of power, the people of the United States would never acquiesce in or recognize any such usurped power. This grand army of the republic—twenty-two hundred strong, I believe—or as many of them as can be excused from police duty throughout the Republic, would not stand very much in the way of the people carrying into execution their indignant rejection of such a claim.

"Now let me come to the other side of the House, for I have a word to say to those Democrats who say that the Constitution is sufficient in itself; that we do not need this legislation. You reject this claim set up on behalf of the President of the Senate, and you say that this power is in the two Houses of Congress. I grant you that the two Houses of Congress possess this power—that their power in this regard is coequal. I do not grant you that the power of the House is greater than that of the Senate, nor do I believe that claim can be maintained. But grant that it is equal to the Senate: will you tell me how you are to count the vote for President on the second Wednesday of February next, under the present law? Why, sir, we have no law. The

twenty-second joint rule has been repealed on the part of the Senate."

(Here the hammer fell.)

The Speaker: "The time for debate has expired."

The question was taken, as follows:

YEAS—Messrs. Abbott, Adams, Ainsworth, Anderson, Ashe, Atkins, Bagby, George A. Bagley, John H. Bagley, Jr., Banning, Beebe, Bell, Bland, Bliss, Blount, Boone, Bradley, Bright, John Young Brown, Buckner, Samuel D. Burchard, Burleigh, Cabell, William P. Caldwell, Campbell, Candler, Caulfield, Chapin, Chittenden, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochran, Cook, Cowan, Cox, Crapo, Culberson, Cutler, Darraill, Davis, Davy, De Bolt, Dibrell, Douglas, Durand, Eden, Ellis, Faulkner, Felton, Field, Finley, Foster, Franklin, Fuller, Gause, Gibson, Glover, Goode, Goodin, Gunter, Andrew H. Hamilton, Robert Hamilton, Hancock, Hardenbergh, Benjamin W. Harris, Henry R. Harris, John T. Harris, Harrison, Hart-ridge, Hartzell, Hatcher, Hathorn, Haymond, Henkle, Hereford, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Hoar, Holman, Hooker, Hopkins, Hoskins, House, Humphreys, Hunter, Hunton, Jenks, Frank Jones, Kehr, Kelley, Lamar, Franklin Landers, George M. Landers, Lane, Leavenworth, Le Moynes, Levy, Lewis, Luttrell, Lynde, Mackey, Maish, MacDougall, McCrary, McDill, McFarland, McMahon, Meade, Metcalfe, Miller, Money, Morgan, Morrison, Mutchler, Neal, New, Norton, O'Brien, Oliver, Payne, Phelps, John F. Phillips, Pierce, Piper, Platt, Potter, Powell, Rea, Reagan, John Reilly, James B. Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Miles Ross, Sampson, Savage, Sayler, Scales, Schleicher, Seelye, Sheakley, Southard, Sparks, Springer, Stanton, Stenger, Strait, Stevenson, Stone, Swann, Tarbox, Teese, Terry, Thomas, Thompson, Throckmorton, Washington Townsend, Tucker, Turney, Robert B. Vance, Waddell, Charles C. B. Walker, Gilbert C. Walker, Walling, Walsh, Ward, Warner, Warren, Watterson, Erastus Wells, G. Wiley Wells, Whitehouse, Whitthorne, Wike, Willard, Alpheus S. Williams, James Williams, William B. Williams, Willis, Wilshire, Benjamin Wilson, James Wilson, Fernando Wood, Yeates, Young, and the Speaker—191.

NAYS—Messrs. John H. Baker, William H. Baker, Ballou, Banks, Blackburn, Blair, Bradford, William R. Brown, Horatio C. Burchard, Buttz, John H. Caldwell, Cannon, Carr, Caswell, Cate, Conger, Crounse, Danford, Denison, Dobbins, Dunnell, Durham, Eames, Evans, Flye, Forney, Fort, Freeman, Frye, Garfield, Hale, Haralson, Hendee, Henderson, Hoge, Hubbell, Hurd, Hurlbut, Hyman, Thomas L. Jones, Joyce, Kasson, Kimball, Knott, Lapham, Lawrence, Lynch, Magoon, Milliken, Mills, Monroe, Nash, O'Neill, Packer, Page, Plaisted, Poppleton, Pratt, Purman, Rainey, Robinson, Rusk, Singleton, Sinnickson, Slemmons, Smalls, A. Herr Smith, William E. Smith, Stowell, Thornburgh, Martin I. Townsend, Tufts, Van Vorhes, John L. Vance, Wait, Waldron, Alexander S. Wallace, John W. Wallace, White, Whiting, Andrew Williams, Charles G. Williams, Jere N. Williams, Alan Wood, Jr., Woodburn, and Woodworth—86.

NOT VOTING—Messrs. Bass, Cason, Collins, Egbert, Hays, King, Lord, Odell, William A. Phillips, Sobieski Ross, Schumaker, Stephens, Wheeler, and Wigginton—14.

So the bill was passed.

In the Senate, on January 29th, a message was received from the President, as follows:

To the Senate of the United States:

I follow the example heretofore occasionally permitted, of communicating in this mode my approval

of the act to provide for and regulate the counting of votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877, because of my appreciation of the imminent peril to the institutions of the country, from which, in my judgment, the act affords a wise and constitutional means of escape.

For the first time in the history of our country, under the Constitution as it now is, a dispute exists with regard to the result of the election of the Chief Magistrate of the nation.

It is understood that upon the disposition of disputes touching the electoral votes cast at the late election by one or more of the States depends the question whether one or the other of the candidates for the presidency is to be the lawful Chief Magistrate. The importance of having clearly ascertained, by a procedure regulated by law, which of the two citizens has been elected, and of having the right to this high office recognized and cheerfully agreed in by all the people of the Republic, cannot be overestimated, and leads me to express to Congress, and to the nation, my great satisfaction at the adoption of a measure that affords an orderly means of decision of a gravely-exciting question.

While the history of our country in its earlier periods shows that the President of the Senate has counted the votes and declared their standing, our whole history shows that in no instance of doubt or dispute has he exercised the power of deciding, and that the two Houses of Congress have disposed of all such doubts and disputes, although in no instance hitherto have they been such that their decision could essentially have affected the result.

For the first time the Government of the United States is now brought to meet the question as one vital to the result, and this under conditions not the best calculated to produce an agreement, or to induce calm feeling in the several branches of the Government or among the people of the country. In a case where, as now, the result is involved, it is the highest duty of the law-making power to provide in advance a constitutional, orderly, and just method of executing the Constitution in this most interesting and critical of its provisions. The doing so, far from being a compromise of right, is an enforcement of right and an execution of powers conferred by the Constitution on Congress.

I think that this orderly method has been secured by the bill, which, appealing to the Constitution and the law as the guide in ascertaining rights, provides a means of deciding questions of single returns through the direct action of Congress, and in respect to double returns by a tribunal of inquiry, whose decisions stand unless both Houses of Congress shall concur in determining otherwise; thus securing a definite disposition of all questions of dispute in whatever aspect they may arise. With or without this law, as all of the States have voted, and as a tie vote is impossible, it must be that one of the two candidates has been elected; and it would be deplorable to witness an irregular controversy as to which of the two should receive or which should continue to hold the office. In all periods of history controversies have arisen as to the succession or choice of the chiefs of states; and no party or citizen loving their country and its free institutions can sacrifice too much of mere feeling in preserving, through the upright course of law, their country from the smallest danger to its peace on such an occasion; and it cannot be impressed too firmly in the heart of all the people, that true liberty and real progress can exist only through a cheerful adherence to constitutional law.

The bill purports to provide only for the settlement of questions arising from the recent elections. The fact that such questions can arise demonstrates the necessity, which I cannot doubt will before long be supplied, of permanent general legislation to

meet cases which have not been contemplated in the Constitution or laws of the country.

The bill may not be perfect, and its provisions may not be such as would be best applicable to all future occasions; but it is calculated to meet the present condition of the question and of the country.

The country is agitated. It needs and it desires peace, and quiet, and harmony, between all parties and all sections. Its industries are arrested, labor unemployed, capital idle, and enterprise paralyzed, by reason of the doubt and anxiety attending the uncertainty of a double claim to the Chief Magistracy of the nation. It wants to be assured that the result of the election will be accepted without resistance from the supporters of the disappointed candidate, and that its highest officer shall not hold his place with a questioned title of right. Believing that the bill will secure these ends, I give it my signature.

U. S. GRANT.

EXECUTIVE MANSION, January 29, 1877.

Mr. Conkling said: "Mr. President, I move that this important and wise message be printed, and lie on the table."

The motion was agreed to.

In the Senate, on January 30th, on taking and counting the votes, it appeared that the following Senators were unanimously chosen members of the Electoral Commission, namely: Messrs. George F. Edmunds, Oliver P. Morton, Frederick T. Frelinghuysen, Allen G. Thurman, and Thomas F. Bayard. On February 26th the place of Mr. Thurman was filled by Mr. Kernan, owing to the physical inability of Mr. Thurman.

The House, by a *viva-voce* vote, appointed Messrs. Henry B. Payne, of Ohio, Eppa Hunton, of Virginia, Josiah G. Abbott, of Massachusetts, George F. Hoar, of Massachusetts, and James A. Garfield, of Ohio, members of the commission on the part of the House of Representatives.

The following resolution was concurred in by both Houses:

Resolved by the Senate (the House of Representatives concurring), That, during the counting of the votes for President and Vice-President, no persons, besides those who now have the privilege of the floor of the House of Representatives, shall be admitted to the south wing of the Capitol extension, except upon tickets to be issued by the President of the Senate and the Speaker of the House of Representatives; to be issued to Senators and Representatives and others, and shall be distributed by the Sergeant-at-Arms of the Senate and House of Representatives.

The following communication was also sent to the House:

To the Speaker of the House of Representatives of the United States:

Pursuant to the provisions of the second section of the act of Congress, entitled "An act to provide for and regulate the counting of votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," approved January 29, 1877, the undersigned, associate justices of the Supreme Court of the United States assigned to the first, third, eighth, and ninth circuits, respectively, have this day selected Hon. Joseph P. Bradley, the associate justice

assigned to the fifth circuit, to be a member of the commission constituted by said act.

Respectfully submitted.

NATHAN CLIFFORD,
SAM. J. MILLER,
STEPHEN J. FIELDS,
W. STRONG,

Associate Justices of the Supreme Court of the United States, assigned respectively to the First, Third, Eighth, and Ninth Circuits.

WASHINGTON, January 30, 1877.

On January 31st the members of the Electoral Commission assembled and organized.

On motion of Mr. Commissioner Bradley, the rules reported were considered *seriatim*, and, after being amended, were adopted as follows, namely:

RULE I. The commission shall appoint a secretary, two assistant secretaries, a marshal, and two deputy marshals, a stenographer, and such messengers as shall be needful; to hold during the pleasure of the commission.

RULE II. On any subject submitted to the commission, a hearing shall be had, and counsel shall be allowed to conduct the case on each side.

RULE III. Counsel, not exceeding two in number on each side, will be heard by the commission on the merits of any case presented to it, not longer than two hours being allowed to each side, unless a longer time and additional counsel shall be specially authorized by the commission. In the hearing of interlocutory questions, but one counsel shall be heard on each side, and he not longer than fifteen minutes, unless the commission allow further time and additional counsel; and printed arguments will be received.

RULE IV. The objectors to any certificate or vote may select two of their number to support their objections in oral argument, and to advocate the validity of any certificate or vote the validity of which they maintain; and, in like manner, the objectors to any other certificate may select two of their number for a like purpose; but, under this rule, not more than four persons shall speak, and neither side shall occupy more than two hours.

RULE V. Applications for process to compel the attendance of witnesses, or the production of written or documentary testimony, may be made by counsel on either side. And all process shall be served and executed by the marshal of the commission or his deputies. Depositions hereafter taken for use before the commission shall be sufficiently authenticated if taken before any commissioner of the Circuit Courts of the United States, or any clerk or deputy clerk of any court of the United States.

RULE VI. Admission to the public sittings of the commission shall be regulated in such manner as the president of the commission shall direct.

RULE VII. The commission will sit, unless otherwise ordered, in the room of the Supreme Court of the United States, and with open doors (excepting when in consultation), unless otherwise directed.

On February 1st the president of the commission sent the following notice to Congress:

WASHINGTON, February 1, 1877.

SIR: I have the honor to inform the House of Representatives that the commission constituted under the act of Congress, approved January 29, 1877, entitled "An act to provide for and regulate the counting of votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," has met, and, the members thereof having taken and subscribed the oath prescribed by law, organized,

and is now ready to proceed to the performance of its duties.

Very respectfully,
NATHAN CLIFFORD,
President of Commission.

COUNTING THE VOTES.

On the same day, February 1st, the House notified the Senate that it was ready to receive that body for the purpose of proceeding to open and count the votes for President and Vice-President. At one o'clock the Senate entered the Hall of the House.

The President *pro tempore* of the Senate took his seat as Presiding Officer of the joint meeting of the two Houses, the Speaker of the House occupying a chair upon his left.

Senators Ingalls and Allison, the tellers appointed on the part of the Senate, and Mr. Cook and Mr. Stone, the tellers appointed on the part of the House, took their seats at the Clerk's desk, at which the Secretary of the Senate and the Clerk of the House also occupied seats.

The Presiding Officer: "The joint meeting of the two Houses of Congress for the counting of votes for President and Vice-President of the United States will now come to order. In obedience to the Constitution, the Senate and House of Representatives have met to be present at the opening of the certificates, the counting, and the declaring of the results of the electoral votes for the President and the Vice-President of the United States for the term of four years commencing on the 4th day of March next. In compliance with law, the President of the Senate will now proceed, in the presence of the two Houses, to open all the certificates of the several States, in alphabetical order, beginning with the State of Alabama."

Having opened the certificate of the State of Alabama, received by messenger, the Chair hands to the tellers the certificate to be read in the presence and hearing of both Houses.

Senator Allison (one of the tellers) read in full the certificate of the electoral vote of the State of Alabama, giving 10 votes for Samuel J. Tilden, of New York, for President, and 10 votes for Thomas A. Hendricks, of the State of Indiana, for Vice-President of the United States.

The Presiding Officer: "The certificate of the vote of the State of Alabama having been read, the Chair has opened and hands to the tellers the duplicate certificate received by mail from the same State, which will likewise be read."

Mr. Stone (one of the tellers) proceeded to read the duplicate certificate.

Senator Conkling (interrupting): "I venture to interrupt the reading, to suggest it can hardly be necessary to read *in extenso* the duplicate certificates received by mail; and if that should be the impression of the Presiding Officer and of the two Houses, I make the further suggestion that hereafter, when the tellers read

a certificate, the tellers not reading had better overlook the duplicate certificate at the same time, in order that a comparison may thus be made."

The Presiding Officer: "The suggestion of the gentleman from New York has been heard. Is there objection to following that suggestion? The Chair hears none, and it will be followed hereafter."

Mr. Stone (one of the tellers) then concluded the reading of the duplicate certificate of the State of Alabama.

The Presiding Officer: "Are there any objections to the certificate of the State of Alabama? The Chair hears none, and the votes of the State of Alabama will be counted. One of the tellers will announce the vote, so there can be no mistake."

Mr. Cook (one of the tellers): "The State of Alabama gives 10 votes for Samuel J. Tilden, of New York, for President of the United States, and 10 votes for Thomas A. Hendricks, of Indiana, for Vice-President."

The Presiding Officer: "The Chair hands to the tellers the certificate of the electoral vote of the State of Arkansas, received by messenger, and the corresponding one received by mail. In accordance with the suggestion of the Senator from New York, but one will be read, and the other will be examined as the original is read. The tellers will follow the reading of the one received by messenger in every case with the one received by mail."

The tellers then proceeded, in the manner indicated, to announce the electoral votes of the States of Arkansas, California, Colorado, Connecticut, and Delaware, it being mentioned in each case that the certificate of the election of the electors was signed by the Governor and countersigned by the Secretary of State; and in each case the Presiding Officer asked whether there were any objections to the certificate; and, there being none, the vote in each case was then counted.

The Presiding Officer: "The Chair hands to the tellers a certificate from the State of Florida, received by messenger, and the corresponding one by mail."

Mr. Stone (one of the tellers) read the certificate *in extenso*, giving 4 votes for Rutherford B. Hayes, of Ohio, for President, and William A. Wheeler, of New York, 4 votes for Vice-President.

The Presiding Officer: "The Chair hands another certificate, received by messenger from Florida, and the corresponding one received by mail."

Mr. Stone (one of the tellers) also read *in extenso* the certificate from the State of Florida indicated, giving 4 votes for Samuel J. Tilden, of New York, for President, and 4 votes for Thomas A. Hendricks, of Indiana, for Vice-President.

The Presiding Officer: "Still another certificate from the State of Florida has been received by messenger, January 31st, and it is

now handed to the tellers, and the corresponding one received by mail, January 30th."

Senator Allison (one of the tellers) read the certificate, and then Senator Ingalls (another of the tellers) proceeded to read the papers accompanying the certificate.

Senator Conkling: "I understand the teller is proceeding to read a list of the counties and returns in detail; and, the counties being twenty-nine in number—"

Mr. Springer: "Thirty-nine."

Senator Conkling: "Thirty-nine—I will correct myself—all appearing in long printed lists. I know the act of Congress under which the two Houses have met requires these certificates and papers shall be read. I rise, after consultation with some members of either House about me, to suggest that, by consent, the announcement of the result of these lists by the tellers be deemed by the two Houses a reading satisfying the act, and that these papers go, as they must go under the statute, to the provisional tribunal raised to examine them in the first instance. I can see nothing to be gained by a reading literally of all the figures attenuated upon that printed list."

The Presiding Officer: "Is there objection to the suggestion of the Senator from New York that the reading of this list be dispensed with, except the footing? (After a pause.) The Chair hears none."

Senator Ingalls (one of the tellers) read the footing of the votes and the remaining portion of the certificate.

The Presiding Officer: "Are there objections to the certificates from the State of Florida?"

Mr. Field, of New York: "The following is an objection to the votes, certificates, and lists mentioned in the return first read. I send it to the desk."

The Presiding Officer (having examined the paper sent up): "The objection complies with the law, having attached the signatures of Senators and Representatives. The Clerk of the House will read the objection."

The Clerk of the House reads as follows:

The undersigned, Charles W. Jones, Senator of the United States from the State of Florida; Henry Cooper, Senator of the United States from the State of Tennessee; J. E. McDonald, Senator of the United States from the State of Indiana; David Dudley Field, Representative from the State of New York; J. Randolph Tucker, Representative from the State of Virginia; G. A. Jenks, Representative from the State of Pennsylvania; and William M. Springer, Representative from the State of Illinois, object to the counting of the votes of Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, as electors of President and Vice-President of the United States in, for, or on behalf of the State of Florida, and to the paper purporting to be a certificate of M. L. Stearns as Governor of the said State, that the said Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, were appointed electors in, for, or on behalf of the said State, and to the papers purporting to be the lists of votes cast by the said Charles H. Pearce, Frederick C. Humphries,

William H. Holden, and Thomas W. Long, for President and Vice-President of the United States, and to the votes themselves, for the reasons and upon the grounds following among others, that is to say:

1. For that the said Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, were not appointed by the said State of Florida in such manner as its Legislature had directed, or in any manner whatever, electors of President and Vice-President of the United States.

2. For that Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, were appointed by the said State, in such manner as its Legislature had directed, electors of President and Vice-President of the United States.

3. The manner of appointing electors of President and Vice-President of the United States in, for, or on behalf of the State of Florida, was by the votes of the qualified electors at a general election held in said State on the 7th day of November, 1876; and the qualified electors of the said State did, on the said 7th day of November, 1876, execute the power by appointing Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, to be such electors; which appointment gave to the appointees an irrevocable title that could not be changed or set aside, or conferred on any other person.

4. For that the pretended certificate, or paper purporting to be a certificate, signed by M. L. Stearns as Governor of said State, of the appointment of the said Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, to be electors, was and is in all respects untrue, and was corruptly procured and made in pursuance of a conspiracy between the said M. L. Stearns, Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, and other persons to these objectors unknown, with intent to deprive the people of the said State of the right to appoint electors, and to deprive Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, of their right to said office, and to assert and set up fictitious and unreal votes for President and Vice-President, and thereby to deceive the proper authorities of this Union.

5. For that the said papers, falsely purporting to be the votes for President and Vice-President of the State of Florida, which are fictitious and unreal and do not truly represent any votes or lawful acts, and are now here objected to, were made out and executed in pursuance of the same fraudulent conspiracy by the said persons purporting to have cast said votes.

6. For that the said pretended certificates and the pretended lists of electors connected therewith, so made by the said M. L. Stearns, if the said certificates and lists ever had any validity, which these objectors deny, have been annulled and declared void by a subsequent lawful certificate of the executive of the State of Florida, duly and lawfully made, in which the said Wilkinson Call, Robert Bullock, James E. Yonge, and Robert B. Hilton, are truly and in due form declared to have been duly appointed by the said State in the manner directed by its constitution, and also by an act of the Legislature of the said State, in which the title of the said Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, as such electors, is declared to be good and valid. And further, by the judgment of the Circuit Court of the said State of Florida for the second judicial circuit, that being a court of competent jurisdiction, upon information in the nature of *quo warranto* brought on the 6th day of December, 1876, before said pretended electors in any form voted for President or Vice-President, as aforesaid, by the State of Florida, on the relation of the said Wilkinson Call, Robert Bullock, James E. Yonge, and Robert B. Hilton, against the said Charles H. Pearce,

Frederick C. Humphries, William H. Holden, and Thomas W. Long, whereby the defendants, after having appeared, pleaded, and put in issue the questions of their own right and title and that of the relators to act as such electors, and after full hearing, it was duly and lawfully adjudged by said court that the said Charles H. Pearce, Frederick C. Humphries, William H. Holden and Thomas W. Long were not, nor was any one of them elected, chosen, or appointed, or entitled to be declared elected, chosen, or appointed as such electors or elector, or to receive certificates or certificate of election or appointment as such electors or elector; and that the said respondents were not, upon the said 6th day of December, or at any other time, entitled to assume or exercise any of the powers or functions of such electors or elector, but that they were, upon the said day and date, usurpers, and that all and singular their acts and doings as such were and are illegal, null, and void. And it is further considered and developed that said electors, Robert Bullock, Robert B. Hilton, Wilkinson Call, and James E. Yonge, all and singular, were at said election duly elected, chosen, and appointed electors of President and Vice-President of the United States, and were, on said 6th day of December, 1876, entitled to be declared elected, chosen, and appointed as such electors, and to have and receive certificates thereof, and upon the said day and date, and at all times since, to exercise and perform all and singular the powers and duties of such electors, and to have and enjoy the pay and emoluments thereof.

For that the four persons last named did, as such electors, on December 6, 1876, cast the four votes of Florida for Mr. Tilden as President and Mr. Hendricks as Vice-President, and as well in that respect as in all others acting in entire and perfect conformity with the Constitution of the United States, certified the same vote to the President of the Senate.

They did everything toward the authentication of such votes required by the Constitution of the United States or by any act of Congress, except section 136 of the Revised Statutes; and in conformity with the aforesaid judgment of the Florida court, the Governor of Florida, who had been duly inducted into office subsequent to December 6, 1877, did, on the 26th day of January, 1877, give to the last-named four electors the triplicate lists prescribed by said act of Congress (Revised Statutes of the United States, section 136), which they forwarded, as prescribed by the act of Congress, as a supplement to their former certificate in that behalf. And in support of said objections and claims the undersigned beg leave to refer to the reasons and documents submitted herewith, and to such petitions, depositions, papers, and evidence as may be hereafter produced, and as may be competent and pertinent in considering the said objections and claims.

Among the papers herewith submitted are the following, namely:

1. So much of the official *Congressional Record* of February 1, 1877, as contains the report of the House committee on the recent election in Florida.
2. The original report of said committee.
3. A certified copy of the act of the Legislature of Florida, approved January 17, 1877, entitled "An act to procure a legal canvass of the electoral vote of the State of Florida, as cast at an election held on the 7th of November, 1876."
4. A certificate of the State canvasser of the election held November 6, 1876, dated January 19, 1877.
5. A certified copy of an act of the Legislature of the State of Florida, approved January 26, 1877, entitled "An act to declare and establish the appointment by the State of Florida of electors of President and Vice-President."
6. The certificate of George F. Drew, Governor of the State of Florida, of the names of the electors chosen on the 7th day of November, 1876, bearing date January 26, 1877.

7. The certificate of Wilkinson Call, J. E. Yonge, R. B. Hilton, and Robert Bullock, elected and appointed by the State of Florida, of the vote cast for President and Vice-President by them, bearing date of January 26, 1877.

8. The record of the proceedings and judgment of the Circuit Court of Leon County, second judicial circuit of the State of Florida, on information in the nature of *quo warranto*, in the name of the State of Florida *ex rel.* F. C. Humphries, Charles H. Pearce, William H. Holden, and T. W. Long; also, a certified copy of the act of the Legislature of the State of Florida, approved January 26, 1877, aforesaid, and the certificate of the State canvassers aforesaid, and the proceedings and judgment on the information aforesaid, transmitted to and received by the House of Representatives on the 31st day of January, 1877.

--	---

The Presiding Officer: "Are there further objections to the certificates from the State of Florida?"

Senator Sargent, of California: "In behalf of certain Senators and members of the House of Representatives who signed the same, I present three papers containing objections; the first one of which I send to the Clerk's desk, and ask to have it now read."

The Secretary of the Senate read as follows:

An objection is interposed to the certificates, or papers purporting to be certificates, of the electoral vote of the State of Florida as having been cast by Wilkinson Call, J. E. Yonge, R. B. Hilton, and Robert Bullock, upon the ground that said certificates or papers are not authenticated according to the requirements of the Constitution and laws of the United States so as to entitle them to be received or read, or the votes stated therein, or any of them, to be counted in the election of President and Vice-President.

S. B. CONOVER, A. A. SARGENT, JOHN SHERMAN, H. M. TELLER, WM. WOODBURN, MARK H. DUNNELL, JOHN A. KASSON, GEO. W. MCCRARY,	} Senators. } Members of the House of Representatives.
--	---

Senator Sargent: "On the same behalf, I present the paper which I send up and ask to have read."

The Secretary of the Senate read as follows:

An objection is interposed to the certificates, or papers purporting to be certificates, of the electoral votes of the State of Florida as having been cast by James E. Yonge, Wilkinson Call, Robert B. Hilton, and Robert Bullock, upon the ground that said certificates or papers do not include or are not accompanied by (in the package or inclosure in which they were received and opened by the President of the Senate in the presence of the two Houses) the certificate of the executive authority of the State of Florida, of the list of the names of said electors, Yonge, Call, Hilton, and Bullock, or any of them, as being said electors; nor are said certificates or papers objected to accompanied by any valid or lawful certification or authentication of said electors, Yonge, Call, Hilton, and Bullock, or any of them, as having been appointed or as being electors to cast the elec-

total vote of the State of Florida, or entitling the votes of said Yonge, Call, Hilton, and Bullock, or either of them, to be counted in the election of President of the United States or of Vice-President of the United States.

Senator Sargent: "On the same behalf, I present the further objection which I send to the desk."

The Secretary of the Senate read as follows:

An objection is interposed to the certificates, or papers purporting to be certificates, of the electoral votes of the State of Florida as having been cast by J. E. Yonge, Wilkinson Call, Robert B. Hilton, and Robert Bullock, upon the ground that by a certificate of the electoral vote of the State of Florida, in all respects regular and valid and sufficient under the Constitution and laws of the United States, and duly authenticated as such, and duly transmitted to and received by and opened by the President of the Senate in the presence of the two Houses of Congress, it appears that Frederick C. Humphries, Charles H. Pearce, William H. Holden, and T. W. Long, and each of them, and no other person or persons, were duly appointed electors to cast the electoral vote of the State of Florida, and that the said above-named electors did duly cast the votes, and did duly certify and did transmit the said electoral vote of the State of Florida to the President of the Senate; by reason whereof the said certificates or papers purporting to be certificates objected to are not entitled to be received or read, nor are the votes therein, or any of them, entitled to be counted in the election of President of the United States or of Vice-President of the United States.

JOHN SHERMAN,	
H. M. TELLER,	} Members of the House of Representatives.
WM. WOODBURN,	
MARK H. DUNNELL,	
GEORGE W. McCRARY,	
JOHN A. KASSON,	

The Presiding Officer: "Are there any further objections to the certificates from the State of Florida?"

Senator Jones, of Florida: "I send up, to be read, a further objection."

The Secretary of the Senate read as follows:

The undersigned object to the counting of the votes of F. C. Humphries as an elector for the State of Florida, upon the ground that the said Humphries was appointed a shipping commissioner under the Government of the United States at Pensacola, Florida, heretofore on the 3d day of December, 1872, and qualified as such thereafter on the 9th day of December, 1872, and continued to hold the said office continuously from the last-named day until and upon the 7th day of November, 1876, and thereafter until and upon the 6th day of December, 1876; wherefore and by reason of the premises the said F. C. Humphries held, at the time of his alleged appointment as an elector of said State, and at the time of casting his vote as an elector thereof, an office of trust and profit under the United States, and could not be constitutionally appointed an elector as aforesaid.

C. W. JONES, Senator.
C. G. THOMPSON,
Member of the House of Representatives.

The Presiding Officer: "Are there further objections to the certificates from the State of Florida?"

Mr. Kasson, of Iowa: "I present a further objection, duly signed by members of the Senate and House of Representatives, to the last paper purporting to be a certificate and read at the Clerk's desk."

The Clerk of the House read as follows:

1. The undersigned object to the last paper read, purporting to be a certificate of electors and of the electoral votes of the State of Florida, and to the counting of the votes named therein, because the same is not certified as required by the Constitution and laws of the United States, the certificate being by an officer not holding the office of Governor, or any other office in said State, with authority in the premises at the time when the electors were appointed, nor at the time when the functions of the electors were exercised, nor until the duties of electors had been fully discharged by the lawful college of electors having the certificates of the Governor of Florida at the time of the action of said lawful college, and duly transmitted to the President of the Senate as required by law.

2. Because the proceedings as recited therein as certifying the qualifications of the persons therein claiming to be electors are *ex post facto*, and are not competent under the law as certifying any right in the said Call, Yonge, Hilton, and Bullock, to cast the electoral vote of the said State of Florida.

3. Because the said proceeding and certificates are null and void of effect as retroactive proceedings.

A. A. SARGENT,
JOHN SHERMAN,
Senators.
JOHN A. KASSON,
S. A. HURLBUT,
Members of the House of Representatives.

The Presiding Officer: "Are there further objections to the certificates from the State of Florida? (After a pause.) If there are none, the certificates and papers, together with other papers accompanying the same, as well as the objections presented, will now be transmitted to the Electoral Commission for judgment and decision. And the Senate will now withdraw to its Chamber."

Accordingly (at three o'clock and five minutes P. M.) the Senate withdrew.

PROCEEDINGS OF THE ELECTORAL COMMISSION.

The commission met for consultation on February first, and, on motion of Mr. Justice Clifford, the following-named gentlemen were selected as officers of the commission: *Secretary*, James H. McKenney. *Assistant Secretaries*, B. E. Cattin and George A. Howard. *Marshal*, William H. Reardon. *Deputy Marshals*, Albert S. Seely and J. C. Taliaferro. *Stenographer*, D. F. Murphy.

A communication from the two Houses of Congress in joint session was presented by Mr. Gorham, Secretary of the Senate, and read as follows:

HALL OF THE HOUSE OF REPRESENTATIVES,
February 1, 1877.

To the President of the Commission: More than one return, or paper purporting to be a return, or certificate of electoral votes of the State of Florida having been received and this day opened in the pres-

ence of the two Houses of Congress, and objections thereto having been made, the said returns, with all accompanying papers, and also the objections thereto, are herewith submitted to the judgment and decision of the commission, as provided by law.

T. W. FERRY, President of the Senate.

The President: "It is suggested, and I think very properly, that the doors may now be opened, and that proper persons be admitted."

Mr. Commissioner Payne: "Now I move that the certificates, with the papers, be printed at as early an hour as possible."

The President: "The motion before the commission is, that the three certificates in the case of Florida be printed, and the objections thereto. If that is your pleasure, you will say 'Aye.' (Putting the question.) It is a vote."

The President: "How soon can they be printed?"

Mr. Commissioner Field, of California, said: "Should we not have copies of the papers presented?"

The President: "I suppose the certificates and objections may be printed in a very short time. The Secretary will understand that the motion is intended to include the certificates and the objections and the papers that accompany the certificates, and nothing else. It is desirable that they should be printed with as little delay as possible."

Senator Sargent, of California, said: "The objectors, the persons whose names are signed to the paper, are Senators Conover, Sargent, and Sherman, and Mr. McCrary, Mr. Kasson, Mr. Woodburn, and Mr. Dunnell, members of the House. There has been no opportunity up to this moment of consulting with these gentlemen, to ascertain which of them will state their objections to the commission."

The President: "Two objectors may represent the case in this tribunal."

Senator Sargent: "So we understand by the rules."

The President: "Will Mr. Field state the names of the objectors on the other side?"

Mr. Representative Field, of New York, said: "The objectors to the first return are Senators Jones, of Florida, and Cooper, and Representatives Thompson, Jenks, and myself."

The President: "I am requested now to call for the names of counsel who appear in the case on each side."

Mr. Representative Field: "We have several counsel on our side. We have Mr. O'Connor, of New York, Judge Black, of Pennsylvania, Judge Trumbull, of Illinois, Mr. Merrick, of Washington, and Mr. Green, of New Jersey."

The President: "Counsel not exceeding two in number on each side are allowed to participate in argument."

The President: "Who are counsel on the other side?"

Mr. Evarts: "I will state that Mr. Stoughton, Mr. Stanley Matthews, Mr. Shellabarger, and myself, are expected to represent objectors in some of the cases which will appear."

Senator Sargent: "In reply to the question

of the commission as to which of the objectors would present the case on behalf of the objectors aside from counsel, on conference it is determined that Mr. McCrary and Mr. Kasson will so appear."

The President: "My impression is—although I do not make that decision in behalf of the commission—that the several objections to the returns from a State constitute one case, and two objectors will be heard upon one side and two on the other; and after they shall have been heard, two counsel will be heard upon one side and two upon the other. Unless otherwise advised by the commission, that will be the ruling."

Mr. Representative Field: "Will you allow me to say that perhaps there may be some misunderstanding in regard to that rule, unless I state to you precisely the facts?"

The President: "Proceed, sir."

Mr. Representative Field: "There are objections to the four votes of Florida on each side; that is to say, we object to the four votes mentioned in the first returns."

Mr. Commissioner Edmunds: "Which are they?"

Mr. Representative Field: "They are, if I may use the names of the candidates, the Hayes electors. We object, on our part, to those votes, certificates, and lists."

Mr. Commissioner Edmunds: "And the other gentlemen object to the others?"

Mr. Representative Field: "Mr. Sargent, Mr. Kasson, and the gentlemen on the other side specifically object to ours. Then there is the additional objection made by Senator Jones, of Florida, and others, to one of the Hayes electors as ineligible under the Constitution. That is a distinct matter, and we supposed it would be taken up quite distinctly. It is a minor affair, and should not encumber the principal one. And if the commission will allow us, we will designate Mr. Thompson and Mr. Jenks. I suppose the discussion of that will not take up much of the time of the commission; but at all events, as a matter of form, if you will allow us, we will suggest that Mr. Thompson and Mr. Jenks be the objectors in those, and then, as to counsel, we will advise to-night, and inform the commission to-morrow what counsel represent us."

The President: "Under the circumstances, I will put the motion that, when the commission adjourns, it adjourn until to-morrow at half-past ten o'clock."

The motion was agreed to.

Mr. Commissioner Miller moved that the objections to certificates in the Florida case be heard as one objection to each set of electors, and be argued together; which was adopted.

FRIDAY, February 2, 1877.

The commission met at half-past ten o'clock A. M., pursuant to adjournment, all the members being present.

The President: "The case before the commission is that of Florida. Inquiries were made yesterday, 'What is the case?'—to which I beg to respond, that it consists of three certificates with the accompanying papers, and the objections to the same. Two of the objectors on each side will be allowed to speak in the opening of the case. Those representing the objections to certificate No. 1 will speak first; and I would remind them that the fourth rule allows them two hours, in which they will state the case in the opening arguments in support of their objections, and also in support of any other certificate which they claim to be valid. When they have concluded, two objectors on the other side will speak, under the same rules and limitations. I will not give any directions now as to counsel; that will come afterward."

Mr. Representative Field: "Before proceeding, if you will allow me, I beg to speak to a preliminary matter. I observe that Rule 5 speaks of evidence. Now, I am in some doubt about the course of proceeding. If evidence is admissible, it should be stated, we suppose, before beginning the argument. We are prepared with witnesses from Florida to state, at the bar or in any manner that the court may indicate, by deposition or otherwise, all that is necessary to prove the allegations of our objection. We suppose that the papers which have been presented here contain sufficient evidence and are receivable; but I ought to state *in limine* that I do not wish to proceed with the argument under the impression that we have not other evidence. Of course, saving the question whether the evidence is competent, I wish to say that we have the evidence, and we can produce it here, or anywhere that the commission may direct, and offer to do it now, or at any other time or in any other manner."

"I thought I ought not to proceed with my statement without making that preliminary suggestion."

Mr. Commissioner Strong: "Mr. President, it seems to me that the rules which we have adopted place the objectors in precisely the same position that counsel are placed in who open a case before it is submitted to a jury. We propose—such is my understanding of the rule—that the objectors shall occupy exactly that position in their statement of their objections, to state what the objections are, and how they propose to support them. The other questions will come up afterward in regard to the admissibility of evidence."

Mr. Representative Field: "That is quite satisfactory."

Mr. Commissioner Strong: "That is my understanding at this time."

The President: "You can proceed, Mr. Field, with the case at a quarter before eleven. Your side will have two hours."

Mr. Representative Field: "Mr. President and gentlemen of the Electoral Commission: It will be my endeavor, in the statement which I

shall make, to set forth with as much conciseness as I may the facts that we expect to prove and the propositions of law which we hope to establish."

"The power devolved by the Federal Constitution upon the States of this Union was, in the State of Florida, exercised by the Legislature of the State directing the appointment of presidential electors to be made by the qualified voters of the State at a general election. That election was held on the 7th of November, 1876. It was quiet and orderly, so far as we are informed, throughout the State, and it remained only to gather the result of the voting. That result was a majority in favor of the electors who, for convenience sake, I will designate as the Tilden electors. Nevertheless, a certificate comes here, signed by the then Governor of the State, certifying that the Hayes electors had a majority of the votes. By what sort of jugglery that result was accomplished, I now take it upon me to explain."

"By the laws of the State the counties are divided into polling-precincts, and the votes of the polling-precincts are returned to the county clerk at the county seat, where they are canvassed, and the county canvassers certify to the State canvassers. I have occasion to mention canvassers only in one county. That county was decisive of the result; but if it were not, *ex uno disce omnes*. The county to which I refer is Baker County. The canvassers were by law to be the county judge, the county clerk (or, rather, I think he is called the clerk of the Circuit Court for the county, but I call him, for convenience, the county clerk), and a justice of the peace, to be by them called in for their assistance. In case either the judge or the clerk is absent or cannot attend, the sheriff of the county is to be called in his place. The law provides that the canvass by the county canvassers shall be on the sixth day after the election, or sooner if the returns are all received."

"In this county there were but four precincts, and the returns from them were all received in three days. On the 10th of November the county clerk, considering that the returns being in further delay in the canvass might be embarrassing—for what reasons it does not devolve on me to say—requested the county judge to join him in the canvass. The county judge refused. The clerk then asked the sheriff to join him, but he declined. The clerk thereupon called to his assistance a justice of the peace and made the canvass; and a true canvass it was, as all parties agree, I think. I have never heard anywhere the suggestion that the votes as certified by them were not the true votes. But it so happened that the county judge on the same day—the 10th—issued a notice to the county clerk and to a justice of the peace to attend him at the county seat on the 13th—which, as you will remember, was just six days after the election—at noon, for the purpose of making the count. On that day

and hour the county clerk and the justice thus requested attended. The county judge, however, absented himself, although he had given the notice. He was invited and urged to go on with the canvassing. The record shows that he laughed, and said he thought that what had been already done was enough. The sheriff was then applied to, and he refused. Thereupon the county clerk and a justice of the peace—another justice called in—re-canvassed the votes, giving the same result precisely, and certified them to the State canvassers, stating in the certificate the reasons why neither the county judge nor the sheriff was present. The office of the clerk was then closed for the day.

"In the evening of that day the same county judge and the same sheriff, taking to their assistance a justice of the peace who had been commissioned by Stearns only on the 10th, and who had never acted before, entered the office surreptitiously, opened a drawer and took out the returns, threw aside two precincts, certified the two remaining, and sent that certificate to the State canvassers. You are now to say whether this certificate of these men, under these circumstances, in the darkness of the night, throwing out two precincts, and certified to the State canvassers, without any reason why the county clerk was not present, shall be taken as the voice of that county of Florida.

"Now let me go from this county canvass to the State canvass. When the State canvassers were at work there were certain significant telegrams passed between Florida and Washington. I omit the names of the correspondents, except that of the Governor, Stearns—the same whose certificate is before you, certifying to the election of the Hayes electors. The examination is thus reported:

Q. Do you recollect any telegram at Lake City about the 25th of December, asking—

"(I will say, the Chairman of the National Republican Committee)—

any questions about attacking the returns?

A. I remember one dispatch—I cannot give the date—asking on what grounds they should assail these counties, or words to that effect.

Q. What was the answer?

A. There was a dispatch subsequently received; whether or not it was the answer to it, you must draw your own conclusion. The words in it were "fraud, intimidation." There was another word, which may have been "violence;" but I am not sure that it was "violence."

"Thereupon the State canvassers did—what? They took the third canvass from Baker County and amended it, as appears in the *Congressional Record* of February 1, page 65, and added, 'amended by canvassing all the precinct returns,' and that statement in the full canvass is the true one as to Baker County; that is, they got at a true result in respect to that county by taking the false certificate and amending it so as to take in all the returns. But what did they then do? Stearns was a candidate for the office of Governor. He was then Governor, and he was a candidate for the

succession. His opponent was Mr. Drew. The canvassers were Stearns's appointees, to go out of office with him, and to remain in office if he was counted in. They took the returns from the other counties and threw out enough to give the State to the Hayes electors, and to Stearns as Governor.

"Thus the matter stood upon the State canvass thus made. You will observe that it gave the true vote of Baker County, but eliminated from the votes of other counties certain precincts enough to elect their patron Stearns. But it did not remain so, as I will show in a moment; for this elimination being declared by the Supreme Court illegal, the canvassers thereupon, in order to prevent a majority appearing for the Tilden electors, recalled their amendment of the Baker County false return, and used it in all its falsehood.

"These are all facts which we offer to make good by such evidence as the commission may prescribe, by a cloud of witnesses, and by a host of documents.

"This monstrous fraud being thus far accomplished, the people of the State took it upon themselves to see if they could right the wrong, and they did it with a spirit and a success which does them all honor. First, Drew, the candidate for Governor on the other side, went into the Supreme Court of the State and applied for a mandamus to compel this canvassing board to restore to their canvass the eliminated precincts; and the Supreme Court decided that the State canvassers had no power under the laws of Florida to eliminate votes, but they were bound to count every lawful vote put into the ballot-box; that they were neither electors nor judges otherwise than of what votes were put in; and, in obedience to that, they restored to the canvass the rejected precincts and certified a majority for Drew, and Drew took his place and is now the lawful and accepted Governor of the State.

"What did the Tilden electors do? They commenced, in a Circuit Court of Florida which had competent jurisdiction, an information in the nature of *quo warranto* against the Hayes electors. They charged, in the information, that they, the relators, were the lawful claimants of the office, and that the others were usurpers. That information was commenced before the Hayes electors voted on the 6th of December. The case proceeded in the regular course of legal proceedings until it came to trial and judgment, first upon a demurrer, and then, the demurrer being overruled and an answer interposed, upon the issues and proofs; and here is the judgment of the court. After the recitals:

It is, therefore, considered and adjudged that said respondents—

"Who were the Hayes electors—Humphries, and so on—

were not, nor was any one of them, elected, chosen, or appointed as such electors or elector, or to receive certificates or certificate of election or appointment as such electors or elector, and that the said respon-

dents were not, upon the said 6th day of December, or at any other time, entitled to assume or exercise any of the powers and functions of such electors or elector; but that they were, upon the said day and date, mere usurpers."

The President: "We are hearing the statement of one side now."

Mr. Representative Field: "The whole record is certified and exemplified in due form."

"I will go on with the reading:

And it is further considered and adjudged that the said relators, Robert Bullock, Robert B. Hilton, Wilkinson Call, and James E. Yonge—

"These are the Tilden electors—

all and singular, were at said election duly elected, chosen, and appointed electors of President and Vice-President of the United States, and were on the said 6th day of December, 1876, entitled to be declared elected, chosen, and appointed as such electors, and to have and receive certificates thereof, and upon the said day and date, and at all times since, to exercise and perform all and singular the powers and duties of such electors, and to have and enjoy the pay and emoluments thereof. It is further adjudged that respondents pay to relators the costs of the action.

"So much for the action of the judicial department of Florida. Everything was done, I take it upon me to say, which it was possible to do, so that I am warranted in asserting that, if there be any way known to the law by which in such a case a defrauded State can right itself through the courts of the State, that way has been taken.

"In the mean time the Hayes electors had voted and sent their lists of votes to the President of the Senate, with the certificate of Stearns to their appointment.

"There was no canvass or certificate of the State canvassers to their appointment, other than that first made, which the Supreme Court had ordered to be rectified on the application of Mr. Drew, and the rectification of which, therefore, could go no further than the canvass of the Governor's vote. The same rectification, applied to the electoral votes, would of course give the majority to the Tilden electors; but to avoid the appearance of this, the canvassers pretended to alter the vote first given by them to Baker County, and reduce it to the two precincts mentioned in the third and false return of the county canvassers. This attempt was rebuked by the Supreme Court, in an order directing the State canvassers to confine their action under the mandamus to the votes for Governor; so that there really appears upon the records of the State canvassers no semblance of any authority for Stearns's certificate other than the first canvass, which the Supreme Court branded as illegal and false.

"Now look at what the Legislature of Florida has done. The Legislature is the department of the Florida government which could alone direct how the power devolved by the Federal Constitution could be performed. This Legislature has passed two acts, to which I call your attention. In view of the fact that the Su-

preme Court had made the decision which I have mentioned, the Legislature passed

An act to provide for a canvass according to the laws of the State of Florida, as interpreted by the Supreme Court, of the votes for electors of President and Vice-President cast at the election held November 7, 1876.

"The law was approved January 17th. It provides that the Secretary of State, Attorney-General, and the Comptroller of Public Accounts, or any of them, together with any other member of the Cabinet who may be designated by them, shall meet forthwith at the office of the Secretary of State, pursuant to a notice to be given by the Secretary of State, and proceed to recanvass the votes. They did meet and recanvass pursuant to that law, and they certified the result according to the fact, giving the majority to the Tilden electors. The second law declared that the Tilden electors, naming them, were elected on the 7th day of November, and that they had voted, and directed that the same electors should meet; that the Governor should give them a certificate of their election, pursuant to the recanvass; and that they should make out duplicate lists of the votes, and transmit them to the President of the Senate at Washington; and the proceedings under that law make up the third return which has been read."

Mr. Commissioner Bradley: "What was the second return?"

Mr. Representative Field: "The second return to the President of the Senate was the return of the Tilden electors.

"The first return was made by the Hayes electors, and sent with the certificate of Stearns as Governor. The second return contains the certificates of the Tilden electors without the certificate of the Governor, but with a certificate of the Attorney-General, the only dissenting member of the Board of State Canvassers, certifying that they were elected. Then, the third return contains the action of the State authorities subsequently to the two first, for the purpose of ratifying and confirming, so far as it was possible for the State authorities to do it, the second return; and they therefore not only passed a law for the recanvass of the votes, which recanvass took place and resulted in a certificate of the election of the Tilden electors, but they passed another act reciting that the election had been in favor of the Tilden electors, and that the Tilden electors had met and voted on the 6th of December, but without a certificate of the Governor, and directing the Governor of the State to forward a supplementary certificate for its confirmation; and directing, moreover, for abundant caution, that there should be new lists made out and a new certificate by these electors, who were to be re-assembled for the purpose, the certificates all to be forwarded to the President of the Senate, as they would have been but for the conspiracy in November. Those papers make the third return.

"Now, if the commission please, we are told that the certificate of the Governor (Stearns), which has been forwarded to Washington annexed to the lists of votes of the Hayes electors, countervails all this evidence, and that, no matter what amount of testimony we may offer, documentary or oral, we can never invalidate the signature of Marcellus L. Stearns; and it is to that question that I shall devote what remains of my address. It is putting the question in an erroneous form to put it thus: 'You cannot go behind the certificate.' The form should be reversed: Can the certificate go before the truth, and conceal it? I prove these facts, or offer to prove them. On the other side—if I have rightly understood the objections made yesterday in the joint convention—on the other side there is no suggestion that we are not right in the facts; there is no avowal that the true and lawful vote of the State of Florida was not given for the Tilden electors; but the claim is, that 'there is the certificate of M. L. Stearns, and that stands as a barrier against all these witnesses, and the truth cannot be proven. The truth is buried under this certificate. Neither you, exercising for this occasion the powers of the two Houses of Congress, nor the two Houses themselves, acting separately or together, can consider any fact whatever to the contrary of which Stearns has certified.'

"Let me ask, in the first place, upon what foundation that doctrine rests? Who tells you that you are to take that certificate as conclusive evidence against anything that can be proved on the other side? By what rule of evidence, by what precept of law, are you deprived of the right to investigate the truth? Is it not a universal rule that every judge is invested *ex necessitate* with the power to take into consideration all pertinent evidence in respect to the facts upon which his judgment is to be pronounced, unless there is some positive law declaring that certain certificates or other documentary evidence shall be conclusive? I venture to say that that is the universal rule, and that there is no court of general jurisdiction known to American or Anglo-Saxon law in which it is not a fundamental principle that whenever a court can inquire into facts necessary to its judgment, it may take all the pertinent evidence—that is to say, all evidence that tends to prove the fact—unless it is restricted by some positive law. Now, then, show me a positive law that makes the certificate of Stearns evidence against the truth? Where is it? In what book? It is not in the Constitution. It is not in the laws of Florida. Is it in any law of Congress? The only act of Congress applicable is that which provides that the Executive of the State shall deliver to the electors a certificate that they are such electors; but that act does not declare that this certificate shall be conclusive—neither declares it nor implies it. Suppose I offer to prove that the certificate is wholly false—fabricated for the

purpose of cheating the State out of its vote, and the other States out of their rights? Take the State, one of the oldest and proudest in this Union of States—the State of Massachusetts, of which my friend Mr. Commissioner Abbott is so worthy a representative—and suppose that the honored Governor of that State were so debased as to certify that the Tilden electors had received the votes of a majority of the good and true voters of Massachusetts: will any man tell me that it must be taken as absolutely true?—that you cannot prove it to be false? Where is the law for that? Nay, more: I venture to affirm that, if an act of Congress had declared that that certificate should be conclusive, the act would have been unconstitutional. For what reason? For this reason: The Constitution, as if the foresight of the fathers grasped the conflicts of future years, declares that the person having the highest number of votes shall be the President. Not the person declared to have the highest number of votes, but 'the person having the highest number.' No certificate can be manufactured to take that away. If you had declared by act of Congress, in the most express and positive terms, that the certificate of the Governor delivered to the electors should be conclusive against all proof, you would have transcended the limits of the organic law. You cannot say that the certificate of the Governor of Massachusetts shall override the votes of the electors of Massachusetts in their choice of President. Therefore it is I say not only that you have not done it, but you could not do it. You could not do it if you would, as I am sure you would not if you could.

"Is not your right to inquire into the very truth implied by the law under which you act? What are you to do? You are to declare whether any and what votes are the votes provided by the Constitution; not to declare what are the votes certified by Governor Stearns. That was known well enough beforehand. You are to certify what are the lawful votes upon which a President of forty-five millions of people is to be inducted into office.

"Is not the same right implied in the notion, which I find to prevail everywhere, that Congress might authorize a writ of *quo warranto* to try the title of President within the purview of the Constitution? Can that be doubted? The Constitution has declared that the person having the highest number of votes shall be the President; not the one certified. Congress has not as yet invested any tribunal with the power to try the title to the presidency by *quo warranto*. No such law exists, I am sorry to say. Such a law, if I might be permitted to say so, ought to be made. It is no small reproach to our statesmanship that for a hundred years no law has been provided for this great exigency.

"I have not been able to satisfy myself that there is any provision for a writ of *quo warranto* in the case of President. But my argu-

ment is that, whether there be a law now existing or not, it is competent to Congress to pass such a law; and if a law to provide for a writ of *quo warranto* would be constitutional, then it is constitutional to impose a like duty on any other tribunal to investigate the title. That is to say, if you could devolve that duty upon any tribunal by means of a writ of *quo warranto*, you can devolve it by other means. If the Governor's certificate would not be conclusive there, it is not conclusive here. The right to inquire into the fact exists somewhere; and if nowhere else, it must be here.

"Thus thinking that Congress could devolve upon some tribunal the authority to inquire into the title of the President, and that such authority would necessarily give to the tribunal investigating the right to go into the truth, notwithstanding any certificate to the falsehood, I argue that here before this Electoral Commission, invested with all the functions of the two Houses, you can inquire into the truth, no matter what may have been certified to the contrary.

"Furthermore, I submit to the commission that there is another rule of law which necessarily leads us to answer affirmatively the question whether the truth can be given in evidence notwithstanding the certificate: and that is, that fraud vitiates all transactions, and can always be inquired into in every case except possibly two. I will not argue now that the judgment of a court of record of competent jurisdiction can be impeached collaterally for fraud in the judge. Opinions differ. If it cannot be impeached, it must be because such an impeachment would lead to an inquiry that would be against public policy. It would be a scandal to inquire into the bribery or corruption of a judge while the judge is sitting to administer justice; and therefore, from motives of public policy, it may be the rule that, until the judge is impeached and removed, you cannot inquire into the corruption of his acts. And it may also be true that you cannot inquire into the validity of an act of a Legislature upon the ground of fraud or bribery. But, with those two exceptions, I venture to claim that there is no act and no document anywhere that you cannot impeach for fraud. Now, this canvassing board and this Governor were not invested with any such sanctity as are judges of courts of record. They were not dispensing justice between litigating parties, and it would not be against public policy to inquire into the corruption or invalidity of their acts. Not a single consideration that I have ever heard of, or which I can imagine, would lead us to the conclusion that you cannot inquire into the truth of their certificates; and I put it to the commission that they corruptly acted if they were bribed or led astray by hunger for office or the thirst for power or the thirst for gold. You can impeach their acts. Who is it whose acts we are now seeking to impeach? It is the then Governor of Florida, Stearns—Stearns, the man

who sent the telegram asking on what grounds the votes of counties could be thrown out, and who received, for answer, 'fraud, intimidation,' or something else—Stearns, the man who controlled the canvassing board sitting to certify whether he and they were to continue in office."

The President: "One of the objectors to the second certificate will now be heard, on the same rules and conditions prescribed in respect to the objectors to the first."

Mr. Representative Kasson: "What is the case before the commission? First, a certificate, as required by the Constitution and laws of the United States and in conformity with the statutes of the State of Florida, certifying the electoral votes of one of these States which my honorable friend who last spoke before the recess (Mr. Tucker) was pleased to call 'sovereign States' of this Union. That certificate is the one which was first opened and read in the joint session. There is a second so-called certificate opened in the joint meeting of the two Houses of Congress in which the persons signing the same preface their own certificate by one signed by an officer not recognized by the laws of the United States nor by the statutes of Florida as a certifying officer, being the Attorney-General of the State of Florida. He certifies that there is no provision of the law of Florida 'whereby the result of said return can be certified to the Executive of said State;' admitting by that certificate, if it has any force at all, that his action is without the law and without any sanction of the statutes of the State. Next, the self-styled electors certify to their own election and their own qualifications, and that they themselves notified the Governor of their own election. That is Certificate No. 2—a certificate of unauthorized persons and uncertified persons in the view of the laws, State and national, and that was presented and opened, in pursuance of the recent act of Congress, for what it is worth.

"There is a third certificate still more extraordinary—still more wanting in all the legal elements of electoral verification, and which asks for itself consideration. It is a certificate which is thoroughly *ex post facto*, certified by an officer not in existence until the functions of the office had been exhausted; a certificate which recites or refers to posterior proceedings in a subordinate court and in a superior State court, the latter expressly excluding the electoral question; a certificate which is accompanied by that sort of a return which a canvassing board might under some circumstances report to the State officers, but which has never been sent to the Congress of the United States or to the President of the Senate for their consideration in the one hundred years in which we have been a Republic. Every date of the judicial orders and of the laws authorizing the executive acts certified, the official existence of the very officers who certify them, the proceedings in the court as recited in them, are all subsequent to that time

which by the Constitution and laws of the United States is the date fixed for the final performance of electoral functions.

"These two certificates, therefore, are wanting in all the elements of constitutional and legal validity which should exist to give them audience before this commission. They conform in no respect to the laws of the country as they now are, or to the laws of the State as they were on the 6th day of December, when the functions of the electors were ended. More than that: if the first certificate, designated as Certificate No. 1, is a constitutional and legally-certified expression of the vote of the State of Florida, that question, being settled in favor of this certificate, obviates the necessity for considering the certificates numbered 2 and 3.

"I shall, therefore, cheerfully confine the argument to Certificate No. 1, because, if the objections to that certificate are invalid, and the certificate itself is valid, of course that dismisses all need of consideration of the other certificates, and we shall have ascertained what is the constitutional and legal electoral vote of the State of Florida.

"Now, it is not within the scope of my purpose to answer otherwise than generally that argument which took up most of the time of the objectors who opened this discussion. I must affirm, however, to this commission, that the first objector was in error in saying that we on this side had nothing to say contradicting his assertions of the frauds. We say everything in denial of fraud in the State officers. We affirm fraud in directly the reverse sense, and frauds which you would ascertain in the very steps to which he calls our attention, in the action of certain county canvassers certifying results for Tilden electors. For example, when he refers to Baker County, I entirely dissent from his view of the facts as existing of record in that case; but if you go into that question in Baker County to verify his assertions, we should inevitably ask that you go into Jackson County, where, under other political domination, they rejected 271 votes actually cast for the Hayes electors. We should ask you to go into Alachua County, and find at one precinct a railroad-train of non-resident passengers getting off on their passage through and voting the ticket which was supported by the objector (Mr. Field) who made the allegation against Baker County. We should invoke your attention to Waldo precinct, of the same county, to find that they had vitiated that poll also by what is called 'stuffing the ballot-box.' And so on with other counties passed upon by the State board.

"We answer, then, the allegation that their charges of fraud have not been denied by us, by stating that, if they are ever reached in the exercise of your jurisdiction, we propose to show, and shall show in that contingency, that there was such a case of fraud in the incipency of that vote which they claim should elect their candidate, as would astonish not only this

commission, but the whole country, by its presentation. I unite with my friends in condemning fraud wherever it exists. It should not only vitiate the result which it produced when it is ascertained by the proper tribunals, but it should also condemn every man, public or private, who participated in it. We are not here to defend fraud. We are here, however, to say not only that the allegation of it as made on the other side is not correct, but that the very next step behind the county canvassers confronts you with some of the grossest cases of the violation of the popular right to freely cast the vote, and to have that vote counted, which has ever been found in the history of this country.

"I leave that question now. I do not believe that this commission, by the Constitution or laws, was ever intended, or has the power, to go to the extent that would be required if they attempted to probe these mutual allegations of fraudulent voting and fraudulent canvassing to the bottom by judicial investigation and judicial decision.

"It seems to me that our honorable friends on the other side have been misled by the judicial atmosphere of this hall, consecrated usually to the jurisdiction of a constitutional court of justice.

"They have presented to you the following questions upon which it is absolutely necessary to come to a decision, upon their theory of your jurisdiction:

"1. Is this commission a general canvassing board, with power to recanvass the popular vote of the State of Florida?

"2. Is this commission a national court of appeal from the State canvassing boards?

"3. Is this commission a judicial court of appeal from the State Circuit Court of Florida in proceedings by writ of *quo warranto*?

"The affirmative of all these propositions is taken by our opponents. They do affirm that you are a canvassing board with power to recanvass the vote of Florida cast by the people; they do affirm that you are not merely a canvassing board, but a national court of appeal from the action of the canvassing board of Florida. They do affirm that you are a court so judicial that from the action of the State Circuit Court of Florida you can take jurisdiction by reviewing that action; and they do affirm that there is no limit to your power to investigate into the honesty and integrity of the action of the returning board of Florida, and to determine originally, with the powers of a court, to whom the certificate of election should have been awarded.

"This represents the legal position of our opponents. I ask, therefore, What are the powers of this commission? I need not remind the honorable gentlemen composing it that the assumption of these powers implies that we are to have no election of a President and Vice-President of the United States by the time limited for the commencement of the

functions of their offices. You cannot say to those gentlemen, 'We will go behind the regular certificates provided by the Constitution and the law just so far as will accommodate you to find whether it is true or not that what you allege to be fraud was done against your interest in one or two counties.' We must, if we go behind the electoral college, go where all the allegations of fraud on both sides assert its existence. It is the popular vote that those gentlemen say you are to review, to canvass, and to ascertain. Where does this commission get its power for that? By the act organizing the commission, you are vested with the right to consider just so much of this alleged case as Congress might consider; and when I say 'Congress,' I include, of course, the two Houses. Let me ask, then, What is that limit? We must clear our minds from what has grown within the later years to be most dangerous to the reserved rights of the States and to the rights of the people, namely, the assertion of unlimited universal power of each House, or both Houses, to assume jurisdiction over all things or questions having a national aspect or relation. No such undefined grasp was intended by the Constitution. Suppose this act—and I beg the attention of gentlemen to it—suppose this act had provided that, instead of surrounding the president of this commission with these gentlemen and conferring these indefinite powers, Congress had chosen to surround the President of the Senate with only the representatives of the Senate and of the House, would you have thought of attributing judicial power to them? The same power that justifies Congress, under the Constitution of the United States, in providing that the counting should be done by this commission, would have justified them in providing that the counting should be done by the President of the Senate alone. Admitting that Congress has power to that extent to regulate the counting, you must guide yourselves by the same principles in determining your jurisdiction that you yourselves would decide limited the jurisdiction of the President of the Senate as sole counting agent were he designated by this act to count the votes alone.

"Now, suppose that act in existence, and you have it by law that the Vice-President shall not only open, but shall himself count the votes. If the Constitution had said, 'and the votes shall then be counted *by him*,' the same result would have been attained. If, instead of 'by him,' you add the two words, 'by Congress,' you do not vary the power at all. Whatever counting is to be done is to be done either by the President of the Senate or by the two Houses of Congress. In either case it is only to 'count.' That is the substance. The rest is agency. Would you maintain for one moment, if that were the provision either of Constitution or law, that the President of the Senate should count the votes?—that he had the right to send out commissioners to take

depositions; 'to take into view' all other papers; to reach evidence at will; to canvass the popular vote of the State of Florida; to organize the whole machinery alike of executive canvassing boards of a State and of all the judicial courts of the State? Is there a gentleman on this commission from either House of Congress, or from the Supreme Bench, who would tolerate for a moment the exercise of such power under the simple language, 'shall count the votes'? If not, then the act has given no additional power to fifteen men beyond that power which, by the like terms, would have been conferred upon one man; and hence I affirm that there is in this law no power whatever to do more than is necessarily implied in the words, 'and the votes shall then be counted.'

"If that be so, then we come to the next question, What does the word 'count' mean? And is the power of that sort that implies something not ministerial, or within the narrow circuit of discretion that belongs to the ministerial power? Does it imply, as gentlemen on the other side claim, the unlimited circuit of the judicial power? If it does, your Constitution in its very framework and organization is violated.

"The first three articles of the Constitution divide the functions of this Government into legislative, executive, and judicial. The third article affirms positively that the judicial power is vested in one Supreme Court, and in inferior courts to be established.

"So the first article says that all legislative power granted is vested in the Congress of the United States. So the second article says that the executive power is vested in the President. Your limits are drawn by the Constitution of your country, which tells you that the several powers of this Government, the three great powers, shall not by any contrivance be merged or mingled in any tribunal, whether constituted of the three divisions, or of any or either of the three. The safety of our people hangs upon it; the safety of our States hangs upon it; all the elements of national safety hang upon the observance of that division of the functions of government. It is the greatest act in the progress of modern civilization as contrasted with the ancient and the Eastern, which combined all functions in one supreme head. It withholds each department of power from assuming either of the other essential powers of the Government, that the people may be saved from the tyranny of irresponsible authority.

"The claim made on the other side confuses and merges them in so far as you are asked to exercise judicial functions in the determination of rights. The very language used this morning was, that your powers were coextensive in this matter with those of a court trying a proceeding by *quo warranto*. Are you, then, a court under the third article of the Constitution?

"I therefore think it may be assumed that the indefinite language of this act of Congress confers no such powers as claimed upon this delegated commission, organized to tide over a difficulty, and to do the ministerial act of counting the votes in the stead of the President of the Senate.

"I have spoken of the narrow circuit of discretion that surrounded the ministerial act of counting.

"Now, what is that narrow circuit of discretion? It is broad enough to ascertain whether the papers before you as certificates are genuine and not counterfeit, and are duly and truly verified by State authority as required under the Constitution and laws. It is broad enough to ascertain whether the Electoral College has complied with the law. This is a ministerial examination. Do the papers upon their face contain evidence of fraud, of doubt, of irregularity, of error? Is Certificate No. 2 on its face more regular, more free from apparent fraud, more worthy of being received in evidence, than Certificate No. 1? Is Certificate No. 3 a truer certificate, more in compliance with law, and bearing upon its face the greater evidences of its authenticity? Which is the authentic certificate and the authenticated vote? These are the questions to be ministerially settled. Neither Congress nor any officers created by it have the right to recount popular votes; for the Constitution says expressly it is the *electoral votes* that are to be counted—not the popular vote. Over this Congress has no power under the presidential clauses of the Constitution.

"Every phase of the discussion confronts us, in a narrower or broader circle of reasoning, with this one question, Are you to revise and adjudicate all the proceedings of State elections for electors of President and of all State tribunals relating thereto appointed by State laws? We always come around to that. Or are you to count what is properly certified and presented to you? If you affirm the first proposition, you must declare the Constitution amended by this tribunal—*ipso facto* amended; so that it shall read: 'Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors equal,' etc., *subject, however, to revision by the Congress of the United States, who shall have power to overrule the State authorities in determining the college of electors*. Would the Constitution ever have been adopted with that construction?

"We are brought inevitably to such an amendment by construction. Yet the Constitution sought to preserve absolutely the right of the State to appoint its electors without Federal dictation. It required every ballot to be cast on the same day throughout the Union, that it might be free from every centralized influence. Every member of the commission knows what the history of the adoption of this clause is, and yet we are brought perpetually by the claims of the other side to this one

question: Shall we now go on and complete the absorption of this most absolute, independent, and unquestioned right of the States to appoint their electors in their own way, and hold that it is subject to revision and change by the two Houses of Congress?

"The objectors asked, Are we, then, to take the certificate of the proper State officers against the truth? Is there any reason why, on the other hand, it should not be asked, Are we to take the certificate of these fifteen gentlemen against the truth? There is a necessity in public affairs, and in the very organization of society and of political communities—an absolute necessity—to have some final jurisdiction. There must be, somewhere, an authority by which we stand, even if it be impeached by charges of fraud. Where is that authority? Is it here? Is it in the Governor? Is it in the canvassing board? Is it in the State Legislature? Is it in the State judiciary? Where is it? I submit that, for the purposes of this case and under the Constitution and laws, it is found where the State authority concludes; and that if the Constitution and laws of the United States, in manner, in time, in substance, so far as shown by the duly certified results, are conformed to, there is the determination of the case.

"I regret to pause, may it please the commissioners, to repel the suggestions made against this returning board. It was said that the court had found their return fraudulent. There is no evidence in the records of the court that that allegation is true. I have read the decision, and, in answering their argument, I must say there is not an allusion to the fact that that canvassing board acted fraudulently. It was alleged that their action, which had conformed to the action two years before, was a misinterpretation of their rights under the law; and in the document submitted a few moments ago to the commissioners, I think on the second page, there is a copy of the essential section of the law. The important language of the act to which I wish to call the attention of the commissioners, in the statutes of Florida regulating the powers of this board, is this:

If any such returns shall be shown or shall appear to be so irregular, false, or fraudulent, that the board shall be unable to determine the true vote for any such officer or member, they shall so certify, and shall not include such return in their determination and declaration.

"Thus it will be seen that the canvassing board of Florida were to inquire if these returns appeared to be so irregular, false, or fraudulent, that the board was unable to ascertain the true vote. That was their function. In exercising that function they not merely passed upon the returns of the county canvassers, but upon the certified results in precincts.

"The court said they had overstepped the law. And here I must remind the gentlemen

composing the commission, that, when they made the canvass which I have styled Canvass No. 2, under order of the Supreme Court of Florida, it will appear they then reported not only the result in respect to Governor, but they also reported the result in respect to electors. That result of the second canvass showed the election of the Hayes electors, but by a reduced majority. These electors appear to have run two or three hundred votes ahead of the State ticket, and the canvass left them still some two hundred majority. That appeared on the record. It does not appear on the printed document which has been submitted on the other side here, I suppose, because the court ruled that they intended their order to only apply to State officers; and therefore they struck out, after it had once gone in the record, the result as to the electors; but it was originally a part of the proceedings under order of the court, which, if gone into, will show the fact that not only Canvass No. 1 showed the election of the Hayes electors, but Canvass No. 2 had, under the order and in accordance with the ruling of the Supreme Court, showed both the election of the Democratic State ticket and the election of the Hayes electors.

"Then we come to Canvass No. 3, made after the college was *functus officio*, and there you find that, not satisfied at all, they appointed a new board of State canvassers. From that new board they left out the Attorney-General of the State. This, I suppose, was owing to the fact that his opinion had been, as to the law of the case in many points of the canvass, with the Republican members of the board. These papers which have been laid on your desk show that, instead of the Attorney-General being a member of the new State canvassing board, the Treasurer of the State was substituted.

"Now, I ask if you are to recognize canvass after canvass, and the changing results of partisan affiliations, the changing desires of individuals, the changing influences surrounding the canvassing board, and the whole political aspect of the State? Are you to change your rules of law, and to say that canvass after canvass may be made after function exhausted, and that the last canvass made under the circumstances should prevail, *ex post facto* entirely, *ex post facto* by law authorizing it, *ex post facto* by executive authority, *ex post facto* by the constitution of the board, *ex post facto* by the exhaustion of the functions of the officers themselves elect, *ex post facto* because the very terms of the officers elected had expired?

"The case is made when it is found to be in accordance with Constitution and law in time, manner, and due certification of authenticity. Can it be upset? Yes, if legal provision is made therefor. 'Where?' says the gentleman. I answer, Within the jurisdiction where the laws provide for the appellate or original determination of rights. 'But,' says the gentle-

man, 'suppose no such provision of law is made?' Then I answer, that a *casus omissus* of proper authority is no reason for the usurpation of that authority where not a scintilla of constitutional law has placed it. If the allegation were true, it simply shows the necessity of further legislation where that legislation ought to exist. If it be untrue, the whole ground and fabric of the argument here falls to the ground."

The President: "I inquire of counsel for the information merely of the commission, that we may know how to act in consultation. Do you propose to offer evidence before proceeding to the argument?"

Mr. Merrick: "Mr. O'Connor requests me to answer your honor that we expect to offer evidence, which is now here, before proceeding with the argument. We have been under the impression that the evidence was already before the commission, without any necessity for a further offer on our part."

The President: "That is sufficient, sir. What is the proposition of counsel on the other side?"

Mr. Evarts: "We have no evidence to offer, unless there should be a determination to admit evidence inquiring into facts, and evidence should be produced against us which we should then need to meet."

The President: "Should the commission decide to receive evidence, you expect to have the privilege of offering it afterward?"

Mr. Evarts: "We do."

SATURDAY, February 3, 1877.

The commission met at half-past ten o'clock A. M. pursuant to adjournment, all the members being present. There were also present: Hon. Charles O'Connor, of New York, Hon. Jeremiah S. Black, of Pennsylvania, R. L. Merrick, Esq., of Washington, Ashbel Green, Esq., of New Jersey, William C. Whitney, Esq., of New York, of counsel in opposition to Certificate No. 1; Hon. William M. Evarts, of New York, Hon. E. W. Stoughton, of New York, Hon. Stanley Matthews, of Ohio, Hon. Samuel Shellabarger, of Ohio, of counsel in opposition to Certificates Nos. 2 and 3.

The President: "I will state to the counsel at the bar that the proceedings under Rule 4 are concluded. Proceedings will now take place under Rule 3, two counsel on a side being allowed.

"Doubtless some question will arise as to the best mode of proceeding. It occurs to the Chair, without speaking for the commission, that a convenient and just mode may be that counsel representing the objectors to Certificate No. 1 should make their offers of proof in a concise, well-arranged, classified form, and then that the counsel representing the objectors to the second certificate should make their offers of proof, based, of course, upon the condition that proof should be admitted, it being under-

stood by the Chair that they probably may object to all proofs on the part of the counsel representing objections to Certificate No. 1. They can therefore make their provisional offers of proof in case there shall be a decision that proofs are admissible. Then the commission will have before it a case, and so will the bar. The case then would be, if that course should be adopted and pursued, the certificates with the accompanying papers, the objections, and the offers of proof upon which the counsel on the one side and the other would be heard. Then the commission would in a great degree have before it the whole case, and all the questions that arise under it.

Mr. O'Connor: "Mr. President and gentlemen of the commission: Advised of the position which this controversy stood in, and the stage of it at which we had arrived, by the question somewhat suddenly propounded last evening to us before the adjournment, I have endeavored in the *interim* to adjust a statement of what seemed to me to be desirable matter in the nature of evidence to be laid before this commission.

"I did not prepare that exactly in the form of an offer of evidence; but, although that be not its form, that is the substance of what I have written, which presently I will read, there not having been time even to make a fair copy of it, much less to have it printed.

"My object in framing what I propose to read to the court was not to conform to any particular view that I have heard exactly from any quarter, but to place the commission in possession of the general facts of the case in this brief and condensed form, so that the proper course of proceeding might go on, and that proper course be adjudged of and determined in a fair view of the matter by the commission.

"I now proceed to read the paper on which I have written our propositions:

"1. On December 6, 1876, being the regular law-day, both the Tilden and the Hayes electors respectively met and cast their votes, and transmitted the same to the seat of Government. Every form prescribed by the Constitution, or by any law bearing on the subject, was equally complied with by each of the rival electoral colleges, unless there be a difference between them in this: The certified lists provided for in section 136 of the Revised Statutes were, as to the Tilden electors, certified by the Attorney-General; and were, as to the Hayes electors, certified by Mr. Stearns, then Governor. All this appears of record, and no additional evidence is needed in respect to any part of it."

"Perhaps I convey no new light by saying that, but it is for the sake of presenting as distinct matter the view we take.

"2. A *quo warranto* was commenced against the Hayes electors in the proper court of Florida on the said 6th day of December, 1876, before they had cast their votes, which event-

uated in a judgment against them on the 25th of January, 1877. It also determined that the Tilden electors were duly appointed. The validity and effect of this judgment is determinable by the record; and no evidence seems to be desirable on either side, unless it be thought (1) that the Tilden electors should give some supplemental proof of the precise fact that the writ of *quo warranto* was served before the Hayes electors cast their votes, and (2) unless it be desired on the other side to show the entry and pendency of an appeal from the judgment in the *quo warranto*."

"With these two possible and very slight exceptions the whole case on this branch of it depends upon the record.

"3. To show what is the common law of Florida, and also the true construction of the Florida statutes, the Tilden electors desire to place before the commission the record of a judgment in the Supreme Court of that State on a mandamus prosecuted on the relation of Mr. Drew, the present Governor of that State, by force of which Mr. Stearns was ousted and Mr. Drew was admitted as Governor. This judgment, together with the court's opinion, is matter of record, and they require no other proof; nor is there any technical rule as to the manner in which this commission may inform itself concerning the laws of Florida."

"If I may be permitted to interject, it will be seen that I am endeavoring to show how very little there is in the shape of proof to delay this commission in proceeding directly to argument.

"4. The legislation of Florida subsequently to December 6, 1876, authorizing a new canvass of the electoral vote, and the fact of such new canvass and the due formal transmission thereof to the seat of Government, in perfect conformity to the Constitution and laws except that they were subsequent in point of time to December 6, 1876, are all matters of record, and already regularly before the commission.

"5. The only matters which the Tilden electors desire to lay before the commission by evidence actually extrinsic will now be stated.

"1. The Board of State Canvassers, acting on certain erroneous views when making their canvass, by which the Hayes electors appeared to be chosen, rejected wholly the returns from the county of Manatee, and parts of returns from each of the following counties: Hamilton, Jackson, and Monroe."

"I trust I have omitted none, but I have had no consultation.

"In so doing the said State board acted without jurisdiction, as the Circuit and Supreme Courts in Florida decided. It was by overruling and setting aside as not warranted by law these rejections, that the courts of Florida reached their respective conclusions that Mr. Drew was elected Governor, that the Hayes electors were usurpers, and that the Tilden electors were duly chosen. No evidence that

in any view could be called extrinsic is believed to be needful in order to establish the conclusions relied upon by the Tilden electors, except duly-authenticated copies of the State canvass'—that is; the erroneous canvass as we consider it—and of the returns from the above-named four counties, one wholly and in others in part rejected by said State canvassers.

"II. Evidence that Mr. Humphries, a Hayes elector, held office under the United States."

"This may be deemed anticipatory, and perhaps not proper to come from me.

"6. Judging from the objections taken by those supporting the Hayes electors, and the opening argument offered in their behalf, the supporters of the Tilden electors are led to believe that no evidence is needed or intended to be offered by the supporters of the Hayes electors, except: first, that the above-mentioned appeals were taken; and secondly, that Mr. Humphries had resigned."

"If I may be permitted to say a word, the commission will perceive that I have acted here with a view to support my idea that the facile method is to take these proofs subjected to all question; that there is not enough of matter to produce delay or confusion or conflict in respect of those extrinsic proofs that give rise to a judgment in discretion that it might be inconvenient. On the contrary, there is so little, and it is almost so completely pure matter that might be called of record, that we can get rid of the matter of evidence very promptly and easily and beneficially as to time and as to results, unless the commission please to adopt such a method as will make us, on the first little scrap of testimony being offered, present our whole case on both sides, and have the whole merits decided."

Mr. Black: "If your honors please, I think the suggestions that have come from the commissioners, and what has been said by Mr. O'Connor, as well as what has fallen from the gentlemen on the other side, relate to the most important duty that you have to perform; and therefore I shall be pardoned, I trust, for making a remark or two at this moment."

The President: "Do you desire to make further offers of proof?"

Mr. Black: "No, sir; I desire to suggest the course of proceeding which I think this tribunal is bound, by its legal duties, to take, for the purpose of reaching the justice of this cause."

The President: "It is not the moment for argument now."

Mr. Black: "It is the moment for suggesting the course of proceeding and our rights with reference to the evidence which is to be given. I insist upon it that the evidence is in, and that we are not bound to make any offer at all."

The President: "That, I think, is part of your argument after the cause is set down for argument, and not a preliminary statement."

Mr. Commissioner Miller: "Let me suggest that Mr. O'Connor has made a proposition to

submit certain evidence. If counsel on the other side have no objection to it, there is no occasion for further argument. If counsel on the other side submit to have that evidence come in, it will come in, and we can go on."

The President: "I think Judge Black had better defer until we hear from Mr. Evarts; otherwise there may be misunderstanding. We will hear Mr. Evarts."

Mr. Evarts: "The question whether the certificates transmitted from the States that fall within the warrant of such transmission by the Constitution and laws of the United States constitute the material upon which the duty of counting the vote of the State is to proceed, or whether the authority vested by the Constitution with the power to count can seek or receive extrinsic evidence of any kind, in any form, to be added to the certificates in the hands of the President of the Senate under the Constitution, is no doubt a principal inquiry of law and of jurisdiction in this commission, which, once settled upon principle and by your decision, will go to a certain extent in superseding or predetermining your action upon the merits."

Mr. Commissioner Strong: "Mr. Evarts, allow me to suggest that perhaps I do not understand Mr. O'Connor's position. I have not understood Mr. O'Connor as offering evidence at all. He has suggested what he supposes to be in evidence, and suggested what he might offer; but there has been no offer made, so far as I have understood him. If there has been an offer made, your province, it seems to me, is simply to withhold objection, or to object to the admission of the evidence so offered."

Mr. Evarts: "Am I to understand that my objection cannot be accompanied with any observation?"

Mr. Commissioner Miller: "If you object, we will hear argument. We cannot hear argument before anything is offered."

Mr. Commissioner Bradley: "I understand Mr. O'Connor to suggest that the extrinsic evidence mentioned by him be received provisionally for the purpose of the argument, and not to be decided upon by the commission at present. That is what I understood Mr. O'Connor. If that is his position, then it is simply a question of convenience whether that would be the better course, or whether we had better have an argument upon the question of the admissibility of evidence now alone, before going into an argument on the merits. As the argument on the admissibility of evidence would necessarily greatly involve the merits, it seems to me, unless counsel on the other side have forcible objections to that plan, Mr. O'Connor's suggestion is a good one, because it would then unify the argument—make one argument of the whole case; and the court, upon the close of it, would decide both questions: first, whether the argument was admissible; and, if it was, then as to its effect."

Mr. Commissioner Hoar: "Mr. President,

suppose Mr. O'Connor's offer of testimony be objected to by the other side, and then the commission hear the argument of the case as it then stands, resembling more nearly than any other judicial proceeding that I think of an argument made on a demurrer to the plaintiff's evidence, the evidence not being considered as in, but as offered."

The President: "That was the view of the Chair."

Mr. Commissioner Hoar: "Now, if we should hear the counsel on both sides on the case presented by the certificates which are before the commission, upon the offer of evidence made by Mr. O'Connor, and objected to by the other side, it seems to me that that would present (I do not know what other questions may arise in the case) one principal question of the case in the most clear, convenient, and quick form."

Mr. Commissioner Thurman: "Mr. President, I should like to inquire of counsel who support Certificate No. 1, what objection they have to all the evidence being received subject to all exceptions, not precluding any objection to it whatsoever? It appears from the statement of Mr. O'Connor that the testimony to be produced by him is in a very small compass. How great may be the volume of testimony, if any, produced on the other side, I do not know. But what objection is there, as this is a trial not by jury but by a court, to receiving all this testimony subject to all exceptions, and then arguing its admissibility with the main argument in the cause, allowing counsel, if it become necessary by the adoption of that course, more time than the third rule allows—such further time as may be necessary in order to consider the question of the admissibility of the evidence as well as the main question? What objection is there to that? I should like Mr. Evarts to answer."

The President: "In the absence of other discussion, I will state the view of the Chair. I shall regard the paper read by Mr. O'Connor as an offer of proof. Nothing, therefore, remains to the other side except to object or waive objections."

Mr. Evarts: "Then I am not prepared to reply to Mr. Commissioner Thurman."

The President: "It is hardly necessary, because you are to have full argument as well as a brief explanation of the objection."

Mr. Evarts: "I rose to speak to the precise point—"

The President: "Do you object to the offer of proof?"

Mr. Commissioner Thurman: "I suggest that Mr. Evarts ought to answer my inquiry."

Mr. Evarts: "I rose originally to speak to the very point to which Mr. Commissioner Thurman has drawn my attention."

The President: "Very well, sir; you may reply to that inquiry. I wished to get at the case as soon as may be. That was my purpose."

Mr. Evarts: "I will be as brief as I can,

and certainly fall quite within the fifteen minutes. The proposition is that the preparation of the case, as ready for argument upon its exhausted and completed merits on either alternative of the views of this commission as to the exclusion or admission of evidence, shall be made up by provisional acceptance of the mass of proof, whatever it may be, to be discussed as to admissibility and pertinency and efficacy in the conclusions of the tribunal as a part of the final argument. That I understand to be the proposition.

"The difficulty with that is, it requires the inclusion of all the countervailing proof that we, opposing their certificate or supporting ours, have a right to present under some determination of this court as to that right; for, if you go beyond the evidence furnished from the hands of the President of the Senate into an inspection and scrutiny of the election in the State as upon a trial of right to the office, then we say that the tribunal that accepts that task and is to fulfill that duty is to receive evidence that will make the scrutiny judicial and complete, from the primary deposit of the votes to the conclusion of the election. Now, this commission, as I suppose, does not contemplate a provisional introduction of all that evidence, oral, documentary, record, and otherwise, on our part, which comes in without objection, and subject only to the sifting of a final argument. That is my suggestion in reference to this intimation of convenience of a *de bene esse* introduction of evidence. The evidence by which, under the instruction of this commission that we have the right, we are let into a scrutiny of the election in Florida, is a scrutiny which can only be exhausted by oral testimony and by the fundamental original transactions of the election. That is the difficulty in selecting a part of the evidence to be admitted provisionally as furnishing the ground and area of a final discussion, because it does not include the evidence upon both sides which, under some *post hoc* determination of the court on the final argument, may be properly introduced.

"Now, I object to the evidence now offered."

Mr. Commissioner Miller: "Mr. President, I move that counsel on each side be allowed two hours to discuss the question raised by Mr. Evarts's objection to testimony, as to whether any other testimony will be considered by this commission than that which was laid before the two Houses by the presiding officer of the Senate."

Mr. Commissioner Thurman: "Mr. President; Suppose, then, that the commission should decide that further evidence should be considered, we should not have determined one thing as to what that further evidence should be. We should only have decided that evidence beyond the mere face of the papers presented by the President of the Senate to the two Houses should be received, but we should not have ad-

vanced one single step toward deciding what kind of evidence should be received. Here the two Houses have sent this inquiry to this commission, with all the powers that the two Houses, acting separately or together, possess; and obviously on that bare statement the question arises, What powers have the Houses?—what may the Houses—not by main force, but what may they constitutionally—receive as testimony? And that question is for us to decide; for, whatever they may constitutionally receive as testimony in deciding this question, it will be certainly admitted that we, having their powers, may receive. And that brings up the question suggested by the counsel who last spoke. I think, therefore, while I am perfectly willing that this question shall be argued—and indeed it ought to be argued—the scope of the argument must go much further than that suggested by Mr. Justice Miller, and it must embrace the question of whether or not we are to take into consideration the testimony that has been taken by either of the Houses, and also the question what further testimony may be offered here. Therefore, I think the question to be submitted for argument ought not to be narrowed to the mere question of whether we can go beyond the face of the papers that were handed in and opened by the President of the Senate; for when we have decided that, if it be decided one way that we can go further, we have not advanced one single step toward deciding what we can receive, and we should have to have another argument.”

Mr. Commissioner Miller: “I am willing to modify the motion in accordance with the suggestion of the Senator from Ohio.”

The President: “The motion, as modified, is as follows:

“That counsel be allowed two hours on each side to discuss the question whether any evidence will be considered by the commission that was not submitted to the two Houses by the President of the Senate; and if so, what evidence can properly be considered; and also the question, What is the evidence now before the commission?”

The President: “The question recurs on the original motion of Mr. Justice Miller, as modified.”

The motion was agreed to.

The President: “The order of speaking will be that indicated yesterday, unless otherwise instructed by the commission. One of the counsel supporting the objections to Certificate No. 1 will open. Both the counsel supporting the objections to Certificate No. 2 will follow. Then the other counsel supporting the objections to Certificate No. 1 will close. The case is before you under the motion of Mr. Justice Miller already adopted by the commission, and, if the counsel are ready, the commission is ready to hear them.”

Mr. O'Connor: “I hope I may be allowed to say, Mr. President, that your direction to pro-

ceed immediately in an argument which appears to us to involve essentially the whole merits, has rather confused our order of battle. We bow to it, however, most respectfully; but it somewhat embarrasses us; and it has not been thought that it would answer any useful purpose to make the counsel who is expected to deliver the reply to also deliver an opening. It would be clumsy and inconvenient in a great many respects; and we have had some difficulty in arranging so as to present a fair and proper argument covering the whole ground to-day, without consuming too much of our three hours. It appears to us that Judge Black and Mr. Merrick should be allowed to divide the time that we consider it proper to occupy to-day, if that is agreeable to the commission.”

The President (to the commission): “Shall three counsel be allowed to speak on each side, if they desire, without enlarging the time? That is the motion.”

The motion was agreed to.

Mr. Merrick: “Mr. President and gentlemen of the commission: The order passed by the honorable commission this morning, as remarked by Mr. O'Connor, has somewhat changed our order of battle, and we are compelled, though but indifferently prepared, to enter upon the discussion of the grave and important questions which you have required us to argue. We came into court expecting to proceed regularly with the Florida case; and, believing that the testimony taken by the committees of the Senate and House of Representatives upon this subject was regularly before the commission as testimony in the case, without being liable to any objection on account of its formality, supposed that its effect and ultimate admissibility would be considered by the court when it came finally to determine the main questions involved in the cause. But that case is practically suspended for the present, and the counsel are required to argue an abstract proposition of law submitted by the commission, involving an inquiry into the general powers of this commission under the organic act, and as to what evidence is now before you, and what further evidence it may be competent for counsel to offer and introduce.

“First, then, may it please your honors, as to the powers of the commission. The law of the United States under which this commission has been established and organized provides as follows in regard to electoral certificates from States which have sent up duplicate or triplicate certificates, and to any of which objections may be made at the time such certificates are opened in the presence of the two Houses:

When all such objections so made to any certificate, vote, or paper from a State shall have been received and read, all such certificates, votes, and papers so objected to, and all papers accompanying the same, together with such objections, shall be forthwith submitted to said commission, which shall proceed to consider the same, with the same powers, if any, now possessed for that purpose by the two Houses, acting separately or together, and, by a

majority of votes, decide whether any and what votes from such State are the votes provided for by the Constitution of the United States, and how many and what persons were duly appointed electors in such State, and may therein take into view such petitions, depositions, and other papers, if any, as shall by the Constitution and now existing law be competent and pertinent in such consideration.

"The language that I have read from the law embraces a succinct and clear declaration of the powers of this commission, and is the only part, I believe, that has direct reference to the testimony we regard as at present before the commission. As to the formal regularity of the evidence that is already before you, I presume there can be no objection. A question was raised in each of the two Houses of Congress after the late presidential election, early in their session, as to what votes, if any, should be counted from the States of Florida, Louisiana, South Carolina, and Oregon. Upon that question committees were duly appointed under the authority of the respective Houses to take testimony. In reference to the case of Florida, the committees from the two Houses respectively proceeded to that State and took testimony in accordance with the uniform methods and custom adopted by committees representing Congress and discharging duties similar to those imposed upon these committees. That testimony, having been so taken, was returned to the two Houses of Congress; and when objection was made to the counting of the votes from that State at the time they were opened by the President of the Senate, in pursuance of the mandate of that portion of the law to which I have referred, the certificates from the State of Florida, being three in number, with the papers accompanying those certificates and the objections and the evidence that had been taken by the committees of the House in reference to the regularity and the legality of the vote contained in these certificates, were all transmitted to this commission. I respectfully submit that this evidence, so transmitted, is now before this commission and properly in the cause. Wherever either House of Congress has assumed to exercise the power of instituting an inquiry into a disputed fact, it has uniformly appointed special committees or invested standing committees with authority to summon witnesses and take testimony in regard to that fact; and in this case each of the two Houses appointed its committee to take testimony upon the issue raised in reference to the electoral vote of Florida. That testimony was regularly returned to the two Houses, that were to act upon that vote under the Constitution of the United States; and such as was taken by the committee of the House has been transmitted by the House in joint session to this commission, which possesses and is to exercise all the power of the two Houses, or either of them, in the premises.

"I therefore presume, may it please your honors, that there can be no question in reference to the regularity of that testimony, what-

ever question may be raised in reference to its admissibility, under the issues you are to try and in reference to its effect upon those issues. I speak now of the mass of testimony generally that was laid upon this table, and respectfully submit that it is now before the commission, and, so far as I am advised, there is no other evidence, with the exception, possibly, of some relating to the particular hour of the day at which the writ of *quo warranto* was served upon what have been called the Hayes electors; and with that exception, as stated in the paper read by Mr. O'Connor this morning, I believe there is no question upon which the counsel for the objectors propose to offer any extrinsic evidence whatever.

"This evidence, which has thus been sent to the commission by the two Houses, is of two separate and distinct characters. First, there is the evidence that was inclosed in the certificates returned from the State of Florida. There were, as I have stated, three certificates: the first certificate being that of the Hayes electors, accompanied by the certificate of the Governor of Florida given to those electors; the second certificate was accompanied by the certificate of the Attorney-General of Florida; and the third was accompanied by certain judicial records, which, under the express language of the organic act, were referred to this body for their consideration.

"The other testimony, to which I have already referred, was extrinsic evidence, taken by the committee acting under the authority and in obedience to the mandate of the House of Representatives.

"And I may remark that, when the House committee took this testimony, there was full opportunity given to all parties interested in the result of the inquiry to summon whatever witnesses they might desire to have examined, and to cross-examine all that were brought forward. The examination-in-chief was taken with the regularity of all the rules of evidence, and cross-examination was permitted with the broadest latitude those rules allow. And if we were required to repeat the experience of that committee under the authority of this commission, and retake that evidence, there could probably be no witness summoned who was not before the committee, possibly no question propounded that was not propounded by some by some of the members of that committee, and no cross-interrogatory propounded that was not propounded, and the answer to which is not now before this honorable tribunal.

"But as this commission is invested with all the powers of Congress, under the law, the question recurs upon the materiality and admissibility of the evidence, without regard to its form; and this brings me to the inquiry as to what are its powers. I owe your honors an apology for undertaking to argue so important a subject, for I did not come into court prepared to perform that duty; and in assuming to

discharge it now, I am submitting myself to that subordination that prevails in the profession, and obey the orders of my senior counsel.

"It was said, in the opening statement made by the objectors upon the other side, that this commission possessed no other than simply a power to perform a ministerial duty; that it possessed no other than a power to enumerate the votes; that the certificate of the Governor of the State was final and conclusive, and there was no authority in this commission, whatever might be the proof, to correct that certificate for mistake or vacate it for fraud. They told you that it imported absolute verity beyond the reach of any evidence, however strong and however conclusive, and beyond the reach of the power of the State itself either to correct, modify, or annul it; and, carrying out the position assumed by the objectors on the other side, it would follow that if, in reference to the certificate of Governor Stearns, Governor Stearns himself had, subsequent to the date of that certificate, come before the two Houses of Congress in sackcloth and ashes, begging on behalf of his State to have some error in that certificate corrected, it could not be done. If he had come with penitential sorrow, confessing himself to have been guilty of any fraud, however enormous—I am merely supposing a case—and made it patent that that certificate was the representative of a falsehood and a fraud, and not of truth, yet the certificate was beyond reach of the truth, and it was necessary to crystallize its falsehood into a practical fact.

"May it please your honors, in view of that position upon the other side, as well as in taking appropriate positions in the opening of this argument, it becomes necessary to look at that paper and see what it is, and whence it derives this extraordinary sanctity—ininitely holy, beyond any judicial record, and beyond any record that can be made between nations in their most solemn compacts. By the act of Congress, section 136 of the Revised Statutes, it is provided as follows:

It shall be the duty of the Executive of each State to cause three lists of the names of the electors of such State to be made and certified, and to be delivered to the electors on or before the day on which they are required by the preceding section to meet.

"There is nothing in this section declaring that the certificate to which it refers shall be conclusive evidence of anything. There is nothing in this section declaring in words as to what particular fact that certificate shall be directed. There is nothing in this section making it mandatory upon the Governor to issue that certificate; and if there had been, it would have been something transcending the powers of Congress under the Constitution to put there, for Congress could not reach the Executive of a State by any enactment as to his official duty. It was not within the power of Congress to make it mandatory upon the Gov-

ernor to issue that certificate; and if it was not within the power of Congress to make it mandatory upon the Executive of a State to issue that certificate, can it be possible that it was within the power of Congress to say that the certificate, if issued, should be conclusive, or that the certificate should be necessary evidence in the absence of which the electoral vote should not be counted? Congress could not have required the Executive to issue the certificate, and could not have declared that the certificate should be the conclusive and only evidence of the election of the electors of the several States, because, in addition to what I have already submitted, the Constitution of the United States itself provides for the authentication of those electors, and that requirement is for an authentication from themselves; and if Congress superadds to that authentication an additional authentication which it makes a condition-precedent to counting the vote, it would be an act in violation of that provision of the Constitution, as well as in contravention of the relations of the Federal to the State Government. I do not question the power of Congress to require authentication, and to specify whatever manner of authentication it desires, in order to relieve any difficulty in determining who are the agents appointed by the State to cast its electoral vote; but the power that I deny to exist is the power to specify some authentication as an absolute condition-precedent to counting the vote, and to declare that, in the absence of that authentication so required by Congress, the electoral vote shall not be counted at all.

"Recurring to that section of the law in the Revised Statutes which I have read, I respectfully submit, as a proposition of law, that where certificates are required as matters of evidence, or where the law specifies evidence of any kind going to a particular fact with which the law so specifying the evidence is dealing, such evidence is never regarded in any court of law as conclusive beyond the power of rebuttal, unless the law specially provides that it shall be conclusive. Where the law says that such and such a paper or fact shall be evidence of a certain conclusion, that fact and that paper so specified as evidence of that conclusion are never beyond the power of rebuttal, unless the law has declared in specific terms that it shall be the only evidence, and shall be unimpeachable.

"I have referred to that clause of the Constitution which requires the electors to certify to their own appointment, and the manner in which they have executed their office; and I submit in this connection that it is not within the power of Congress to tie its hands so that it can never inquire into the truth of the due appointment of the electors and the electoral vote. It is not within the power of Congress to estop the two Houses from ascertaining what is the true vote. The language of the article referred to requires the return of the vote by

the electors—requires them to name in their ballots the persons voted for as President and Vice-President—to make distinct lists—to return the certificate of their vote to the President of the Senate—and then it proceeds as follows:

The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted.

“The learned objectors upon the other side stated yesterday that the word ‘counted’ was the controlling word in the sentence, and that, giving that word its proper and only signification, the clause that I have read conferred no other power upon the two Houses of Congress than the power of enumeration. I respectfully submit that the controlling word in that sentence is ‘votes’—‘the votes shall then be counted’—and that the word ‘votes’ controls the word ‘counted;’ and when you refer to the word ‘counted,’ you have to go back and see what it is that you are required to count. What is it, may it please your honors, that is to be counted? It is ‘the votes;’ and if those votes are cast by persons not duly appointed electors under the law of the State, they are not votes; and when you count them, you count something the Constitution did not authorize you to count. Therefore, in executing your duties under this clause, you must, before you count, ascertain what are votes. Having ascertained what are votes, you count those votes, throwing aside whatever ballots you shall find that are not votes. Under this article of the Constitution, and this particular clause of the article, I respectfully submit that there is in the two Houses of Congress a power to determine what are votes.

“Then the question arises as to how far you shall go in taking testimony to determine what are votes; but, as preliminary to that question, I beg leave to add that, if the Constitution has devolved upon the two Houses of Congress the duty of counting the votes—the true votes—and the necessary power of determining what are the true votes, Congress possesses no power to say what shall be conclusive and unimpeachable evidence of those votes; but in the performance of their high function the two Houses must ascertain what are the true votes, without any limitation placed upon them by Congress, and without being so restrained that they cannot go into the inquiry as to the truth. Congress may prescribe modes of authentication, but merely modes of authentication as aids, and not as conclusive evidence or restraints upon the Houses in their action. We therefore submit that any legitimate evidence going to determine what are the true votes is proper and competent evidence before this tribunal.

“And, may it please your honors, upon the question of whether you can go behind the certificate of the Executive of the State, and whether the certificate is conclusive or not

upon Congress, I beg to refer you to a high and most responsible authority—an authority that has the sanction of some of the most distinguished names that now adorn the passing history of the Republic. In 1873 the question came before Congress as to the counting of the Louisiana vote. The electors met; they voted; they sent up to the President of the Senate the certificate required by Article XII. of amendments to the Constitution, stating for whom they had voted, and inclosed in that certificate so sent up the certificate of the recognized Governor of Louisiana certifying to their due appointment; and all their proceedings were regular on their face from beginning to end. There was no objection made, and none intimated, to those proceedings, because of their nonconformity to the statutes of the United States. When that vote was opened, objection was made to it; but, prior to the time when the vote was opened, it was understood that there was some difficulty in reference to that vote, of some kind or other. The Senate of the United States directed its Committee on Privileges and Elections to inquire into the circumstances attending the election of the electors of that State. That committee went into the inquiry; it examined witnesses, and they were also cross-examined. All the facts that were needed and desired lying behind that certificate were gone into fully by that committee. Having gone into all those facts, they made their report to the Senate. In that report, made February 10, 1873 (which is to be found on page 1218 of the *Congressional Globe*, part 2, third session of the Forty-second Congress), the chairman of the committee, one of the honorable commissioners whom I have now the privilege of addressing, states as follows:

If Congress chooses to go behind the Governor's certificate and inquire who had been chosen as electors, it is not violating any principle of the right of the States to prescribe what shall be the evidence of the election of electors, but it is simply going behind the evidence as prescribed by an act of Congress; and, thus going behind the certificate of the Governor, we find that the official returns of the election of electors from the various parishes of Louisiana had never been counted by anybody having authority to count them.

“In the conclusion of the report Senator Morton says:

Whether it is competent for the two Houses, under the twenty-second joint rule (in regard to the constitutionality of which the committee here give no opinion), to go behind the certificate of the Governor of the State, to inquire whether the votes for electors have ever been counted by the legal returning board created by the law of the State, or whether, in making such count, the board had before them the official returns, the committee offer no suggestions, but present only a statement of the facts as they understand them.

“Now, in reference to the power of the joint rule of the two Houses, it is proper, before I proceed further, that I should make a single remark. That joint rule could give to the two

Houses no power they did not possess under the Constitution. It could neither enlarge nor abridge their constitutional powers. It is beyond the authority of Congress, or of any other tribunal, to enlarge or abridge the powers with which the Constitution has vested that body. A joint rule might formulate that power; a joint rule might indicate the manner in which that power should be exercised; a joint rule might prescribe the methods of proceeding in the execution of the power; but it could neither give power nor diminish power. In this report the only objection made to the vote of Louisiana is, that the returns for electors in that State had never been canvassed or counted. It was conceded that the certificate of the Governor was regular—perfectly regular on its face; and the honorable chairman of the committee, after stating those facts, says that he declines to make any suggestion to Congress as to what disposition ought to be made of the vote.

"May it please your honors, the evidence taken by that committee was before the two Houses of Congress when they met to count the vote four years ago. The intimation of the objection in the report was before those two Houses, and that intimation found shape and substance and form in a motion made by the Senator from Wisconsin, that the vote of Louisiana should not be counted. I am aware that that Senator at the time maintained that Louisiana was not a State bearing such relation to the Federal Union as authorized her to participate in the election of a Chief Magistrate; but in that position, it is a well-known political and historical fact, few or none of the Senators sympathized. He made his motion, stating different grounds for the motion; but the only ground before the Senate, conceding that Louisiana was a State and could participate in that election—the only ground before the two Houses of Congress upon which her vote could be excluded by any possibility or under the process of any sophistry or logic—was that, although the certificate of the Governor to the election of the electors was regular in form, yet the return lying behind that certificate, and upon which that certificate purported to be founded, had never been canvassed. The question came up for determination in the Senate on the 12th day of February, 1873 (as will be seen by reference to page 1293 of the same volume), and it was voted upon. Mr. Carpenter's resolution, that the vote should not be counted, was determined in the affirmative, and the vote was not counted."

Mr. Commissioner Edmunds: "Have you there, and will you read, the resolution adopted by the Senate on that occasion?"

Mr. Merrick: "The only one I have been able to find is Mr. Carpenter's resolution, 'that the votes should not be counted.' He objected to the vote, stating various grounds; but the only resolution I have been able to find is a simple resolution that the vote of Louisiana should not be counted."

Mr. Commissioner Edmunds: "Without stating in terms the grounds on which it proceeded?"

Mr. Merrick: "Yes, sir; I indicated that."

Mr. Commissioner Edmunds: "I was only inquiring for information."

Mr. Merrick: "But I supplemented the indication by this further statement, that there was no ground before the Senate upon which the vote could have been excluded, as far as I can ascertain from the record, except that the vote for electors had not been canvassed. If there is any other ground stated in the report of the committee, I have been unable to find it. Mr. Carpenter entertained a different opinion from nearly every Senator as to the peculiar relations of Louisiana to the Federal Union. He may have voted upon that ground; but I believe that no other Senator, or not more than one or two, shared his opinion. I believe his honor who made the inquiry of me voted in the affirmative on the resolution that the vote should not be counted.

"Now, may it please your honors, I refer to this precedent as authority for two propositions: First, that the testimony taken by a committee of either of the Houses inquiring into the regularity and legality of an electoral vote is competent testimony to be considered when the question arises as to what disposition you shall make of that vote. Secondly, that it is competent for Congress, under the Constitution of the United States, to go behind the certificate of the Governor, and throw out a vote where the testimony proves that that certificate does not properly indicate the wishes of the people in the individuals that certificate designates as the agents of the State; and, those facts being established, it is competent to discard the vote.

"But, may it please your honors, in the case of the State of Florida we shall not ask for evidence going behind the certificate. This case presents itself to the court in a peculiar aspect. The evidence which we shall offer, and which we claim to be admissible as to that State, is evidence furnished by the State herself, as indicated in the proposition read by the distinguished gentleman with whom I have the honor to be associated (Mr. O'Connor).

"Two propositions as to evidence, then, come before your honors:

"First, whether the United States through its Congress, or either or both Houses of Congress, can, in reference to an electoral vote, institute an original inquiry itself, and by a committee of either House take testimony going behind the certificate of the State, and invalidate that certificate on its own motion, when the State still adheres to the regularity of that certificate. That is one question—a very important one; but there is another, totally different from that.

"Second, whether, when the Houses of the Congress of the United States come to inquire into the electoral vote and ascertain which

vote shall be counted, it is competent for them to receive evidence furnished by the State herself in reference to the certificate her Governor may have given.

"Your honors perceive at once the wide difference in the two cases; and I respectfully submit, in connection with that proposition, that if the power does not exist in the two Houses of Congress as a primary and original power separately to take testimony going behind the certificate, then it must exist in the State to correct its own certificate, or impeach it for fraud or falsehood; or else we may be inevitably tied to an accident or mistake, and a presidential election may turn upon a certificate which is known to all the world to be an accident, a falsehood, or a fraud, which can neither be impeached by the State that gave it because of fraud, accident, or mistake, nor interfered with in any way by the Federal Government to which it is addressed, but must be a substantial and perpetual truth in the presence of convincing evidence that it is an active and living lie.

"In the case of the State of Florida, taking up the second proposition, the State herself, after the meeting of the electors, ascertaining that this certificate given by Governor Stearns was given either in mistake or fraud, and founded upon an irregular and illegal canvass of the votes according to the laws of Florida, by her Legislature passed a law directing another canvass to be made. But she did not pass that law, even, until she had appealed to her judicial tribunals to interpret the laws previously existing and relating to the subject. Having appealed to those tribunals to interpret these laws, and in the mandamus case having received from her tribunal of last resort an opinion giving construction to those previously-existing laws, by which opinion it became apparent that the returning board had transcended its legal duties and jurisdiction and made a return which was erroneous under the law, her Legislature then, on the basis of that opinion, directed another canvass of the vote to be made in accordance with the judicial construction of the law. When that canvass was made and returned to the Legislature, her Legislature passed another act on the basis of that canvass, declaring that the parties to whom the certificate had been issued by Governor Stearns had not been appointed, and designating the persons who had been chosen as the agents of the State to speak her voice in the electoral college. But she has gone further. A *quo warranto* was issued against these parties who assumed to exercise the electoral office under the certificate granted by Governor Stearns, and that *quo warranto* having come before the judicial tribunals, they, in the exercise of a jurisdiction given to them by the State laws of Florida, decided that the men who had received that certificate were not elected, but that other men were elected; and those other men so elected received a certi-

cate from the Governor of Florida, and in the execution of the office to which they had been appointed by the people in the previous November discharged their duties as electors, and voted on the day designated by the law of the United States.

"Now, then, may it please your honors, you have from that State this evidence—evidence from her Legislature, evidence from her Executive, evidence from her judicial tribunals—that the electors to whose vote we object were not the duly appointed electors of Florida; and through all the departments of her government Florida therefore comes to the United States Congress and begs that you (for you now exercise that power, and it is vested in you) will protect her people from the enormity of having their voice simulated by parties never appointed to speak in her behalf. Is not that competent evidence to go before the House of Congress? If it is not, and if Congress itself cannot, in the exercise of its original power, go forward and inquire into the manner and due election of these electors, then you have placed the whole Government and Administration of the United States in the power of any Executive who may issue his certificate to a party never voted for at all, while the unanimous vote of the State may have been in favor of another party. You may take the whole population of Florida, and although they may never have voted for A and B at all, and though the vote may have been unanimous in favor of other parties, if the Governor chooses to issue his certificate to A and B, that certificate becomes binding upon Congress, and may cast a presidential election. If this be the law, may it please your honors, then who will 'deliver us from the body of this death?' It is beyond the power of Congress to grant relief; it is beyond the power of this tribunal.

"I find that I have consumed, may it please your honors, more than the time allotted me."

The President: "The side that has been opened has spoken one hour and twenty minutes. We will now hear the other side."

Mr. Matthews: "Mr. President and gentlemen of the commission: What are we engaged in doing? What is this commission organized to effect? It is, to assist in that business which under the Constitution is called counting the electoral vote. This is all the power that Congress has on that subject. It makes no difference who is to do it. The debate up to the passage of this act was whether the President of the Senate should do it, or whether the two Houses of Congress should participate with him in it; and a variety of opinions, from the year 1800 up to now, has been entertained and expressed by distinguished statesmen on both sides as to where the power was lodged. But it is immaterial now. The question is not, *Who does it?* but, *What is it that is to be done?*

"It was said by the objectors on our side—I think it cannot be controverted—that count-

ing, in its primary meaning, is merely enumeration, and is limited to that in all cases where the subjects of the count are definitely ascertained. To be sure, it is an important question, as put by the learned counsel on the other side—What is to be counted? There is no dispute on that. It is the electoral votes; and the cases which are referred to this tribunal are those of two sets of votes, and the power, therefore, is implied to distinguish between these several sets of votes, and ascertain which is the vote lawfully to be counted.

“What is the nature and extent of that implied power incident to this right to separate the lawful from the unlawful electoral votes? for upon the question of the limit of the inquiry which this body is authorized to make under the act which organizes it depends the solution of the question as to what evidence it may look to for the purpose of determining the fact which is the subject of its inquiry. I think it involves, undoubtedly, the exercise of certain discretion and judgment. It may involve the decision of some questions of fact not determinable merely by inspection of the paper purporting to contain the vote, or to constitute the vote; as, for example, the very case put by one of the learned gentlemen on the other side: its genuineness, or whether it be a forgery—whether, if it be proven by a seal, the seal be the genuine seal. It may also involve the decision of some question of law, as, for example, whether the paper offered is one known to the law or made in conformity with the law.

“But this power, however described, whether as ministerial, administrative, political, or otherwise, must be carefully distinguished from that judicial power which is exerted by judicial courts under the jurisdiction to try the title to an office by the prerogative writ of *quo warranto*. In the exercise of that jurisdiction, the court, armed with its proper process and the machinery of trial by jury, and for the enforcement of evidence, goes to the *very truth and right of the matter*, without regard to the paper title. It ascertains, by a scrutiny and the testimony of witnesses, who in fact received the legal number of legal votes to vest him with actual title to the office. Is it proposed here to do that? Why, if your honors please, what length of time would be required to investigate by recounting and recounting the popular vote that lies at the foundation of the electoral vote in every State in the Union, or even in those which are the subjects of dispute in this count? And if you cannot go down to the bottom—if you cannot, in probing and searching for frauds and errors and mistakes, go through the long and black catalogue of crime—why stop at the first, in order to take advantage of all the rest? If this work is the work of this tribunal, then it is to be made thorough and searching. Certainly there is not any principle of law or good morals which, if the door be opened to that inquiry,

requires you to stop before you have got through.

“I think it is plain that this commission is not engaged in the exercise of that jurisdiction. It is not invested with any portion of that judicial power which is conferred or constituted by the Constitution of the United States; and Congress, not possessing it itself, could not confer it upon such a body as this, which is created for the mere purpose of assisting in the count of the votes, because it is not such a court as Congress is authorized to create for the purpose of receiving a grant of the judicial power of the Constitution. I do not doubt that the jurisdiction to try the title to the office of President and Vice-President, being judicial and properly exercised under the power to issue writs of *quo warranto*, may be vested by law in the Federal courts, as a case at common law arising under the Constitution and laws of the United States; but, until vested, it remains dormant. Whether in point of fact such legislation exists, either by a direct act of Congress or indirectly by the adoption of the Maryland statutes in the District of Columbia, is a question upon which I am not advised; but the fact that such a jurisdiction either has been or may be evoked out of the Constitution, is an unanswerable reply to the doctrine that Congress, or this tribunal sitting in its stead, has a right to make judicial inquiry as in *quo warranto* into the title of any office. I claim, provided there be no actual legislation such as I have spoken of by Congress, in respect to *quo warranto* in regard to President and Vice-President, that there is no law, either State or Federal, in reference to the office and function of an elector. I maintain that there is no law, either State or Federal, whereby that title can be judicially investigated and determined after he has cast his vote.

“I maintain that no State can exercise such jurisdiction after that event, because, although, by the terms of the Constitution of the United States, each State by its Legislature may determine the mode of the appointment, and in fact make the appointment of its electors, yet the function of voting for President and Vice-President is exercised under the authority of the Constitution of the United States; and if it were possible that such jurisdiction existed in State tribunals under the authority of State laws, it would be an easy matter, in the great strife and struggle of political parties in the various States that constitute the Union after the election, to interpose by judicial process such delays in respect to the quieting of the title of the parties having the regular and formal appearance of election as to defeat by an injunction, as well as a *quo warranto*, the right to cast the vote at the time when by the Constitution and laws of the United States it is necessary that it should be cast. And so it would be in the power of party and faction at any time, when beaten at the polls by the popular vote, to resort to these extraordinary writs

under State authority, and defeat their adversaries by the interminable delays of litigation.

"It was the policy of our fathers, it is the policy of the Constitution, to provide a machinery which, let it work as it will, must nevertheless, by the 4th day of March, after the election, necessarily work out the result of having some President and some Vice-President. It was of far more consequence, and was so esteemed by the framers of the Constitution, as it will be by every lover of law and order, that we should have some constituted authority; far more important that the line of continuous authority should be preserved, than that either A or B should hold the place and receive the power and the emoluments of the office.

"I say, therefore, that, although I admit that the State may provide as it pleases any mode by which the appointment may be made and by which the fact of appointment may be verified so as to furnish such machinery and mode of proof as it may choose to verify its own appointment, yet, nevertheless, it must take effect, if it have any power whatever, prior to the time when by the Constitution of the United States those who have the *indicia* of office and the color of office are called upon as the appointed electors of a particular State to discharge the constitutional duty of depositing their vote for President and Vice-President; so that when the person appointed, or who appears to have been appointed, having in his possession formal evidences of his appointment, in fact exercises the authority conferred upon him under the Constitution of the United States, actually discharges the duty of casting the vote which it is his business to deliver, the transaction to which he has been a party has passed beyond the control of State power and authority.

"Then, Mr. President, if I be right, the actual question before this commission is not, Which set of electors in Florida received a majority of popular votes? it is not, Which set appears, from the return of the votes made at the primary voting-places, to have had a majority of votes so returned? it is not, Which set, by looking at the county returns, appears to have had a majority of the votes so compiled? but it is this: Which set, by the actual declaration of the final authority of the State charged with that duty, has become entitled to and clothed by the forms of law with actual incumbency and possession of the office? That body of electors which, with an apparent right and a paper title, and in possession of the function, franchise, or office, actually exercises it, is for the purpose of this tribunal the lawful body whose votes must be counted. It is not necessarily the body which upon subsequent proceedings may be ascertained to have had *de jure* title; but it is that body which by color of office, having the formal external proofs of authority, was in point of fact inducted into possession of the power to cast

that vote, and who did it; in other words, who under the law of Florida were, on the 6th day of December, 1876, *de facto* electors for that State.

"The gentlemen say there were two sets. Why, Mr. President and gentlemen, it is as absurd to say that there are or can be two sets of *de facto* officers in the same office as it is to say that there are or can be two sets of *de jure* officers. It is as absurd in law as it would be in physics to say that two bodies can occupy the same space in the same moment of time. The man who is in the office, who has possession of it, who has been inducted into it, who exercises its authority, who does the thing which that office authorizes whomsoever is in it to do, is the man for whom we are inquiring, for he is the man that votes. Nobody else votes. Everybody else is a mere volunteer, unorganized, illegal, without authority, no matter although his ultimate and final right be better than that of the man who has intruded.

"There is no safety and there is no sense—I speak it with great respect to this tribunal and to the gentlemen who differ with me; I am bound to say it—there is neither safety nor sense in any other doctrine. You may talk as eloquently as may be on questions of fraud. It is said 'fraud vitiates everything.' No, it does not. It makes things voidable, but it does not vitiate everything. If my friend (Mr. Black), by the arts and stratagems of other people (which I know his guileless soul does not possess), should hoodwink me by fraudulent misrepresentation into voting for his candidate—if that be a possible supposition—I cannot retract my ballot, nor can the scrutiny set aside the result, because fraud upon private persons is sometimes insignificant when compared with public interests. Frauds by trustees or persons in fiduciary capacities do not make void their fraudulent transactions. They may be avoided, but only by judicial process, and the defense of laches is always a sufficient answer; and lapse of time may be an element in a matter of such transcendent public interest as this that no man, after the time had elapsed, can be heard to allege it.

"And, Mr. President, the only alternative, as I think I have already once said, is, upon the doctrine of our learned friends on the other side, that if the inquiry is opened, it must be opened to all intents and purposes; it must be opened for all inquiries and investigations; it must be opened for all possible proofs. It will not do to stop at the first stage in the descent, but you must go clean to the bottom. And, although it be not pertinent to a forensic discussion, perhaps the example set to me by the learned gentlemen on the other side will warrant the expression, on my part, of my personal confidence that, if that true result, setting aside all the forms and the fictions of the law, could be ascertained, there would be no question here as to who ought to be entitled to

have counted in his favor the vote of Florida. I admit that the mere certifying act is not conclusive. It may be dispensed with. Congress, who provided it, furnished it, made it a part of the transaction, may disregard it. They need not tie themselves hand and foot; they need not estop themselves; but they have directed this commission only to receive that which is competent and pertinent by existing law, and the existing law makes the Governor's certificate pertinent and competent and sufficient.

"But, Mr. President and gentlemen, if you go behind the certificate, what are you limited to by the necessity of the thing? In my judgment, you are limited to this: to an inquiry into what are the facts *to which he should have certified and did not*; not, what are or may be the ultimate and final facts and right of the case. The facts to be certified by the Governor in this or in any case are the public facts which by law remain and constitute a part of the record in the public offices and archives of the State, and of which, being Governor for the time being, he has official knowledge. So, then, the case stands, that on the day and at the time when, if ever, the title and right to the possession and incumbency of this function became complete, Governor Stearns was the lawful Governor of Florida, and the fact to be certified was just what appeared at that time in his office, or in the office of the Secretary of State—to wit, that by the judgment and finding of the final authority of the State canvassing that election the gentlemen whom he certified to be electors had in fact and according to law been appointed."

MONDAY, February 5, 1877.

The commission met at eleven o'clock A. M., pursuant to adjournment, all the members being present.

The President: "The concluding counsel on the part of the objectors to the first certificate is entitled to an hour and forty minutes. Mr. Evarts, on the other side, who will speak first, is entitled to an hour and thirty-two minutes."

Mr. Evarts: "Mr. President and gentlemen of the commission: The order of the commission inviting the attention of counsel lays out for their consideration three topics:

"1. Whether, under the powers possessed by the commission, any evidence beyond that disclosed in the three certificates from the State of Florida, which were opened by the President of the Senate in the presence of the two Houses of Congress, and under the authority of the recent act of Congress are transmitted to this commission, can be received.

"2. If any can be received, what that evidence is.

"3. What evidence other than these certificates, if any, is now before the commission.

"I will dispose of the last question in the order of the commission first. It requires but

brief attention to express our views sufficiently, and will, I think, require but little consideration, in point of time, however important it may be in substance, from the commission.

"It is suggested that certain packages of papers, which were borne into the presence of the commission by the messenger that brought the certificates and the objections, are *already* evidence in the possession of the commission. What those packages contain, what degree of authenticity, or what scope of efficacy, is to be imputed to or claimed for them as particular matters of evidence and particular forms of proof, is unknown to us and unknown to the commission. The proposition upon which it is claimed that this evidence, whatever it may be—subject, undoubtedly, to discussion and to rejection by the commission as not pertinent and not important and not authentic—the proposition is that, being mentioned in one of the objections interposed against the first certificate as matter on which the objection was founded, instead of being a warrant as it were to the objector which he vouches, he, the objector, thereby makes it a part of the evidence before the commission; and our learned friend, Judge Black, has proposed that, except as against objectors who prevail in their arts and efforts in common-law courts, and whom he has been polite enough to designate as '*snapperadoes*,' this evidence is, by authentic principles of jurisprudence, made evidence by this attachment to this objection.

"Now, the provisions of the recent act that at all touch this matter are very few. In the first place, the objections are not conclusive of anything. They bind nobody. They are merely the action upon which the reference to this commission arises. If there be no objection, the case provided for the exercise of your authority is not produced. If the objection is made, however inartificial or imperfect, the case has arisen; but that the objection narrows and limits and provides the issue or affects the controversy upon which your jurisdiction attaches, is a pure fabrication out of utterly unsubstantial and immaterial suggestions in the law. Certainly, if volunteer objectors on one side and the other were permitted to lay down the issues and adduce the evidence and make up the packages of the evidence, it would be a strange commitment of your great authority to casual, to rash, to disingenuous suggestion.

"So much, I think, entirely disposes of the question whether there is any evidence here. The other question, as to whether evidence in the possession of either or both of the Houses of Congress, in the shape of committees' reports or conclusions of either of those great bodies, in any form, is transmissible, and may be proposed to this commission and may be accepted and received by it after it is unfolded, after it is understood, after the paper is scrutinized and is opposed, is a question that is but a subordinate part of the main question, wheth-

er any evidence beyond the certificates can be received.

"I wish to preclude, at the outset, anything that should carry for a moment the impression that there has been ~~overpassed~~, by some stroke of astuteness or of diligence, the question of what you can receive and what you must reject. I find myself, then, unimpeded in the inquiry, as open to me as it is open to you, whether *any* evidence can be received, and, if any, what, beyond the certificates opened by the President of the Senate. On that question I shall think it quite attentive to the instruction of the commission, and much more suitable to a practical and definite discussion and a practical and definite determination by this commission, that, whatever of general principles, and however far-reaching the decision on those general principles in this matter of evidence may be, the evidence that is now actually proposed should be taken as the apparent limit of the inquiry whether evidence should be received, not from any particular defect as to form or manner of proffer, but as to whether it falls within evidence that may be received extraneous to, in addition to, the certificates opened by the President of the Senate. I am enabled by the memorandum presented by the learned counsel, Mr. O'Connor, to present the quality and character, the office and effort, of extraneous evidence that it is supposed might be, within the powers of this commission, received and entertained by it.

"In the first place, he excludes from the area of consideration one of the certificates, to wit, that which contains the vote of the Tilden electors; for that they need no extrinsic proof, and it is mentioned only that it may be excluded. Then, secondly, there are statements concerning the *quo warranto* suit of Florida, commenced on the 6th of December and ending on the 25th of January. In regard to that, the record is supposed to contain in itself the particular means of its use according to established rules of jurisprudence as a record or as an authority. It is suggested in respect to that, therefore, that extraneous proof only would need to reach the point of the precise hour of the day on the 6th of December on which the writ commencing that action was served, and on our part, perhaps, proof that an appeal had been taken from that judgment, and is still pending.

"Then are enumerated some other matters that require no proof, as it is supposed. Again, the acts of the Legislature mentioned are public acts and matters of record; and it is supposed that they are regularly before the commission, so far, at least, as they appear in the third certificate, by virtue of that transmission; and, besides, I suppose that they are matters of public record as the action of the Legislature of the State. We come now to the following:

Fifthly. The only matters which the Tilden electors desire to lay before the commission by evidence actually intrinsic will now be stated.

1. The Board of State Canvassers, acting on certain erroneous views when making their canvass, by which the Hayes electors appeared to be chosen, rejected wholly the returns from the county of Manatee and parts of returns from each of the following counties—

"Naming them—

In so doing the said State board acted without jurisdiction, as the Circuit and Supreme Courts in Florida decided.

"That is, by their recent judgments in mandamus and *quo warranto*.

It was by overruling and setting aside as not warranted by law these rejections, that the courts of Florida reached their respective conclusions that Mr. Drew was elected Governor, that the Hayes electors were usurpers, and that the Tilden electors were duly chosen. No evidence that in any view could be called extrinsic is believed to be needful in order to establish the conclusions relied upon by the Tilden electors, except duly authenticated copies of the State canvass. That is—

"Mr. O'Connor adds—

the erroneous canvass as we consider it, 'and of the returns from the above-named four counties, one wholly and others in part rejected by said State canvassers.' "

Mr. O'Connor: "That is your canvass that you rely on."

Mr. Evarts: "So I understand. I was reading your language.

And of the returns from the above-named four counties, one wholly and others in part rejected by said State canvassers.

"It is proposed, therefore, as the matter extraneous that it is desired to introduce, and that it is claimed is open to your consideration; not that the certificate of Governor Stearns falsifies the fact he was to certify; not that it falsifies the record that makes the basis of the fact which he was to certify to; but that the record at the time on which by law he was to base his certificate, departing from which his certificate would be false, is itself to be penetrated or surmounted by extraneous proof, showing that by matters of substance occurring in the progress of the election itself errors of fraud intervened. This means, that somewhere in the steps of the election between the deposit of the ballots in the boxes at the precincts and the original computation of the contents of those boxes there, and the submission to a correct canvass in a county of the precincts thus canvassed at their own ballot-boxes, or between the returns of the county canvass to the State canvassers, or in the action of the State canvassers in the final computation of the aggregates to ascertain the plurality of votes as for one or the other candidate, and so declare the result of the election, frauds or mistakes occurred. In other words, where in the process of the election itself, from stage to stage, on the very matter of right and on the question of title *de jure* there has occurred matter of judicial consideration which should be inquired into here. For I need not say that, however simple and however limited

the step to be taken behind the record of the final State canvass, to serve the needs and to accomplish the justice as proposed by the learned counsel for the objectors against the Hayes certificate, the *principle* upon which this evidence is offered, if their occasions required it, if justice required it, if the powers of this commission tolerated it, would carry the scrutiny and the evidence to whatever point this complete correction or evisceration of the final canvass would demand.

"I am at once, therefore, relieved from any discussion, as practical in this case, except so far as illustration or argument may make it useful *pro* or *con*, of any consideration whether a Governor's certificate could be attacked as itself being not a Governor's certificate, but a forgery. That is not going *behind* the Governor's certificate. That is going in front of the Governor's certificate, and breaking it down as no Governor's certificate. That is not the question you are to consider here. There is certainly no reason, on principle, that when a Governor's certificate is required for any solemnity or conclusiveness of authentication, a forged paper should be protected because it is called a Governor's certificate. Neither does their offer of proof suggest any debate as to whether *the fact to be certified by the Governor*, the substance that his certificate is to authenticate, can be made the subject of extraneous evidence with a view to show that the fact to be certified is discordant with the certificate, and that the fact must prevail over the interpolated false certificate of the fact.

"There can be no escape from this criticism on their offer of proof, unless our learned opponents ask your assent to a claim that, when the act of Congress requires the Governor's certificate as to the list of persons that have been appointed electors, it requires from the Governor a certificate that every stage and step of the process of *the election* has been honest and true and clear and lawful and effectual, and free from all exception of fraud. Unless you make *that* the fact to be certified by the Governor, you lay no basis for introducing evidence of discord between the fact to be certified and the fact that has been certified. Without disguise, therefore, the proposition is that, whether or no there might be occasion for extraneous proof to falsify a Governor's certificate on the ground of its own spurious character, or on the ground of its falsely setting forth the fact professed to be stated, and admitting the Governor's certificate to be genuine, and admitting the final canvass, duly filed and recorded, to be in accord with the certificate, this commission stands at the same stage of inquiry and with the same right to investigate the election itself to the bottom as a judicial court exercising the familiar jurisdiction of *quo warranto*.

"I have said that this commission cannot receive evidence in addition to the certificates of the nature of that which is offered; that is,

evidence that goes behind the State's record of its election, which has been certified by the Governor as resulting in the appointment of these electors. One reason of this proposition, and on which sufficiently it rests, is that that is a judicial inquiry into the very matter of right, the title to office. This inquiry accepts the prevalence of the formal, the *certificated*, the recorded, title of the electors, and proposes then to investigate as *inter partes*, as a matter of right, which of two competing lists of electors is really elected on an honest and searching canvass and scrutiny of the State election. It undertakes a function that is judicial; and the powers for its exercise are attempted to be evoked by their necessity for the exercise of the function assumed. What are adequate means? Adequate means for that judicial investigation are plenary means. No means are adequate for that inquiry that are not plenary. But no plenary judicial powers, no plenary powers for inquiry into fact and determination of law, judicially, can be communicated by Congress except to tribunals that are courts inferior to the Supreme Court, and that are filled by judges appointed by the President of the United States and confirmed by the Senate. Will any lawyer, expert or inexperienced, mention a topic or method of judicature, of jurisprudence, that involves the possession of means of larger reach and a more complete control of powers than the trial of a *quo warranto* for an office that is to search an election? But not only is it beyond the power of Congress to transfer to this commission the powers of a court of this plenary reach and efficiency, but on the topic of *quo warranto* to try the title of an office they would find a *subject* of jurisdiction in regard to which the Constitution had interposed an insurmountable barrier to its devolution on a court like this. The *quo warranto* is a matter and an action of the common law. It involves, as matter of right, the introduction of a jury into its methods of trial. No title to office on a contested election was ever tried without a jury. The seventh article of the Constitution requires that, in suits at common law, the right of trial by jury shall be preserved, and their verdict shall never be re-examined in any court of the United States except by the rules of the common law.

"I may ask your attention, in connection with the topic that I last discussed, and in pertinent relation to the present, to the case of *Groome vs. Gwynne*, in 43 Maryland Reports, 572, especially at page 624. This case shows that this argument, that a duty attributed by law or the Constitution must carry to itself, in the functionary charged with its exercise, all the powers necessary, upon the ground that the duty must involve the powers, finds no place in our jurisprudence; the argument is the other way. If the functionary, if the commission, has not been clothed with the necessary faculties, then the duty is not accorded; or, the means of its exercise not being fur-

nished, it cannot be discharged. There the Governor had, by the State constitution, the power to determine a contest for the elective office of Attorney-General of the State of Maryland. The Governor, finding by his own inspection of the constitution that he lacked the means of carrying out the scrutiny that must decide, held that he could not exercise it, and he would not exercise it unless compelled by judicial authority. The Court of Appeals, on an application for a mandamus to compel the Governor to give the certificate to the candidate appearing to be elected by the canvass, held that he was vested by the constitution with an authority to decide the contest, but that the laws of Maryland had not executed the constitution by furnishing him with powers to perform the duty assigned to him, and that the mandamus must go against him to compel him to deliver the certificate to the candidate that, on the fraudulent election, was returned as having the plurality of votes. Thus the preliminary contest before the Governor, that might have been effectual to redress the frauds of the election, was defeated for want of necessary legislation. The contest could only be had under the judicial powers of the State lodged in the courts, and in the shape of *quo warranto* on a suit against the inducted candidate that the Governor might or would have decided not to be entitled to take the office.

"I find in this act of 1877 no such purpose in the arrangement of this commission or its endowment with powers as to make it a court under the Constitution. I find no appointment of these judges to this court under the powers of the Constitution. I find no means provided for writs and their enforcement, nor for the methods of trial that must belong to a discussion on a *quo warranto*. Now, I understand that the proponents of this proof lay out as the nature and the limits of your inquiries of your duties and your powers, that of judicial investigation upon *quo warranto*. Mr. Representative Field assigned to you what he described as 'powers at least as great as those of a court on *quo warranto*,' and of course in that nature. Mr. Merrick claimed the same. Judge Black did not in terms, yet, in assigning the nature and the searching character of the transaction that you are to enter upon, gave it that character and implied that demand. The brief handed in by Mr. Green, in the praise of which I am happy to join with his learned associates, makes the claim distinctly that you are not adequate as a revising canvassing board, but you must have the powers of a court on *quo warranto*. And why this claim, if anything less magnificent and anything less intolerable could have been found of sufficient area for your action as desired? It is because, in the methods and machinery of elections, as they insist, the steps are onward, from one canvass to the next; and if you are made only a superior canvassing board, to determine whether Governor Stearns's certificate that these electors were appointed

is valid, and you are nothing but a returning board surmounting the final returning board to see whether their returns justified that certificate, then, at once, you must find that it does; that the *de facto* title and possession is complete, and that nothing but a jurisdiction that concedes the *de facto* title and possession can begin—can find the case for beginning—the consideration of the question of right. This *quo warranto* suit in the Florida court, if it becomes a subject of evidence, declares absolutely, on the petition of the Tilden electors, that the Hayes electors are in possession of the faculty, the office, or whatever it may be, and are exercising it, and they ask that an inquiry may then proceed in due course of law, to inquire whether that possession and that exercise, as matter of right, between them and the Hayes electors, are or are not according to law and truth.

"And the commission will be good enough to look at an act, not reprinted in the little collection of the acts so usefully laid before us, of February 2, 1872, in the laws of Florida, in relation to the proceeding upon writs of *quo warranto*. The general statute of procedure excludes any possible writ of *quo warranto* except by the State through the action of the Attorney-General; and this *quo warranto* suit begins by evidence that the Attorney-General refused to bring the writ for the State, and that led to an inquiry how it happened that it was brought at all, and to the discovery of this law of 1872, providing that, when the Attorney-General refuses, then claimants may make themselves relators, and use the name of the State; but in such cases the suit is a mere private suit, that is good between the parties but does not affect the State. It is in terms so provided, and it is provided that the judgment shall not be a bar to a subsequent suit by the Attorney-General in the public right. So much to explain that situation.

"There is but one other point that I wish to call to the attention of the commission in the legislation of Florida, for I can spend no time to rehearse the statutes. On page 53 of the pamphlet that has been printed for the use of the commission there are found sections 31 and 32. One is a provision that

The Secretary of State shall make and transmit to each person chosen to any State office immediately after the canvass—

"Showing that the canvass as completed is the basis of the State's authentication of the right of every State officer—

a certificate showing the number of votes cast for each person, which certificate shall be *prima facie* evidence of his election to such office.

"That gives him the office. Subsequent inquiry is as to the final right. Then section 32:

When any person shall be elected to the office of elector of President and Vice-President, or Representative in Congress, the Governor shall make out, sign, and cause to be sealed with the seal of the State, and transmit to such person, a certificate of his election.

"That is the State's final designation of the person that has been appointed an elector under the Constitution of the United States. Had these contestants any such authentication of their right, and have they proposed any such evidence of right as in existence on the 6th day of December? Have they questioned the completeness of the Hayes electors' warrant to attend and discharge their duty, that clothes the vote when cast with the complete qualification under the State laws and the State's action? We have the Governor's certificate—and he is the very person that passed officially upon that question which furnishes the authority to the electors to meet and act—that this is the list of the electors appointed. *Omnia præsumuntur rite acta*; but there is no presumption needed here. These certificates under the State law form no part of the return to the President of the Senate; but when the same Governor executes under Federal law the same duty and upon the same evidence as under State law, we have in this certificate, now here, adequate authentication of the completion of the transaction by which the State appointed the Hayes electors.

"Now we come to consider the general doctrine as to what the powers are, and what the arrangement and disposition of those powers are, under the Constitution of the United States in the transaction of choosing a President. In the first place, the only transaction of choosing a President begins with the deposit, so to speak, in the Federal urn, of the votes of certain persons named and described in the Constitution as electors. From the moment of that deposit the sealed vote lies protected against destruction or corruption in the deposit provided for it, the possession of Federal officers in Federal offices. The only other step after that is the opening of those votes and their counting. All that precedes the deposit of the votes by electors relates to their acquisition of the qualifications which the Constitution prescribes. Those qualifications are nothing but *appointment by the State*, and with that the act of Congress and the Federal Constitution, with due reverence to State authority, do not interfere. It has been provided, under a rule of prudence, that the electors shall all be appointed on the same day in all the States. It has been provided that they shall meet and cast their votes on the same day. The latter provision fixes a duty in the transaction of *voting for President*. The other is the only intrusion upon State authority in the absolute choice of the time and manner of appointment; Congress may prescribe that the time of voting shall be the same in all the States, and Congress has so prescribed.

"What are we to gather in respect to the stage of this transaction which is the deposit of the Federal vote for President by the qualified electors? It is their own vote. They are not delegates to cast a vote according to the instruction of their State. They are not dep-

utized to perform the will of another. They are voters that exercise a free choice and authority to vote, or refrain from voting, and to vote for whom they please; and, from the moment that their vote is sealed and sent forward toward the seat of Government, no power in a State can touch it, arrest it, reverse it, corrupt it, retract it. Nothing remains to be done except count it, and count it as it was deposited. The wisdom of the secret ballot and of its repose in the possession of the President of the Senate secures the object, *ut nihil innovetur*. The vote is to be opened and counted, in contemplation of law, as freshly as if it had been counted on the day it was cast in the State.

"These electors at our present election, three hundred and sixty-nine citizens in number, not being marked and designated by any but political methods, are by the Constitution made dependent for their qualification upon the action of the State. If the State does not act, there are no qualified electors. If the State does act, whatever is the be-all and the end-all of the State's action up to the time that the vote is cast, is the be-all and the end-all of the qualification of the elector, and he is then a qualified elector, depositing his vote to accomplish its purpose, and to be counted when the votes are collected.

"Let me find for you those constitutional limitations upon the supposed *quo warranto* procedures that were to cover investigations into thirteen or thirty-eight States before the votes could be counted. Why, the *second substituted election*, on the failure of the first, must end by the 4th of March. What room is there to interpolate *quo warranto* proceeding in any stage from the deposit in the primary ballot-box in the State up to the counting of the votes which declares a President elected, or the failure to elect, upon which the States resume their control through their delegates in the lower House of Congress upon the basis of State equality? The substituted election must come to an end by the 4th of March; and whoever introduces judicial *quo warranto* anywhere in the transaction, introduces a process of retardation, of baffling, of obscuring, of defrauding, of defeating, the election, and gives to the Senate, by mere delay, the present filling of the presidency with an acting officer, and *compels* a new election. That much for delay. Now, it is an absolutely novel proposition, that judicial power can put its little finger into the political transaction of choosing anybody to an elective office.

"The bringing into office a President, bringing into office a Governor, bringing into office any of the necessary agents of the frame and structure of the State, without which in present action it will be enfeebled and may fall, is a political action from beginning to end. It comes to furnish a subject of judicial *post hoc* investigation only after it has been completed. If judges are to intrude, and courts with their

proceedings, at the various stages that are to be passed in the business of filling the offices, so that there shall be no vacant and no disputed succession *de facto*, who does not see that you introduce the means of defrauding and defeating the political action entirely, and turning it into a discussion of the mere right that shall leave the office vacant till the mere right is determined?

"It is an absolute novelty, unknown in the States, unknown in the nation, that judicial inquiries can be interposed to stop the political action that leads up to the filling of offices. The interest of the State is that the office shall be filled. Filling it is the exercise of a political right, the discharge of a political duty. Such safeguards as can be thrown about the ballot-box, about the first canvass, the second canvass, the third canvass, the final canvass in the States, about the final counting before the two Houses, and that shall not retard or defeat the progress to the necessary end, are provided. These are provided; these are useful; but you do not step with a judicial investigation into a ballot-box upon a suggestion that it has been stuffed, and stop the election till that *quo warranto* is taken; and then, when you get to the first canvasser, stop his count from going on because it is a false count, and have a court decide; and so with the county canvassers, stop their transaction in the rapid progress to the result aimed at, to wit, filling the office, with a *quo warranto* there, and then in the State canvass, and then here. It is an absolute novelty. No judicial action has ever been accepted and followed except the mandamus to compel officers to act; nothing else. That was not retarding: that was ascertaining; that was compelling; that was discarding delays on the question of right.

"The novelty, as I have said, of the situation produces strange results. Never before has there been the retardation of the political transactions of counting an election; and, to accomplish that, almost a miracle has been needed, for the sun and the moon have been made to stand still much longer than they did for Joshua in the conflict in Judea. You will find that an attempt to bring judges—I do not now speak of judges in the official capacity that some portion of this bench occupy in the Supreme Court, but I mean judges in the nature of judicial function and its exercise—into the working of this scheme of popular sovereignty in its political action will make it as intolerable in its working, will so defraud and defeat the popular will by the nature and necessary consequences of the judicial intervention, that, at last, the government of the judges will have superseded the sovereignty of the people, and there will be no cure, no resource, but that which the children of Israel had—to pray for a king."

The President: "Mr. O'Connor, the commission will now hear you."

Mr. O'Connor: "Mr. President and gentlemen

of the commission: I will not say probably, because it may be said certainly, the most important case that has ever been presented to any official authority within these United States is now brought before this honorable commission for its investigation and decision. It is brought here under circumstances that give absolute assurance, as far as absolute assurance can exist in human things, of a sound, upright, intelligible decision, that will receive the approval of all just and reasonable men. The great occasion which has given rise to the construction of this tribunal has attracted the attention of every enlightened and observing individual in the civilized world. This commission acts under that observation. The conclusion at which it may arrive must necessarily pass into history; and from the deeply interesting character, in all their aspects, of the proceedings had, and the judgment to be pronounced, that history will attract the attention of students and men of culture and intelligence as long as our country shall be remembered; for it cannot be supposed that a question will ever arise and be determined in a similar manner, which, by its superior magnitude, importance, delicacy, and interest, will obscure this one, or cause it to be overlooked.

"The selection of members to this commission was made by a choice of five individuals equal—assumed to be equal, pronounced to be equal, if not superior—to any others to be found in the House of Representatives, and a similar choice of similar individuals taken from the Senate; thus placing the entire legislative representation of our whole country under the observation of present and future times in respect to whatever shall here be done. To that has been added a selection of five other members from the highest judicial tribunal known under our Constitution and laws, and certainly a tribunal equal in official majesty and dignity, as well as in intellectual power, to any that has ever existed. Evidently, from the whole frame of the procedure, these appointments were made with an earnest intent, and indeed a fixed resolution, to have here represented in this tribunal whatever of perfect impartiality and fairness, whatever of purity and integrity, whatever of learning and dignity of position, our country could afford. This, too, is a public act of the highest authority that could be invoked to express the sovereign will of the whole people.

"The questions to be considered are of a public character and of a judicial nature. Every member of the commission has been a jurist by profession during his life, and has devoted his time and his study to the apprehension and comprehension of legal questions.

"It was said by a great English judge—and an eminent writer and historian—in the highest court of that country, in a conspicuous case, that 'jurisprudence is the department of human knowledge to which our brethren of the United States of America have chiefly devoted

themselves, and in which they have chiefly excelled.'

"With all these elements affording guarantees in respect to the result, I think it may be confidently asserted that such result cannot be other than the intelligent judgment of mankind in present and future times will approve. With that assurance, and with a deep sense of my own incapacity to fulfill the part assigned me in arguing the great question presented, but with a conviction that all deficiencies of this kind will be supplemented by the learning and ability of the tribunal, I proceed to lay before your honors what may seem proper to be now said on our part in relation to the issues that have been raised for consideration by the commission's resolve, adopted on Saturday.

"The questions, in short, without repeating details, are expressed by the inquiry, What powers have been vested in this commission for the purpose of enabling its members to guide through its determination the action of the political authorities as to the election of President and Vice-President? And here let me observe on a mistake which the other side has made in relation to a paper presented to the court on our part on Saturday. It has been construed as in some sense prescribing limits, or giving our view of some limit proper to be assigned, to the power and authority of this commission. This is a mistake. That paper was designed for no such purpose and expresses no such idea. With a view to facilitate the action of the court, we presented in that paper a statement which we believe to be correct and true in point of fact, showing the very narrow range of inquiry into matters of fact that would actually become necessary.

"In reference to the question, What elements of inquiry are within the competency of this court? we stand in direct conflict with the other side, and the issue formed between us is this:

"We maintain, as representing what are called the Tilden electors, that this tribunal has full authority to investigate, by all just and legitimate means of proof, the very fact, and thereby to ascertain what was the electoral vote of Florida.

"On the other hand, it is claimed that this learned commission is greatly trammelled by technical impediments, and has no power except merely to determine what may be the just inferences from the documents returned to the President of the Senate from the State of Florida. While thus contending, however, the Hayes electors mainly repose themselves on the proposition that they are officers *de facto*. Admitting, for the sake of argument, that their claim to be electors is without right, and is simply clothed with a false and fabricated color of title, the Hayes electors claim, through their counsel, that, inasmuch as they cast their vote while possessed of some documents which gave to them the mere color of a right to perform that duty, the fact that they

acted upon this color, and did of their own motion or their own personal will, through their own right of selection, cast the votes for Mr. Hayes that are sent here as the vote of Florida, all inquiry is completely precluded, and that it is impossible for any earthly tribunal, or any individual, to investigate or to declare the invalidity of their claim.

"This issue—thus, I trust, not too narrowly stated—raises the question, What are the powers of this commission? I proceed to state our views on the subject.

"Those powers are distinctly and briefly expressed in the electoral bills under which you are acting—that admirable act of legislation, destined, to the immortal honor of those concerned in its preparation, to pass into history with your action. The language defining your powers declares that you shall possess

The same powers, if any, now possessed—

"For the purpose in hand—

by the two Houses, acting separately or together.

"You have, then (and this is the test), all the powers of those two Houses which they could possibly exercise under the Constitution and by the preëxisting statutes, for the purpose of enabling you to determine the inquiries submitted to you. Let us see, then, what powers are possessed by the two Houses, separately or together, in deciding as to the electoral vote upon the facts that exist or that might exist and may be proven. And this calls upon us to say what those powers are, and requires us to answer whether, in relation to the action which has here been called counting, any powers under the laws existing when this electoral bill was passed, and which were needful to a proper ascertainment of the vote, were vested in the President of the Senate.

"Now, that no power of any description deserving the name of a power to investigate and decide resided in the President of the Senate, is most plain from the very words of the Constitution. He is authorized to receive certain packets, and he has no authority whatever by the Constitution save and except only to present himself to the two Houses of Congress, and in their presence to open these packets. The phrase is, 'open the certificates;' but this evidently means, open the packets. He has no right to open them at any previous time; he has no power whatever to investigate what is contained in the packets before thus opening them; he has no means of taking testimony; he has no right to judge of anything; and he is positively precluded, not only by the Constitution itself, but by the physical laws of Nature, from knowing what may be within any packet thus received by him until the moment at which he opens that packet in the presence of the two Houses. Of course, the packets which he is thus authorized to open are to present the basis of subsequent action.

"Nothing further is prescribed to him, and

I humbly submit that it is most manifest that he has none but the merest of clerical powers, nor any ability to do anything except to open the packets at that time and at that place and in that presence. He cannot even know what is in the packets until he opens the packets. But it is manifest that the packets which he thus opens may raise a decision by some authority of a preliminary question—that is to say, What are the votes in respect to which a count may take place?—no person or functionary or body being specially pointed out as having power to make that count. Now, a great deal has been said which I consider not very applicable or very instructive in reference to this word ‘count,’ as if it were the operative and principal word here, and were used to determine the faculty and point out the power of those who have authority to count. Now, I humbly insist that the count itself is so purely a simple arithmetical process, that in reference to it there never could be a possible difference of opinion anywhere or among any persons.

“I apprehend that there is a word in this constitutional provision that ought not to be overlooked. The President of the Senate is to receive these packets. They are not required to have any note or ear-mark of any description to indicate to him what they are, and he can only learn by external inquiry or report that they are sent him by persons pretending to be electors of President and Vice-President; and the Constitution, proceeding to declare his duty, says that he shall ‘open *all* the certificates.’ The word ‘all’ would perform no function, and it would be entirely useless, if it were to be confined to indicating the certificates before spoken of. The simple phrase ‘shall open the certificates’ would suffice; but he is to ‘open *all* the certificates;’ and this provision of the Constitution, not granting powers of investigation but dealing with visible facts, declares that he shall ‘open *all* the certificates.’ This, I apprehend, means all packets that may have come to him under color of being such packets as the Constitution refers to: that is, packets containing electoral votes, or appearing to be of that character. He is bound to open all such packets in the presence of the Houses, and there ends his duty. But when we come to the prescription that there shall be a count, we are not told that there shall be a count of *all* the certificates presented, or of *the* certificates, or of anything in the certificates, but that there shall be a count of ‘the votes.’ This, I humbly submit, introduces a necessary implication that somehow and by some authority there shall be made, if necessary, a selection of the actual votes from the mass of papers produced and physically present before the Houses. Any investigation that this nature of the case may happen to require in order to determine what are ‘the votes’ must be made by some functionaries having competency to make it. This

is a preliminary inquiry; and whether you denominate it judicial or ministerial or executive, it is to be an inquiry, and the power to institute or carry it on is neither granted in terms nor are there any possible means of its exercise, so far as the President of the Senate is concerned. This is left to an implication that it is to be exercised by those who may have occasion to act officially on the result of the electoral vote.

“Who are they that are to act officially by the terms of the Constitution in performance of duty resulting from the count of the votes? The Constitution is plain. The votes—meaning, of course, the legal votes—are to be counted. The count is the merest ceremony in itself; but the ascertainment of what are legal votes presented necessarily devolves upon that body or those bodies that must act on that which is produced as a result by the count. The authorities compelled by duty to see that the count is justly and truly made, and to act on the result, are the two Houses.

“Unquestionably the first and primary duty of the Houses, if there is a count showing the election of a person to the presidency and another to the vice-presidency, is to recognize them as constituting that coordinate department of the Government called the Executive. As to a mere count, all the world may make it; no mortal man can doubt about the effect of a count; but I presume the general world is not called upon to act in reference to the count until that count has been officially recognized by some lawful authority. But what is more certain is this: It is the duty of the House of Representatives at that point in the process to determine whether an exigency has arisen which renders it their duty to recognize that a person has been elected as President by a majority of votes—of the legal votes—or whether there has been a failure to elect by reason of a tie; and in that event, if it should occur, that House is bound to act upon the result, and in this exigency itself is to elect a President. The same observations apply to the Senate with reference to the Vice-President; that body is bound, in like manner, to recognize the fact of an election, to allow it, admit it, and accept it as a fact, or to deny it and say that it is not so, and themselves to proceed in the election of a Vice-President.

“I attach no importance to the word ‘count;’ but I claim, from the very nature of the thing, from the laws inwrought into the constitution of human beings and governing human transactions, that those who have thus to act officially on the count are the persons who must do whatever may be needful for the purpose of enabling a count to be made. Those who are bound to act in the one direction or in the other, as the case may require, must possess the power of making any preliminary investigation that may become necessary.

“The result of this construction is, that that

officer who has no power but to open them is set aside from the moment he opens the packets, and the duty of exercising the higher function, preliminarily, of inquiring what are the votes, prior to this mere formal act, 'counting,' must devolve upon those who must take notice what are the legal votes and act upon the count of them. This no one is authorized to make or to declare unless it be themselves. This implied power is not introduced by any forced construction, but from the absolute necessity of the case. And, consequently, we claim that the needful powers of preliminary investigation were in the Houses. It cannot fairly be disputed that Congress, by united action, might have constituted some public body to conduct the investigation; and how far they might have gone toward making the result absolutely obligatory on the Houses themselves respectively, we need not inquire.

"They did not exercise such a power prior to the election of 1876, and they have not otherwise exercised it subsequently, except by the constitution of this tribunal, and they have reserved to themselves the privilege of establishing a different determination by a concurrent vote.

"The competency of each House to ascertain the truth is unquestionable. Each has complete powers of investigation; they can take proof through their committees, or otherwise, as to any matter on which they may be obliged to decide, and, either before or after the opening of all the votes, they can thus investigate, though not, it must be admitted, with the aid of a jury, nor in the precise forms of a judicial proceeding. They can investigate, as political and legislative bodies may, all the facts and circumstances that are necessary to be known in order to enlighten their judgment and guide them to a just and righteous decision.

"Our construction thus recognizes in those two bodies, on such a contingency as is here presented, full power to do whatever may be needful to the accomplishment of justice.

"What is the objection to this construction? The whole argument against it resolves itself simply into the argument *ab inconvenienti*. Those who would seek to grasp a high office by illegal, irregular, and fraudulent means claim that it would be inconvenient to take so much trouble as might become necessary in order to investigate rightly, and rightly to determine on proofs, the question of their delinquency and the falsehood of their claim. This is a common plea among persons who set up a falsely and fraudulently contrived title. When an effort is made to strip them of their pretended authority, by demonstrating before a court or other appropriate tribunal the fallacy of their claims, and the necessity to the ends of justice of having that fallacy declared and their pretensions set aside, they point out the trouble involved in the task. But let us see how

stands that argument. Let us test it by ordinary and familiar principles.

"It is suggested that it might lead—and, if entered upon, must necessarily lead, if the parties think fit—to an investigation of the personal qualifications of every one among the millions of electors; and that, if you lay down the rule or adopt the principle that you have a right to investigate at all, you open the door to that inconvenient and boundless sea of litigation. The mischief of this, they say, would be so great, that it is better to let injustice triumph, and permit a usurper to enter the executive office by the most unholy of avenues—that which is paved with falsehood, fraud, and corruption. They say it is better to submit to all that, or any other more enormous evil—if a more enormous one can be imagined—than to submit to the shocking and monstrous inconvenience that is thus to result from any attempt to inquire into the validity of the election!

"There is really nothing in this broadly-presented picture of overwhelming inconvenience. They say, no matter how, we should limit our inquiries to a very narrow range; for, if you allow any investigation, you will establish the doctrine, you will open the door to intolerably-protracted litigation. This suggestion is not warranted by law or the practice of courts in such investigations. True it is that, in a writ of *quo warranto* to inquire into the title of an individual to an office, it is competent to investigate all the particulars down to the qualifications of each individual voter, and, on a point of identity similar to that which occurred in the Tichborne case, one trial might take many years. This is presenting a 'raw head and bloody bones,' to frighten this commission and the whole country from its propriety.

"The answer to all that is as simple as can possibly be imagined. The objection, you perceive, applies as much to ordinary writs of *quo warranto* in reference to ordinary offices as it does to this inquiry if it should take place before Congress. But this argument *ab inconvenienti* is as fatal to the general procedure of courts of justice in actions of *quo warranto* as it is to the proceeding here suggested.

"But, if the learned commission please, the investigation which might be allowed to take place before either House of Congress, or any commission appointed by them, would be governed by the same principles of general jurisprudence which apply to the determination of proceeding by *quo warranto*; and one of those principles is, that no man has a right to the writ of *quo warranto* as of course, or merely because he makes out an apparent title. It has always been a matter of discretion. Numerous cases are cited here-for that purpose on the other side. It has always been treated as a matter of discretion in the power of the supreme tribunal, which, acting in the name and majesty of the sovereign power, when applied to for a writ of *quo warranto*, to allow it or not, as under all the circumstances may be thought most

consistent with the public interest and the ends of justice and the convenience of society; and, by consequence, this expanded inquiry could never take place in the writ of *quo warranto*; it never would be allowed; no court would ever permit the writ to issue without a statement of the points intended to be made; and if it were necessary in allowing the writ, the court would lay their restraint on the party as to what points or questions he might make.

"So it appears that in all investigations, judicial or otherwise, as to the right of a particular individual to hold and exercise a public office, it is in the discretion of the tribunals how far they will go; and it is in your discretion, as it would be in the discretion of either House of Congress investigating for its own advice and direction as to the election of the President or the Vice-President, to determine whether they would permit any of these intolerably prolix investigations.

"So much for the argument *ab inconvenienti*. It has no application. Standing upon the ancient practices of the law, the authority that might be called upon to institute an investigation would look at the difficulty presented, and say, under the influence of a due regard to the argument *ab inconvenienti*, 'Thus far you may go; no farther shall you go.'

"Now, in reference to the legal question presented as to what powers each house of Congress has under existing laws, and what powers consequently you can exercise, we say, as the learned manager from the House said in opening this case, that there is no technical legal limit or barrier, but that you exercise the same high power of the Government which has always been exercised in such questions even in the courts of the common law, to which application must be made to obtain the writ of *quo warranto*. You exercise the same discretion, but you can limit the inquiry, when the point arises, within those limits that are prescribed by necessity and convenience.

"Now, this is our view, stated as fully as it is in my power to state it in the brief time I am permitted to occupy the attention of your honors. We say that there is no limit to the power of investigation for the purpose of reaching the ends of justice, except such as a due regard for public convenience and the interests of public justice and society at large may impose in the exercise of this discretionary authority.

"Well, what is our condition, and the condition of all cases of this kind? There is no judicial court of the United States clothed with authority to deal with the premises. We assert that, without stopping to cite books and to prove it to you negatively. It seems to be conceded that, if such a power might have been created, it has remained dormant and has not been exercised. And consequently we are told that here we stand, in the second century of this Republic's existence, in such a condition that there is no possible remedy against the most palpable fraud and forgery that could be

perpetrated, or against any outrageous acts in violation of the rights of the people of the respective States and of the whole nation; that Congress must sit by, blind and silent, and permit an alien to be counted into office as President of the United States; they must sit by, and permit a set of votes plainly and palpably fraudulent—votes given by individuals not only disqualified for want of having been chosen by the States, but being themselves absolutely disqualified by the Constitution from acting in the office or casting the vote—and must permit the usurpation contemplated to take place merely because our wise fathers—one would think that the compliment was intended as a sarcasm—had so chosen to constitute the Government they created, that injustice, however flagitious, might be perpetrated in open day, without the possibility of having any remedy or even uttering decorously a complaint."

WEDNESDAY, February 7, 1877.

The commission met at ten o'clock A. M. pursuant to adjournment, all the members being present.

The commission resumed its session for deliberation on the question pending in the matter of the electoral vote of the State of Florida, with closed doors.

In the deliberations with closed doors, the question of the admissibility of evidence was fully discussed.

Mr. Commissioner Morton said: "I believe that the votes contained in Certificate No. 1 must be counted, and that the evidence offered to impeach them ought not to be received. The electors therein named were certified by M. L. Stearns, the lawful Governor of the State at the time, and their election by the people was declared in due form of law by the officers of the State expressly authorized by the laws of the State to perform that duty. That a new Governor, a new Legislature, and a new returning board, coming into office after the 6th of December, and after the jurisdiction of the State had passed away, with or without the aid of the courts, can recount the vote, or in any way change the result, is a doctrine most dangerous and absurd."

Mr. Commissioner Thurman said: "The power of the two Houses to go behind the Governor's certificates and the decisions of canvassing boards has been again and again asserted by the House and carried into execution. Thus, in 1865, Congress resolved that no votes for presidential electors should be received from the States of Florida, Louisiana, Tennessee, Mississippi, North Carolina, Virginia, South Carolina, Alabama, Arkansas, Texas, and Georgia. In 1873 the votes of the States of Arkansas and Louisiana, and certain electoral votes of the State of Georgia, were rejected. But these instances are familiar to the members of the commission, and it is unnecessary to dwell upon them."

Mr. Commissioner Bayard said: "The order of this commission has been made to hear testimony in the case of Mr. Humphries, who was alleged to be ineligible to be appointed an elector because on the day of election he held an office of trust and profit under the United States. I do not comprehend, as I have said before, why one provision of the Constitution relating to this subject should be more obligatory upon us than another. I concur that it is our right and duty to hear testimony on this subject, and equally so in all other questions where the true performance of the requirements of the Constitution are brought in question."

Mr. Commissioner Hunton said: "Mr. President, when I consider the past action of the two Houses of Congress, the phraseology of the law under which we are acting, the offers of proof, and the authorities which I have examined, I have no doubt left on my mind that it is not only our right but our duty to hear the proof offered, and to decide which certificate contains the true and lawful electoral vote of Florida. Any other course would disappoint the expectations of the country, looking to us to solve this vexed presidential election according to the very right of the case. Any other course dwarfs this high commission into a tribunal to ascertain merely whether the four votes of Florida have been correctly added up or not, and whether the Governor's certificate accompanies the votes. This duty might as well have been performed by a page of either House. The business of the two Houses would not then have been interrupted by withdrawing five members from each House, and waiting for days for us to arrive at the *most difficult decision* that Florida had really cast four votes, and that the electors who cast the four votes had the Governor's certificate. The business of the Supreme Court would not then have been entirely suspended, by the withdrawal of five of its associate justices to form this commission and play the *rôle* of boys in primary arithmetic. No, sir; this Electoral Commission was designed (as the law creating it directs) to 'decide whether any and what votes from such State are the votes provided by the Constitution of the United States, and how many and what persons were duly appointed electors in such State.' To do this, and to discharge our duties under the bill and satisfy our consciences under the oaths we have taken, we must go behind these certificates and ascertain whether they represent the persons duly appointed electors."

Mr. Commissioner Abbott said: "If this attempt to authorize these two irresponsible officers, not the State or people of Florida, to appoint presidential electors for that State, is by the judgment of this commission to be crowned with success, we shall in effect proclaim to all the world that the whole armory of the law and the Constitution contains no weapon of offense or defense by which the

high office of Chief Magistrate of the greatest civilized nation on earth can be successfully protected and defended against being seized upon and held by means of the grossest fraud. Such a judgment would proclaim to the world that, to obtain and enjoy the office of President of the United States, it is not now, as in the olden time, necessary to be constitutionally elected by the States and the people; but that a candidate and party, as lacking in principle as they are rich in money, can, by buying a few weak, wicked, and irresponsible State canvassers, gain possession of and hold that high office, and that such an act will be justified and sanctified by the two Houses of Congress. In fine, such a judgment would proclaim that this Government is no longer one of the people, under the Constitution and law, but that it is a government of returning boards and their creatures."

Mr. Commissioner Hoar said: "Upon the whole matter, therefore, I am of opinion that the appointment of electors and the ascertaining who has been appointed is the sole and exclusive prerogative of the State. The State acts by such agencies as it selects. The powers conferred by the State upon these agencies cannot be exercised by Congress. To usurp them for the purpose of righting alleged wrongs, would be for this commission, which has only the powers of Congress, to commit the very wrong which is imputed to the returning boards in some of the States. When the agencies which the State has selected have acted, the State has acted; no power can reverse its action for mistake in law or fact, for fraud, or for any cause whatever, unless it be a power higher than the State on whom the Constitution has expressly conferred such authority. But there is for this purpose no such power higher than the State, and the President of the Senate and Congress are but the mere servants of the State's will and registers of its action, with power only to open the certificates and count the votes of the electors whom the State authority has appointed and certified."

Mr. Commissioner Garfield said: "The final determination of the result of the election having been declared by the authority empowered to determine and declare it, that act becomes the act of the State; and the two Houses of Congress can no more question such declaration, than they can question the primary right of appointment by the State.

"I shall vote against receiving the evidence offered. In conclusion I will add, that the preservation of the right of the States under the Constitution to appoint electors and declare who have been appointed, is, in my judgment, a matter of much greater importance than the accession of any one man to the presidency."

Mr. Commissioner Field: "Mr. President, I desire that this commission should succeed, and give, by its judgment, peace to the country. But such a result can only be attained by dis-

posing of the questions submitted to us on their merits. It cannot be attained by a resort to technical subtleties and ingenious devices to avoid looking at the evidence. It is our duty to ascertain, if possible, the truth, and decide who were in fact duly appointed electors in Florida—not merely who had received certificates of such appointment. That State has spoken to us through her courts, through her Legislature, and through her Executive, and has told us in no ambiguous terms what was her will and whom she had appointed to express it. If we shut our ears to her utterances, and, closing our eyes to the evidence, decide this case upon the mere inspection of the certificates of the Governor and canvassing board, we shall abdicate our powers, defeat the demands of justice, and disappoint the just expectations of the people. The country may submit to the result, but it will never cease to regard our action as unjust in itself, and as calculated to sap the foundations of public morality."

Mr. Commissioner Strong said: "My conclusions, then, are, that neither Congress nor this commission has authority under the Constitution to recanvass the vote of Florida for State electors; that the first determination of the State canvassing board was conclusive, until it was reversed by State authority; that, while it remained unreversed, it conferred upon the persons declared by it to have been chosen electors rightful authority to cast the vote of the State; and that, the act which those electors were appointed to do having been done, it was not in the power even of the State afterward to undo the act and call in question the authority by which it was done. It follows, in my judgment, that the evidence now offered is impertinent to any question we can decide, and, therefore, that it ought not to be admitted."

Mr. Commissioner Bradley said: "My conclusion is that the validity of the first certificate cannot be controverted by evidence of the proceedings had in the courts of Florida by *quo warranto*, and that said evidence should not be received."

Mr. Justice Clifford said: "Due service of process in the *quo warranto* suit was made at the earliest possible moment, and it is not even suggested that any greater diligence could have been employed in bringing the litigation to a close. Prompt investigation was made by the new board of State canvassers, and the Legislature enacted the statute declaring that the Tilden electors were duly chosen and appointed the next day after the decree was entered in the *quo warranto* suit. Neither the public nor the citizens have any power to defeat the machinations of fraud, perjury, and forgery, if the measures adopted for that purpose in this case are held to be ineffectual and insufficient.

"For these reasons I am of the opinion that the evidence offered should be admitted, and that the other side should be permitted to give evidence in reply."

The hour of three o'clock having arrived, being the time designated by an order of the commission at which the question on the matter pending should be submitted,

Mr. Commissioner Miller moved the following order:

Ordered, That no evidence will be received or considered by the commission which was not submitted to the joint convention of the two Houses by the President of the Senate with the different certificates, except such as relates to the eligibility of F. C. Humphries, one of the electors.

The question being on its adoption, it was determined in the affirmative: Yeas, 8; Nays, 7.

Those who voted in the affirmative are: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong.

Those who voted in the negative are: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman.

So the motion of Mr. Commissioner Miller was agreed to.

Mr. Commissioner Abbott moved the following:

Ordered, That in the case of Florida the commission will receive evidence relating to the eligibility of Frederick C. Humphries, one of the persons named in Certificate No. 1, as elector.

The question being on its adoption, it was determined in the affirmative: Yeas, 8; Nays, 7.

Those who voted in the affirmative are: Messrs. Abbott, Bayard, Bradley, Clifford, Field, Hunton, Payne, and Thurman.

Those who voted in the negative are: Messrs. Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong.

So the motion of Mr. Commissioner Abbott was agreed to.

FRIDAY, February 9, 1877.

The commission met at ten o'clock A. M. pursuant to adjournment, all the members being present.

Mr. Commissioner Edmunds offered the following resolution:

Resolved, That the following be adopted as the decision of the commission in the case of Florida:

ELECTORAL COMMISSION,
WASHINGTON, D. C., February 9, A. D. 1877. }
To the President of the Senate of the United States, presiding in the meeting of the two Houses of Congress, under the act of Congress entitled "An act to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," approved January 29, A. D. 1877.

The Electoral Commission mentioned in said act, having received certain certificates and papers purporting to be certificates, and papers accompanying the same, of the electoral votes from the State of Florida, and the objections thereto submitted to it under said act, now report that it has duly considered the same, pursuant to said act, and has decided, and does hereby decide, that the votes of Frederick C. Humphries, Charles H. Pearce, William H. Holden, and Thomas W. Long, named in the certificate of M. L. Stearns, Governor of said State, which votes are certified by said persons, as appears

by the certificate submitted to the commission, as aforesaid, and marked "Number One" by said commission, and herewith returned, are the votes provided for by the Constitution of the United States, and that the same are lawfully to be counted as therein certified, namely: Four (4) votes for Rutherford B. Hayes, of the State of Ohio, for President, and four (4) votes for William A. Wheeler, of the State of New York, for Vice-President.

The commission also has decided, and hereby decides and reports, that the four persons first before named were duly appointed electors in and by said State of Florida.

The brief ground of this decision is, that it appears upon such evidence as by the Constitution and the law named in said act of Congress is competent and pertinent to the consideration of the subject, that the before-mentioned electors appear to have been lawfully elected such electors of President and Vice-President of the United States, for the term beginning March 4, 1877, of the State of Florida, and that they voted as such at the time and in the manner provided for by the Constitution of the United States and the law.

The commission has also decided, and does hereby decide and report, that, as a consequence of the foregoing, and upon the grounds before stated, neither of the papers purporting to be certificates of the electoral votes of said State of Florida, numbered Two (2) and Three (3) by the commission, and herewith returned, are the certificates or the votes provided for by the Constitution of the United States, and that they ought not to be counted as such.

Done at Washington the day and year first above written.

Mr. Commissioner Hunton offered the following as a substitute:

That the electors named in Certificate No. 2, to wit, Wilkinson Call, J. E. Yonge, Robert Bullock, and Robert B. Hilton, are the four persons who were duly appointed electors by the State of Florida on the 7th day of November, 1876, and that their votes as certified in such certificate are the votes provided for by the Constitution of the United States.

The question being on the adoption of the substitute, it was decided in the negative: Yeas, 7; Nays, 8.

Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

Thereupon the resolution offered by Mr. Commissioner Edmunds was withdrawn.

Mr. Commissioner Garfield offered the following resolutions:

Resolved, That the four persons, to wit, Frederick C. Humphries, Charles H. Pearce, William A. Holden, and Thomas W. Long, were duly appointed electors of President and Vice-President for the State of Florida, and that the votes cast by the aforesaid four persons are the votes provided for by the Constitution of the United States.

Resolved, That Mr. Edmunds, Mr. Bradley, and Mr. Miller, be appointed a committee to draft a report of the action of the commission, as required by law.

The question being on the adoption of the first resolution, it was decided in the affirmative: Yeas, 8; Nays, 7.

Those who voted in the affirmative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

Those who voted in the negative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

The question being on the adoption of the second resolution offered by Mr. Commissioner Garfield, it was decided in the affirmative.

Mr. Commissioner Edmunds (at six o'clock and five minutes P. M.) moved that the commission take a recess for one hour.

The motion was agreed to, and a recess was accordingly taken until seven o'clock and five minutes P. M.

The recess having expired, the commission resumed its session for deliberation.

Mr. Commissioner Edmunds, on behalf of the committee appointed to prepare a report of the commission in the matter of the electoral vote of the State of Florida, offered the following order:

Ordered, That the following be adopted as the final decision and report in the matters submitted to the commission as to the electoral vote of the State of Florida:

ELECTORAL COMMISSION, }

WASHINGTON, D. C., February 9, A. D. 1877. }

To the President of the Senate of the United States, presiding in the meeting of the two Houses of Congress, under the act of Congress entitled "An act to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," approved January 29, A. D. 1877:

The Electoral Commission mentioned in said act, having received certain certificates and papers purporting to be certificates, and papers accompanying the same, of the electoral votes from the State of Florida, and the objections thereto submitted to it under said act, now report that it has duly considered the same, pursuant to said act, and has decided, and does hereby decide, that the votes of Frederick C. Humphries, Charles H. Pearce, William H. Holden, and Thomas W. Long, named in the certificate of M. L. Stearns, Governor of said State, which votes are certified by said persons, as appears by the certificate submitted to the commission, as aforesaid, and marked "Number One" by said commission, and herewith returned, are the votes provided for by the Constitution of the United States, and that the same are lawfully to be counted as therein certified, namely: Four (4) votes for Rutherford B. Hayes, of the State of Ohio, for President, and four (4) votes for William A. Wheeler, of the State of New York, for Vice-President. The commission also has decided, and hereby decides and reports, that the four persons first before named were duly appointed electors in and by said State of Florida.

The ground of this decision, stated briefly, as required by said act, is as follows:

That it is not competent under the Constitution and the law, as it existed at the date of the passage of said act, to go into evidence *aliunde* on the papers opened by the President of the Senate in the presence of the two Houses to prove that other persons than those regularly certified to by the Governor of the State of Florida, in and according to the determination and declaration of their appointment by the Board of State Canvassers of said State prior to the time required for the performance of their duties, had been appointed electors, or by counter-proof to show that they had not, and that all proceedings of the courts or acts of the Legislature, or of the Executive of Florida, subsequent to the casting of the votes of the electors on the prescribed day, are inadmissible for any such purpose.

As to the objection made to the eligibility of Mr. Humphries, the commission is of opinion that, without reference to the question of the effect of the vote of an ineligible elector, the evidence does not show that he held the office of shipping commissioner on the day when the electors were appointed.

The commission has also decided, and does hereby decide and report, that, as a consequence of the foregoing, and upon the grounds before stated, neither of the papers purporting to be certificates of the electoral votes of said State of Florida, numbered Two (2) and Three (3) by the commission, and herewith returned, are the certificates of the votes provided for by the Constitution of the United States, and that they ought not to be counted as such. Done at Washington, the day and year first above written.

The question being on the adoption of the report of the commission, it was decided in the affirmative: Yeas, 8; Nays, 7.

Those who voted in the affirmative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

Those who voted in the negative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

So the report of the commission was adopted; and said decision and report was thereupon signed by the members agreeing therein, as follows:

SAMUEL F. MILLER, W. STRONG, JOSEPH P. BRADLEY, GEORGE F. EDMUNDS, O. P. MORTON, FRED. T. FRELINGHUYSEN, JAMES A. GARFIELD, GEORGE F. HOAR,	} Commissioners.
--	------------------

On February 10th the following note was sent to the Senate and House:

WASHINGTON, D. C., *February 9, 1877.*

SIR: I am directed by the Electoral Commission to inform the Senate, that it has considered and decided upon the matters submitted to it under the act of Congress concerning the same, touching the electoral votes from the State of Florida, and herewith, by direction of said commission, I transmit to you the said decision in writing, signed by the members agreeing therein, to be read at the meeting of the two Houses, according to said act. All the certificates and papers sent to the commission by the President of the Senate are herewith returned.

NATHAN CLIFFORD,
President of the Commission.

Hon. THOMAS W. FERRY,
President of the Senate.

COUNTING THE VOTES.

At one o'clock on the same day the two Houses reassembled to hear and coincide, or otherwise, with the decision of the Electoral Commission.

The Secretary of the Senate read the decision above mentioned.

The Presiding Officer: "Are there objections to this decision?"

Mr. Field: "I submit an objection to the decision and report just read."

The Presiding Officer: "The member from New York (Mr. Field) submits an objection to the decision, which will be read by the Clerk of the House."

Mr. Adams, Clerk of the House, read as follows:

An objection is interposed by the undersigned Senators and Representatives to the decision made by the commission constituted by the act entitled "An act to provide for and regulate the counting of the vote for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," as to the true and lawful electoral vote of Florida, upon the following grounds:

1. For that the decision determines that the vote cast by Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, as electors of President and Vice-President of the United States in and for or on behalf of the State of Florida, is the true and lawful electoral vote of said State, when, in truth and in fact, the vote cast by Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, is the true and lawful vote of said State.

2. For that said commission refused to receive competent and material evidence tending to prove that Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, were not appointed electors in the manner prescribed by the Legislature of the State of Florida, but were designated as electors by the returning board of said State corruptly and fraudulently, in disregard of law, and with the intent to defeat the will of the people expressed in the choice of Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, who were legally and regularly appointed electors by the State of Florida, in the manner directed by the Legislature thereof.

3. For that the decision aforesaid was founded upon the resolution and order of said commission previously made, as follows:

"Ordered, That no evidence will be received or considered by the commission which was not submitted to the joint convention of the two Houses by the President of the Senate, with the different certificates, except such as relates to the eligibility of F. C. Humphries, one of the electors."

4. For that said decision excludes all the evidence taken by the two Houses of Congress and by the committees of each House concerning the frauds, errors, and irregularities committed by the persons whose certificates are taken as proof of the due appointment of electors.

5. For that said decision excludes all evidence tending to prove that the certificate of — Stearns, Governor, as also that of the Board of State Canvassers, was procured or given in pursuance of a fraudulent and corrupt conspiracy to cheat the State of Florida out of its rightful choice of electors, and to substitute therefor those who had not been chosen or appointed electors by said State in the manner directed by the Legislature thereof.

6. For that said commission refused to recognize the right of the courts of the State of Florida to review and reverse the judgment of the returning board or Board of State Canvassers, rendered through fraud and without jurisdiction, and rejected and refused to consider the action of said courts after their decision that Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, were not entitled to cast the electoral vote of Florida; which said decision was rendered by a court of said State in a case lawfully brought before said court, which court had jurisdiction over the subject-matter thereof, and whose jurisdiction over the said Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, had attached before any act was done by them as electors.

7. For that said decision excludes all evidence tending to prove that the State of Florida, by all the departments of its government, legislative, executive, and judicial, has repudiated as fraudulent and

void the certificates of — Stearns, Governor, as well as that of the State canvassers, upon which certificate of the said Governor the said commission has acted, and by means of which the true electoral votes of Florida have been rejected and false ones substituted in their stead.

8. For that to count the votes of Charles H. Pearce, Frederick C. Humphries, William H. Holden, and Thomas W. Long, as electors for President and Vice-President, would be a violation of the Constitution of the United States.

CHARLES W. JONES, Florida,
HENRY COOPER, Tennessee,
FRANCIS KERNAN, New York,
ELI SAULSBURY, Delaware,
J. E. McDONALD, Indiana,
W. H. BARNUM, Connecticut,

On the part of the Senate.

J. PROCTOR KNOTT,
DAVID DUDLEY FIELD, New York,
W. S. HOLMAN, Indiana,
J. R. TUCKER,
CHARLES P. THOMPSON,
G. A. JENKS, Pennsylvania,
J. J. FINLEY,
MILTON SAYLER,
E. JNO. ELLIS,
W. R. MORRISON,
ABRAM S. HEWITT,
WILLIAM M. SPRINGER,

On the part of the House.

The Presiding Officer: "Are there further objections to the decision? (A pause.) If there be none, the Senate will retire to its Chamber, that the Houses respectively may consider and determine the objection."

The Senate then withdrew.

In the Senate the objection thus submitted was read and considered.

Mr. Sherman, of Ohio, offered the following resolution:

Resolved, That the decision of the commission upon the electoral vote of the State of Florida stand as the judgment of the Senate, the objections made thereto to the contrary notwithstanding.

The President *pro tempore*: "The question is on agreeing to this resolution."

Mr. Whyte called for the yeas and nays, and they were ordered; and, being taken, resulted — yeas 44, nays 25 — as follows:

YEAS—Messrs. Alcorn, Allison, Anthony, Blaine, Booth, Boutwell, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chaffee, Christianity, Clayton, Conkling, Conover, Cragin, Dawes, Dorsey, Ferry, Frelinghuysen, Hamilton, Hamlin, Harvey, Hitchcock, Howe, Ingalls, Logan, McMillan, Mitchell, Morrill, Morton, Oglesby, Pad-dock, Patterson, Robertson, Sargent, Sharon, Sherman, Spencer, Teller, Wadleigh, West, Windom, and Wright—44.

NAYS—Messrs. Bailey, Barnum, Bayard, Boggy, Cockrell, Cooper, Davis, Eaton, Goldthwaite, Hereford, Johnston, Jones of Florida, Kernan, McCree-ry, McDonald, Maxey, Merrimon, Norwood, Ran-dolph, Ransom, Saulsbury, Stevenson, Wallace, Whyte, and Withers—25.

ABSENT—Messrs. Dennis, Edmunds, Gordon, Jones of Nevada, Kelly, and Thurman—6.

So the resolution was agreed to.

Mr. Sargent: "I move that the House of Representatives be notified that the Senate has come to a determination of the matter submitted, and is ready to meet with the House in joint convention."

The motion was agreed to.

The President *pro tempore*: "The Secretary will execute the order of the Senate."

The House, soon after the retirement of the Senate, took a recess until February 12th, when the following resolution was offered by Mr. Field, of New York:

Ordered, That the counting of the electoral vote from the State of Florida shall not proceed in conformity with the decision of the Electoral Commission, but that the votes of Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, be counted as the votes from the State of Florida for President and Vice-President of the United States.

It was adopted by the following vote:

YEAS—Messrs. Abbott, Ainsworth, Anderson, Ashe, Atkins, Bagby, John H. Bagley, Jr., Banning, Bell, Blackburn, Bland, Bliss, Blount, Boone, Bradford, Bright, John Young Brown, Samuel D. Burchard, Cabell, John H. Caldwell, William P. Caldwell, Campbell, Candler, Carr, Cate, Caulfield, Chapin, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochran, Collins, Cook, Cowan, Cox, Culberson, Cutler, Davis, De Bolt, Dibrell, Douglas, Durham, Eden, Egbert, Ellis, Faulkner, Fel-ton, Field, Finley, Forney, Franklin, Fuller, Gause, Gibson, Glover, Goode, Goodin, Gunter, Andrew H. Hamilton, Robert Hamilton, Hancock, Hardenbergh, Henry R. Harris, John T. Harris, Harrison, Hartridge, Hartzell, Hatcher, Haymond, Henkle, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Holman, Hooker, Hopkins, House, Humphreys, Hunton, Hurd, Jenks, Frank Jones, Thomas L. Jones, Kehr, Knott, Lamar, Franklin Landers, George M. Landers, Le Moynes, Levy, Lewis, Luttrell, Lynde, Mackey, Maish, McFarland, McMahon, Meade, Metcalfe, Mil-likan, Mills, Money, Morgan, Morrison, Mutchler, Neal, New, O'Brien, Odell, Payne, John F. Philips, Piper, Poppleton, Powell, Rea, Reagan, John Reilly, James B. Reilly, Rice, Riddle, John Robbins, William M. Robbins, Roberts, Miles Ross, Savage, Saylor, Scales, Schleicher, Sheakley, Singleton, Slemons, William E. Smith, Southard, Sparks, Springer, Stenger, Stevenson, Stone, Swann, Tar-box, Teese, Terry, Thomas, Thompson, Throck-morton, Tucker, Turney, John L. Vance, Robert B. Vance, Waddell, Gilbert C. Walker, Walling, Walsh, Ward, Warner, Warren, Watterson, Erastus Wells, Whitthorne, Wigginton, Alpheus S. Williams, Jere N. Williams, Willis, Wilshire, Benjamin Wilson, Fernando Wood, Yeates, and Young—168.

NAYS—Messrs. Adams, George A. Bagley, John H. Baker, William H. Baker, Ballou, Banks, Bel-ford, Blair, Bradley, William R. Brown, Horatio C. Burchard, Burleigh, Buttz, Cannon, Cason, Caswell, Chittenden, Conger, Crapo, Crounse, Danford, Dar-rall, Davy, Denison, Dobbins, Dunnell, Eames, Evans, Flye, Fort, Foster, Freeman, Frye, Garfield, Hale, Haralson, Benjamin W. Harris, Hathorn, Hays, Hendee, Henderson, Hoar, Hoskins, Hubbell, Hunter, Hurlbut, Hyman, Joyce, Kasson, Kelley, Kimball, Lawrence, Leavenworth, Lynch, Magoon, MacDougall, McCrary, McDill, Miller, Monroe, Nash, Norton, Oliver, O'Neill, Packer, Page, Wil-iam A. Phillips, Pierce, Plaisted, Platt, Potter, Pratt, Rainey, Robinson, Sobieski Ross, Rusk, Sampson, Seelye, Sinnickson, Smalls, A. Wiley Wells, White, Whitehouse, Whiting, Willard, Andrew Williams, Charles G. Williams, William B. Williams, James Wilson, Alan Wood, Jr., Wood-burn, and Woodworth—108.

NOT VOTING—Messrs. Bass, Beebe, Buckner, Du-rand, Hoge, King, Lane, Lapham, Lord, Phelps, Furman, Schumaker, Stanton, Stephens, Martin L.

Townsend, Charles C. B. Walker, Wheeler, Wike, and James Williams—19.

At two o'clock and twenty-five minutes P. M. the doorkeeper announced the Senate of the United States.

The Presiding Officer: "The joint meeting of Congress resumes its session. The two Houses separately have considered and determined the objection submitted by the member from the State of New York (Mr. Field) to the decision of the commission upon the certificates from the State of Florida. The Secretary of the Senate will now read the decision of the Senate."

The Secretary of the Senate read the following:

Resolved, That the decision of the commission upon the electoral vote of the State of Florida stand as the judgment of the Senate, the objection made thereto to the contrary notwithstanding.

The Presiding Officer: "The Clerk of the House will now read the decision of the House."

The Clerk (Mr. Pettit) read as follows:

Ordered, That the counting of the electoral votes from the State of Florida shall now proceed in conformity with the decision of the Electoral Commission; but that the votes of Wilkinson Call, James E. Yonge, Robert B. Hilton, and Robert Bullock, be counted as the votes from the State of Florida for President and Vice-President of the United States.

The Presiding Officer: "The two Houses not concurring in ordering otherwise, the decision of the commission will stand unreversed, and the counting will now proceed in conformity with the decision of the commission. The tellers will announce the vote of the State of Florida."

Mr. Allison (one of the tellers): "The State of Florida gives four votes for Rutherford B. Hayes, of Ohio, for President, and four votes for William A. Wheeler, of New York, for Vice-President."

The votes of the States of Georgia (11), Indiana (15), and Kentucky (12), were then counted for Tilden and Hendricks, and the votes of Illinois (21), Iowa (11), and Kansas (5), were counted for Hayes and Wheeler.

The Presiding Officer: "The Chair opens a certificate from the State of Louisiana, received by mail, no corresponding one by messenger. One of the tellers will read the same in the hearing and presence of the two Houses."

Senator Allison (one of the tellers) read a certificate of William P. Kellogg, as Governor of the State of Louisiana, to the election of certain electors, and the certificate of those electors that they had met and cast eight votes for Rutherford B. Hayes, of Ohio, for President of the United States, and eight votes for William A. Wheeler, of New York, for Vice-President.

The Presiding Officer: "Having opened a certificate received by messenger from the same State, the Chair hands it to the tellers, to

be read in the presence and hearing of the two Houses. A corresponding one, received by mail, is also handed to the tellers."

Mr. Stone (one of the tellers) read a certificate, signed by John McEnery as Governor of the State of Louisiana, to the election of certain electors, and the certificate of those electors that they had met and cast eight votes for Samuel J. Tilden, of New York, for President, and eight votes for Thomas A. Hendricks, of Indiana, for Vice-President.

The Presiding Officer: "The Chair having opened another certificate from the State of Louisiana, received by messenger, one of the tellers will read the same in the presence and hearing of the two Houses. A corresponding certificate, received by mail, is also handed to the tellers."

Senator Ingalls (one of the tellers) read a certificate of William P. Kellogg as Governor of the State of Louisiana, to the election of certain electors, and an accompanying certificate of the electors that they had met and cast eight votes for Rutherford B. Hayes, of Ohio, for President, and eight votes for William A. Wheeler, of New York, for Vice-President.

The Presiding Officer: "This closes the reading of the certificates from the State of Louisiana. Are there objections to the certificates which have been read?"

Senator McDonald: "On behalf of the Senators and Representatives whose names are subscribed hereto, I submit the following objections to the counting of the electoral vote of the State of Louisiana as cast for Hayes and Wheeler."

The Presiding Officer: "The objections to counting the vote will be read by the Secretary of the Senate."

Mr. Gorham, Secretary of the Senate, read as follows:

The undersigned Senators and members of the House of Representatives of the United States object to the lists of names of the electors made and certified by William P. Kellogg, claiming to be, but who was not, the lawful Governor of the State of Louisiana, and to the electoral votes of said State signed by W. P. Kellogg, J. H. Burch, Peter Joseph, L. A. Sheldon, Morris Marks, A. B. Levisse, O. H. Brewster, Oscar Joffron, being the two several certificates the first and third presented by the President of the Senate to the two Houses of Congress in joint convention, for the reasons following:

I. Because, on the 7th day of November, 1876, there was no law, joint resolution, or other act of the Legislature of the State of Louisiana, in force, directing the manner in which electors for said State should be appointed.

II. Because, if any law existed in the State of Louisiana on the 7th day of November, 1876, directing the manner of the appointment of electors, it was an act of the Legislature which directed that electors should be appointed by the people of the State in their primary capacity at an election to be held on a day certain, at particular places, and in a certain way; and the people of the State, in accordance with the legislative direction, exercised the powers vested in them at an election held in said State, November 7, 1876, in pursuance of said act and of the laws of the United States, and appointed John McEnery, R. C. Wickliffe, L. St. Martin, F.

P. Poché, A. De Blanc, W. A. Seay, R. G. Cobb, and K. A. Cross, to be electors by a majority for each of six thousand and upward of all the votes cast by qualified voters for electors at said election; and said electors received a certificate of their due appointment as such electors from John McEnery, who was then the rightful and lawful Governor of said State, under the seal thereof; and thereupon the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, became and were vested with the exclusive authority of electors for the State of Louisiana, and no other person or persons had, or could have, such authority or power, nor was it within the legal power of any State or Federal officer, or any other person, to revoke the power bestowed on the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, or to appoint other electors in their stead, or to impair their title to the office to which the people had appointed them.

III. Because the said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrion, were not, nor was either of them, duly appointed an elector by the State of Louisiana in the manner directed by the constitution and laws of said State and of the United States; and the lists of names of electors made and certified by the said William P. Kellogg, claiming to be, but not being, Governor of said State, were false in fact, and fraudulently made and certified by said Kellogg, with full knowledge at the time that the said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrion, were not duly appointed electors by the qualified voters of said State, and without any examination of the returns of the votes cast for electors, as required by the laws of the State.

IV. Because the pretended canvass of the returns of said election for electors of President and Vice-President by J. Madison Wells, T. C. Anderson, G. Casanave, and Louis Kenner, as returning officers of said election, was without jurisdiction, and void, for these reasons:

1. The statutes of Louisiana, under which said persons claimed to have been appointed returning officers, and to have derived their authority, gave them no jurisdiction to make the returns or to canvass or compile the statements of votes cast for electors of President and Vice-President.

2. Said statutes, if construed as conferring such jurisdiction, give the returning officers power to appoint the electors, and are void as in conflict with the Constitution, which requires that electors shall be appointed by the State.

3. Said statutes, in so far as they attempt to confer judicial power, and to give to the returning officers authority in their discretion to exclude the statements of votes, and to punish innocent persons without trial by depriving them of their legal right of suffrage, are in conflict with the constitution of the State of Louisiana, and are anti-republican and in conflict with the Constitution of the United States, in so far as they refer it to the discretion of the returning officers to determine who are appointed electors.

4. If said Louisiana statutes should be held valid, they conferred no jurisdiction on said Wells, Anderson, Casanave, and Kenner, as a board of returning officers, to make the returns of said election or to canvass and compile the statements of votes made by the commissioners of said election, for the reason that they constituted but four of the five persons to whom the law confided those duties; that they were all of the same political party; and that there was a vacancy in said board of returning officers which the said Wells, Anderson, Casanave, and Kenner, failed and refused to fill as required by law.

5. Said board of returning officers had no jurisdiction to exercise judicial functions and reject the statement of the votes at any poll or voting-place unless the foundation for such jurisdiction was first

laid as required by the statute, which the papers and records before said board of returning officers showed was not done to such an extent as to change the result of the election as shown on the face of the returns.

6. Said returning officers, with a full knowledge that a true and correct compilation of the official statements of votes legally cast November 7, 1876, for presidential electors in the State of Louisiana, showed the following result, to wit:

	Votes.
John McEnery.....	88,723
R. C. Wickliffe.....	83,859
L. St. Martin.....	83,650
F. P. Poché.....	83,474
A. De Blanc.....	83,638
W. A. Seay.....	83,812
R. G. Cobb.....	83,580
K. A. Cross.....	83,608
W. P. Kellogg.....	77,174
J. H. Burch.....	77,162
Peter Joseph.....	74,918
L. A. Sheldon.....	74,902
Morris Marks.....	75,240
A. B. Levisse.....	75,895
O. H. Brewster.....	75,479
Oscar Joffrion.....	75,618

And that said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, were duly and lawfully elected electors, illegally and fraudulently changed, altered, and rejected the statements of votes made by the commissioners of election and the returns of supervisors of registration, and declared the following to be the state of the poll, to wit:

	Votes.
John McEnery.....	70,508
R. C. Wickliffe.....	70,509
L. St. Martin.....	70,558
F. P. Poché.....	70,335
A. De Blanc.....	70,536
W. A. Seay.....	70,525
R. G. Cobb.....	70,423
K. A. Cross.....	70,556
W. P. Kellogg.....	75,135
J. H. Burch.....	75,127
Peter Joseph.....	74,014
L. A. Sheldon.....	74,037
Morris Marks.....	74,418
A. B. Levisse.....	74,007
O. H. Brewster.....	74,018
Oscar Joffrion.....	74,736

The said returning officers thereupon falsely and fraudulently certified that said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrion, were duly elected electors; when the fact was that, omitting the statements of votes illegally withheld by supervisors, those before the returning officers which it was their duty to, but which they did not, canvass and compile, showed majorities for McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, ranging from 3,459 to 6,405.

5. That said returning officers, before making any declaration of the vote for electors, offered for a money-consideration to certify and declare the due election of the persons who, according to the face of the returns, received a majority of the votes, and were duly and properly elected. Failing to find a purchaser, they falsely, corruptly, and fraudulently, certified and declared the minority candidates elected, after having first applied for a reward for so doing. Wherefore the undersigned object to the certificate or declaration of the election of electors made by said board of returning officers as utterly void, by reason of the fraud and corruption of said board of returning officers in thus corruptly offering said certificates for sale.

V. The undersigned especially object to counting the vote cast by the said A. B. Levisse, for the reason that the State of Louisiana was forbidden by the Constitution of the United States to appoint the said A. B. Levisse an elector, because he was at the

time of the appointment of the electors in said State, to wit, on the 7th day of November, 1876, and for a number of days previous and subsequent thereto, holding an office of trust or profit under the United States, to wit, the office of Commissioner of the United States Circuit Court for the district of Louisiana, and his subsequent appointment by the other electors was not only without authority of law, and void, but it was knowingly and fraudulently made for an illegal and fraudulent purpose.

VI. The undersigned especially object to counting the vote cast by the said O. H. Brewster, for the reason that the State of Louisiana was forbidden by the Constitution of the United States to appoint the said Brewster an elector, because he was at the time of the appointment of electors of said State, to wit, the 7th day of November, A. D. 1876, and for a number of days previous and subsequent thereto, holding an office of trust or profit under the United States, to wit, the office of Surveyor-General of the Land Office for the land-district of the State of Louisiana; and any subsequent appointment of the said Brewster as an elector by the other electors was not only without warrant of law, and void, but was made knowingly and fraudulently for an illegal and fraudulent purpose.

VII. The undersigned object and insist that under no circumstances can more than six of the eight electoral votes cast in Louisiana for Rutherford B. Hayes and William A. Wheeler be counted, for the reason that at least two of the persons casting such votes, to wit, A. B. Levisse and O. H. Brewster, were not appointed electors by said State; and they further object especially to the vote given and cast by William P. Kellogg, one of the pretended electors of said State of Louisiana, because the certificate executed by himself as Governor of that State to himself as elector of that State is void as to him, and creates no presumption, and is no evidence in his own favor that he was duly appointed such elector, and there is no other evidence whatever of his having been appointed an elector of said State. And they further object to the said Kellogg, that by the constitution of Louisiana he was not entitled to hold both offices, but was disqualified therefrom, and that on the day of casting the vote aforesaid, and on the day of the election for electors, and after those days, he continued to act as Governor of the State, and that his vote as elector is null and void.

VIII. Because the certified lists of the names of the said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrion, as the duly appointed electors for the State of Louisiana by William P. Kellogg, claiming to be, but who was not, Governor of said State, were falsely, fraudulently, and corruptly made and issued, as a part of a conspiracy between the said Kellogg and the said returning officers Wells, Anderson, Casanave, and Kenner, and other persons, to cheat and defraud the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, of the offices to which they had been duly appointed as aforesaid, and to defraud the State of Louisiana of her right to vote for President and Vice-President according to her own wish, as legally expressed by the vote of the people at the election aforesaid.

For which reason the list of names of the said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrion, as electors, and the votes cast by them, are utterly void; in support of which reasons the undersigned refer to the Constitution and laws of the United States and of the State of Louisiana, and, among other, to the evidence taken at the present session of Congress by the committee and sub-committees on Privileges and Elections of the Senate, the select committee and the sub-committees of the House of Representatives on the Recent Election in the State of Louisiana, and the committee of the House of Representatives on the Powers, Privileges, and Duties of the House of Representatives

in Counting the Electoral Vote, together with papers accompanying said evidence.

ELI SAULSBURY, J. E. McDONALD, J. W. STEVENSON, L. V. BOGY, DAVID DUDLEY FIELD, G. A. JENKS, R. L. GIBSON, JOHN R. TUCKER, W. M. LEVY, E. JOHN ELLIS, WM. R. MORRISON,	} Senators. } Representatives.
--	---

The Presiding Officer: "Are there further objections to the certificates from the State of Louisiana?"

Mr. Gibson: "I have the honor to offer objections to the certificates of the electoral vote of the State of Louisiana signed by William Pitt Kellogg on behalf of the State of Louisiana."

The Presiding Officer: "The Clerk of the House will read the objections presented by the member from the State of Louisiana (Mr. Gibson)."

The Clerk of the House read as follows:

The undersigned, Senators and members of the House of Representatives of the United States, object to the certificates and electoral votes of the State of Louisiana signed by William P. Kellogg, J. H. Burch, Peter Joseph, L. A. Sheldon, Morris Marks, A. B. Levisse, O. H. Brewster, and Oscar Joffrion, for the following reasons:

1. The Government of the State of Louisiana, as administered at and prior to the 7th day of November, 1876, and until this time, was and is not republican in form.

2. If the Government of the State of Louisiana was and is republican in form, there was no canvass of the votes of the State made on which the certificates of election of the above-named alleged electors were issued.

3. Any alleged canvass of votes on which the certificates of election of said alleged electors are claimed to be founded was an act of usurpation, was fraudulent and void.

4. The votes cast in the electoral college of said State by Oscar Joffrion, William P. Kellogg, J. H. Burch, Morris Marks, are not electoral votes, for that the said Oscar Joffrion, William P. Kellogg, J. H. Burch, and Morris Marks, are and were ineligible by the laws of Louisiana, and were disqualified; for by the constitution of the State of Louisiana, section 117, it is provided that no person shall hold or exercise at the same time more than one office of trust or profit, except that of justice of the peace or notary public; whereas on and prior to the 7th day of November, 1876, and until after the 6th day of December, 1876, W. P. Kellogg was acting *de facto* Governor of said State; Oscar Joffrion was Supervisor of Registration for the parish of Pointe Coupée, in said State; Morris Marks was a District Attorney for one of the districts of said State and candidate for District Judge, and was elected at said election; and J. H. Burch was a member of the Senate of said State, also a member of the Board of Control of the State Penitentiary, Administrator of the Deaf and Dumb Asylum, both salaried officers, and Treasurer of the School Board of the parish of East Baton Rouge.

5. In addition thereto, said Oscar Joffrion was specially disqualified by the 13th section of the act of the Legislature of said State, dated the 24th day of July, 1874, which provides that no Supervisor of registration shall be eligible for any office at any election when said supervisor officiates; and the said

Oscar Joffrion, at the election held on the 7th day of November, 1876, did act and officiate as Supervisor of Registration for the parish of Pointe Coupée, in said State. In support hereof, *inter alia*, there is herewith submitted the testimony taken before the special committee of the House of Representatives to investigate the election in Louisiana; also the testimony taken before the Committee on Powers and Privileges of the House of Representatives; also the testimony taken before the Committee on Privileges and Elections of the Senate.

ELI SAULSBURY, J. E. McDONALD, FRANCIS KERNAN,	} Senators.

ording, or the acknowledging of any commission or license or certificate of appointment or of authentication, signed or purporting to be signed by John McEnery as Governor of the State of Louisiana, for the reason that there is no evidence that John McEnery is now, or ever was at any time during the year 1876, Governor of the State of Louisiana; and for the further reason that there is conclusive evidence that W. P. Kellogg was, during the whole of the year 1876 and for several years prior thereto, Governor of that State; was recognized as such by the judicial and legislative departments of the Government of that State, and by every department of the Government of the United States.

The Presiding Officer: "Are there further objections to the certificates from the State of Louisiana?"

Mr. Wood, of New York: "I present, on behalf of the Senators and Representatives who have signed it, a further objection."

The Presiding Officer: "The objection submitted will be read by the Clerk of the House."

The Clerk of the House read the objection, as follows:

The undersigned, Senators and Representatives, object to the counting of the vote of O. H. Brewster, A. B. Levisse, W. P. Kellogg, Oscar Joffrion, Peter Joseph, J. H. Burch, L. A. Sheldon, and Morris Marks, as electors for the State of Louisiana, for the reason that the said persons were not appointed electors by the State of Louisiana in the manner directed by its Legislature.

M. I. SOUTHARD, Representative from the State of Ohio.
CHAS. E. HOOKER, of Mississippi.
R. A. DE BOLT, of Missouri.
E. P. BLAND, of Missouri.
JOHN W. STEVENSON, of Kentucky.
WM. PINCKNEY WHYTE, of Maryland.
FERNANDO WOOD, Representative from the State of New York.
ERASTUS WELLS, Representative of Missouri.
A. G. EGBERT, Representative of Pennsylvania.

The Presiding Officer: "Are there further objections to the certificates from the State of Louisiana?"

Senator Howe: "I submit some concise objections to counting the vote certified here by John McEnery and his associates."

The Presiding Officer: "The objections will be read by the Secretary of the Senate."

The Secretary of the Senate read the objections, as follows:

The undersigned respectfully object to the counting of any vote for President and Vice-President of the United States given or purporting to have been given by John McEnery or E. C. Wickliffe, or of either of them, for the reason that there is no evidence whatever that either of said persons has been appointed an elector of said State in such manner as the Legislature thereof has directed; and for the further reason that there is evidence conclusive in law that neither of said persons has been appointed to be an elector for the State of Louisiana in such manner as the Legislature thereof has directed.

They respectfully object to the reading, the re-

The Presiding Officer: "Are there further objections to the certificates from the State of Louisiana? If there be no further objections, all the certificates from that State, and the papers accompanying the same, together with the objections thereto, will now be submitted to the Electoral Commission for its judgment and decision. The Senate will now retire to their Chamber."

Accordingly the Senate withdrew.

On February 17th the President of the Electoral Commission notified the two Houses that it had considered and decided the matters touching the electoral vote of Louisiana.

On the same day a joint meeting of the two Houses was held.

The Presiding Officer: "The joint meeting of Congress for counting the electoral vote resumes its session."

"The objections presented to the certificates from the State of Louisiana having been submitted to the commission, the two Houses have reconvened, to receive and consider the decision of that tribunal. The decision, which is in writing, by a majority of the commission, and signed by the members agreeing therein, will now be read by the Secretary of the Senate, and be entered in the Journal of each House."

The Secretary of the Senate read as follows:

ELECTORAL COMMISSION, }
WASHINGTON, D. C., February 16, A. D. 1876. }
To the President of the Senate of the United States, presiding in the meeting of the two Houses of Congress under the act of Congress entitled "An act to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," approved January 29, A. D. 1877:

The Electoral Commission mentioned in said act having received certain certificates and papers purporting to be certificates, and papers accompanying the same, of the electoral votes from the State of Louisiana, and the objections thereto submitted to it under said act, now report that it has duly considered the same, pursuant to said act, and has, by a majority of votes, decided, and does hereby decide, that the votes of William P. Kellogg, J. Henri Burch, Peter Joseph, Lionel A. Sheldon, Morris Marks, Aaron B. Levisse, Orlando H. Brewster, and Oscar Joffrion, named in the certificate of William P. Kellogg, Governor of said State, which votes are

certified by said persons, as appears by the certificate submitted to the commission as aforesaid, and marked Numbers One (1) and Three (3) by said commission, and herewith returned, are the votes provided for by the Constitution of the United States, and that the same are lawfully to be counted as therein certified, namely:

Eight votes for Rutherford B. Hayes, of the State of Ohio, for President; and

Eight votes for William A. Wheeler, of the State of New York, for Vice-President.

The commission has, by a majority of votes, also decided, and does hereby decide and report, that the eight persons first before named were duly appointed electors in and by the State of Louisiana.

The brief ground of this decision is that it appears, upon such evidence as by the Constitution and the law named in said act of Congress is competent and pertinent to the consideration of the subject, that the before-mentioned electors appear to have been lawfully appointed such electors of President and Vice-President of the United States for the term beginning March 4, A. D. 1877, of the State of Louisiana, and that they voted as such at the time and in the manner provided for by the Constitution of the United States and the law.

And the commission has, by a majority of votes, decided, and does hereby decide, that it is not competent, under the Constitution and the law as it existed at the date of the passage of said act, to go into evidence *abunde* the papers opened by the President of the Senate in the presence of the two Houses, to prove that other persons than those regularly certified to by the Governor of the State of Louisiana, on and according to the determination and declaration of their appointment by the returning officers for elections in the said State prior to the time required for the performance of their duties, had been appointed electors, or by counter-proof to show that they had not; or that the determination of the said returning officers was not in accordance with the truth and the fact; the commission, by a majority of votes, being of opinion that it is not within the jurisdiction of the two Houses of Congress assembled to count the votes for President and Vice-President, or to enter upon a trial of such questions.

The commission, by a majority of votes, is also of opinion that it is not competent to prove that any of said persons so appointed electors as aforesaid held an office of trust or profit under the United States at the time when they were appointed, or that they were ineligible under the laws of the State, or any other matter offered to be proved *abunde* the said certificates and papers.

The commission is also of opinion, by a majority of votes, that the returning officers of elections who canvassed the votes at the election for electors in Louisiana were a legally constituted body by virtue of a constitutional law, and that a vacancy in said body did not vitiate its proceedings.

The commission has also decided, and does hereby decide, by a majority of votes, and report that, as a consequence of the foregoing, and upon the grounds before stated, that the paper purporting to be a certificate of the electoral votes of said State of Louisiana, objected to by Timothy O. Howe and others, marked "N. C. No. 2" by the commission, and herewith returned, is not the certificate of the votes provided for by the Constitution of the United States, and that they ought not to be counted as such.

Done at Washington the day and year first above written.

SAMUEL F. MILLER.

W. STRONG.

JOSEPH P. BRADLEY.

GEORGE F. EDMUNDS.

O. P. MORTON.

FRED'K T. FRELINGHUYSEN.

JAMES A. GARFIELD.

GEORGE F. HOAR.

The Presiding Officer: "Are there any objections to the decision of the commission?"

Mr. Gibson: "I have the honor to present the following objections to the decision and report of the Electoral Commission, signed by Senators and Representatives."

The Presiding Officer: "The objections will be read by the Clerk of the House."

The following objections are interposed by the undersigned, Senators and Representatives, to the decision made by the commission constituted by the act entitled "An act to provide for and regulate the counting of votes for President and Vice-President, and the decisions of questions arising thereon, for the term commencing March 4, A. D. 1877," as to the true and lawful electoral vote of the State of Louisiana, for the following reasons, viz.:

1. For that the said commission, as guides to their action, adopted the rejected resolutions, as follows:

"Friday, February 16, 1877.

"The commission met at ten o'clock A. M., pursuant to adjournment, with closed doors, for the purpose of consultation on the question submitted relative to the offers of proof connected with the objections raised to the certificates of electoral votes from the State of Louisiana.

"After debate,
"Mr. Commissioner Hoar submitted the following order:

"*Ordered*, That the evidence offered be not received."

"Mr. Commissioner Abbott offered the following as a substitute for the proposed order:

"*Resolved*, That so much of the act of Louisiana establishing a returning board for that State is unconstitutional, and the acts of said returning board are void."

"The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Mr. Commissioner Abbott offered the following as a substitute:

"*Resolved*, That evidence will be received to show that the returning board of Louisiana, at the time of canvassing and compiling the vote of that State at the last election in that State, was not legally constituted under the law establishing it, in this: that it was composed of four persons all of one political party, instead of five persons of different political parties."

"The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Mr. Commissioner Abbott offered the following as a substitute:

"*Resolved*, That the commission will receive testimony on the subject of the frauds alleged in the specifications of the counsel for the objectors to certificates Nos. 1 and 8."

"The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Mr. Commissioner Abbott offered the following as a substitute:

"*Resolved*, That testimony tending to show that the so-called returning board of Louisiana had no jurisdiction to canvass the votes for electors of President and Vice-President is admissible."

"The question being on the adoption of the substitute, it was determined in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Mr. Commissioner Abbott offered the following as a substitute:

"*Resolved*, That evidence is admissible that the statements and affidavits purporting to have been made and forwarded to said returning board, in pursuance of the provisions of section 26 of the election law of 1872, alleging riot, tumult, intimidation, and violence at or near certain polls and in certain parishes, were falsely fabricated and forged by certain disreputable persons, under the direction and with the knowledge of said returning board, and that said returning board, knowing such statements and affidavits to be false and forged, and that none of the said statements or affidavits were made in the manner or form or within the time required by law, did knowingly, willfully, and fraudulently fail and refuse to canvass or compile more than ten thousand votes lawfully cast, as is shown by the statements of votes of the commissioners of election."

"The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Mr. Commissioner Hunton offered the following as a substitute:

"*Resolved*, That evidence be received to prove that the votes cast and given at said election on the 7th of November last for the election of electors, as shown by the returns made by the commissioners of election from the several polls or voting-places in said State, have never been compiled or canvassed, and that the said returning board never even pretended to compile or canvass the returns made by said commissioners of election, but that the said returning board only pretended to canvass the returns made by such supervisors."

"The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Mr. Commissioner Bayard offered the following as a substitute:

"*Resolved*, That no person holding an office of trust or profit under the United States is eligible to be appointed an elector, and that this commission will receive evidence tending to prove such ineligibility as offered by counsel for objectors to Certificates 1 and 8.

"The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"The question then recurring on the adoption of the order submitted by Mr. Commissioner Hoar, Mr. Commissioner Payne moved to strike out the word 'not.'

"The question being on the adoption of the amendment, it was determined in the negative—yeas 7, nays 8.

"Those who voted in the affirmative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7.

"Those who voted in the negative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"The question then recurring on the adoption of the order submitted by Mr. Commissioner Hoar in the following words:

"*Ordered*, That the evidence offered be not received."

"The question being on the adoption of the order, it was determined in the affirmative—yeas 8, nays 7.

"Those who voted in the affirmative were: Messrs. Bradley, Edmunds, Frelinghuysen, Garfield, Hoar, Miller, Morton, and Strong—8.

"Those who voted in the negative were: Messrs. Abbott, Bayard, Clifford, Field, Hunton, Payne, and Thurman—7."

2. For that the said commission refused to receive evidence offered, as in the annexed paper stated, or any part of said evidence, and decided that the votes mentioned in the certificates numbered 1 and 8 shall be counted for Hayes and Wheeler, said evidence to the contrary notwithstanding.

logg received for elector 6,800 votes less than were at said election cast for each and every of the following-named persons; that is to say, John McEnery, R. C. Wickliffe, L. St. Martin, E. P. Poché, A. De Blanc, W. A. Seay, R. G. Cobb, and K. A. Cross. (Sec. 43, Act of 1872.)

2. In connection with the certified copies of said lists, we offer to prove that the returning board, which pretended to canvass the said election under the act approved November 20, 1872, did not receive from any poll, voting-place, or parish in said State, nor have before them, any statement of any supervisor of registration or commissioner of election in form as required by section 26 of said act, on affidavit of three or more citizens, of any riot, tumult, acts of violence, intimidation, armed disturbance, bribery, or corrupt influences, which prevented or tended to prevent a fair, free, and peaceable vote of all qualified electors entitled to vote at such poll or voting-place.

3. We further offer to show, that in many instances the supervisors of registration of the several parishes willfully and fraudulently omitted from their consolidated statement, returned by them to the State returning board, the result and all mention of the votes given at certain polls or voting-places within their respective parishes, as shown to them by the returns and papers returned to said supervisors by the commissioners of election, as required by law; and that in consequence of this omission the said consolidated statements, on their face, omitted of majorities against the said Kellogg, and in favor of each and every the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, amounting to 2,267, but that said supervisors of registration did, as by law required, return to the said returning board, with their consolidated statements, the lists, papers, and returns received by them according to law from the commissioners of election at the several polls and voting-places omitted as aforesaid from said consolidated statements of said supervisors.

And that the said returning board willfully and fraudulently neglected and refused to make any canvass of the majorities so omitted, or estimate them in any way, in their pretended determination that the said Kellogg was duly elected an elector at the election aforesaid.

4. We offer to show that, by the consolidated statements returned to said returning board by the supervisors of registration of the several parishes of the State of the result of the voting at the several polls or voting-places within their parishes respectively, it appeared that said Kellogg received at said election 3,459 less votes for elector than the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, and each and every of them.

5. We further offer to show that the said returning board willfully and fraudulently estimated and counted as votes in favor of said Kellogg 234 votes which were not shown to have been given at any poll or voting-place in said State, either by any consolidated statement returned to said returning board by any of the said supervisors, nor by the statements, lists, tally-sheets, or returns made by any commissioners of election to any of said supervisors, or which were before said returning board.

6. We offer to prove that the votes cast and given at said election on the 7th of November last for the election of electors, as shown by the return made by the commissioners of election from the several polls or voting-places in said State, have never been compiled nor canvassed; and that the said returning board never even pretended to compile or canvass the returns made by said commissioners of election, but that said returning board only pretended to canvass the returns made by the said supervisor.

Act of 1872, section 43: "Supervisor must forward." Act of 1872, section 2: "Board must canvass."

The "annexed paper" referred to in the foregoing is as follows:

I.

1. We offer to prove that William P. Kellogg, who certifies, as Governor of the State of Louisiana, to the appointment of electors of that State, which certificate is now before this commission, is the same William P. Kellogg who by said certificate was certified to have been appointed one of said electors. In other words, that Kellogg certified his own appointment as such elector.

2. That said Kellogg was Governor *de facto* of said State during all the months of November and December, A. D. 1876.

CONSTITUTION OF LOUISIANA.

"ART. 117. No person shall hold or exercise at the same time more than one office of trust or profit, except that of justice of the peace or notary public."

II.

We offer to prove that said William P. Kellogg was not duly appointed one of the electors of said State in A. D. 1876, and that the certificate is untrue in fact.

To show this, we offer to prove:

1. By certified copies of the lists made out, signed, and sworn to by the commissioners of election in each poll and voting-place in the State, and delivered by said commissioners to the Clerk of the District Court wherein said polls were established, except in the parish of Orleans, and in that parish delivered to the Secretary of State, that at the election for electors in the State of Louisiana, on the 7th day of November last, the said William P. Kel-

7. We offer to prove that the votes given for electors at the election of November 7th last, at the several voting-places or polls in said State, have never been opened by the Governor of the said State in presence of the Secretary of State, the Attorney-General, and a district judge of the district in which the seat of government was established, nor in the presence of any of them; nor has the Governor of said State ever, in presence as aforesaid, examined the returns of the commissioners of election for said election to ascertain therefrom, nor has he ever, in such presence, ascertained therefrom, the persons who were, or whether any one was duly elected electors, or elector, at said election; nor has he ever pretended so to do. (Revised Statutes, section 2826.)

8. We further offer to prove

That the said William P. Kellogg, Governor as aforesaid, when he made, executed, and delivered the said certificate, by which he certified that himself and others had been duly appointed electors as aforesaid, well knew that said certificate was untrue in fact in that behalf; and that he, the said Kellogg, then well knew that he, the said Kellogg, had not received, of the legal votes cast at the election of November 7, 1876, for electors, within five thousand of as many of such votes as had at said election been cast and given for each and every of the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross; and that he, the said Kellogg, when he made and executed the aforesaid certificate, well knew that of the legal votes cast at the popular election held in the State of Louisiana on the 7th day of November last, for the election of electors in said State, as shown by the lists, returns, and papers sent, according to law, by the commissioners of election, who presided over and conducted the said election at the several polls and voting-places in said State, to the supervisors of registration, and as shown by the said lists, returns, papers, and ballots deposited by said commissioners of election in the office of the clerks of the district courts, except the parish of Orleans, and deposited for the parish of Orleans in the office of the Secretary of State, according to law; that each and every the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, had received more than five thousand of the legal votes cast at said election for electors, more than had been cast and given at said election for the said Kellogg as elector, and that the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, had been thus and thereby duly appointed electors for said State in the manner directed by the Legislature of said State.

9. We further offer to prove

That at the city of New Orleans, in the State of Louisiana, in the month of October, A. D. 1876, the said William P. Kellogg, J. H. Burch, Peter Joseph, L. A. Sheldon, Morris Marks, A. B. Levisse, O. H. Brewster, Oscar Joffrion, S. B. Packard, John Ray, Frank Morey, Hugh J. Campbell, D. J. M. A. Jewett, H. C. Dibble, Michael Hahn, B. P. Blanchard, J. R. G. Pitkin, J. Madison Wells, Thomas C. Anderson, G. Casanave, L. M. Kenner, George P. Davis, W. L. Catlin, C. C. Nash, George L. Smith, Isadore McCormick, and others, entered into an unlawful and criminal combination and conspiracy to and with each other, and each to and with each of the others, to cause it to be certified and returned to the Secretary of State by the returning board of said State, upon their pretended compilation and canvass of the election for electors, to be thereafter held on the 7th day of November, A. D. 1876, that the said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrion, had received a majority of all votes given and cast at said election for electors, whether such should be the fact or not; and

That afterward, to wit, on the 17th day of November, A. D. 1876, after said election had been held, and it was well known to all of said conspirators that said Kellogg and others had not been elected

at said election, but had been defeated, and their opponents had been elected at said election, the said returning board assembled at the city of New Orleans, the seat of government of said State, to pretend to compile and canvass the statement of votes made by the commissioners of election from the several polls and voting-places in said State for presidential electors, and make returns of said elections to the Secretary of State, as required by an act of the Legislature of that State, approved November 20, 1872; that when said returning board so assembled, said Wells, said Anderson, said Kenner, and said Casanave, who were all members of one political party, to wit, the Republican party, were the only members of said board; there being one vacancy in said board, which vacancy it was the duty of said Wells, said Anderson, said Kenner, and said Casanave, as members of said board, to fill, then and there, by the election or appointment of some person belonging to some other political party than the Republican party; but that the said Wells, Anderson, Kenner, and Casanave, then and there, in pursuance of said unlawful and criminal combination aforesaid, then and there neglected and refused to fill said vacancy, for the reason, as assigned by them, that they did not wish to have a Democrat to watch the proceedings of said board; and that, although frequently during the session of said board assembled for the purpose aforesaid, they, the said Wells, Anderson, Kenner, and Casanave, were duly, and in writing, requested by said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, to fill said vacancy, they refused to do so, and never did fill the same, but proceeded as such board, in pursuance of said combination and conspiracy, to make a pretended compilation and canvass of said election without filling the vacancy in said returning board; and

That said Wells, Anderson, Kenner, and Casanave, while pretending to be in session as a returning board for the purpose of compiling and canvassing the said election, and in pursuance of said combination and conspiracy, employed persons of notoriously bad character to act as their clerks and assistants; to wit, one Davis, a man of notoriously bad character, who was then under indictment in the criminal courts of Louisiana, and said Catlin, said Blanchard, and said Jewett, three of said conspirators, who were then under indictment for subornation of perjury in the criminal courts of Louisiana; the said Jewett being also under indictment in one of the criminal courts of Louisiana for obtaining money under false pretences; and Isadore McCormick, who was then under indictment in a criminal court of said State charged with murder.

And that, in pursuance of said unlawful combination and conspiracy aforesaid, the said Wells, Anderson, Kenner, and Casanave, acting in said returning board, confided to their said clerks and employees, said co-conspirators, the duty of compiling and canvassing all returns which were by said returning board ordered to be canvassed and compiled; and, although thereto particularly requested by a communication, as follows—

"To the honorable Returning Board of the State of Louisiana:

"GENTLEMEN: The undersigned, acting as counsel for the various candidates upon the Democratic-conservative ticket, State, national, and municipal, with respect show:

"That the returns from various polls and parishes are inspected by this board, and the vote announced by it is merely that for Governor and electors;

"That the tabulation of all other votes is turned over to a corps of clerks, to be done outside of the presence of this board;

"That all of said clerks are Republicans, and that the Democratic-conservative candidates have no check upon them, and no means to detect errors and

fraudulent tabulations, or to call the attention of this board to any such wrong, if any exist;

"That by this system the fate of all other candidates but Governor and electors is placed in the hands of a body of Republican clerks, with no check against erroneous or dishonest action on their part;

"That fair play requires that some check should be placed upon said clerks, and some protection afforded to the said candidates against error or dishonest action on the part of said clerks:

"Wherefore they respectfully ask that they be permitted to name three respectable persons, and that to such parties be accorded the privilege of being present in the room or rooms where said tabulation is progressing, and of inspecting the tabulation and comparing the same with the returns, and also of fully inspecting the returns, and previous to the adoption by this board of said tabulation, with a view to satisfy all parties that there has been no tampering or unfair practice in connection therewith.

"Very respectfully,

"F. C. ZACHARIE.

"CHARLES CAVANAC.

"E. A. BURKE.

"J. R. ALCEE GAUTHREAUX.

"HENRY C. BROWN.

"FRANK MCGLOIN.

"I concur herein.

"H. M. SPOFFORD, Of Counsel.

They, the said Wells, Anderson, Kenner, and Casanave, acting as said board, expressly refused to permit any Democrat, or any person selected by Democrats, to be present with said clerks and assistants while they were engaged in the compilation and canvass aforesaid, or to examine into the correctness of the compilation and canvass made by said clerks and assistants as aforesaid.

And that said returning board, in pursuance of said unlawful combination and conspiracy aforesaid, and for the purpose of concealing the animus of said board and inspiring confidence in the public mind in the integrity of their proceedings on the 18th day of November, A. D. 1876, adopted and passed a preamble and resolution as follows:

"Whereas this board has learned with satisfaction that distinguished gentlemen of national reputation, from other States, some at the request of the President of the United States, and some at the request of the national executive committee of the Democratic party, are present in this city, with the view to witness the proceedings of this board in canvassing and compiling the returns of the recent election in this State for presidential electors, in order that the public opinion of the country may be satisfied as to the truth of the result and the fairness of the means by which it may have been attained; and

"Whereas this board recognizes the importance which may attach to the result of their proceedings, and that the public mind should be convinced of its justice by a knowledge of the facts on which it may be based: Therefore,

"Be it resolved, That this board does hereby cordially invite and request five gentlemen from each of the two bodies named, to be selected by themselves respectively, to attend and be present at the meetings of this board while engaged in the discharge of its duties, under the law, in canvassing and compiling the returns and ascertaining and declaring the result of said election for presidential electors, in their capacity as private citizens of eminent reputation and high character, and as spectators and witnesses of the proceedings in that behalf, of this board."

But that said returning board, being convinced that a compilation and canvass of votes given at said election for presidential electors, made fairly and openly, would result in defeating the object of said conspiracy, and compelling said returning board to certify that said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, had

been at said election duly chosen, elected, and appointed electors by the said State of Louisiana; and, in pursuance of said unlawful combination and conspiracy, did afterward, to wit, on the 20th day of November, A. D. 1876, adopt and pass the following rules for the better execution and carrying into effect said combination and conspiracy; that is to say:

"Sec. 7. The returning officers, if they think it advisable, may go into secret session to consider any motion, argument, or proposition which may be presented to them; any member shall have the right to call for secret session for the above purpose."

"Sec. 10. That the evidence for each contested poll in any parish, when concluded, shall be laid aside until all the evidence is in from all the contested polls in the several parishes where there may be contests, and, after the evidence is all in, the returning officers will decide the several contests in secret session; the parties or their attorneys to be allowed to submit briefs or written arguments up to the time fixed for the returning officers going into secret session, after which no additional argument to be received unless by special consent."

That the proceedings thus directed to be had in secret were protested against by the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross; but said board thereafter proceeded and pretended to complete their duties as such returning board; and did perform, execute, and carry out the most important duties devolving upon said board in secret, with closed doors, and in the absence of any member of their board belonging to the Democratic party, or any person whatever not a member of said board not belonging to the Republican party.

That the said Wells, Anderson, Kenner, and Casanave, acting as said returning board, while engaged in the compilation and canvass aforesaid, were applied to, to permit the United States supervisors of election, duly appointed and qualified as such, to be present at and witness such compilation or canvass.

That application was made to said returning board in that behalf, as follows:

To the President and Members of the Returning Board of the State of Louisiana:

GENTLEMEN: The undersigned, of counsel for United States Supervisors of Election, duly appointed and qualified as such, do hereby except, protest, and object to any ruling made this 20th day of November, 1876, or that hereafter may be made, whereby they are deprived of the right of being present during the entire canvass and compilation of the results of the election lately held in the State of Louisiana, wherein electors for President and Vice-President, and members of the Forty-fifth Congress, were ballotted for, and the result of which said board are now canvassing.

That, under the fifth section of the United States act of February 28, 1871, they are to be and remain where the ballot-boxes are kept, at all times after the polls are open, until each and every vote cast at said time and place shall be counted, and the canvass of all votes polled to be wholly completed, and the proper and requisite certificate or returns made, whether said certificate or returns be required under any law of the United States, or any State, territorial, or municipal law.

That, under said law of the United States, District Attorney J. R. Beckwith, under date of October 30, 1872, gave his written official opinion for the instruction and guidance of persons holding the office now held by protestants, wherein said United States District Attorney said:

"It cannot be doubted that the duty of the supervisors extends to the inspection of the entire election, from its commencement until the decision of its result. If the United States statutes were less explicit, there still could be no doubt of the duty and authority of the supervisors to inspect and canvass every vote cast for each and every candidate, State,

parochial, and Federal, as the law of the State neither provides nor allows any separation of the election for Representatives in Congress, etc., from the election of State and parish officers. The election is in law a single election, and the power of inspection vested in law in the supervisors appointed by the court extends to the entire election, a full knowledge of which may well become necessary to defeat fraud."

In which opinion the Attorney-General of the State of Louisiana coincided. Whereupon protestants claim admittance to all sessions of the returning board, and protest against their exclusion as unwarranted by law, as informed by their attorneys has been done and is contemplated to be done hereafter in said proceedings of said board.

F. C. ZACHARIE, E. A. BURKE, CHAS. CAVANAC, FRANK McGLLOIN, J. E. A. GAUTHREAUX, H. C. BROWN,	}	Of Counsel.
--	---	-------------

But that said Wells, Anderson, Kenner, and Casanave, acting as such returning board, in further pursuance and execution of said unlawful combination and conspiracy, then and there refused to permit said United States commissioners of election to be present for the purpose aforesaid, but proceeded in their absence to the pretended compilation and canvass aforesaid.

That the said returning board, while in session as aforesaid, for the purpose aforesaid, to wit, on the 20th day of November, 1876, adopted the following rule to govern their proceedings; that is to say:

(9) "No *ex parte* affidavits or statements shall be received in evidence, except as a basis to show that such fraud, intimidation, or other illegal practice had at some poll requires investigation; but the returns and affidavits authorized by law, made by officers of election, or in verification of statements as required by law, shall be received in evidence as *prima facie*."

But that said board subsequently, while sitting as aforesaid, for the purposes aforesaid, having become convinced that they could not, upon other than *ex parte* testimony, so manipulate the said compilation and canvass as to declare that said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrin, were elected electors at said election, and in further pursuance of said unlawful combination and conspiracy did subsequently modify said rule, and declare and decide that, as such returning board, they would receive *ex parte* affidavits, under which last decision of said board over two hundred pages of *ex parte* testimony was received by said board in favor of said Kellogg and others; and afterward, when the said McEnery and others offered *ex parte* evidence to contradict the *ex parte* evidence aforesaid, the said returning board reversed its last decision, and refused to receive *ex parte* affidavits, in contradiction as aforesaid.

And that, in pursuance of said unlawful combination and conspiracy, the said returning board, in violation of a law of said State, approved November 20, 1872, neglected and refused to compile and canvass the statement of votes made by the commissioners of election, which were before them according to law for canvass and compilation as aforesaid in regard to the election, of presidential electors, but that said board did, in pursuance and further execution of said combination and conspiracy, canvass and compile only the consolidated statements and returns made to them by the supervisors of registration of the several parishes of said State.

And that said returning board, in pursuance and further execution of said unlawful combination and conspiracy, did knowingly, willfully, and fraudulently refuse to compile and canvass the votes given for electors at said election in more than twenty parishes of said State, as was shown and appeared by

and upon the consolidated statement and return made to them by said supervisors of said parishes.

And that said returning board did, in said canvass and compilation, count and estimate, as a foundation for their determination in the premises, hundreds of votes which had not been returned and certified to them either by the commissioners of election in said State or by the supervisors of registration in said State, they the said members of said board then and there well knowing that they had no right or authority to estimate the same for the purpose aforesaid.

And that said returning board, in further pursuance and execution of said unlawful combination and conspiracy, knowingly, willfully, falsely, and fraudulently did make a certificate and return to the Secretary of State that said Kellogg, Burch, Joseph, Sheldon, Marks, Levisse, Brewster, and Joffrin, had received majorities of all the legal votes cast at said election of November 7, 1876, for presidential electors, they then and there well knowing that the said McEnery, Wickliffe, St. Martin, Poché, De Blanc, Seay, Cobb, and Cross, had received majorities of all the votes cast at said election for presidential electors, and were duly elected as the presidential electors of said State.

And that the said returning board, in making said statement, certificate, and return to the Secretary of State, were not deceived nor mistaken in the premises, but knowingly, willfully, and fraudulently made what they well knew when they made it was a false and fraudulent statement, certificate, and return; and that the said false and fraudulent statement, certificate, and return, made by said returning board to the Secretary of State in that behalf, was made by the members of said returning board in pursuance and execution of, and only in pursuance and execution of, said unlawful combination and conspiracy.

And that said returning board, while in session as aforesaid for the purpose aforesaid, in further pursuance and execution of said unlawful combination and conspiracy, did alter, change, and forge, or cause to be altered, changed, and forged, the consolidated statement and return of the supervisor of registration for the parish of Vernon, in said State, in the manner following, to wit: The said consolidated statement, as made and returned to said board, showed that, of the legal votes given in said parish for electors at said election for November 7, 1876, said McEnery received 647, said Wickliffe received 647, said St. Martin received 647, said Poché received 647, said De Blanc received 647, said Seay received 647, said Cobb received 647, said Cross received 647; and that said Kellogg received none, said Burch received none, said Joseph received 2, said Brewster received 2, said Marks received 2, said Levisse received 2, said Joffrin received 2, said Sheldon received 2; and said board altered, changed, and forged, or caused to be altered, changed, and forged, said consolidated statement, so as to make the same falsely and fraudulently show that the said McEnery received 469, said Wickliffe received 469, said St. Martin received 469, said Poché received 469, said De Blanc received 469, said Seay received 469, said Cobb received 469, said Cross received 469; and that said Kellogg received 178, said Burch received 178, said Joseph received 178, said Sheldon received 180, said Marks received 180, said Levisse received 180, said Brewster received 180, said Joffrin received 180; and that said returning board, while in session as aforesaid for the purpose aforesaid, to pretend to justify the alteration and forgery of said consolidated statement, procured and pretended to act upon three forged affidavits, purporting to have been made and sworn to by Samuel Carter, Thomas Brown, and Samuel Collins, they, the said members of said returning board, then and there well knowing that said pretended affidavits were false and forged, and that no such persons were in existence as purported to make said affidavits. And that said members of said returning board, acting as said board, in pursu-

ance and execution of said unlawful combination and conspiracy, did, in their pretended canvass and compilation of the legal votes given at said election on the 7th day of November, A. D. 1876, for presidential electors in said State of Louisiana, as shown to them by the statements, papers, and returns made according to law by the commissioners of election presiding over and conducting said election at the several polls and voting-places in said State, all of which votes were legally cast by legal voters in said State at said election, knowingly, willfully, and fraudulently, and without any authority of law whatever, excluded and refused to count and estimate or compile or canvass votes given at said election for electors, as follows, which papers, statements, and returns were before them, and which it was their duty by law to compile and canvass, that is to say: for said John McEnery, 10,280; for said R. C. Wickliffe, 10,293; for said L. St. Martin, 10,291; for said F. P. Poché, 10,280; for said A. De Blanc, 10,289; for said W. A. Seay, 10,291; for said R. A. Cobb, 10,261; for said K. A. Cross, 10,288; they, the said members of said returning board, then and there, well knowing that all of said votes which they neglected and refused to canvass and compile had been duly and legally cast at said election for presidential electors by legal voters of said State; and then and there, well knowing that, had they considered, estimated, and counted, compiled, and canvassed said votes as they then and there well knew it was their duty to do, it would have appeared, and they would have been compelled to certify and return to the Secretary of State, that said Kellogg had not been duly elected or appointed an elector for said State; but that at said election the said McEnery, the said Wickliffe, the said St. Martin, the said Poché, the said De Blanc, the said Seay, the said Cobb, and the said Cross, had been duly elected and appointed presidential electors in said State.

And that by false, fraudulent, willful, and corrupt acts and omissions to act by said returning board as aforesaid in the matter aforesaid, and by said non-feasance, misfeasance, and malfeasance of said returning board as hereinbefore mentioned, the said returning board made to the Secretary of State of said State the statement, certificate, and return upon which the said Kellogg, as *de facto* Governor of said State, pretended to make his said false certificate, certifying that himself and others had been duly appointed electors for said State, as hereinbefore mentioned; and that said statement, certificate, and return made by said returning board, and that the said certificate made by the said Kellogg as *de facto* Governor, each, every, and all, were made in pursuance and execution of said unlawful and criminal combination and conspiracy, as was well known to and intended by each and every of the members of said returning board when they made their said false statement, certificate, and return to the Secretary of State of said State, and by the said Kellogg when, as Governor *de facto* of said State, he made his said false certificate hereinbefore mentioned.

III. We further offer to prove

That Oscar Joffrin was, on the 7th day of November, A. D. 1876, supervisor of registration of the parish of Pointe Coupée, and that he acted and officiated as such supervisor of registration for said parish at the said election for presidential electors on that day; and that he is the same person who acted as one of the electors for said State, and on the 6th day of December, A. D. 1876, as an elector, cast a vote for Rutherford B. Hayes for President of the United States, and for William A. Wheeler for Vice-President of the United States.

IV. We further offer to prove

That, on the 7th day of November, A. D. 1876, A. B. Levisé, who was one of the pretended college of electors of the State of Louisiana, and who in said college gave a vote for Rutherford B. Hayes for President of the United States, and for William

A. Wheeler for Vice-President of the United States, was, at the time of such election, a court commissioner of the Circuit Court of the United States for the district of Louisiana, which is an office of honor, profit, and trust under the Government of the United States.

V. We further offer to prove

That, on the 7th day of November, A. D. 1876, O. H. Brewster, who was one of the pretended electors in the pretended college of electors of the State of Louisiana, and who in said college gave a vote for Rutherford B. Hayes for President of the United States, and for William A. Wheeler for Vice-President of the United States, was at the time of such election as aforesaid, holding an office of honor, profit, and trust under the Government of the United States, to wit, the office of Surveyor-General of the Land Office for the district of Louisiana.

VI. We further offer to prove

That, on the 7th day of November, 1876, Morris Marks, one of the pretended electors, who in said college of electors cast a vote for Rutherford B. Hayes for President of the United States, and a vote for William A. Wheeler for Vice-President of the United States, was, ever since has been, and now is, holding and exercising the office of District Attorney of the Fourth Judicial District of said State, and receiving the salary by law attached to said office.

VII. We further offer to prove

That, on the 7th day of November, A. D. 1876, J. Henri Burch, who was one of the pretended electors who in said pretended electoral college gave a vote for Rutherford B. Hayes for President of the United States, and a vote for William A. Wheeler for Vice-President of the United States, was holding the following offices under the constitution and laws of said State; that is to say: Member of the Board of Control of the State Penitentiary, also Administrator of the Deaf and Dumb Asylum of said State, to both of which offices he had been appointed by the Governor, with the advice and consent of the Senate of said State, both being offices with salaries fixed by law, and also the office of treasury of the parish school board for the parish of East Baton Rouge; and that said Burch, ever since the 7th day of November (and prior thereto), has exercised and still is exercising the functions of all said offices, and receiving the emoluments thereof.

VIII. We further offer to prove the canvass and compilation actually made by said returning board, showing what parishes and voting-places and polls were compiled and canvassed, and what polls or voting-places were excluded by said returning board from their canvass and compilation of votes given for presidential electors; and we also offer to show what statements and returns of the commissioners of election and of the supervisors of registration were duly before said returning board.

IX. We further offer to prove that a member of said returning board offered to receive a bribe, in consideration of which the board would certify the election of the Tilden electors.

X. We offer to prove that the statements and affidavits purporting to have been made and forwarded to said returning board, in pursuance of the provisions of section 26 of the Election Law of 1872, alleging riot, tumult, intimidation, and violence, at or near certain polls and in certain parishes, were falsely fabricated and forged by certain disreputable persons under the direction and with the knowledge of said returning board; and that said returning board, knowing said statements and affidavits to be false and forged, and that none of said statements or affidavits were made in the manner or form required by law, did knowingly, willfully, and fraudulently fail and refuse to canvass or compile more than 10,000 votes lawfully cast, as is shown by the statements of votes of the commissioners of election.

XI. We further offer to prove

That said returning board did willfully and fraud-

ulently pretend to canvass and compile, and did promulgate as having been canvassed and compiled, certain votes for the following-named candidates for electors which were never cast, and which did not appear upon any tally-sheet, statement of votes, or consolidated statement or other return before said board, namely: J. H. Burch, 241; Peter Joseph, 1,362; L. A. Sheldon, 1,364; Morris Marks, 1,384; A. B. Levisse, 829; O. H. Brewster, 776; Oscar Joffrion, 1,364.

The Presiding Officer: "Are there further objections to the decision of the commission?"

Senator Wallace: "I offer the objection which I send to the desk, signed by Senators and Representatives."

The Presiding Officer: "The objection will be read by the Secretary of the Senate."

The Secretary of the Senate read as follows:

The undersigned, Senators and members of the House of Representatives, object to the decision of the Electoral Commission as to the electoral votes of the State of Louisiana, because

1. The said decision was made in violation of the law under which said commission acts, in this, that by said act the said commission is required to decide whether any and what votes from such State are the votes provided for by the Constitution of the United States, and how many and what persons were duly appointed electors in said State; yet said commission refused to examine and ascertain who were duly appointed electors in and by the State of Louisiana, and what votes from such State are within the provisions of the Constitution of the United States.

2. Because the act creating said commission was passed to the end that the commission would hear and examine evidence and honestly decide which electors in any disputed State were fairly and legally chosen; whereas the said commission refused to hear and consider evidence offered to show that the electors, whose votes the said commission has decided shall be counted, were not duly chosen, but falsely and fraudulently acted as such electors, as well as the evidence offered to show that the pretended certificates of election of said electors were produced by corruption and were wholly untrue.

3. Because the said decision is in disregard of truth, justice, and law, and establishes the demoralizing and ominous doctrine that fraud, forgery, bribery, and perjury, can lawfully be used as a means to make a President of the United States against the well-known or easily-ascertained will of the people and of the States.

HIESTER CLYMER,	

The Presiding Officer: "Are there further objections to the decision of the commission?"

Mr. Cochrane: "I desire to offer a further objection to the decision."

The Presiding Officer: "The Clerk of the House will read the objection."

The Clerk of the House read as follows:

The undersigned, Senators and Representatives, do

object to the counting of the votes as recommended by eight members of the joint commission, and do protest against counting the electoral vote of the State of Louisiana, for the reasons following, to wit:

1. It was not denied before the commission that the Tilden electors received a large majority of the votes cast.

2. It was not denied before the commission that Wells and his associates, who styled themselves a returning board, were guilty of gross fraud; that their certificate, given to the Hayes electors, was false and fraudulent, and that their action in canvassing the votes was in violation of the constitution and laws of the State of Louisiana.

3. The action of the eight members of said joint commission in declining to hear evidence of the above, and other facts, was a violation of the letter and spirit of the act under which said commission was created, and of the spirit of the Constitution of the United States.

The Presiding Officer: "Are there further objections to the decision of the commission? (After a pause.) There are none. Objections to the decision of the commission having been submitted and read, the Senate will now withdraw to its Chamber, that the two Houses separately may consider and decide upon the objections."

In the Senate, on February 19th, the objections having been considered,

Mr. Sherman, of Ohio, offered the following resolution:

Resolved, That the decision of the commission upon the electoral vote of the State of Louisiana stand as the judgment of the Senate, the objections made thereto to the contrary notwithstanding.

Mr. Stevenson: "I call for the yeas and nays."

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

The result was announced, as follows:

YEAS—Messrs. Alcorn, Allison, Anthony, Booth, Boutwell, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chaffee, Christiancy, Clayton, Conover, Cragin, Dawes, Ferry, Frelinghuysen, Hamlin, Harvey, Hitchcock, Howe, Ingalls, Jones of Nevada, Logan, McMillan, Mitchell, Morrill, Morton, Oglesby, Paddock, Patterson, Robertson, Sargent, Sharon, Sherman, Spencer, Teller, Wade, West, Windom, and Wright—41.

NAYS—Messrs. Bailey, Barnum, Bayard, Boggy, Cockrell, Cooper, Davis, Dennis, Eaton, Goldthwaite, Gordon, Hereford, Johnston, Jones of Florida, Kelly, Kernan, McCreery, McDonald, Maxey, Merrimon, Norwood, Randolph, Ransom, Saulsbury, Stevenson, Wallace, Whyte, and Withers—28.

ABSENT—Messrs. Blaine, Conkling, Dorsey, Edmunds, Hamilton, and Thurman—6.

So the resolution was agreed to.

In the House, on February 20th, the following, submitted by Mr. Gibson, of —, was agreed to:

Ordered, That the votes purporting to be electoral votes for President and Vice-President, which were given by William P. Kellogg, J. Henri Burch, Peter Joseph, Lionel A. Sheldon, Morris Marks, Aaron B. Levisse, Orlando H. Brewster, and Oscar Joffrion, claiming to be electors for the State of Louisiana, be not counted.

The question was taken, as follows:

YEAS—Messrs. Abbott, Ainsworth, Anderson, Ashe, Atkins, Bagby, John H. Bagley, Jr., Banning, Beebe, Bell, Blackburn, Bland, Bliss, Blount, Boone, Bradford, Bright, John Young Brown, Buckner, Samuel D. Burchard, Cabell, John H. Caldwell, William P. Caldwell, Campbell, Candler, Carr, Cate, Chapin, John B. Clarke of Kentucky, John B. Clark, Jr., of Missouri, Clymer, Cochrane, Collins, Cook, Cowan, Cox, Culberson, Cutler, Davis, De Bolt, Dibrell, Durham, Eden, Egbert, Ellis, Faulkner, Felton, Field, Finley, Forney, Franklin, Fuller, Gause, Gibson, Glover, Goodin, Gunter, Andrew H. Hamilton, Robert Hamilton, Hancock, Hardenbergh, Henry R. Harris, John T. Harris, Harrison, Hartridge, Hartzell, Hatcher, Haymond, Henkle, Abram S. Hewitt, Goldsmith W. Hewitt, Hill, Holman, Hooker, Hopkins, House, Humphreys, Hunton, Hurd, Jenks, Thomas L. Jones, Kehr, Knott, Lamar, Franklin Landers, George M. Landers, Lane, Le Moyne, Levy, Lewis, Luttrell, Lynde, Mackey, Maish, McFarland, McMahon, Meade, Metcalfe, Milliken, Mills, Money, Morgan, Morrison, Mutchler, Neal, New, O'Brien, Odell, Payne, Phelps, John F. Philips, Pierce, Piper, Poppleton, Powell, Rea, Reagan, John Reilly, James B. Reilly, Rice, Riddle, William M. Robbins, Roberts, Miles Ross, Savage, Sayler, Scales, Schleicher, Schumaker, Seelye, Singleton, Slemmons, William E. Smith, Southard, Sparks, Springer, Stanton, Stenger, Stevenson, Stone, Swann, Tarbox, Teese, Terry, Thomas, Thompson, Throckmorton, Tucker, Turney, John L. Vance, Robert B. Vance, Waddell, Charles C. B. Walker, Gilbert C. Walker, Walling, Walsh, Ward, Warner, Warren, Watterson, Erastus Wells, Whitthorne, Wigginton, Wike, Alpheus S. Williams, James Williams, Jere N. Williams, Willis, Wilshire, Benjamin Wilson, Fernando Wood, Yeates, and Young—173.

NAYES—Messrs. Adams, George A. Bagley, John H. Baker, William H. Baker, Ballou, Banks, Belford, Blair, Bradley, William R. Brown, Horatio C. Burchard, Cannon, Cason, Caswell, Conger, Crapo, Crounse, Danford, Darrall, Davy, Denison, Dobbins, Dunnell, Eames, Evans, Flye, Fort, Foster, Freeman, Frye, Garfield, Hale, Haralson, Benjamin W. Harris, Hathorn, Hays, Hendee, Henderson, Hoar, Hoge, Hoskins, Hubbell, Hunter, Hurlbut, Hyman, Joyce, Kasson, Kelley, Kimball, King, Lapham, Lawrence, Leavenworth, Lynch, Magoon, McCrary, McDill, Miller, Monroe, Nash, Norton, Oliver, O'Neill, Packer, Page, William A. Phillips, Plaisted, Platt, Potter, Pratt, Robinson, Sobieski Ross, Rusk, Sampson, Sinnickson, Smalls, A. Herr Smith, Strait, Stowell, Thornburgh, Martin I. Townsend, Washington Townsend, Tufts, Van Vorhes, Wait, Waldron, Alexander S. Wallace, John W. Wallace, G. Wiley Wells, White, Whiting, Willard, Andrew Williams, Charles G. Williams, William B. Williams, James Wilson, Alan Wood, Jr., Woodburn, and Woodworth—99.

NOT VOTING—Messrs. Bass, Burleigh, Buttz, Caul field, Chittenden, Douglas, Durand, Goode, Frank Jones, Lord, MacDougall, Purman, Rainey, John Robbins, Sheakley, Stephens, Wheeler, and Whitehouse—18.

So the motion of Mr. Gibson was agreed to.

At one o'clock and thirty-five minutes P. M. the Doorkeeper announced the Senate of the United States.

The Presiding Officer: "The joint meeting of Congress for counting the electoral vote resumes its session. The two Houses acting separately have considered and decided upon the objections to the decision of the commission upon the certificates from the State of Louisiana. The two Houses not concurring in a contrary opinion, the decision of the commission stands, and the counting will now proceed in conformity therewith. The tellers will announce the vote of the State of Louisiana."

Senator Allison (one of the tellers): "The State of Louisiana casts 8 votes for Rutherford B. Hayes, of Ohio, for President, and 8 votes for William A. Wheeler, of New York, for Vice-President."

The certificates of Maine, Maryland, and Massachusetts were opened by the Presiding Officer and read; and the electoral votes of those States, no objection being made, were then counted.

The Presiding Officer: "The Chair hands to the tellers the certificate of the electoral vote of the State of Michigan, received by messenger, and the corresponding one received by mail."

Senator Allison (one of the tellers) read the certificate *in extenso*.

Mr. Tucker: "I offer objections, signed by Senators and Representatives according to law, to the electoral vote of Daniel S. Crossman, of the State of Michigan, and also send up a duplicate."

An objection was then made on the part of the House to one of the electors of the State, which, on separate consideration, was not sustained by either House. The following resolution was adopted by the House of Representatives:

Whereas, The fact being established that it is about twelve years since the alleged ineligible elector exercised any of the functions of a United States commissioner, it is not sufficiently proven that at the time of his appointment he was an officer of the United States: Therefore,

Resolved, That the vote objected to be counted.

The joint meeting having been resumed, the votes of Michigan (11), Minnesota (5), and Nebraska (8), were counted for Hayes and Wheeler; those of Mississippi (8) and Missouri (15) for Tilden and Hendricks.

An objection was then made to one of the electors from Nevada, as holding an office under the United States.

The objection was not sustained by either House, and the count was resumed and proceeded: Nevada (3), New Hampshire (5), and Ohio (22), for Hayes and Wheeler; New Jersey (9), New York (35), and North Carolina (10), for Tilden and Hendricks.

Objections were then made to the certificates from the State of Oregon, and referred to the Electoral Commission.

On February 23d both Houses reassembled in joint session to hear the decision of the commission.

The Presiding Officer: "The joint meeting of Congress for counting the electoral vote resumes its session.

"The two Houses, having separated pending submission to the commission of objections to the certificates of the State of Oregon, have reassembled to receive and to coincide, or otherwise, with the decision of that tribunal.

"The decision, which is in writing, by a majority of the commission, and signed by the members agreeing therein, will now be read by the Secretary of the Senate, and be entered in the Journal of each House."

The Secretary of the Senate read as follows:

ELECTORAL COMMISSION,
WASHINGTON, D. C., February 23, A. D. 1877. }

To the President of the Senate of the United States, presiding in the meeting of the two Houses of Congress, under the act of Congress entitled "An act to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877," approved January 23, A. D. 1877.

The Electoral Commission mentioned in said act, having received certain certificates and papers purporting to be certificates, and papers accompanying the same, of the electoral votes from the State of Oregon, and the objections thereto submitted to it under said act, now report that it has duly considered the same pursuant to said act, and has by a majority of votes decided, and does hereby decide, that the votes of W. H. Odell, J. C. Cartwright, and J. W. Watts, named in the certificate of said persons and in the papers accompanying the same, which votes are certified by said persons, as appears by the certificates submitted to the commission as aforesaid, and marked "Number One (1) N. C." by said commission, and herewith returned, are the votes provided for by the Constitution of the United States, and that the same are lawfully to be counted as therein certified, namely:

Three (3) votes for Rutherford B. Hayes, of the State of Ohio, for President; and

Three (3) votes for William A. Wheeler, of the State of New York, for Vice-President.

The commission has by a majority of votes also decided, and does hereby decide and report, that the three persons above named were duly appointed electors in and by the State of Oregon.

The brief ground of this decision is that it appears, upon such evidence as by the Constitution and the law named in said act of Congress is competent and pertinent to the consideration of the subject, that the before-mentioned electors appear to have been lawfully appointed such electors of President and Vice-President of the United States for the term beginning March 4, A. D. 1877, of the State of Oregon, and that they voted as such at the time and in the manner provided for by the Constitution of the United States and the law.

And we are further of opinion that, by the laws of the State of Oregon, the duty of canvassing the returns of all the votes given at an election for electors of President and Vice-President was imposed upon the Secretary of State, and upon no one else; that the Secretary of State did canvass the returns in the case before us, and thereby ascertained that J. C. Cartwright, W. H. Odell, and J. W. Watts, had a majority of all the

votes given for electors, and had the highest number of votes for that office, and by the express language of the statute those persons are deemed elected; that, in obedience to his duty, the Secretary made a canvass and a tabulated statement of the votes showing this result, which, according to law, he placed on file in his office on the 4th day of December, A. D. 1876. All this appears by an official certificate under the seal of the State and signed by him, and delivered by him to the electors, and forwarded by them to the President of the Senate with their vote.

That the refusal or failure of the Governor of Oregon to sign the certificate of the election of the persons so elected does not have the effect of defeating the appointment of such electors; that the act of the Governor of Oregon in giving to E. A. Cronin a certificate of his election, though he received a thousand votes less than Watts, on the ground that the latter was ineligible, was without authority of law, and is therefore void.

That, although the evidence shows that Watts was a postmaster at the time of his election, that fact is rendered immaterial by his resignation both as postmaster and elector, and his subsequent appointment to fill the vacancy so made by the electoral college.

The commission has also decided, and does hereby decide by a majority of votes, and report that, as a consequence of the foregoing and upon the grounds before stated, the paper purporting to be a certificate of the electoral vote of said State of Oregon, signed by E. A. Cronin, J. N. T. Miller, and John Parker, marked "No. 2 N. C." by the commission, and herewith returned, is not the certificate of the votes provided for by the Constitution of the United States, and that they ought not to be counted as such.

Done at Washington, District of Columbia, the day and year first above written.

The Presiding Officer: "Are there any objections to the decision of the commission?"

Senator Kelly: "I have the honor to file certain objections to this decision, signed by Senators and Representatives."

The Presiding Officer: "The Senator from Oregon having submitted an objection to this decision, it will be read by the Clerk of the House."

The Clerk of the House read as follows:

The undersigned, Senators and members of the House of Representatives of the United States, object to the decision of the joint commission directing the counting of the vote of John W. Watts, an alleged elector for the State of Oregon, as given for Rutherford B. Hayes, of Ohio, for President of the United States, and for William A. Wheeler, of New York, for Vice-President, and rejecting the vote of E. A. Cronin as cast for Samuel J. Tilden, of New York, for President, and Thomas A. Hendricks, of Indiana, for Vice-President, on the following grounds:

1. John W. Watts was not elected a presidential elector for Oregon.

2. He (J. W. Watts) was not legally appointed as a presidential elector.

3. He (Watts) was disqualified to receive any appointment as presidential elector, or the vote as such, in that he held an office of trust and profit under the United States.

On February 28th the two Houses reassembled to hear the decision of the commission, which was in writing, and signed by the members agreeing thereto, as follows:

The Electoral Commission mentioned in said act, having received certain certificates and papers purporting to be certificates, and papers accompanying the same, of the electoral votes for the State of South Carolina, and the objections thereto submitted to it under said act, now report that it has duly considered the same pursuant to said act, and has by a majority of votes decided, and does hereby decide, that the votes of C. C. Bowen, J. Winsmith, Thomas B. Johnston, Timothy Hurley, W. B. Nash, Wilson Cook, and W. F. Myers, named in the certificate of D. H. Chamberlain, Governor of said State, which votes are certified by said persons, as appears by the certificate submitted to the commission as aforesaid,

The commission has also decided, and does hereby decide by a majority of votes, and reports that, as a consequence of the foregoing and upon the grounds before stated, the paper purporting to be a certificate of the electoral vote of said State of South Carolina, signed by Theodore G. Barker, S. McGowan, John W. Harrington, John Isaac Ingram, William Wallace, John B. Irwin, and Robert Aldrich, marked "No. 2 N. C." by the commission and herewith returned, is not the certificate of the votes provided for by the Constitution of the United States, and that they ought not to be counted as such.

Done at Washington, District of Columbia, the day and year first above written.

GEORGE F. HOAR.

The Presiding Officer: "Are there any objections to the decision of the commission?"

Mr. Philips, of Missouri: "I send up an objection, signed by Senators and Representatives, and along with it I present the evidence upon which the objection is founded."

The Presiding Officer: "The member from Missouri (Mr. Philips) having presented an objection, it will be read by the Clerk of the House."

The Clerk of the House read as follows:

The undersigned, Senators and Representatives, do hereby object to counting the votes cast by C. C. Bowen, J. Winsmith, Thomas B. Johnston, Timothy Hurley, W. B. Nash, Wilson Cook, and W. F. Myers, alleged electors of the State of South Carolina, in conformity to the decision of the Electoral Commission, and as reasons therefor assign the following:

I. Because no legal election was held in the State of South Carolina on the 7th day of November last past for presidential electors, in compliance with section 3, Art. VIII., of the constitution thereof, requiring a registration of the electors of the State as a qualification to vote.

II. Because, in consequence of frauds practised in said election, and the interference with and intimidation of the electors in said State by the Federal Government prior to and during said election, stationing in various parts of said State near the polling-places detachments of the Army of the United States, a full and free exercise of the right of suffrage was prevented, in consequence of which there was no lawful election had.

III. Because, in violation of the Constitution of the United States, the Federal authorities, at the several polling-places in said State on the day of election, stationed over one thousand deputy marshals of the United States, who by their unlawful and arbitrary action, in obedience to the unauthorized instructions from the Department of Justice, so interfered with the full and free exercise of the right of suffrage by the voters of said State that a fair election could not be and was not held in said State on the 7th day of November, 1876.

IV. Because the certification of the election held by said electors on the 6th day of December, 1876, was not made by the lawfully-constituted Governor of said State.

V. Because the said Electoral Commission, contrary to its duty and the authority vested in it by law, neglected and refused to inquire into the facts and allegations aforesaid, and their said decision is contrary to the law and the truth.

VI. Because, at the time of the pretended appointment of the said electors in the State of South Carolina, it was under duress from the power of the United States, unlawfully exerted upon it, and said pretended appointments were made under such duress.

VII. Because the certificate numbered "1" was and is void:

1. For irregularity, in that the electors were not sworn, as by the constitution of the State of South Carolina they were required to be.

2. The certificate does not state that said elec-

tors voted by ballot, as required by the Constitution of the United States.

8. The certificate upon the envelope in which the said certificate and accompanying papers were inclosed was not the certificate required by the laws of the United States.

T. M. NORWOOD, JAMES K. KELLY, HENRY COOPER, S. B. MAXEY, WM. A. WALLACE,	} Senators.
J. F. PHILIPS, HIESTER CLYMER, ERASTUS WELLS, A. T. WALLING, A. M. WADDELL,	
JOHN R. EDEN, THOS. L. JONES, J. R. TUCKER,	
	} Representatives.

The Presiding Officer: "Are there further objections to the decision of the commission?"

Mr. Southard: "I send up in duplicate an objection, signed by Senators and Representatives."

The Presiding Officer: "The member from Ohio (Mr. Southard) submits an objection, which will be read by the Secretary of the Senate."

The Secretary of the Senate read as follows:

The undersigned, Senators and members of the House of Representatives, object to the counting of the electoral vote purporting to come from South Carolina in conformity with the decision of the majority of the Electoral Commission, for the reason that the said electoral votes, as well as the votes of the people of said State at the presidential election on the 7th day of November last, were given under duress, caused by the unlawful exercise of Federal power.

A. S. MERRIMON, GEO. R. DENNIS, J. E. McDONALD, WM. A. WALLACE, C. W. JONES, DAVID DUDLEY FIELD, M. I. SOUTHARD, WM. MUTCHLER, JOHN GOODE, JR., JESSE J. YEATES, JOHN H. CALDWELL, S. S. COX, R. A. DE BOLT, JOHN B. CLARK, JR.,	} Senators.
	} Representatives.

The Presiding Officer: "Are there further objections to the decision? (After a pause.) If there be none, the Senate will now withdraw to its Chamber, that the two Houses separately may consider and determine the objections."

The objections to the decision of the commission were not sustained by the concurrence of the two Houses, and the 7 votes of South Carolina were counted for Hayes and Wheeler.

Objections were then made to the certificates of the States of Vermont and Wisconsin; but, not being sustained by the concurrent action of the two Houses, the votes of Vermont (5) and Wisconsin (10) were cast for Hayes and Wheeler, and those of Virginia (11) and West Virginia (5) were counted for Tilden and Hendricks.

The Presiding Officer (at five minutes past four o'clock A. M., March 2, 1877): "This concludes the count of the thirty-eight States of the Union. The tellers will now ascertain and deliver the result to the President of the Senate."

Mr. Allison, one of the tellers, announced the result as follows:

LIST OF VOTES FOR PRESIDENT AND VICE-PRESIDENT OF THE UNITED STATES FOR THE CONSTITUTIONAL TERM TO COMMENCE ON THE 4TH DAY OF MARCH, 1877.

No. of Electoral Votes to which each State is entitled.	STATES.	FOR PRESIDENT.		FOR VICE-PRESIDENT.

The Presiding Officer: "In announcing the final result of the electoral vote, the Chair trusts that all present, whether on the floor or in the galleries, will refrain from all demonstrations whatever; that nothing shall transpire on this occasion to mar the dignity and moderation which have characterized these proceedings, in the main so reputable to the American people, and worthy of the respect of the world."

"The whole number of the electors appointed to vote for President and Vice-President of the United States is 369, of which a majority is 185.

"The state of the vote for President of the United States, as delivered by the tellers, and

as determined under the act of Congress approved January 29, 1877, on this subject, is: For Rutherford B. Hayes, of Ohio, 185 votes; for Samuel J. Tilden, of New York, 184 votes. And the state of the vote for Vice-President of the United States, as delivered by the tellers, and as determined under the act of Congress approved January 29, 1877, on this subject, is: For William A. Wheeler, of New York, 185 votes; for Thomas A. Hendricks, of Indiana, 184 votes.

"Wherefore, I do declare

"That Rutherford B. Hayes, of Ohio, having received a majority of the whole number of electoral votes, is duly elected President of the United States for four years, commencing on the 4th day of March, 1877. And that William A. Wheeler, of New York, having received a majority of the whole number of electoral votes, is duly elected Vice-President of the United States for four years, commencing on the 4th day of March, 1877.

"The count of the electoral vote being completed and the result declared, the joint meeting of the two Houses is dissolved. The Senate will now retire to its Chamber."

The Senate accordingly retired from the Hall of the House of Representatives at ten minutes past four o'clock A. M., March 2, 1877.

On January 12th, the committee to ascertain and report what are the privileges, powers, and duties of the House of Representatives in counting the votes for President and Vice-President of the United States (*see* page 137) reported as follows:

The committee to ascertain and report what are the privileges, powers, and duties of the House of Representatives in counting the votes for President and Vice-President of the United States, beg leave to report in part the following resolutions for the adoption of the House:

Resolved, 1. That the Constitution of the United States does not confer upon the President of the Senate the power to examine and ascertain the votes to be counted as the electoral votes for President and Vice-President of the United States.

2. That the only power which the Constitution of the United States confers upon the President of the Senate in respect to the electoral votes for President and Vice-President of the United States is to receive the sealed lists transmitted to him by the several electoral colleges, to keep the same safely, and to open all the certificates, or those purporting to be such, in the presence of the Senate and the House of Representatives.

3. That the Constitution of the United States does confer upon the Senate and the House of Representatives the power to examine and ascertain the votes to be counted as the electoral votes.

4. That in execution of their power in respect to the counting of the electoral vote the House of Representatives is at least equal with the Senate.

5. That in the counting of the electoral votes, no vote can be counted against the judgment and determination of this House of Representatives.

6. That the committee have leave to sit again and report hereafter further matter for the consideration of the House.

The views of the minority of the committee were presented on January 18th, by Mr. Burdard, of Illinois, as follows:

Resolved, 1. That it is the power and duty of the House, conjointly with the Senate, to provide by law or other constitutional method a mode for fairly and truly ascertaining and properly counting the electoral vote of each State, so as to give effect to the choice of each State in the election of President and Vice-President.

2. That in the absence of legislative provision on the subject, or authoritative direction from the Senate and House of Representatives, the President of the Senate, upon opening the certificates, declares and counts the electoral votes for President and Vice-President of the United States.

The reports of the committee were discussed, but no final action was taken in the House on the subject. The decision of the presidential election engrossed the attention of Congress until almost the last hour of its session, which terminated at noon on March 4.

CONNECTICUT. In accordance with the constitutional amendment recently adopted by the citizens of this State, the General Assembly met at Hartford on January 3, 1877, when both Houses were promptly organized. In the House of Representatives, Lynde Harrison was elected Speaker. In the Senate, such members as came from evenly-numbered districts took their seats for the term of two years; those from odd districts hold theirs for one year; but the Senators from the last-named districts, who are to be chosen in November, 1877, will be elected for two years;

peaceable settlement of the questions raised about the validity of certain returns of electoral votes, on the counting of which depended the determination of who of the two candidates for the presidency had been elected in November, 1876, both the Senate and House of Representatives in the Connecticut Legislature held the subject under consideration, tending, apparently, to indorse and approve, in advance, that measure which Congress should finally resolve to adopt. At the afternoon session, on January 25th, the House of Representatives, by a vote of 120 to 77, taken after warm debates, passed the following resolutions, as a substitute for others previously offered and referred to the Committee on Federal relations:

Resolved by this Assembly, That, laying aside all party feeling, and looking only to the good of our common country, we hereby express our confidence in the wisdom, patriotism, and integrity of the Executive and the Congress of the United States in settlement of the questions growing out of the late presidential election.

Resolved, That the provisions of our written Constitution should be strictly followed in times of peace; the three departments of the Federal Government should be kept as far as possible independent of each other; the remedy for defects in the Constitution is by its amendment, and not by legislative interference.

Resolved, That we are opposed to intimidation, violence, and murder, as a means of influencing political opinion and elections; that we denounce all frauds in elections; and we demand such amendments to the national Constitution as will secure fair and honest suffrage, and correct any ambiguities which may now exist in it concerning the election of President.

Resolved, That whether the pending disagreement at Washington, in relation to the method of ascertaining the result of the last election for President, be settled by following either the plan adopted at the first election of Washington, and followed at subsequent elections for 40 years; or by adopting a plan which would provide for the rejection, by the concurrent vote of both Houses of Congress, of the electoral vote of any State

on account of intimidation, violence, or fraud; or by the operation of the proposed law to submit all the questions now at issue to a committee of 15 persons—we, the General Assembly of Connecticut, hereby heartily pledge the support of the State Government and of all our loyal citizens to that person who shall thereby be declared elected President of the United States.

Resolved, That any armed opposition to the inauguration, or administration, of the person who may be declared elected President by either of the aforesaid methods which may be adopted by Congress, will be treason; and all persons who threaten civil war, un-

YALE COLLEGE LIBRARY, NEW HAVEN.

so that all of the Senators will thereafter occupy their seats for the same length of time, being elected biennially—the Senators from even districts in one year, and those from odd districts in the year next following.

With reference to the political complexion of the legislative body at this session, the Republican members were in a considerable majority over the Democrats.

Early in the session, when Congress was still discussing the various plans proposed for a

less some one specific plan of settling the difficulty is followed, deserve the execration of all good citizens.

The Legislature continued in session for nearly three months, closing by final adjournment on March 23d. The number of acts passed on a great variety of subjects exceeds 300. From among the more important of them, the following seem to deserve particular mention:

"An Act relating to Elections," by the fifth section of which citizens who move their residence from one town to another are deprived of their right to vote in the new town, unless they have their names registered in the Clerk's Office. Governor Hubbard returned the bill to the House of Representatives without his signature, accompanied by a communication setting forth his objections, which turned especially on the said fifth section. The bill became a law notwithstanding, as, on March 20th, it was reconsidered by the House, and passed over the Governor's veto. Yeas, 102; nays, 65.

"An Act concerning Salaries," whereby the salaries and fees of all officers, directly or indirectly paid out of the State Treasury, excepting the salaries of the judges of the Supreme and Superior Courts, which remain intact, are reduced by 10 per cent.

A special act ordains "that the compensation of auditors of all accounts required to be made to the General Assembly shall be 10 dollars a day for the time actually employed."

An act fixing the legal rate of interest on loans at six per cent. per annum was passed. The clause of forfeiture on account of usury, existing in the old law, is repealed. Present contracts are not affected by the provisions of this act.

"An Act amending the Act concerning Domestic Relations," making the wife's right to acquire and control her property equal to the husband's, and determining the reciprocal rights of either to the property of the other, seems to be the most noteworthy law passed at this session. The text of the act is as follows:

Be it enacted by the Senate and House of Representatives in General Assembly convened:

SECTION 1. That in all marriages hereafter contracted, neither husband nor wife shall acquire, by force of the marriage, any right to or interest in any property held by the other before the marriage, or acquired after the marriage, except as to the share of the survivor in the property of the other, as hereinafter provided. The separate earnings of the wife shall be her sole property. The wife shall have the power to make contracts with third persons, and to convey to them her real and personal estate, in the same manner as if she were unmarried. All her property shall be liable to be taken for her debts, except so far as protected by other statutes; but in no case shall be liable to be taken for the debts of the husband. And the husband shall not be liable for the debts of the wife contracted before marriage, nor upon her contracts made after marriage, except as hereinafter specified.

SEC. 2. All purchases made by either husband or wife in his or her own name shall be presumed, in the absence of notice to the contrary, to be on his or her private account and liability; but both shall be

liable where any article purchased by either shall have in fact gone to the support of the family, or for the joint benefit of both, or for the reasonable apparel of the wife, or for her reasonable support while abandoned by her husband. It shall, however, be the duty of the husband to support his family, and his property, when found, shall be first applied to satisfy any such joint liability; and the wife shall in equity be entitled to an indemnity from the property of the husband for any property of her own that shall have been taken, or for any money that she shall have been compelled to pay, for the satisfaction of any such claim.

SEC. 3. On the death of either husband or wife the survivor, except in the cases mentioned in the next section, shall be entitled to the use for life of one-third in value of the property, real and personal, legally or equitably owned by the other at the time of his or her death, after the payment of all debts and charges allowed against the estate; such third to be set out by distributors appointed by the Court of Probate, and to be set out in any property, real or personal, or both, according to the judgment of the distributors. The right to such third shall not be defeated by any disposition of the property by will to other parties. Where there is no will the survivor shall take such third absolutely, and if there are no children of the decedent, or representatives of children, shall take one-half absolutely, instead of one-third. Where either husband or wife shall have given any device or legacy to the other by will, such provision shall be taken to be in lieu of the share herein provided for, unless the contrary shall be expressly stated, or shall clearly appear; but in any such case the party shall have his or her election whether to accept the provisions of such will or to take such statutory share. The wife shall also, when in the opinion of the judge of probate it is necessary, be allowed a reasonable sum from the estate of the husband for her support and that of her family during the settlement of his estate; but in that case shall not take her statutory share till after the expiration of the time for which such allowance is made.

SEC. 4. The provisions of the last preceding section, with regard to the statutory share of the surviving husband or wife in the property of the other, shall not apply to any case where, by a written contract made before marriage or after, either party has received from the other what was intended as a provision in lieu of such statutory share. Nor shall either party be entitled to such statutory share who had without sufficient cause abandoned the other and had continued such abandonment to the time of the other's death.

SEC. 5. The foregoing provisions shall apply only to marriages hereafter contracted; but in the case of marriages already existing any husband and wife may, during the marriage, enter into a written contract with each other for the mutual abandonment of all rights of either in the property of the other under existing statutes or at common law, and for the acceptance instead thereof of the rights given by this act; which contract shall be recorded in the Probate Court of the district and in the Town Clerk's Office of town in which they reside. And upon such contract being so made and recorded, the provisions of this act shall apply to such marriage in the same manner as to marriages hereafter contracted.

SEC. 6. All statutes and parts of statutes now existing which give to either husband or wife any other rights or interest in the property of the other, either during marriage or after the death of either, than those which are given by this act, are repealed as regards their application to all marriages embraced within the provisions of this act. The provisions of the statute with regard to dower are, however, to be in force so far as they relate either to modes of proceeding or to the duties of tenants in dower as to property held by them; which duties are hereby made the duties of any husband or wife holding a.

life-interest in any estate of the other under the provisions of this statute.

Approved March 16, 1877.

Two amendments to the constitution of the State, agreed to and proposed by the Legislature of 1876, were confirmed by a two-thirds vote in both Houses of the General Assembly of 1877, and were submitted to the people for their adoption or rejection at the election held on the first Monday in October, 1877. They are as follows:

No. 1. Neither the General Assembly, nor any county, city, borough, town, or school district, shall have power to pay or grant any extra compensa-

votes cast, 31,232. Yeas, 23,833; nays, 7,449. Majority of yeas, 16,384.

On amendment No. 2, whole number of votes cast, 31,285. Yeas, 26,751; nays, 4,534. Majority of yeas, 22,217.

The financial condition of the State appears to be quite satisfactory. Her receipts from all ordinary and extraordinary sources during the last fiscal year amounted to \$3,502,195.86; including \$77,415.60 balance in the Treasury at the beginning of the year, and \$1,068,900 proceeds of new bonds then issued. The amount of income from ordinary sources, properly attributable to the last year, was \$1,963,728.75,

which was increased by the addition of \$352,702.36 of taxes belonging to the previous year, but postponed to the following by a mistaken change of a statute; and \$39,399.66 of balances to special accounts transferred to the credit of the civil list.

The State expenditures for the last year, including \$1,068,900 bonds redeemed, were \$2,769,781.53; leaving in the Treasury, for the new year, \$732,414.33.

The estimated receipts for the ensuing year are, \$2,574,364.33; and the estimated expenditures, \$1,743,646; showing an estimated surplus in the Treasury at the year's end of \$830,718.33.

The whole of the public debt of Connecticut, at the end of 1877, was \$4,967,600, consisting of the following items:

January 1, 1863, redeemable January 1, 1883, 6 per cent.....	\$877,000
January 15, 1864, redeemable January 15, 1884, 6 per cent.....	1,313,500
July 1, 1865, redeemable July 1, 1885, 6 per cent..	1,741,104
May 1, 1877, redeemable after May 1, 1887, 5 per cent.....	1,081,000

The State School Fund, on November 30, 1876, amounted to \$2,028,332.81. Its sum in November, 1874, had been reported \$2,044,226.54, showing an apparent loss in two years of \$15,893.73; but accurate research into the affairs of this fund shows that several items put to its credit in former reports were never in existence, or had been canceled.

The number of savings-banks doing business in Connecticut continues the same—86. The aggregate amount of their deposits on October 1, 1877, was \$77,214,372, an increase of \$725,062 over 1876, when it was \$76,489,310, which was in turn an increase of \$2,034,862 over the deposits of 1875. The total of

SHEFFIELD HALL (YALE COLLEGE).

tion to any public officer, employé, agent, or servant, or increase the compensation of any public officer or employé, to take effect during the continuance in office of any person whose salary might be increased thereby, or increase the pay or compensation of any public contractor above the amount specified in the contract.

No. 2. No county, city, town, borough, or other municipality shall ever subscribe to the capital stock of any railroad corporation, or become a purchaser of the bonds, or make donation to, or loan its credit, directly or indirectly, in aid of any such corporation; but nothing herein contained shall effect the validity of any bonds or debts incurred under existing laws, nor be construed to prohibit the General Assembly from authorizing any town or city to protect by additional appropriations of money or credit any railroad debt contracted prior to the adoption of this amendment.

Both of the amendments were approved by the citizens. The aggregate number of votes cast on each was almost the same, the difference between them being three votes only; but the majority of the yeas over the nays, on which they were respectively adopted, was exceedingly unequal, as follows:

On amendment No. 1, whole number of

the resources of these banks in 1877 is set down at \$80,273,238. The withdrawal of deposits exceeding \$3,000 during the last-named year amounted to \$2,677,237. The number of depositors—which, in 1876, was 203,514, showing a decrease of 4,516 as compared with their number in 1875—has increased in 1877 by more than one thousand.

A law was passed by the Legislature of 1877, imposing on the savings-banks' deposits a tax of five-eighths of one per cent.; restricting the rate of interest on their loans to six per cent. per annum; and requiring of them a reserve of one-fourth of one per cent. every six months, for surplus.

The fire-insurance companies of Connecticut were, in 1876, very prosperous. Three among the Hartford companies—the Connecticut, the Orient, and the Phoenix—increased their capital in that year by above one million dollars; its aggregate amount at the beginning of March,

1877, having been \$3,251,000 against \$7,001,000 in the previous year. The proportion of their losses and expenses to income last year was less than 76 per cent., against 77 per cent. in the preceding. The amount of property insured in the Connecticut stock fire companies was \$633,458,645. The premium paid to these companies has been slightly lowered—from 1.42 to 1.36. The losses also have decreased.

The General Assembly of 1877 enacted a law "To provide for the Improvement of the Statutes relating to Insurance Companies." It authorizes the Governor, by and with the advice and consent of the Senate, "to appoint three persons as commissioners, who shall inquire into the practical workings and effects of all statutes of the State now in force, relating to the organization, conduct, supervision, and liquidation of insurance companies; and whether any, and, if any, what changes in

EAST AND WEST DIVINITY COLLEGES AND MARQUAND CHAPEL (YALE COLLEGE).

such legislation are necessary and proper to be made for the protection of the public, and for the security and proper conduct of the companies." It specifies the manner in which the intended work is to be performed by the commissioners, who are to submit a printed report of their doings to the Legislature "at the opening of its regular session in the year 1878."

The banks of discount and trust companies in the State continue in the same condition, and are conducted by persons of wealth and experience. Such of these corporations as confined their operations to banking business only, have not made their usual dividends.

Concerning the education of youth, there are in Connecticut 1,629 public schools, and

the yearly average of school sessions is 177.52 days. Out of 133,099 enumerated children between 4 and 16 years of age, 119,208 attended the public schools; other than public schools, 10,180: the percentage of children in schools of all kinds being reckoned at 94.38. The total of school revenue—from the school fund, State, town, and district taxes, and other sources—for the last year, was \$1,505,718.67. The total of school expenditures for the same year was \$1,509,722.61.

The State Normal School is proving very beneficial, as it renders great services in the interest of education. About 40 efficient teachers, trained in that institution, are annually going out of it to the public schools.

The charitable institutions appear to continue under excellent management, and realize the object for which they were respectively established.

The Connecticut Hospital for the Insane, at Middletown, is overcrowded; and, for want of a place in it, a considerable number of indigent insane are detained in almshouses or county jails. In order to provide room for them, a law was passed at the January session, 1877, creating a board of trustees for the purchase of certain lands and buildings at Mansfield, there to establish a branch hospital for

35 were beneficiaries of the State, which had paid for them \$4,113 since the last report, they add that there were 10 pupils, for each of whom \$3 only per week were received: on which they aver "that the cost for the support of every child is \$5 per week; and that no good reason exists why this work should be carried on for towns or State at less than cost."

In the State Prison, the number of convicts, at the end of the year 1877, was 266. For repairs and improvements in it, during the last two years, the sum of \$40,000 has been expended. Its income for the year 1877 amounted to \$25,056.56; the expenses, to \$28,078.68.

Disorders of the gravest kind have occurred in the Connecticut Penitentiary during the year 1877. It is thought that the possibility of such occurrences in it may be ascribed either to the fault of some among the officers in charge; or to the inadequacy of the force stationed there for guard; or to defective laws regulating the prison; or, in part, to all of these causes combined.

The introduction and propagation of a variety of species of fish,

chiefly salmon and shad, in the waters of Connecticut, is steadily progressing, and apparently with satisfactory results. In different localities, where no such fish had ever been seen before, a few large salmon were casually caught in 1876 (one of them weighing above 15 pounds), and exhibited at Hartford or other cities as objects of curiosity. Pursuant to the invitation of the United States Commissioner on Fisheries, a convention of the Commissioners of all the States in the Union was held in October, 1876, on the Exposition grounds, at Philadelphia, when appropriate topics relating to the introduction, multiplication, and preservation of fishes for food were freely discussed at length, and opinions exchanged, each Commissioner also relating his personal experiences.

The status of the military force of Connecticut, on December 1, 1876, was as follows: Number of officers, 157; of enlisted men, 2,408—forming a total of 2,565. The total mustered on March 1, 1876, was 2,686. The entire force of the National Guard of the State composed one brigade, under the command of a brigadier-general, and was divided into four regiments of infantry and one section of light artillery; the first and third regiments consisting of eight companies, the second and fourth of 10 companies, each. The whole

PEABODY MUSEUM (YALE COLLEGE).

the reception and treatment of the indigent insane. The act appropriated \$600,000 for that purpose. The work for which these trustees were appointed has not been performed, for several reasons; among others, they fear the property intended to be purchased not to present a clear title; find the locality indicated for the establishment of a hospital unhealthy; think also the appropriation inadequate.

By an act passed at the last session, the price of weekly board for State beneficiaries in humane institutions, as the Insane Asylum at Middletown and the Soldier Hospitals at Hartford and New Haven, was reduced to \$4 from \$5, as heretofore paid. With reference to the soldier-patients in the hospital at Hartford, tabular statistics have been collected from year to year, beginning with 1862 and ending with 1876, which show that the actual cost of supporting them (not including the cost of the building, nor the surgeons' and physicians' services, which are generally gratuitous) has been far in excess of the money paid from the State Treasury for that purpose.

This seems to concur with the statement made by the Directors of the State School for Imbeciles, at Lakeville, for the eight months ending December 31, 1876, apparently before the passage of the above-mentioned act. After saying that among the 74 pupils in the school,

number enrolled in the State, as liable to military duty, was 63,793—an increase of 1,690 over the enrollment of 1875. The number of persons assessed for a commutation tax of \$2 was 40,636, or 1,145 more than in 1875; giving the State, for the support of the National Guard, the sum of \$81,272. This was \$2,290 more than in any previous year, and an increase of \$11,476 since May, 1873.

The new State-House building at Hartford is progressing toward completion, though the commissioners who have its erection in charge, in their report to the Legislature at the January session of 1877, say that they cannot assure the General Assembly that the building "will be ready for occupancy in January, 1878;" adding that "it would not be best to force the work to that degree which would be necessary to finish it for that time." The sums received by the commissioners during the year, since their previous report, was \$268,307.90; expended, \$261,839.51. The total amounts paid by the State and the city of Hartford, and expended on account of the new Capitol building, from January 27, 1872, to November 30, 1876, are as follows:

RECEIPTS.	
From the State of Connecticut.....	\$1,163,500 00
“ city of Hartford.....	272,000 00
“ miscellaneous sources.....	5,964 04
Total.....	\$1,441,464 04
EXPENDITURES.	
On construction account.....	\$1,310,670 98
For architect's fees, superintendence, and general expenditures.....	123,324 72
Cash in bank, December 1, 1876.....	6,963 39
Total.....	\$1,441,464 04

In addition to the above-stated payments, the sum of \$375,000 has been paid in 1877 for the new Capitol structure—by the State \$350,000, and by the city of Hartford \$25,000—making a total paid for that purpose, to the end of 1877, of \$1,816,464.04.

On March 27, 1877, a great calamity visited the town of Stafford, in Connecticut, by the breaking away of the dam of the Staffordville reservoir before sunrise that day. The impetuous torrent formed by the waters rushing out of it suddenly inundated the valley along the course and on each side of the river below the reservoir, demolishing and sweeping away before it bridges, mills, shops, dwelling-houses, and all other structures which it met with in its passage. Such buildings as escaped entire destruction were either moved from their places, or turned nearly round, or otherwise seriously injured; if nothing else, undermined. Besides the destruction of property, valued at several hundred thousands of dollars, three lives were lost. The disaster, it is thought, was caused chiefly by substantial defects of construction, helped by the secondary and immediate causes of very heavy rains fallen on the previous day, and the rapid melting of the snow on the hill-sides around. The reservoir having thus been filled to overflow-

ing in an incredibly short time, the dam could not withstand that impulse. The loss of life would doubtless have been incomparably greater, but for the circumstance that, the breaking out of the reservoir having been, if not expected, strongly apprehended, the dam had been closely watched by a number of men all the previous night, and, at the first indications of the impending catastrophe, which manifested themselves after three o'clock in the morning, horsemen and footmen were dispatched in haste to warn the inhabitants along the line of the stream below the reservoir, to flee, and save themselves from the coming flood.

From the report of an accurate survey, made about two years ago by four experts in such matters, we append hereto a list of the highest mountain-points in the different sections of Connecticut. The number of feet given to each elevation in the list is above tide-water, all having been ascertained by actual measurement, excepting the last three, which have been estimated according to the best methods known to approach the truth the nearest. The result of this survey rectifies some erroneous ideas generally entertained in regard to the comparative heights of the elevated lands in Connecticut. Among others, it settles the point that Mount Brace, in Salisbury—exactly in the northwest corner of the State—is about 700 feet more elevated than Mount Ivy, in Goshen, which has commonly been reputed the highest land in Connecticut. To an observer from the tower on Talcott Mountain, the view embraces a region extending upward of 100 miles north and south, and 70 or 80 miles east and west. The elevated points, and their respective heights, are as follows:

	Feet.
Spaulding's Summit, Norfolk.....	1,336
Platt Mountain, Winchester.....	1,460
Chamberlain Mountain, Winchester.....	1,480
Ivy Mountain, Goshen.....	1,642
Riggs Mountain, Norfolk.....	1,565
Knapp Mountain, “.....	1,617
Moss Mountain, “.....	1,645
Dutton Mountain, “.....	1,672
Summer Mountain, “.....	1,672
Haystack Mountain, “.....	1,672
Gaylord Mountain, “.....	1,717
Bald Mountain, “.....	1,770
Winrow Mountain, “.....	1,770
Mount Bradford, Canaan.....	1,900
Clipper Mountain, “.....	1,810
Bald Peak, Salisbury.....	1,996
Buck Mountain, Salisbury.....	2,150

Mount Brace, “.....	2,800

COSTA RICA (REPÚBLICA DE COSTA RICA), one of the five independent states of Central America, situated between 8° and 11° 5' north latitude and 81° 20' and 85° 53' west longitude. It is bounded on the north by Nicaragua, on the east by the Caribbean Sea, and on the south and west by the Pacific Ocean.

The territory of the Republic comprises an area of 21,490 square miles; and the estimated population, in 1874, was 185,000, of whom some 5,000 were civilized Indians, from 10,000 to 12,000 Indians still existing in a state of

savagery, 1,200 negroes, and about 600 Chinese.

The President of the Republic was Don Vicente Herrera, until September, 1877, when he was superseded by General Tomás Guardia, until that time Vice-President.

The Minister of the Interior was Don Saturnino Lizano; the Minister of Foreign Affairs, Justice, Public Instruction, and Public Worship, Don Rafael Machado; and the Minister of Finance, Don Braulio Morales. The new ministry, formed on the accession of General Guardia to the presidency, was composed of Dr. Castro, Don Salvador Lara, and Don Bruno Carranza; but of the respective departments to which they were appointed no official returns had been received up to December 31, 1877.

The amounts and various branches of the national revenue and expenditure, for the fiscal year ending April 30, 1877, were as follows:

REVENUE.		
National Bank.....	\$191,422	
Custom-house of Puntarenas.....	781,540	
Government monopolies:		
Brandy.....	\$740,412	
Tobacco.....	376,158	
Powder.....	1,169	— 1,117,734
National property:		
Government lands.....	36,657	
Government printing-office.....	3,891	
National Institute.....	3,501	
Post-office.....	25,963	
Telegraph.....	6,770	
Railway.....	98,408	
Public works.....	12,496	— 187,186
Taxes, etc.:		
Subsidies.....	17,450	
Stamp duty.....	30,508	
Judicial fees.....	17,063	
Mortgage fees.....	17,065	
Spirit license.....	22,088	— 104,124
Sundry receipts.....		47,426
Total.....	\$2,379,432	
EXPENDITURE.		
Ministry of the Interior.....	\$175,787	
Finance and Commerce.....	131,237	
Justice.....	72,229	
War and the Navy.....	462,996	
Public Works (railway, \$637,996).....	725,264	
Public Instruction.....	120,564	
Public Worship.....	20,617	
Foreign Affairs.....	63,220	
Benevolent institutions.....	8,598	
Government monopolies.....	283,105	
National credit.....	232,412	
Sundry outlays.....	187,911	
Total.....	\$2,484,240	

By comparing the two foregoing tables, it will be observed that there was a deficit of \$104,808; and that the cost of collecting the taxes on the Government monopolies amounted to nearly one-third of the entire proceeds thereof.

The total amount of the foreign debt, in 1877, was £1,011,611; and that of the aggregate liabilities of the Government, \$7,134,061,* including: bills of exchange, \$284,575; Treasury notes, not bearing interest, \$47,975; consolidation of sundry funds, \$164,260; indebtedment to Peru, \$149,500; indebtedment to

the cities of San José and Heredia, \$38,547; and sundries, \$30,354.

The total assets of the state at the same period were set down at \$9,509,544, as follows: real estate, including railway property, \$8,002,154; tobacco, brandy, etc., in warehouse, \$105,496; capital of the National Bank, \$1,181,074; municipal funds, \$8,951; other funds, \$211,869.

It would appear that the commissioners for the 7 per cent. loan maintained agents in Costa Rica during the early months of 1877; but they were not able to effect any arrangement with the Government.

The committee of holders of the 6 per cent. loan have applied themselves, of late, to the promotion of a union among the bondholders of both loans, so as to obtain joint communication and joint action in negotiations with the Costa Rica Government.

Information which was obtained by the 6 per cent. committee confirms the representations previously made, as to the value of the resources of the country, and their probable productiveness, if the railway, now only partially finished, were completed. Unfortunately, it would seem that the means requisite for completing the railway could only be obtained by drawing in advance on the future development of the country dependent on the completion of the line, and not from independent sources.

The total value of the exports for the year ending April 30, 1877, was \$5,307,406, some \$300,000 being the value of those through the Atlantic port of Limón, and the remainder through that of Puntarenas, on the Pacific. The chief staples shipped through the latter port were coffee, 24,300,000 lbs., of the value of \$4,859,154; hides, \$64,533; India-rubber, \$36,230; and flour, \$15,421.

The shipping movements at the two ports above named were as follows in 1876:

*According to official returns, April 30, 1877.

PUNTARENAS: Entered, 79 steamers and 28 sailing vessels, with an aggregate of 157,025 tons, and 769 passengers; and cleared, 79 steamers and 25 sailing vessels, with an aggregate of 156,126 tons, and 527 passengers.

LIMON: Entered, 22 steamers and 75 sailing vessels, with an aggregate of 31,384 tons, and 639 passengers; and cleared, 12 steamers and 60 sailing vessels, with an aggregate of 497 passengers.

In the matter of the railway, but little progress was made in the earlier months of 1877, mainly owing to the remissness of the Government in supplying funds to pay the workers, the latter having been driven, it is said, in the month of February, to the extreme of refusing to continue until all the arrears due them should be paid up. They are reported at that time not to have received any money since July, 1876. There was, besides, a lack of material, likewise attributable to the neglect of the Government. A change for the better took place about May; the arrears were for the most part liquidated, the necessary material furnished, and the work resumed with a degree of energy which bid fair to lead to the early termination of the most of the Atlantic branch of the line. This healthy condition appears to have been confirmed after the change of Government in September. Meantime the making of new wagon-roads was in active prosecution.

The telegraph-lines of the Republic, in 1875, were set down at 200 miles, with 16 offices.

There are no recent reports concerning educational matters. The sum of \$120,864, mentioned in the foregoing table of the national expenditure as having been appropriated to the Department of Public Instruction, would seem rather encouraging for so small a country, and is even considerably in advance of the appropriation for the same purpose in the year immediately preceding; but whether there was mere *appropriation*, without *application*, is a question which, with others of scarcely less moment, may receive some light from the following sketch of the general state of affairs in Costa Rica, in February, 1877:

Of the five Central American States, Costa Rica had, perhaps, been justly considered fully as enterprising as the foremost up to within the last few years. It was a pleasure to make mention of her efforts in the line of progress, to commend the wisdom of her rulers, and to praise the spirit of her people.

That time has, unfortunately, passed away, and we have now but to deplore the recent decline of prosperity and present an almost hopeless condition of affairs—political, financial, educational, and general—in that little country.

This state of things has been brought about mainly, if not altogether, by bad government, and clearly indicates the pernicious evils of bigotry and absolutism, combined and working in unison to control the free thoughts and subvert the liberties of a people. Costa Rica exhibits to-day the sad spectacle of a so-called republican state, under a nominally constitutional Government, close held in the clutches of an autocratic and despotic Directory. The name Republic can no longer, in truth, be applied. We are informed from trustworthy sources that "the hatred against foreigners grows every day stronger and stronger under the present rule, and the poor country is on a downward rush, the end of which everybody may calculate."

A happier order of things was, however, inaugurated with the new Administration, under the leadership of General Guardia, whose unremitting zeal and untiring energy for the welfare of the people at home, and the establishment of the national credit abroad, had been so fruitful of good results in former days. His return to power was regarded throughout the country as a peculiarly happy omen, and a sure earnest of returning and ever-increasing weal.

With the exception of a short-lived uprising of a few hours on the morning of July 29, 1877, the peace of the country was undisturbed throughout the year; nor was any serious rupture of friendly relations with the sister Republics chronicled, spite of the subjoined announcement (December, 1876) from the sources therein mentioned.

The *Nicaragua Gazette* publishes the decree of Costa Rica, suspending all official relations between the two Republics, the first consideration of which says: "The Government of the Republic of Nicaragua by act has severed its relations with that of Costa Rica, by refusing to recognize the present Administration of the nation." The official organ of Nicaragua, refuting this decree, says the assertion that Nicaragua has not recognized the Administration of Herrera is not correct. Nicaragua has said openly that she did not choose to qualify the legality of every act, but thought it her duty to call the attention of the Costa Rica Cabinet to the circumstance that the Government of Herrera had been placed in power on account of its enmity to Nicaragua.

COTTON. According to the statement of the *New York Commercial and Financial Chronicle*, the cotton crop of the United States for the year ending August 31, 1877, amounted to 4,485,423 bales, while the exports were 3,049,497 bales, and the spinners' takings 1,435,418 bales, leaving on hand, at the close of the year, a stock of 119,638 bales. The gross weight of the crop, and the average weight of the bales, were as follows, for two years:

CROP OF	YEAR ENDING SEPTEMBER 1, 1877.			YEAR ENDING SEPTEMBER 1, 1876.		
	Number of Bales.	Weight, in Pounds.	Average Weight.	Number of Bales.	Weight, in Pounds.	Average Weight.
Texas.....	506,634	254,163,078	501.67	488,640	245,863,988	508.17
Louisiana.....	1,195,034	542,247,131	458.75	1,415,959	659,836,894	466.00
Alabama.....	360,918	178,888,478	495.51	374,672	190,089,839	507.35
Georgia.....	491,800	228,195,200	464.00	524,825	243,694,261	464.22
South Carolina.....	468,024	212,019,552	453.01	416,372	184,869,168	444.00
Virginia.....	575,941	267,570,669	464.58	529,126	241,810,582	457.00
North Carolina.....	138,087	62,412,562	451.98	107,836	47,282,168	438.00
Tennessee, etc.....	748,984	355,018,416	474.00	811,858	388,068,124	478.00
Total crop.....	4,485,423	2,100,465,086	468.28	4,669,288	2,201,410,024	471.46

From the above, it will be seen that the average gross weight per bale in 1877 was 468.28 lbs., against 471.46 lbs. in the preceding year, which indicates a decrease in weight of nearly 7 per cent. Hence, if as many pounds had been put into each bale in 1877 as in 1876, the number of bales in the crop of the former year would have been 31,000 less than the present total. The weights, however, were unusually large last year, as will appear from the following comparison (gross weight):

YEARS.	Crop, Number Bales.	Crop, Weight, lbs.	Average Weight per Bale.
1876-'77...	4,485,423	2,100,465,086	468.28
1875-'76...	4,669,288	2,201,410,024	471.46
1874-'75...	3,892,991	1,786,984,765	468.00
1873-'74...	4,170,388	1,956,742,297	469.00

The production of Sea Island cotton in the past season amounted to 17,823 bales, as follows: Florida, 11,214 bales; Georgia, 1,669; South Carolina, 4,911; Texas, 29. The annual production and movement of Sea Island cotton since the war have been as follows:

SEASON	CROP.					EXPORTS.			American Consumption.*	Stock, Aug. 31.
	Florida.	Georgia.	South Carolina.	Texas.	Total.	Great Britain.	Continent.	Total Exports.		
1876-'77....	11,214	1,669	4,911	29	17,823	11,865	1,869	13,284	4,068	1,048
1875-'76....	8,950	1,218	4,756	77	14,996	11,591	1,845	12,936	1,915	527
1874-'75....	8,818	1,110	7,400	204	17,027	13,139	1,907	15,046	2,192	882

1851-'52....	3,015,029		

According to the authority above cited, the past year was not a satisfactory one for spinners, notwithstanding that they manufactured goods in increased quantities, and sold all of them. They began the season with a favorable outlook and very hopeful anticipations, but several circumstances combined to produce their disappointment. All trade in the country was unusually depressed; hence the demand for cotton goods was, in general, quiet, and not favorable to full prices; it absorbed the production, but in such a way as to keep the seller almost constantly under the disadvantage of having to force his goods; moreover, the vagaries of the cotton market helped to increase the indisposition among buyers to purchase. When the year began, the price of cotton, statistically, appeared very low. The consumption of 1876, and the prospective sup-

* Including what has been burnt in the United States.

ply of 1877, clearly showed a deficiency; consequently, spinners "stocked up" and prices of goods improved. But the rumors of war in Europe, and, finally, war itself, wholly changed the situation, giving a drooping tendency both to cotton and to manufactures.

But, in spite of these conditions, and perhaps, in part at least, in consequence of them,

progress was made during the year both by the manufacturer and the producer of cotton. The former has progressed in the work of developing new markets for his goods. A close study of what has been done in this respect gives a very hopeful outlook as to what may be done. The exports of cotton manufactures for the past five years have been as follows:

GOODS.		1877.	1876.	1874.	1873.	1872.
Colored goods.....	Yards	29,111,434	16,488,214	4,600,447	3,585,629	2,844,883
"	Value	\$2,446,145	\$1,445,462	\$660,262	\$596,912	\$458,998
Uncolored goods.....	Yards	76,720,260	59,819,267	13,287,510	10,187,145	8,859,191
"	Value	\$6,424,154	\$5,314,738	\$1,630,297	\$1,655,116	\$1,317,719
Other manufactures of.....	Value	\$1,810,685	\$952,778	\$744,773	\$695,500	\$527,618
Total cotton manufactures exported. Value		\$10,180,984	\$7,722,978	\$3,091,332	\$2,947,528	\$2,804,330

"Here," says the same authority, "is a rise in 6 years from 2 millions in value to 10 millions. The total even now is, of course, very small, but it is highly encouraging, for time and experience alone can acquaint us with the wants of any trade; and besides, this growth has been reached in spite of the very many obstacles which have been interposed by ourselves. We cannot let this opportunity pass without repeating what we have often said be-

fore. The margin for profit is of necessity small, hence every impediment, however trifling, to the freest, cheapest intercourse with nations wanting our goods, cripples or fetters to that extent the trade. What, then, we require, is to have our navigation laws changed and reciprocal trade fostered; or, in a word, we need to have every facility offered for making freights cheap and for securing the fullest and freest intercourse. When this has

THE GIN HOUSE.

been done, our country will experience an industrial development hitherto unknown to us."

In the South, manufacturing, during the past season, was rather more satisfactory than in the North. Some progress was made in new enterprises; and, on the average, the running time of the mills was fuller than in the preceding year. "That section just now presents a more hopeful condition than any other portion of the country. She is virtually out of debt; her people have learned to econo-

mize, and to produce with economy—raising their own food as well as supplying the world with cotton. This year, also, labor is under control for the first season since the war, and next year will be more entirely so, permitting of further economies not heretofore possible. Cotton production will therefore increase, as in the past, and at a decreasing cost to the planter per pound. But the producer need not be frightened with large crops at low prices, for new uses of the staple are constantly being found; and with peace in Europe, and a revi-

val of industry here, the requirements for ordinary spinning purposes will also be speedily enlarged." The mills of the country have made

a further considerable advance in the amount taken from the crop, as is shown by the following statement:

MILLS.	1872.	1873.	1874.	1875.	1876.	1877.

In their Annual Review of the European cotton trade, Messrs. Ellison & Co., of Liverpool, report that the season closing September 30, 1877, like that of 1875-'76, was one of the most disappointing and unsatisfactory periods in the recent experience of the cotton industry. Apparently, Europe was just beginning to recover from the effects of the wide-spread crisis of 1873, brought about by the excessive trading and extravagant speculations of 1870-'72; and during the first three or four months of the past season there were symptoms of renewed, healthy activity in various directions. But these movements were based upon the expectation that the threatened outbreak of hostilities between Russia and Turkey would be averted; and when war became certain, a reaction ensued which left the state of trade in a worse condition even than it was before. During the last eight or nine months of the

this caused producers to keep up the out-turn of their mills, and go on selling what they could at the best prices they could get, until the loss became so great, and the stocks of goods so burdensome, that (chiefly in July, August, and part of September) short time was adopted in the leading manufacturing districts, while the effort to reduce production was further helped by a strike at Bolton. By means of these measures stocks were greatly reduced, and the margin between cotton and goods materially improved—so much so, at all events, that it became less unremunerative to work full than short time, and, with few exceptions (aside from the mills closed at Bolton), short time was practically abandoned by the close of September.

The fluctuation in the price per pound of middling upland cotton in the Liverpool market during the year was as follows: January 8th, 7³/₈d.; January 17th, 6¹/₈d.; January 20th, 7d.; February 8th, 6¹/₈d.; February 13th, 6¹/₈d.; March 22d, 6¹/₈d.; April 27th, 5¹/₈d.; May 15th, 5¹/₈d.; June 14th, 6¹/₈d.; July 19th, 6¹/₈d.; August 23d, 5¹/₈d.; September 29th, 6¹/₈d. The average price for the season was 6¹/₈d., against 6¹/₈d. for the preceding year.

The imports and stock of the whole of Europe for the past two seasons were as follows, in thousands of bales:

COTTON WORM.

season the markets were in a chronic state of over-supply. The after-effects of the commercial and financial disasters which commenced in 1872-'73 were everywhere visible, in the shape of forced reduced expenditure, which led to a curtailed consumption of all kinds of manufactures. The consumption of cotton goods did not perhaps diminish, nor did it keep very far behind, production; but it did keep behind, and this slight excess in production, combined with constantly dragging markets, made selling a one-sided bargain, and almost invariably compelled the producer to part with his goods at unremunerative rates. It was accepted as certain, that peace and settled politics would instantly reverse the positions of buyer and seller, especially as there was a deficit in the supply of the raw material; and

The average weight of American bales consumed in 1876-'77 was estimated at 438 lbs., against 441 lbs. in 1875-'76; Egyptian, 601 lbs. against 602 lbs.; Brazilian, 164 lbs. against 160 lbs.; West Indian, etc., 205 lbs. for both years; Smyrnan, 370 lbs. for Great Britain and 350 lbs. for the Continent, for both years; East Indian, 384 lbs. against 380 lbs. for Great Britain, and 373 lbs. against 367 lbs. for the Continent.

The following is a comparative statement of the exports of cotton yarns and piece goods from Great Britain, in each of the past ten seasons, in millions of pounds and yards:

YEAR.	Yarn.	Goods.	YEAR.	Yarn.	Goods.
	Pounds.	Yards.		Pounds.	Yards.
1876-'77...	229.9	8,303	1871-'72...	200.5	8,449
1875-'76...	223.2	8,635	1870-'71...	194.0	8,432
1874-'75...	218.1	8,546	1869-'70...	181.5	8,412
1873-'74...	218.5	8,530	1868-'69...	169.3	2,908
1872-'73...	219.2	8,526	1867-'68...	179.6	2,980

The exports for 1876-'77 show an increase of 3 per cent. in yarn, and 4.6 per cent. in piece goods, over those of 1875-'76.

The estimated consuming capacity of the Continent, including the average per week and the amount for the year, is as follows:

COUNTRIES.	No. of Spindles.	Pounds per Spindle.	Total Pounds.	Bales of 400 Pounds.	Average per Week.
Russia and Poland.....	2,500,000	65	162,500,000	406,250	7,812
Sweden and Norway.....	310,000	80	24,864,000	62,160	1,195
Germany.....	4,700,000	55	258,500,000	646,250	12,428
Austria.....	1,553,000	67	104,336,000	260,965	5,019
Switzerland.....	1,350,000	25	48,250,000	120,625	2,320
Holland.....	230,000	60	13,800,000	34,500	663
Belgium.....	800,000	60	48,000,000	120,000	2,308
France.....	5,000,000	48	240,000,000	600,000	11,538
Spain.....	1,775,000	48	85,200,000	213,000	4,096
Italy.....	880,000	67	58,960,000	147,400	2,535
Total.....	19,608,000	50.02	1,044,460,000	2,611,150	50,214

In the following table is given an approximate estimate of the quantity of cotton that was actually consumed in each country during the season of 1876-'77. Compared with the full rate of consumption, as shown in the

preceding table, there is a reduction of 12½ per cent. for Russia; 10 per cent. for Switzerland, Belgium, and Italy; 5 per cent. for Germany, France, and Spain; and 2½ per cent. for Austria.

COUNTRIES.	No. of Spindles.	Pounds per Spindle.	Total Pounds.	Bales of 400 Pounds.	Average per Week.
Russia and Poland.....	2,500,000	57	142,500,000	306,250	5,889
Sweden and Norway.....	810,000	80	24,800,000	62,000	1,192
Germany.....	4,700,000	53	249,100,000	622,750	11,976
Austria.....	1,558,000	65	101,270,000	253,175	4,868
Switzerland.....	1,850,000	23	42,550,000	106,375	2,046
Holland.....	230,000	60	13,800,000	34,500	663
Belgium.....	800,000	54	43,200,000	108,000	2,077
France.....	5,000,000	46	230,000,000	575,000	11,058
Spain.....	1,775,000	45	79,875,000	199,687	3,840
Italy.....	880,000	60	52,800,000	132,000	2,539
Total.....	19,603,000	50.02	979,895,000	2,399,787	46,148

The consuming capacity of Europe and the United States is estimated as follows :

COUNTRIES.	No. of Spindles.	Pounds per Spindle.	Total Pounds.	Bales of 400 Pounds.	Average per Week.
Great Britain.....	39,500,000	33	1,303,500,000	3,258,000	62,600
Continent.....	19,500,000	53	1,033,500,000	2,584,000	49,700
Total Europe.....	59,000,000	40	2,337,000,000	5,842,000	112,300
United States.....	10,000,000	63	630,000,000	1,575,000	30,300
Grand total.....	69,000,000	48	2,967,000,000	7,417,000	142,600

According to a recent official report, there are in operation in the cotton mills of India 1,231,000 spindles, and from 10,000 to 11,000 looms. The amount of cotton annually consumed is estimated at 92,325,000 lbs.

The extraordinary progress made in this new branch of Indian industry is shown by the following :

YEAR.	Spindles at Work.	COTTON CONSUMED.		
		Pounds.	Bales of 200 Pounds.	Bales per Week.
1861...	388,000	25,350,000	65,000	1,250
1874...	593,000	44,475,000	114,000	2,190
1875...	836,000	66,450,000	170,000	3,270
1876...	1,124,000	84,800,000	216,000	4,150
1877...	1,231,000	92,325,000	230,700	4,560

CREEDMOOR. An international rifle-match, between British and American teams, took place on the rifle-range at Creedmoor, near Garden City, on Long Island, the 13th and 14th of September. These international contests date from the year 1874, when an American team overcame one of Irishmen. In 1875 the Americans won a match at Dollymount, in Ireland. In 1876, at Creedmoor, the Americans again conquered, bearing away the Centennial trophy, which was the prize contested for a second time, this year, from the Irish, Scotch, Canadian, and Australian teams. The contesting teams at Creedmoor consisted of 8 British marksmen (4 English, 3 Irish, and 1 Scotch), and 8 American, previously selected by competitive trials. The conditions of the match were: Every member of the teams to be a native citizen and inhabitant of the coun-

try he represents; each arm to weigh not more than 10 lbs., and to have a stock at least 3 lbs. in weight; the distances to be 800, 900, and 1,000 yards, each marksman having 30 shots at each distance, trial shots not being allowed; the shooting to begin with the 800-yard range, and to be concluded in two days; every position, without artificial rests, to be allowed; practice to be permitted on the grounds for a week before the match. The captain of each team chose two judges, and these four appointed an umpire, whose decisions were final. The British team was composed of the following members: Sir Henry Halford (Captain), Alfred P. Humphry, Lieutenant-Colonel James Fenton, H. S. W. Evans, Lieutenant George Fenton, Joshua K. Milner, William Rigby, William Fergusson. The members of the American team were: General T. S. Dakin (Captain), Major Herbert S. Jewell, Isaac L. Allen, W. H. Jackson, Lawrence Weber, Frank Hyde, Leslie C. Bruce, C. E. Blydenburgh.

Each marksman made fifteen shots each day, at all the distances. This match resulted again in a signal victory for the Americans. The weather was very favorable. The Englishmen shot more slowly than the Americans. In the score, the bull's-eye counted 5, the centre 4, and the succeeding outer partitions, 3, 2, etc. Blydenburgh's aggregate of 429 out of a possible 450 was 27 in excess of the best ever before made, which was 402, made by both Milner, of the British, and Rathbone, of the American team, the year before—a score which was excelled by all the Americans, save one, and all the Englishmen, save two, in this match. The

excess of the American total over the British, 92 points, was four times what it was over the Irish team in the preceding match, although the shooting of the British team showed a remarkable improvement.

The aggregate score made at all the ranges by each marksman in both days' shooting was as follows, the highest possible number being 450 points:

THE AMERICAN TEAM.

NAMES.	800 Yards.	900 Yards.	1,000 Yards.	Total.

Among the causes which contributed, probably in no small degree, to the success of the Americans, were the superiority of their breech-loading rifles over the English muzzle-loaders, and the supine position which they all adopted, while three of the British team chose to shoot lying prone.

CURRENCY. The question of specie resumption is at present closely connected in the public mind with the subordinate silver question—i. e., whether silver and gold together shall be readopted as the legal currency of the United States, or gold alone. In the latter case, it is feared that not enough of the metal can be accumulated to restore the specie basis and fulfill the promises of the Government; and in the former, it is feared that all the gold will flow out of the country to Europe and be replaced by the silver of Germany, and, possibly, of France and her monetary allies; thus leaving America with a currency which had been discarded in other countries, and whose value, re-

garded as a mere article of merchandise, might sink indefinitely. Thus the uncertain attitude of the nations of Europe—that is to say, of France and the other bi-metallic countries—has greatly complicated the question of American resumption. In Europe public opinion is divided upon the silver question. In France and Belgium the Governments and the principal bankers, as well as the leading newspapers, are in favor of preserving the bi-metallic system; and in Holland and Austria public opinion is against demonetization. Messrs. Cernuschi in France, Laveleye in Belgium, and Samuel Smith, president of the Liverpool Board of Commerce, in England, are earnest agitators for an international convention to restore the dual currency. The opinions of the former, who is the leader of the school, are given below.

Henri Cernuschi, a Parisian banker, who is a devoted advocate of an international compact to preserve the bi-metallic system, was in Washington in February for the purpose of offering testimony before the congressional joint monetary commission. He asserted the opinion that "money is a value created by law;" that the monetary value of the precious metals was imparted to them by the governments, while their purchasing power varied according to the quantity in use as money; and that their usefulness in the arts did not lend them any part of their value as a medium of exchange. He held that if the double standard should be adopted, according to a uniform relative valuation of the two metals in Europe, America, and India, "the effect would be that every variation, every perturbation, in the relative value of gold and silver, would be forever impossible. The quantity produced of the one or of the other of the metals has nothing to do with the relative value of the two metals. The only cause which produces variation in the relative value of gold and silver is that which is shown in the laws of the different countries." He adduced historical evidence to the effect that the sudden influx of large quantities of the two metals by turns into Europe, after the discovery of America, had no effect on their relative values; neither did the California and Australian gold discoveries, which increased the production of gold five-fold. The change in the relative price of gold and silver from 1:10-12 in the sixteenth century to 1:15½ at the present time, he ascribed to the mint-regulations which formerly imposed a higher rate of seigniorage and brassage upon silver than upon gold, relatively to their value. From the fact that foreign gold coin could be more cheaply melted and re-coined in the different countries, that was the kind of money usually exported to pay foreign debts; different nations were in this manner drained of their gold coin successively, and were induced to alter their mint-valuation in favor of gold to secure the reimportation of that metal. The gradual appreciation of gold from this cause has ceased in late times, be-

cause the old mintage-duties have been considerably reduced. He believed that, "if a treaty was made establishing everywhere the same relative weight between gold and silver coins, with everywhere a uniform charge for the coinage of the two metals, there would be no more reason for exporting the one than for exporting the other." He testified his belief that if the United States, provided specie payments were resumed, should, in common with the Latin Union, Holland, and possibly India, employ a bi-metallic currency, according to the uniform valuation of $15\frac{1}{2}$: 1—that the action of these nations would be sufficient to arrest all fluctuations in the price of silver, and assure its value for monetary purposes. If the United States should remonetize silver while preserving the old ratio of 16: 1, then France would keep her mint closed against silver, and the United States would be the only silver-paying country among the chief commercial nations; it would drive all the gold out of the country, and fatally hamper America's commerce by leaving her without any par of exchange with Europe; and, even then, the metal-reserve necessary to redeem the paper currency could not be amassed, since bonds issued for this purpose, which are payable in silver, would not be accepted in Europe. On the other hand, resumption in gold alone would be impossible, as the United States could not derive enough of that metal from the three only stocks in Europe, those of Paris and London, and that of Berlin, which is still accumulating, to redeem the \$360,000,000 of greenbacks now outstanding.

The witness attributed the silver crisis of 1876 (when bullion was quoted in London as low as 46*d.*) to one essential cause, viz., the German law of December 4, 1871; although the legal limitation of silver coinage in the Latin Union—which, however, was a consequence of the German demonetization—as well as the discovery of the Nevada mines, and the diminished exportation of silver to India, doubtlessly aggravated the situation, they would have had no effect without the German law upon the silver market. The subsequent rise in the price of bullion (quoted 58½ pence in the winter of 1876) he traced to the demand created by the importation of silk from China (the European crop having failed), and by the purchases of silver for the coining of the \$50,000,000 American fractional currency voted by Congress—causes which will soon cease to operate, which will occasion another decline in silver. He did not think that the subsidiary silver coinage maintained in Europe (in Germany 10 marks, in France 6 francs *per capita*, in England £20,000,000 nominally) would call for any supply of the metal. He estimated the quantity of old silver yet to be disposed of in Germany as sufficient to coin about 70,000,000 trade dollars.

The uniform legal bi-metallism to be sustained by an international agreement, which

plan he upheld, M. Cernuschi defined as implying legal tender in full, and unlimited coinage, with free importation, and without monopoly of issue for the Government. He suggested, further, the rating of the cost of mintage according to value, and not weight, as at present.

M. Cernuschi suggested a plan for speedy resumption of specie payments, to wit: A public subscription-loan of £85,000,000 (nominal), perpetual, bearing 4 per cent. interest, payable in London in pounds sterling, and issued under par, to be opened in the money-centres of Europe; specie payments to be declared for January, 1878, the greenbacks being treated after that as coin-certificates; the mints to be opened at the same date for the coinage, at an even charge of 5 mills per dollar, of the old silver dollar of 412½ grains, $\frac{9}{16}$ fine, and a new gold dollar of 26.61 grains, $\frac{9}{16}$ fine (8 per cent. heavier than the present dollar, and representing the exact relation of 1: $15\frac{1}{2}$ between the metals, pure).

M. Cernuschi denied that the law of supply and demand operated upon a monetary material the same as upon merchandise. The miners can have all the precious metals which they produce coined into money, and are not affected by competition. If both metals are employed as money, with fixed relative values and full legal tender, the purchasing power of money is less likely to be affected by the variations in the yield of the mines; and if several of the chief mercantile nations employ the double standard, commercial exchange will be preserved, not only between them, but with and between the countries which cling to monometallism. If the United States should conduct resumption in such a way as to expel gold from the country, then they would stand exactly in the same position with a silver currency as now with a paper currency, and all the expenses of redemption and coinage would be thrown away; for while all Europe employs only gold, exchanges would be no less uncertain and expensive than at present.

The mint-regulations in the different countries of Europe are as follows: France, Belgium, Switzerland, Spain, Germany, coin no more silver, but have old silver currency, which circulates as legal tender in full (ratio in these countries 1: $15\frac{1}{2}$); Holland, which was silver-mono-metallic from 1840 to 1872, now coins gold gulden according to the ratio 1: 15.604; England and Portugal are gold-paying countries, using silver for tokens only. The paper-paying countries, and the relative valuation of their coinage, if specie payments were resumed, are: Italy, 1: 15.50; Austria, 1: 15.45; Russia, 1: 15.80; Turkey (gold-mono-metallic). The history of the relative total production of the two metals has been, in recent times, as follows: At the beginning of this century, when France adopted the $15\frac{1}{2}$: 1 ratio, 3 of silver to 1 of gold, or 50 to 1 in weight; about 1849, about equal in value; 1852-'65, about 3 or 4 of gold to 1 of silver in value (annual yield of

gold about \$139,000,000); 1866-72, about 3 of gold to 2 of silver. For 10 years before the passage of the German law of 1871 the world's production of silver averaged about \$50,000,000 per annum; since that date it has averaged about \$68,500,000, and the production of gold for the latter period about \$95,000,000. For 24 years the total production of the two metals together has amounted, almost year for year, to the sum of \$165,000,000, according to the valuation 1:15½.

The Director of the Mint, in his report for 1876, gives an account of the history of the silver dollar in the United States. A resolution of Congress of July 6, 1785, established the dollar as the money unit of the United States. A resolution of August 8, 1786, fixed the weight of the dollar at 375.64 grains of fine silver, and provided for the coinage of ten and five dollar gold pieces, the former to contain 246.268 grains of fine gold. The act of April 20, 1792, fixed the relative value of the two metals at 1:15, and provided for the coinage of "dollars or units, each to be of the value of a Spanish milled dollar, as the same is now current, and to contain 371⁴/₁₆ grains of pure, or 416 grains of standard, silver." An act of January 18, 1837, changed the alloy, making ¹⁰/₁₆ of pure metal the standard for both silver and gold; the value of the silver dollar was not changed, and its weight was consequently altered to 412½ grains. The Spanish dollar, current in 1792, when of full weight, contained 374½ grains of pure silver, and by the relative valuation of 1:15 gold was undervalued; the consequence was that gold coins could not be kept in circulation, but were melted down or exported soon after leaving the mint. After a fifteen years' discussion of this question, an act was passed in 1834 reducing the weight of the gold dollar, thus increasing the coining capacity of gold 6,681 per cent. The silver dollar ceased to be coined in 1804, before which date only 1,439,517 pieces had been struck, and was first coined again in 1837, and after that but very sparingly; the fractional coins, however, were made of full weight. After the reduction in weight of the gold dollar, the silver currency exhibited the same behavior that had been remedied in the case of the gold coin; it was now valued lower in relation to gold than in France and other countries of the double standard, and, consequently, was melted and exported to an extent which left the country in want of small money, in spite of the constant activity of the mint. This condition lasted until, on February 21, 1853, an act was passed demonetizing the fractional silver currency; reducing the weight of the half-dollar, quarter-dollar, dime, and half-dime 7.4 per cent., and limiting their legal-tender character to payments of \$5.00. The act of 1792 was never abrogated until, in 1873, the bill was passed which established the single gold standard. Since 1834, however, gold has been practically the metallic currency of the country, and by

an act of March 3, 1849, the gold dollar (= 25.8 grains of standard fineness) was declared to be the money unit, or representative of the dollar of account. Previous to the law of 1873 the silver dollar had actually three separate values: legally it was a dollar of 100 cents; but its mint-price was (in 1861) 103.98 cents, which was its commercial value expressed in gold currency, while in subsidiary silver currency it was worth 107³/₄ cents, and was paid out at the mint in single pieces for \$1.08.

The annual convention of the American Bankers' Association was held in New York on the 12th, 13th, and 14th of September. The main questions discussed were the double currency standard, and the coöperation of the national banks with the Treasury in the re-introduction of metallic currency, and the subject of the relief of banking capital from taxation.

Mr. George S. Coe, president of the New York Clearing-House, presented a plan for the resumption of specie payments by the assistance of the banks, to the effect that national bonds for redemption purposes, to the amount of \$50,000,000 or more, should be purchased by the banks, at par in gold, minus ¹/₂ per cent for expenses, with the privilege of taking more bonds if found necessary, these bonds, being coupon or registered and of all denominations, to be offered for sale at par by the banks and the United States Treasury; the collateral security to be deposited in the treasury of the banks, for the purchase of the gold bonds, to consist of gold coin, or United States bonds, or Treasury notes at their market value, to be held as a special deposit. The sale of the bonds would enable the banks to accumulate a coin reserve, and the privilege of exchanging collaterals would allow them to reissue legal-tender notes when the money market demanded them. This plan would allow the accumulated volume of coin to circulate in the internal commerce of the country, and, in the natural course of things, to supplant the legal-tender notes, and thus obviate the difficulties attending the plan of resumption by the accumulation of an idle reserve store of gold in the Treasury.

W. S. Groesbeck, of Cincinnati, denied that there was an excessive production of silver, since, from a statistical account, it appears that the aggregate production of gold in the world, from 1852 to 1875, has been \$2,913,000,000, or an average of \$121,000,000, while the world's production of silver during the same period has been \$1,187,000,000, giving a yearly average of only \$49,000,000. The United States' part in the production of the precious metals, from 1845 to 1875, amounted to \$1,323,786,769 in gold, giving a yearly average of \$42,700,000, and \$253,000,000 in silver, averaging \$8,100,000 a year.

Prof. A. L. Perry, of Williams College, presented the other side of the question, adducing historical proofs of the impossibility of preserving a double standard, and affirming the

immutability of Gresham's law, that the baser money will always expel the better from circulation. He showed that making silver coin of the present weight and purity legal tender would have the effect of diminishing all debts 9 per cent. He expressed the opinion that a dear measure of value was better for a people than a cheap one.

In consideration of Mr. Coe's propositions, the convention adopted the following resolutions:

Resolved, That, in the opinion of this Association, the early resumption of specie payments is necessary to the restoration of general prosperity and social progress throughout the nation.

That the general use of coin—the measure of value as formerly—will alone secure those certain rewards to labor, and impart that steadiness to the value and price of all property, which are required to stimulate enterprise and give proper encouragement to every useful industry.

That the time has fully come when an enforced currency—an expedient of the war—should be gradually removed, while all the conditions in the country are most favorable to that end.

That it is essential to the highest welfare of the American people that their trade and commerce should all be conducted upon the standard of value which the most advanced commercial nations in the world have adopted.

That the general resumption of coin payment can be best secured and maintained by the coöperation of the Government and the people through the agency of the banks, which is earnestly recommended; that, by such coöperation, the resources of the country will be most effectually reached, whether in smaller or larger sums, and absorbed into the bonds of the Government; and the present bountiful harvest, and increasing mechanical and manufacturing production of the nation, will thus contribute to redemption.

That this great end can be secured, with the coöperation of the people, by means already provided for by law.

The convention expressed its sense on the silver question in the following declaration:

Resolved, That, in the opinion of this convention, silver money, as a subsidiary currency, is desired by the people, and that its free but not enforced use will greatly aid in restoring the value of our paper money.

Prof. Stanley Jevons, the English economist, presented an address before the Social Science Association, which held its annual convention in Saratoga in the beginning of September, in which he opposed the bi-metallic basis for the United States in the most emphatic manner. He declared that there was no prospect of the project of Cernuschi of a compact between the commercial nations for the establishment of the double standard ever being realized; that England would never entertain the notion of abandoning the gold basis upon which she had prospered since 1816; neither would Germany be inclined to abolish the single-metal basis which she had just adopted, without a trial; while even France had been obliged, from the fluctuating value of silver, to practically follow the course of the other countries, though legally preserving the double standard. America, by returning to the

bi-metallic system, would impede its internal commerce with an unmanageable circulating medium of uncertain value, which would be of no use for exchange, and voluntarily refuse the advantages derived by the other commercial powers from a 15 times lighter currency, which freely circulates between them. The only individuals who could be benefited by America's binding herself in silver fetters would be the few possessors of the silver mines, who are rich enough without the profits which would thus accrue to them. The fear that gold cannot be produced in sufficient quantities to satisfy the monetary requirements of commerce, he considers as unfounded. There is no reason to suppose that the supplies of this metal from the mines of California and Australia will diminish. The gold-production is estimated by S. Dana Horton to be double that of silver in value, or 60,000,000 against 30,000,000, and the annual increase in the world's stores of the two metals, respectively, $1\frac{1}{2}\%$ and 1 per cent.; while two-thirds of the population of the earth use silver coins exclusively as currency, besides following the habit of melting them down and burying them in the ground, and the other peoples also employ silver as a subsidiary currency. Gold is a widely-distributed metal, which can always be found and mined with the exercise of sufficient labor. Silver may not always be as difficult to obtain as it is to-day. It is found in regular mines, and improvements in mechanics and metallurgy may render it so easy to mine and smelt that its value may sink, comparatively, as much as the value of iron and steel has sunk in late times. If, then, Anglo-Saxon miners operate the silver-beds of Mexico; if the vast stores of silver are laid bare in the mountains of South America, which Humboldt and Murchison predicted would be found there—a prophecy which the discovery of the Nevada leads goes to confirm—then the value of the metal as a medium of exchange will be destroyed altogether.

Prof. Jevons sketched a plan for the resumption of specie payments. He declared that but little more gold would be requisite for this purpose than was necessary to balance the foreign exchanges, provided that the amount of notes in circulation be regulated according to the increase or diminution of the gold reserve, after the manner of the Bank Charter Act in England, and of the present German system. The premium on gold was already so low, that, should the gold dollar be made equal in value with the five-franc piece, the paper dollar would stand at par. The difference of about 2 per cent. in the value of the gold dollar would not be noticed in the refreshing effects of resumption. The payments of coin would have to be protected and limited at first, until the newness of resumption had worn off. The redemptions should be confined to small sums; and the national bank notes need not be made redeemable in coin, but exchangeable for legal tenders, which would be redeemed in Washing-

ton and a few other centres. Since gold is only necessary for international transactions, the reserve should be concentrated, and not scattered among the banks. The gold contents of the dollar ought to be changed so as to make the half-eagle equal in value either with the pound sterling or the French twenty-franc piece, i. e., the dollar to contain either 22.6 or 22.4 grains of pure gold. The former standard would have more immediate effect to facilitate commercial calculations and exchanges; but the latter might induce the commercial world to adopt the five-dollar piece as its units of value, and induce England to reduce the gold contents of the sovereign and half-sovereign two pence in the pound, thus establishing the much-desired simple relation between the American, English, and Continental currencies, while, in the mean time, the American coins, when taken in trade for the English, would be preserved from the melting-pot, being less valuable. Prof. Jevons did not think that any country besides the United States would call for a very great supply of gold at present. Russia, Italy, Austria, Turkey, and other states burdened with a depreciated paper currency, are plainly not in a condition to coin much gold. France has already a larger accumulation than any other country. The Scandinavian kingdoms have converted their silver reserves into gold, and will not increase their gold currency further. England needs only the regular yearly increment to her gold currency, which is really only about half what the reports represent. While Germany, while still constantly absorbing gold, has already coined the largest part of the new gold currency required.

Secretary of the Treasury Sherman, in a speech delivered in Ohio, in August, prophesied that within 12 of the 17 months still intervening before the resumption act goes into force, if the same progress were made in that direction as had been observable since the inauguration of President Hayes, the specie basis would be attained. In mentioning the two modes of resumption—that of contracting the currency, and that of accumulating a coin reserve—he regretted that the resumption act, which authorized the issue of 4 per cent., $4\frac{1}{2}$ per cent., and 5 per cent. bonds for coin at par, did not also permit the issue of bonds for currency—a measure which Congress refused to accede to for fear of over-contraction. "The process of selling (bonds) for United States notes need not go far before the mere fact that they (legal tenders) are receivable for bonds would bring them up to par in coin, and that is specie payments." Under the act of January, 1875, authorizing the issue of national bank notes, and the retirement of four-fifths their amount of Federal notes, nearly \$29,000,000 national bank notes have been issued, and \$22,905,700 greenbacks retired. The volume of the circulating currency has been reduced by \$57,170,000 United States notes on deposit in the Treas-

ury, and by nearly \$50,000,000 of cash reserve in the banks, besides what the law requires them to hold. The simplest way of arriving at a specie basis was by issuing bonds bearing the lowest rate of interest that would maintain them in ordinary times at par, in exchange for legal-tender notes. The way which Congress had sanctioned—that of holding a coin reserve in the Treasury—could, however, be accomplished, and should before the limit fixed, January 1, 1879, since our country, which is the greatest producer of precious metals in the world, can supply alone the necessary silver and gold, while the balance of trade is in our favor, and constantly increasing.

A joint resolution of Congress, passed August 15, 1876, authorized a monetary commission, consisting of Senators Jones of Nevada, Boggy, and Boutwell, Representatives Gibson, Willard, and Bland, and, as experts, W. S. Groesbeck and Francis Bowen, to collect evidence on the questions of the remonetization of silver and the resumption of specie payments, directing them to inquire:

1. Into the change which has taken place in the relative value of gold and silver; the causes thereof; whether permanent or otherwise; the effects thereof upon trade, commerce, finance, and the productive interests of the country, and upon the standard of value in this and foreign countries.
2. Into the policy of the restoration of the double standard in this country; and, if restored, what the legal relation between the two coins, silver and gold, should be.
3. Into the policy of continuing legal-tender notes concurrently with the metallic standards, and the effects thereof upon the labor, industries, and wealth of the country.
4. Into the best means for providing for facilitating the resumption of specie payments.

The majority report, signed by Messrs. Jones, Boggy, Willard, Bland, and Groesbeck, ascribed the variations in the relative values of silver and gold, which attained their widest divergence in July, 1876, to the following causes: 1. The demonetization law of Germany in 1871, and those of the United States in 1873 and 1874, and of the Scandinavian Union in 1874; the limitation of the coinage of silver in France, Belgium, Switzerland, and Italy, in 1874, and the suspension of silver coinage in Holland and Switzerland in 1875, and in France in the summer of 1876, and the proposals of the Spanish and Dutch Governments to demonetize silver. 2. A temporary interruption in the demand for silver in the East. 3. The increase in the production of silver from the discovery of new mines in the United States, and the exaggerated reports of the extent of these discoveries, together with the general ignorance of the fact that nearly half of the products of the Comstock lode consists of gold. 4. The demand in Germany for gold to replace bank notes, recalled to the amount of 130 million dollars. 5. The act of the United States Congress in 1875, ordaining the resumption of payments in gold in the beginning of 1879.

The scheme of demonetization originated after the discovery of the Californian and Australian gold fields. It was gold which Chevalier and others of his school called upon the nations of Europe then to demonetize. The reason given for the demonetization of gold at that time was the same as that now advanced for the single gold standard, viz., the protection of the creditor and income-receiving classes against a depreciation of money. Germany and Austria adopted the single silver standard in 1857, and, except for the opposition of France, the other Continental countries would have followed. The Netherlands, in changing to a single silver currency, did so to escape from becoming involved in the frequent financial convulsions which occur in England—a motive which should prevent the United States now from adopting a simple gold currency. Facts do not confirm the fears of the mono-metalists, that there is, or is likely to be, a production of silver sufficiently abundant to decrease the purchasing power of money; the contrary is more to be dreaded—that is, that the aggregate production of the precious metals will decline, or remain stationary, when a gradually-increased production is necessary to maintain values on their present footing. The world's production of silver has been, during the 24 years from 1852 to 1875, inclusive: in Mexico, 30 millions per annum for the first 16 years, and 25½ millions on an average in the last 8 years of the period, while that of 1874 and 1875 was only 25 millions; in the world outside of America, 10 million dollars without variation; in the United States, during the 5 years ending 1875, the annual product of the silver mines was 23½ millions. The 5 years ending 1875 show a mean increase in the world's annual yield of silver over the 5 years ending 1856 of \$19,446,870. There are capacities for an increased silver production in Mexico and in other regions along the great American cordillera. The silver production of Mexico decreased from 35½ millions, before the revolt from the Spanish rule, to 15½ millions, and then advanced to an annual average of 30 millions, and now stands at 25 millions. It is not likely that more efficient methods of mining will be introduced in that country. The production of the United States is more likely to slowly decrease than to increase. More than half the silver product comes from the Comstock lode, in which an average depth of 1,800 feet has been reached; a smaller yield in those mines may reasonably be expected in the future, and it is not to be expected that the working of the difficult lower-grade argentiferous veins, which are abundant in the Rocky Mountains, and westward to the Sierra Nevada, will advance as fast as the Comstock yield diminishes. Extravagant speculations as to the capacity of the Nevada bonanza have had a great deal to do with the recent demonetization agitation in Europe. The estimates of the ore in sight in

the new mines varied from 300 to 1,500 million dollars. The German *Reichsanzeiger* stated confidently that the products of the Nevada mines for 1876 were valued at 500 million francs. The yield of this Big Bonanza for the 4 years in which it has been worked has aggregated altogether 52½ million dollars, 45 per cent. of which was gold, having an annual silver product from that body of ore of a little over 7 million dollars; the total yield of the 12 or 13 ore-bodies of the Comstock lode has aggregated in 16 years 240 million dollars, 47½ per cent. being gold, giving an average annual production of \$7,875,000 in silver, and \$7,125,000 in gold. The silver product of the United States has been \$155,600,000 in the 6 years from 1871 to 1876, giving an average of 26 millions, the product for 1876 amounting to \$38,200,000. The average annual silver product of the State of Nevada has been, for the same period, 19 million dollars; that for 1876 was 28 millions.

The estimates of Chevalier of the world's production of the precious metals, from 1492 to 1848, were: Gold, \$2,626,000,000 (\$1,928,000,000 from America); silver, \$5,705,000,000 (\$5,261,000,000 from America). The world's production from 1849 to 1876, inclusive, has been, according to the calculation of Sir Hector Hay: Gold, \$3,215,000,000; silver, \$1,367,000,000. Before 1849 the proportion of silver to gold in the existing stock of the world is supposed to have been 3 to 1, and in the stock of the Western world, 2 to 1. In the Western world gold has since then been in excess; Chevalier computed the proportion in 1866 as 44 of gold to 30 of silver; Xeller estimated it as 37 to 28; the excess of gold is now greater than at that date. Gold formed 31 per cent. of the aggregate supply down to 1849. In the beginning of the century the gold supply was only 25 per cent. of the whole. From 1809 to 1829 the product of gold was 30 per cent. of the aggregate supply; in 1846, in consequence of a large out-turn from the Russian gold-fields, its proportion increased to from 50 to 52 per cent. After the opening of the Californian mines the proportion of the gold supply was vastly higher, being, in the 5 years ending with 1866, 79 per cent.; in the succeeding lustrium, 75 per cent.; and in the 2 following, 71 per cent. In the 4 years ending with 1876 the silver yield of the Washoe mines reduced the ratio of the gold product to 60 per cent., and in the year 1876 it was 57 per cent.

The relation between the bullion value of equal weights of gold and silver, which fluctuated in the first century after the discovery of America between 1:10 $\frac{7}{10}$ and 1:12, has varied since the middle of the seventeenth century from 1:15 to 1:16, and during the enormous accessions of gold in the present century was held firm by the bi-metallic policy of France at about 1:15½, until the demonetization law of Germany was enacted. The resumption of specie payments by England, in 1821, caused

a depreciation of silver of about 3 per cent. The fluctuations in the bullion value of silver for the past 117 years are exhibited in the following table, showing the average annual ratio of value between gold and silver—expressed, as is customary, in quantities of pure silver to one of gold—in the London market from 1760 to 1876, inclusive (up to 1829, from “Executive Document 117, First Session, Twenty-first Congress;” from 1830 to 1832, from the report of the Director of the United States Mint; from 1833 to 1875, from Pixley & Abell’s circulars; for 1876, from the weekly gold averages for standard silver in the London *Economist*):

When the London quotation is 59*d.* per standard ounce, the ratio in that market is the former legal ratio of the United States, 1 : 15.98; when bullion is quoted 60.87*d.* per ounce, it represents the French legal ratio of 1:15*d.*

There is little silver remaining in Europe, aside from the subsidiary coinages, except in the French stock of full-tender coins, the highest estimate of which is 413½ million dollars, and in the German thaler coinage, which may amount to 100 million dollars. The consumption of the world, outside of Asia, of silver in arts and manufactures, and in supplying the waste and loss of coins, may be estimated to be at least 50 million dollars’ worth, while the world’s production is now only 74 millions. This would leave of the annual supply only 24 millions to supply the Asiatic demand, which has always largely exceeded that amount, and is now, after a brief interruption, more active than ever. Humboldt estimated, in the beginning of the century, that Asia absorbed 25 out of the 43 millions of silver produced annually in America. In the 26 years from 1851 to 1876, the shipments of specie from England and France to Egypt and the East were, altogether, \$1,036,557,450 in silver and \$316,963,035 in gold, an annual average of nearly

40 millions of silver and over 12 millions of gold. British India alone received, in excess of exports, 1,000 millions of silver and half that amount of gold in the 40 years ending 1875. The requirements of India and the rest of the Orient for silver currency, and the desire of the Asiatic peoples for both the precious metals for ornaments, are as exigent to-day as they ever were, and are practically insatiable, and only limited by their ability to pay for them. The shipments of silver from England to India and China in 1876 were \$45,975,438, which was 17 millions more than the average for 26 years. In the same year \$9,119,031, in silver, were shipped to the East from San Francisco; and \$5,319,792 went to the Levant from Austria, in the form of Maria-Theresa thalers. Asia has already engorged the mass of silver forced upon the market by the German Government.

“The opportunity to obtain silver, before the disposable European stock is entirely transferred to the East, ought to be seized upon by the United States.” It would be absolutely impossible to resume specie payments in the United States in gold. The entire visible supply of coin and bars in the Western world at present does not exceed 1,600 million dollars. The current supply is no greater than the annual consumption; England alone requires an annual supply of 25 million dollars, or one-fourth of the world’s production. The United States Government and banks could not establish a gold basis of payments with less than 300 million dollars, which would be about 20 per cent. of the entire stock of the Occident. “To propose to this country a contest for a gold standard with the European nations, is to propose to it a disastrous race, in reducing the prices of labor and commodities, in aggravating the burdens of debt, and in the diminution and concentration of wealth, in which all the contestants will suffer immeasurably, and the victors even more than the vanquished.” Silver and gold are both products of the United States, and “both are needed, and in the fullest measure, to render the resumption of specie payments possible.” The double standard gives a stability to values which is far more important than the fanciful disadvantages of the alternation of the metals in the actual circulation. Gold is, of the two metals, the least appropriate for a measure of values, owing to the greater irregularity of its supply, as may be seen in the financial history of England, which has abounded in commercial crises and revulsions. “It is the single-standard countries which suffer the evils of falling prices caused by an enhanced value of their money, while it is the double-standard countries which enjoy the benefits of the use of a money which is the better because the steadier in value. It is the single-standard countries whose money metal is temporarily the dearer which pay these premiums, and it is the double-standard countries which receive them. Thus, after

1821, this country sold gold to England at a premium of from 5 to 8 per cent. In more recent times France sold silver to India at a large profit; and at the present time the Germans are paying a heavy premium on gold, which is inaccurately described as the sale of silver at a discount. This premium on gold is for them a loss without any compensation, and, so far as they have proceeded in the policy of establishing a gold standard, it has proved an unmitigated injury to the commercial and industrial interests of the world, and especially of Germany."

The world's gold-yield has diminished since 1856 considerably more than the silver-yield has increased. According to the estimates of Tooke and Newmarch, the Californian and Australian gold-production averaged per annum, during the 5 years ending 1856, £29,176,000, and during the 5 years ending 1875, £20,308,200, showing an average annual reduction of over 44 million dollars; according to Sir Hector Hay, the reduction of the world's annual production was from £29,935,000 in the former period to £19,640,000, making the decrease in the annual yield over 51 million dollars. The products of the gold-diggings are still annually decreasing. The world's stock of the precious metals in coin, bars, and plate, in 1848, the year of the California gold-discoveries, is estimated to have been 2,800 million dollars in gold and 4,000 millions in silver, and in coin and bullion alone, 1,200 million dollars in gold and 2,200 millions in silver. During the 5 years ending with 1856, the total production was 950 million dollars in gold and silver, and 750 millions in gold alone, an addition to the total stock of 14 per cent., and to the stock of coin and bars of 28 per cent., and to the stock of gold of 25 per cent., and to the stock of gold, exclusive of plate, of 62½ per cent. During the 28 years ending in 1875, the aggregate production of gold and silver was 4,582 million dollars, which was an addition of 67 per cent. to the stock of 1848, and of 135 to the stock of coin and bullion alone; the gold-production of the world during the same period aggregated 3,215 million dollars, an increment of 115 per cent. to the gold-supply in 1848, and of 268 to the gold coin and bullion. This large increase in the gold-yield affected prices but very slowly, each year's production increasing the total stock but by a small percentage. In 1856, although the effect of the new gold-supplies was visible in increased commercial activity, there was no increase in the average prices of commodities. Prices reached their highest level in 1865. The influence on prices of a new accession to the world's stock of the precious metals is always very slow. The influx of gold and silver into Europe, after the discovery of America, did not begin to affect values until 1570, 50 years after the entrance of the Spaniards into Mexico, and 30 years after the discovery of the Potosi silver mines, and the highest

range of prices was not attained until 1640. The stock of gold and silver in Europe, at the time of the discovery of America, is estimated by Chevalier to have been only 193 million dollars, while that of Asia may have been 1,500 millions. The metallic money of the Roman Empire, in the beginning of the Christian era, amounted to 1,800 million dollars. The whole course of the 15 centuries, during which this stock shrank to less than one-ninth that amount, was marked by economic stagnation; populations dwindled, and endless miseries weighed upon the Western world. It was the silver from America which revived Europe from the lethargy of the Dark Ages. Periods of increasing money have always been times of productive activity and universal prosperity, while periods of shrinking money and falling prices are necessarily accompanied by commercial stagnation and all the miseries which follow in its train. The modern history of prices reveals that, from the outbreak of the revolutions in the Spanish-American states, there was a continuous rise in the value of money until the discovery of the Californian gold-diggings, in 1849; during this period, according to Jevons, money gained 145 per cent. in purchasing power, or, in other words, prices fell 60 per cent. After the opening of the Californian and Australian mines there was a gradual fall in the relative value of money; the highest range of prices was not attained until 1865, the mean fall in the value of money being about 15 per cent. Since 1865 this decrease in the purchasing power of money has been quite regained, and prices stand to-day on as low a level as they did in 1849. Since 1873 another period of commercial depression and popular misery and destitution has set in all over the world, whose only cause is that which occasioned a similar condition of affairs before the gold-discoveries in California, namely, a diminution in the world's supplies of money, and the consequent shrinkage in prices. This is partly due to the decreased yield of the mines, and partly to the folly of the governments, who began, at the date when the present troubles commenced, to deprive one of the precious metals of its monetary functions. The amount of silver now in circulation is about equal to that of the gold currency. The pressure of the stationary or diminishing supplies of money furnished by both metals together on the business of the world, whose natural growth demands a moderate increase of the medium of exchanges, has been relieved, though not entirely, by the liberation of the metallic currency of countries which have suspended specie payments, to wit, Russia in 1857, the United States in 1862, and Italy in 1866. The suspensions in the Argentine Confederation in 1857, in Peru and Austria in 1868, and in France in 1870, also contributed, though in a less degree, to augment the stock of specie in the metal-paying countries, and to lessen the demand for the annual out-turn of the

mines. Notwithstanding the concentration of the precious metals in three or four of the commercial countries, those countries, as well as all others, are now suffering the evils of a failing supply. "A shrinking volume of money and falling prices always have had, and always must have, a tendency to concentrate wealth, to enrich the few, and to impoverish and degrade the many. This tendency is subtle, active, and portentous throughout the world to-day." An unusual increase of the world's store of specie has invariably acted as a beneficent stimulant to industry and invention. A decreasing volume of currency and falling prices, on the other hand, while increasing the burden of debts and transferring property unjustly, also paralyzes commerce and industry, and dooms the laboring and producing class to enforced idleness. "Money in shrinking volume becomes the paramount object of commerce, instead of its beneficent instrument. Instead of mobilizing industry, it poisons and dries up its life-currents. It is the fruitful source of political and social disturbance. It fomented strife between labor and other forms of capital, while itself, hidden away in security, gorges on both. It rewards close-fisted lenders, and filches from and bankrupts enterprising borrowers. It circulates freely in the stock exchange, but avoids the labor exchange. It has in all ages been the worst enemy with which society has had to contend." Although the employment of checks, bills, and banking expedients in the settling accounts—by which methods 97 per cent. of all payments are made in England, while 2½ per cent. are effected by bank notes, and only ½ per cent. in coin—is an immense saving in the wear of coin and in its transportation; yet such credit certificates are only representative, and prices must conform to the volume of the specie circulation. If the scheme for the demonetization of silver should be accomplished, in the unsettling of nominal values which would ensue, the burden of all debts would be doubled. Nothing short of universal bankruptcy could be expected, and a period of prostration and confusion which might last for ages. "In the general wreck which would follow such a contraction, debtors and creditors would be engulfed in one common ruin."

With regard to the supposed commercial advantages of adopting the same monetary standard as the nations of Western Europe, it does not appear that the export trade to those countries, consisting for the most part of cotton, grain, tobacco, and animal products, commodities indispensable to Europe, needs any stimulation or encouragement, while all classes of thinkers unite in desiring a decrease in the import trade from those nations. Trade with the non-commercial nations, with the less civilized peoples, and those possessing different systems of civilization, and those parts of the world whose products are essentially different, is more desired; and in that trade the nations

of Europe are the rivals of the United States. Asia and other parts of the world where silver is current, are the natural outlets for American manufactures, and commerce with those lands, unlike that with the commercial countries, must be sought after and assiduously cultivated. The trade with Mexico and South America will be fostered if the United States is in the position to pay them the best price for their mining products; and that with Asia, if it constantly possesses an abundance of the metal for which the East will readily exchange its marketable productions. The silver-standard countries, not counting Russia and Austria, which have suspended specie payments, are China, India, Mexico, Peru, Central America, Ecuador, and Egypt; their aggregate population is 656,944,456. The double-standard countries, excluding Italy, which has a paper currency, contain 187,300,000 inhabitants; they are France, Japan, Spain, Belgium, Holland, Roumania, Switzerland, Colombia, Chili, Venezuela, Paraguay, Uruguay, Greece. The gold-standard countries, Great Britain, Canada, and the Cape and Australian Colonies, Germany, Sweden, Norway, Denmark, and Portugal, have a total population of 92,800,000; Turkey and Persia have the gold standard nominally, but a bi-metallic currency; Brazil and the Argentine Confederacy have suspended specie payments. Unenumerated countries in Africa and Asia use silver more generally than gold.

The duties of the United States, with respect to its coin obligations, are clearly expressed on the face of the bonds. The act of July 14, 1870, under which the national debt is being refunded, provides that payments shall be made "in coin of the present standard value." No legislation demonetizing either or both of the metals, or altering the standard of either, can alter the obligation of the Government to pay these contracts in the coin of the standard of that date; neither can any ordinary principles of the construction of contracts deprive the United States of the option of discharging them in either gold or silver coins of the stipulated weight and fineness. The remonetization of silver in the United States would, by creating a large demand for it, cause it to appreciate, and would thus render the bonds, which are payable in either silver or gold, more valuable. A comparison between the average prices of to-day and those which obtained from 1865 to 1873, will show that the purchasing power of silver has not diminished, although that of gold has increased.

The character of the act of February 12, 1873, which prohibited the coinage of silver, was not understood at the time of its passage, and the connection of that law, which was supplemented by the act of June, 1874, which limited the legal tender of silver to \$5, with the specie-resumption act of January 4, 1875, has been misconceived by the people of the United States, who "were not aware that coin then

meant gold, and that coin payments involved the shrinking of all values to the measure of a single metal." The Government of the United States, a debtor nation and a nation of debtors, cannot, without abusing its trust, support such a movement as the general demonetization of silver, which would largely increase the burden of taxation to be imposed upon the people for the payment of the interest and principal of the national debt (2,000 million dollars), the state debts (390 millions), the city, town, and county debts (850 millions); it would practically double the debts of railroads (2,459 millions), canals (109 millions), and of other corporations, mining, manufacturing, etc., whose aggregate debts are enormous; it would increase the long debts which are secured by real-estate mortgages in like proportion, and would work the confiscation of a large portion of the land and city property of the country from the present owners and improvers (a large portion—probably one-half—of the deposits and surplus capital of the banking institutions are invested in real-estate securities, and the mortgages held by private persons must be of much greater amount; the cities and farming regions alike of the United States are largely built up on long loans; it was computed that three-fourths of the lots on Manhattan Island were under mortgage liens two years ago); it would augment in like manner the value of the rents contracted for in advance in the leases of land and buildings, or of land to be built upon by the lessees, and a great portion of the property occupied for commercial and manufacturing purposes in the cities has been taken on long-lease contracts; and it would render insupportable the current trading liabilities of the business community, contracted under the present scale of value (the average liabilities of the 9,022 merchants and manufacturers on the list of Dunn's mercantile agency, who failed in 1876, were \$21,020; taking that as an average for the whole number of traders and manufacturers on the books of that agency, the collected business debts of the whole 630,099 must amount to \$13,244,000,000, and the aggregate liabilities of all the traders and operators in the country to a much larger figure). "The danger which menaces is, not a plethora, but a scarcity, of money, even if both metals are retained as such. But with the demonetization of one of them we should witness a contraction and scarcity of money and fall in prices which, in magnitude and suddenness combined, has no precedent in the history of the world, and in respect to the consequences of which we have no adequate experience to guide us." The aggregate amount of American public and corporate debts held in Europe is over 2,000 million dollars, the simple interest on which exacts a tribute of 100 millions on the productive forces of the United States. "If the United States should resume specie payments under the optional or double standard, silver would always constitute a part of our

currency. The channels of circulation would doubtless for a short time, and until the new demand here for silver caused the legal and market relations of the metals to coincide, be monopolized by silver, and by such paper as might be convertible into the metals. It would, therefore, not be necessary to resumption to draw gold from Europe or to intercept it on its way there. Even if the gold now in this country, or some portion of it, should be sent to Europe, it would be sent where it would be of the greatest possible service to us, and where it would have a direct influence in raising the prices of our exported products. These prices are not regulated or controlled by the volume or kind of money in use in this country, but by the volume and kind of money used in the countries to which our products are exported. A gold standard here will force a fierce scramble with Europe for gold. This would straiten our largest customers, diminish their means and disposition to make purchases, and lower the prices of our products in European markets."

The commissioners recommended the restoration of the double standard, with unrestricted coinage of both metals; Messrs. Jones, Willard, and Bogy advised the relative valuation of the Latin Union of 1:15½, as tending to strengthen those countries in the bi-metallic position; while Messrs. Groesbeck and Bland favored the retention by the former legal relation of 1:15.988. The commission believed that the remonetization of silver by the United States would deter the Latin Union from abandoning the double standard, and, even if it should not, that it would restore its former value to silver. In the event of a large influx of silver from Europe, the citizens of the United States would only be voluntarily exchanging commodities which they can spare for money which they need.

Mr. George S. Boutwell presented a minority report, in which he recommended that the United States Government invite governments of the other commercial nations to join in a convention for the use of both metals as currency, according to a fixed relative valuation to be agreed upon. He deprecated any independent action, and considered that the inconvenience which would ensue to American merchants in the settlement of their balances in London, which is the clearing-house of the world, furnishes a paramount objection to the use of a silver currency in this country. The depreciation of the public credit, by the payment of its obligations in silver, would entail losses which would greatly overbalance the gain to be derived from the payment of the debt and interest in the cheaper metal.

Prof. Bowen also returned a minority report, in which Mr. Gibson concurred. The recent fluctuations in silver, he believed, had three causes: 1. The productiveness of the Nevada mines, which increased the annual silver production of the world within the period from

1861 to 1875 to from about 40 to 80 million dollars, which latter rate of production will probably not decline in the near future. 2. The cessation of the Indian demand for silver, of which metal 270 million dollars were imported in the 4 years from 1862 to 1866, in payment for cotton—an average of over 67 millions a year—and of which in the following 4 years 35 millions a year were received and expended in the construction of public works, for which India is to that amount in debt to England, and her silver-receiving capacity is proportionately diminished, so that, in the last 4 years, the net silver imports have been only 10 million dollars per annum. 3. The demonetization of silver in Germany, Denmark, Sweden, and Norway, and the limitation of its coinage in Holland and the Latin Union, which acts were impelled by, rather than originally caused, the rapid decline in the value of this metal. England adopted the single gold standard 60 years ago, and confined the silver circulation to a limited volume of token currency, which is overvalued 6 per cent., and only tender for 40s. English gold coins are now received at their full value in all parts of the world, and are the recognized medium for the payment of balances in international trade. It was to secure the advantages of this system, and to avoid the evils of a circulating medium of falling and uncertain value, that Germany adopted the single gold standard, making the unit of account, the 20-mark piece, 5*l.* less than the sovereign and 3*l.* less than the 25-franc piece, in order to insure its exchange with those coins, while preserving it from destruction. The other European countries are adopting, or seem

disposed to adopt, the single gold standard. A double standard is a fallacy, and never has existed in fact in any country. France had a silver currency for 40 years after the establishment of the legal ratio in 1803, and a gold currency after that metal sank in worth in consequence of the Californian and Australian discoveries. Her recent action in restricting the coinage of silver is in reality an acceptance of the single gold standard. Mr. Bowen considered it equally impracticable to maintain a paper circulation on an equal footing with a metallic currency, thus attempting to establish a triple standard, or to preserve both metals in concurrent circulation. He advised the adoption of a simple gold standard, changing the weight of the coins, making them three-fifths of a grain in the dollar lighter, the dollar to contain 22.6 grains of pure gold, thus making the half-eagle almost exactly equal in value to the English sovereign, and little variant from the French and German units of value. This alteration, besides the paramount advantage of facilitating international commercial transactions, would reduce the premium on the gold dollar from 5½ to 3 per cent., and help toward specie resumption. The quantity of the precious metals in the country on January 1, 1877, was not less than 220 millions, an amount sufficient to maintain specie payments. The silver-token coinage, he recommended, should be enlarged, preserving the present standard of 345.6 grains of pure silver, the same to be issued in exchange for one and two dollar notes, which shall be canceled, and to be legal tender up to \$20, and receivable at the Treasury for all Government dues except import-duties.

D

DAKOTA. With respect to the Black Hills, a judicious correspondent, writing from Deadwood, under date of October 12th, finds the situation much more favorable than he had anticipated; not so much from the amount of gold actually taken out, as from the preparations for methodical work which have been made for the development of the quartz mines, which are now the prominent, and are, doubtless, to be the permanent, industry of this region. It may be said, with confidence, that the gulch mines, upon which everybody based the riches of the Black Hills country up to this summer, have been nearly exhausted. Custer City, the first camp in this country, and at one time quite a city, is almost deserted. The gulches in that vicinity have not "panned out" as was expected. Castleton, on Castle Creek, is meeting with the same fate. Rapid City, on Rapid Creek, is still there; but the miners in the vicinity are not getting anything better than "grub stakes." In fact, the industry, population, and trade of the Black Hills country are nearly all centred about Dead-

wood, Gayville, and Central City, within a radius of 10 miles. The population within this area is about 12,000, a good deal less than in midsummer. It will remain about the same through the winter. There are still many outlying camps in different directions, and, perhaps, a population of 5,000 or 6,000 scattered through them. The principal large towns are Deadwood, Gayville, Central City, Lead City, Lancaster City, Pennington, and Galena City. The population of Deadwood is about 4,000; Gayville, 1,200; Central City, 1,500; Lead City, 1,000; Lancaster City, Pennington, and Galena City, together about 2,000.

The progress made in milling ores may be seen from the following statistics:

MINES.	Mills.	Stamps.
Lead City.....	7	85
Poorman Gulch.....	2	15
Anchor City.....	2	20
Golden Gate.....	2	30
Central City.....	6	110
Bobtail Gulch.....	2	20

Making, in all, 20 stamp-mills, carrying 280

stamps, now in operation. There are, besides this, 9 mills, carrying 155 stamps, in course of construction within this district, and 5 mills with machinery en route to this place, having a capacity of 90 stamps. So it seems probable that by the 1st of January there will be in operation in this vicinity upward of 40 stamp-mills, working from 550 to 650 stamps. If the ore that is being taken out at the various mines holds as good as now, it is quite probable that by next summer there will be 1,000 stamps in operation. Suppose each stamp to crush one ton and a half of \$15-ore per day, the yield would be \$22,500 per day, or \$6,750,000 per year of 300 working-days.

In forming an estimate of the gold product of the Black Hills for 1877, it must be borne in mind that the stamp-mills are almost a new thing in this country, and that this is the first year of quartz or lode mining. It is the opinion of those best informed that the ore reduced and marketed will bring about \$1,500,000. As to the placer claims, their yield has been less than last year, and will not probably exceed \$1,000,000. This makes the total product of the Black Hills for 1877 about \$2,500,000, or one-fourth as much as that of Colorado.

As an indication of what the best placers are paying, a careful estimate of the best 15 is as follows:

Allen, Florida & Co.	\$65,000	Hildebrandt & Co.	\$50,000
Johnson & Co.	70,000	Simson & Co.	75,000
Pierce & Co.	80,000	Neal & Co.	26,000
Scott & Co.	80,000	Neal & Co.	80,000
Thompson & Co.	40,000	Spencer & Morton. . . .	25,000
McAleer & Pierce	75,000	John Kane.	80,000
Gilmer, Salisbury & Co.	40,000	J. McAleer.	80,000
		George Stokes.	80,000

In October, Deadwood was suffering from the concentration of capital and trade at Central City, three miles up the gulch. Nearly all the stamp-mills were removing there, most of the miners make it their headquarters, and it seemed likely soon to absorb Gayville, and become the point of supply for the other towns and camps. On the other hand, Deadwood was making efforts to counteract this tendency, and its citizens confidently expected that the stamp-mills would, in time, be returned, and that the works for crushing low-grade ores would be all erected in their town, at the mouths of Deadwood and Whitewood Creeks. Various railroads are projected to the Black Hills; the Covington, Columbus & Black Hills line being under construction. The idea of a separate territorial government is prevalent among the settlers; and delegates have been sent to Washington to urge the scheme upon Congress.

DAVENPORT, EDWARD L., an American actor, died in Canton, Pa., September 1, 1877. He was born in Boston, Mass., in 1816. He made his first appearance on the stage in Providence, R. I., in 1836, the play being "A New Way to Pay Old Debts," with the elder Booth as *Sir Giles Overreach*, a part in which Mr. Daven-

port afterward became famous. He made his *début* in New York City at the Bowery Theatre, under the management of Thomas H. Hamlin, and in 1838 he first played in Philadelphia, at the Walnut Street Theatre, as *Count Montalban*, in "The Honeymoon." He was connected chiefly with the Boston theatres, until 1867, when he visited England, with Mrs. Anna Cora Mowatt, and appeared, on December 6th of that year, at the Manchester Theatre, as *Claude Melnotte*, Mrs. Mowatt acting *Pauline*. He supported Macready for two seasons while in England, and was very popular at the Haymarket Theatre, in London, as *William* in "Black-Eyed Susan." While in England he married Miss Fanny Vining, a member of a well-known English theatrical family, who was afterward associated with him in many of his starring engagements. After his return to America he fulfilled various engagements with Wheatley, Jarrett, Wallack, Mark Smith, and Mrs. Barrow. In 1859 he became manager of the Howard Athenæum, in Boston, and in 1869 was manager of the Chestnut Street Theatre, in Philadelphia. In 1873 he acted at Wood's Museum, in New York, his last appearance in that city being in "Daniel Druce," at Booth's Theatre, where, a short time before, he gave his masterly impersonation of *Brutus* during the protracted run of "Julius Cæsar." Mr. Davenport was one of the most finished actors on the American stage; his versatility was remarkable, appearing with equal success both in tragedy and comedy. His eldest daughter, Fanny Davenport, has achieved many professional triumphs on the American stage.

DAVIS, CHARLES HENRY, an American naval officer, died in Washington, D. C., February 18, 1877. He was born in Boston, Mass., January 16, 1807; entered the Navy, as midshipman, in 1823; and from 1844 to 1849 was assistant in the Coast Survey. In 1846-'49 he was engaged in a survey of the waters about Nantucket, in the course of which he discovered the "new south shoal," and several smaller shoals, directly in the track of ships sailing between New York and Europe, and of coasting-vessels from Boston. These discoveries were thought to account for several wrecks and accidents before unexplained, and they called forth the special acknowledgments of insurance companies and merchants. During and after his connection with the Coast Survey, he was appointed on several commissions to examine the harbors of Boston, New York, Charleston, etc. These investigations led him to the study of the laws of tidal action, the results of which are given in his "Memoir upon the Geological Action of the Tidal and other Currents of the Ocean" ("Memoirs of the American Academy," new series, vol. iv.), and the "Law of the Deposit of the Flood-Tide" ("Smithsonian Contributions," vol. iii.). The "American Nautical Almanac" owes its foundation directly to his efforts. He was appointed the first superintendent of the work in 1849, and

continued at the head of this establishment till the autumn of 1856, when he was ordered to naval service in the Pacific, as commander of the sloop-of-war *St. Mary's*. After the breaking out of the Civil War he was assigned to the Mississippi squadron, of which he was appointed flag-officer, May 9, 1862, and on the 11th repulsed an attack by the Confederate flotilla. He in turn attacked the latter, June 6th, opposite Memphis, capturing or destroying all but one vessel; this action was immediately followed by the surrender of Memphis. He then joined Farragut, and was engaged in various operations near Vicksburg and in the Yazoo River. He was made lieutenant in 1834, commander in 1854, captain in 1861, commodore in 1862, and rear-admiral in 1863. In 1862 he was appointed chief of the Bureau of Navigation; in 1865-'67 he was superintendent of the Naval Observatory at Washington, and in 1867-'69 commander of the South Atlantic squadron, after which he resumed his scientific duties at Washington. Besides articles on "Astronomy" and "Geodesy," he published a translation of Gauss's "*Theoria Motus Corporum Coelestium*" (Boston, 1858).

DELAWARE. There is very little worthy of record pertaining to the State of Delaware for the year. There was no State election, and consequently no political action calling for mention. The regular biennial session of the Legislature began at Dover on January 3d, and continued until March 21st, but its action was of little general importance. That body was unanimously Democratic in both branches, the Senate consisting of 8 members, and the House of 21. A considerable reduction in taxation was effected; the principal changes in the law being a reduction of the rate on county assessments from 10 to 5 cents on the hundred dollars, and of license fees to one-half their former amount. Attempts were made to secure radical changes in the laws relating to the sale of intoxicating liquors, and the subject occupied a good deal of time; but the final result was insignificant. The word "citizen" was substituted for "freeholder" in the provision regarding applicants for licenses. The payment of a tax to the United States for licenses was made *prima facie* evidence of liquor-selling, and the transfer of a license to an incoming tenant was authorized. These were the princi-

pal changes. An insurance law was enacted, which requires all companies incorporated out of the State to file a copy of their charters with the State Auditor, file a statement of their condition each year, and obtain a certificate authorizing them to do business in the State. On application of 10 or more policy-holders the Auditor is requested to make an investigation of the condition of any company, and, if found insolvent, to cause it to cease doing business in the State. There were several bills affecting the local government of cities, but such of them as passed made no important changes. An act was passed for the encouragement of beet-sugar culture, but only \$300 was appropriated for the purpose of distributing seeds and affording premiums. A commission was appointed to carry the act into effect; but it decided that, as the preparation of the ground ought to be made in the autumn, no effort should be made to secure results until 1878. Meantime, information was to be furnished by printed circulars to such as were interested in the subject.

Fruit-raising constitutes one of the most prominent industrial interests of Delaware, but it is difficult to obtain accurate statistics of the product. We find a statement of the shipment of 512 car-loads of strawberries over a single railroad—the Philadelphia, Wilmington & Baltimore—up to June 11th. There is an average of about 8,000 quarts in a car-load.

THE OLD SWEDES CHURCH, WILMINGTON.

The peach-growers held secret meetings during the summer, and, as usual, made efforts to secure satisfactory arrangements with the railroads for the transportation of their products to market. This was a difficult matter, and all causes of complaint were not removed. The railroad strikers in July interfered somewhat with shipment, and the large supply and

low prices of the season are said to have made the crop, on the whole, unprofitable.

The peach crop of the year has to be estimated from the shipments on the various railroads and lines of water-transportation. It is placed at 3,392,293 baskets, including 2,124,102 shipped by rail, 948,518 by water, and 319,675 which were canned, dried or otherwise cured.

Among the new enterprises of the year is the projected construction of a branch of the Delaware division of the Philadelphia, Wilmington & Baltimore Railroad, from Dover to Rehoboth. The line has been surveyed, and its early construction is probable, although there is considerable opposition to it, on the ground that it will give a practical monopoly of transportation in the State to one company.

As there was no session of the Legislature in January, 1878, other official reports are wanting, since they are made to cover periods of two years.

Statistics of the free schools of Delaware, from December, 1876, to December, 1877, showing the whole number of children between the ages of five and twenty-one years, the number attending schools, and whole amount of school property, are as follows:

Whole number of white children between the ages of five and twenty-one years in New Castle County	16,760
Whole number, etc., in Kent County	6,862
Whole number, etc., in Sussex County	8,227
Total	31,849
Whole number of white children attending free schools in New Castle County	11,056
Whole number, etc., in Kent County	4,905
Whole number, etc., in Sussex County	6,437
Total	22,398
Whole number of colored children between the ages of five and twenty-one years in New Castle County	1,800
Whole number, etc., in Kent County	1,400
Whole number, etc., in Sussex County	1,100
Total	3,800
Whole number of colored children attending free schools in New Castle County	580
Whole number, etc., in Kent County	580
Whole number, etc., in Sussex County	508
Total	1,668
Whole amount of school property in New Castle County	\$381,299 04
Whole amount of school property in Kent County	53,088 00
Whole amount of school property in Sussex County	61,569 60
Total	\$450,956 64

DENMARK, a kingdom in Northern Europe. Reigning sovereign, Christian IX., fourth son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, appointed to the succession of the Danish crown by the Treaty of London, of May 8, 1852, and by the Danish law of succession of July 31, 1853; succeeded to the throne on the death of King Frederick VII., November 15, 1863; married, May 26, 1842, to Louise, daughter of Hesse-Cassel. Heir-apparent, Prince Frederick, born June 3, 1843; married, July 28, 1869, to Louisa, only daughter of the late King Charles XV. of Sweden; offspring of this union are three sons, born in

1870, 1872, and 1876; and a daughter, born in 1875. The King has a civil list of 500,000 rigsdalers, and the heir-apparent 60,000 rigsdalers. The present Ministry was formed on June 11, 1875, and was, at the close of 1877, composed as follows: President of the Council and Minister of Finance, J. B. S. Estrup; Minister of the Interior, E. V. R. Skeel; Minister of Justice and Minister for Iceland, J. M. V. Nellesmann; Minister of Worship and Public Instruction, J. C. H. Fischer; Minister of Foreign Affairs, O. D. Baron Rosenörn-Lehn, appointed October 11, 1875; Minister of War and of the Navy, General J. C. F. Dreyer, appointed July 28, 1877.

The area of Denmark proper, inclusive of lakes, is 14,753 square miles; of European dependencies (Faroe Islands and Iceland), 40,268 square miles; of American possessions, Greenland, St. John, St. Thomas, and St. Croix, 759,000 square miles. The population* was, in 1870 and 1876, as follows:

COUNTRY.	Census of 1870.	Official Calculation, 1876.
Denmark proper	1,784,741	1,903,000
Dependencies	127,401	129,800
Total	1,912,142	2,032,800

In the budget for 1876-'77 the receipts were estimated at 48,085,953 and the expenditures at 46,695,071 crowns. The public debt on March 31, 1876, amounted to 181,773,245 crowns.

The following table exhibits the value of Danish commerce in the year 1875, value expressed in crowns:

COUNTRIES.	Imports.	Exports.
Great Britain	63,563,000	72,108,000
Germany	83,888,000	48,781,000
Sweden	25,814,000	22,666,000
Norway	7,419,000	17,789,000
Russia	7,149,000	1,270,000
Holland	7,296,000	1,046,000
Belgium	8,428,000	1,218,000
France	4,787,000	46,000
Iceland	2,619,000	2,288,000
Greenland	896,000	651,000
United States	2,107,000	188,000
Danish Antilles	2,771,000	150,000
Brazil	8,627,000	16,000
Faroe Islands	628,000	528,000
Other countries	11,812,000	2,083,000
Total	227,744,000	170,658,000

The imports and exports were divided as follows among the different classes of goods:

CLASSES OF GOODS.	Imports.	Exports.
Articles of food	67,300,000	134,800,000
Raw material	62,000,000	12,000,000
Manufactured goods	80,200,000	16,200,000
Machinery, instruments, etc.	18,200,000	7,700,000
Total	227,700,000	170,700,000

The movement of shipping during the year 1875 was as follows:

* For population of the divisions of Denmark proper and the several dependencies, see ANNUAL CYCLOPEDIA for 1876.

VESSELS.		SAILING VESSELS.		STEAMERS.		TOTAL.	
		Number.	Tons.	Number.	Tons.	Number.	Tons.
ENTERED.	Coasting vessels.....	15,759	185,210	6,869	178,104	22,628	363,314

	Ocean vessels.....	14,590	179,086	6,125	229,484	20,715	408,520

The following table exhibits the condition of the commercial navy from 1872 to 1875:

DATES.	SAILING VESSELS.		STEAMBOATS.			TOTAL.	
	Number.	Tons.	Number.	Tons.	Horse-power.	Number.	Tons.
1872, March.....	2,655	173,444	91	15,633	5,748	2,746	189,077
1873, ".....	2,629	175,657	109	21,602	6,912	2,738	197,259
1874, ".....	2,723	185,219	123	27,351	7,988	2,846	212,600
1875, December.....	3,081	211,165	169	39,478	11,509	3,250	250,643

Besides, there were, in 1875, 10,920 vessels having each 4 tons or less. The aggregate length of railroads in operation on January 1, 1877, was 1,366.17 kilometres (1 kilometre = 0.62 English mile), of which 811.25 kilometres were state roads, and 554.92 kilometres private roads.

The Danish Legislature met on January 9th. The Folkething, or Lower House, organized by reelecting its presidents of 1876, Krabbe, J. A. Hansen, and Høgsbro. The Folkething continued in its opposition to the Government in the discussion of the budget. In January the Landsting passed a bill on the third reading, introducing the metrical system of weights and measures in the kingdom, after it had been previously passed by the Folkething. The majority of the committee were in favor of the rejection of the 50,000 crowns demanded by the Government for the representation of Denmark at the Paris Exhibition of 1878. A large number of Danish manufacturers also protested against the participation, and sent an address to the King, declaring that 50,000 crowns were insufficient for the purpose, and 250,000 crowns, the sum which would probably be necessary, was too much for the country. At the third reading of the budget, the Folkething rejected all propositions of the Government, and sanctioned all the suggestions of its budget committee, by a vote of 68 to 25. During the general debate of January 29th, the speakers of the Left were so excited, that the president was forced to call them frequently to order. The opposition rejected all plans of compromise, and even went so far as to move the indictment of the former ministers, Krieger, Holstein-Holsteinborg, Fønnesbech, Hall, and Worsaae, for building a new theatre a few years previously, without waiting for the consent of the Chamber. The motion was carried on January 30th, and the deputy Hørup appointed public prosecutor. The session of the Chambers, which had been extended for two months on December 2, 1876, was extended two more months on February 2d, to give the Landsting time to consider the budget as passed by the

Folkething. The general depression of business caused large numbers of workmen to be without employment. To relieve them, it was proposed by the Government to advance 1,000,000 crowns to the different communes, to enable them to employ those without any other work, on public works. The united Left of the Folkething passed a resolution to make a present of this sum to the communes, while the Government proposition was also adopted. In the second week of March, the Landsting returned the budget to the Folkething, as originally presented by the Government. As the two Chambers could not agree on the budget, a joint committee of both Houses was appointed to settle the matter. Of the 30 members of this committee, 16 belonged to the Government party, and 14 to the opposition. The Folkething, in March, not only granted the 50,000 crowns demanded by the Government, to represent Denmark at the Paris Exhibition of 1878, which it had originally refused, but raised it to 125,000 crowns. As the discussions were yet unfinished on April 1st, the session was again extended till April 15th. The joint committee being unable to come to any agreement, it contented itself by embodying the wishes of the two parties in two resolutions, which were presented to the two Chambers. The resolution in favor of the Government was adopted by the Landsting, and that in favor of the opposition by the Folkething. The Government, therefore, was forced to content itself with a provisional budget. The session of the Chambers was closed, by a royal order, on April 4th.

In the latter part of July, General Haffner, the Minister of War, resigned, and General Dreyer, the Inspector-General of the Engineer Corps, was appointed in his place.

The Rigsdag was again opened, on October 1st, by the President of the Ministry, without a speech from the throne. On the 2d the Minister of Finance submitted the budget for 1878-'79, and shortly afterward that for 1877-'78 to the Folkething. The latter budget was referred to a committee of 15, who were to con-

fer with the Ministry on the provisional budget, and pave the way for the acceptance of the definite budget, if the provisional one should not be adopted. On October 31st, the report of the Finance Committee was brought forward. The Left, forming the majority of the committee, moved that the House should reject the provisional financial law which was attached as a note to the budget of 1877-'78, and then pass to the second reading of the budget itself. At the same time, the Left offered to give a provisional sanction to the budget in a form which the Ministry declared unacceptable. The Right offered, in case of the provisional budget passing to a second reading, to vote for its preliminary approval in the form accepted by the Ministry. On November 7th,

Landsting. The Government declared itself in favor of this temporary law, which was, nevertheless, changed by the Landsting, and returned to the Folkething, which restored it to its original form, when it was again changed by the Upper House. At this stage, a joint committee was appointed, which arranged a satisfactory compromise bill, which was adopted by both Chambers on November 8th. The Rigsdag continued its session beyond December 1st, the day fixed by law for its adjournment, with the consent of the King.

The trial of Messrs. Hall and Worsaae, the ex-ministers charged with the misappropriation of public moneys, which was resolved upon by the Chambers in the beginning of the year, came to a hearing before the Supreme Court on September 24th, after several previous adjournments of the case; and, in the beginning of October, the court acquitted the two ex-ministers.

The social democrats, who had always been very strong in Denmark, met with serious reverses. In January, one of their leaders, Brix, was sentenced to four years in the House of Correction, for insulting the King. On March 24th, two other leaders, MM. Pio and Gøleff, the so-called "two martyrs," the editors of the *Social Democrat*, suddenly left for parts unknown. Great excitement prevailed when it

was discovered that they had taken all the money on hand, belonging not only to the paper but to the various working-men's building societies, the trades unions—in fact, every available shilling which had been intrusted to them, including even a sum of some 2,000 dollars belonging to the leader of the female socialists, the Swedish Baroness Liliencrantz, besides leaving debts calculated at 16,000 to 20,000 crowns.

DERVISH PASHA, the commander of the Turkish corps at Batum, was born about 1805. A Bulgarian by birth, he renounced, at an early age, Christianity, and is now a Mohammedan. His name first became known in the campaign in the Corsan-Dagh, where he so distinguished himself by his energy and severity, that the conquered Kurds mentioned his name for a long time with fear. Under the administration of his old comrade, Hussein Avni Pasha, he became, in 1873, Minister of War; was then for a time Minister of the Navy, and was finally appointed commander of the troops in Albania, where he conducted the campaign against

KRONBORG CASTLE, ELSINORE.

the Folkething, after a debate lasting three days, refused to sanction the provisional financial law of April 12th. This law was made by the Ministry, because the Chambers could not agree on a definite budget. The Ministry had, however, neglected to have the provisional financial law, which was valid up to April 15th, renewed by the Chambers; if this had been done, much trouble would have been avoided. The reason why this step had not been taken became known during the debate on the question of sanctioning this law. The Prime Minister stated that, at the time, the material for the new law was ready, but as he, the President of the Ministry could not make himself heard during the session of March 31st, it had been impossible to submit it to the Chambers. As soon as the provisional law had been defeated, a temporary one was proposed. This did not come from the Government, but from a member of the Folkething, and was passed, after having been received in about the same form as the budget passed by the Folkething on March 31st, but which was afterward rejected by the

Montenegro with decidedly poor luck. After having been replaced by Mehemed Ali, he remained for a time out of favor, and was then appointed Governor of Salinica, after the massacre in that city. There he remained until June, 1877, when he was appointed commander of Batum.

DEVENS, CHARLES, Attorney-General of the United States, was born at Charlestown, Mass., in 1820. He graduated at Harvard College in 1838, and, after a course in the law school of that institution, began practice in Franklin County in 1841. He was elected to the State Senate in 1846, and was United States Marshal from 1849 to 1853, during which time it became his duty to act officially in the rendition of the fugitive slave, Thomas Sims, whose case attracted wide attention. Afterward, when Mrs. Lydia Maria Child was making efforts to raise money by subscription to redeem Sims from slavery, Mr. Devens wrote to her, saying: "If you have received any contributions, please return them to the donors, as I wish to contribute the entire sum myself." In the spring of 1861 Mr. Devens entered the army as major, and in August became major of the 15th Massachusetts regiment, which took part in the Peninsular campaign. He was appointed brigadier-general in April, 1862, took an active part in many of the battles fought in Virginia, and, after the fall of Richmond, was made brevet major-general of volunteers. He acted as military governor for a year (1865-'66) in South Carolina; was a judge of the Superior Court of Massachusetts from 1867 to 1873, and was a justice of the Supreme Court of that State from 1873 till March, 1877, when he was appointed by President Hayes Attorney-General of the United States. During the war, General Devens distinguished himself as a brave soldier, and during his judicial career became known as a sound jurist.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The relations of the United States with other nations were very friendly during 1877; and the correspondence, which is quite limited, contains nothing of special importance.

DISCIPLES OF CHRIST. The *General Christian Missionary Convention* of the Disciples of Christ met at St. Louis, Mo., October 25th. Elder W. K. Pendleton presided. Besides the United States, delegates were present from Canada, and one delegate from Australia. The report of the Board of Home Missions showed that the amount of \$45,410.90 had been received during the year for the purposes of its work, besides which \$51,500 had been received in the form of bequests, for missionary work, and \$11,000 had been subscribed, in stock, for the Southern Christian Institute, for the education, chiefly, of colored teachers and preachers of the Gospel. The total amount of money expended for all missionary purposes since 1869, when the organization took its present name, had been \$471,789.73. The to-

tal amount of bequests during the same period had been \$85,744. The total amount received from the proceeds of the Hymn-Book fund, from collections by the secretary, and contributions for weak churches, and the Mississippi Mission, was \$5,532.91. The total number of additions to the churches under the care of the Board, during the year, had been 3,786; and the total number of additions since 1869 was 43,123. These numbers represent only the amounts raised, and the members received into the church under the immediate care of the Board. It was estimated that the funds raised and the additions received in the State Conventions, apart from the operations of the Board, would show nearly equal results. The Board of Foreign Missions reported that satisfactory progress had been made in all its fields of work, particularly in the English and Danish missions. A French mission had been contemplated for some time, but the financial condition of the Board had not been such as to justify an appropriation for the establishment of it. Two missionaries were ready to go, and the enterprise was commended to the interest of the churches represented in the Convention. The report of the Committee on Weak Churches gave a discouraging view of the situation of many churches, and the proposition to institute measures for providing for their necessities awakened considerable opposition.

The *Christian Woman's Board of Missions* met in connection with the meeting of the Convention. The secretary reported that 18 State organizations had been formed, with a total of 382 members. The total receipts of the Board during the three years in which it had been in existence had been \$4,986.69. An account was given of the work of the Board in Jamaica.

A *National Sunday-School Convention* was also held, in connection with the General Convention. It recommended to the General Convention the creation of a Sunday-school board of 5 members, whose duty it should be to superintend and promote the organization of Sunday-school work and the publication of Sunday-school literature, and the appointment of a corresponding secretary, to labor in the interest of Sunday-schools among the churches, and to promote unity and efficiency of method and means in the work.

DISRAELI, BENJAMIN, Earl of Beaconsfield, an English author and statesman, Prime Minister of England. The career of Mr. Disraeli is one of the most extraordinary in English history. By genius and energy, unaided by wealth or family connections, he has made himself leader of the House of Commons, minister of finance in the most commercial of countries, and twice prime minister of one of the mightiest of modern empires. He was born in London, December 21, 1805, and is the eldest son of Isaac Disraeli, the author of "Curiosities of Literature," and other works. His mother's maiden name was Baseri. He re-

ceived his education at home, from his father, and from private tutors. An intimate friend of his father, an eminent solicitor, who had a great practice, and no son of his own, wished to make Benjamin the heir of his business, and took him into his office for a time. But the young Disraeli did not like the life of a lawyer, and was not ambitious of success in that direction. He therefore abandoned the solicitor's office, with its brilliant prospect of wealth and reputation, and devoted himself to literature. His personal beauty, refined manners, and remarkable powers of conversation, soon made him a favorite in society.

At the age of nineteen he visited Germany, and on his return to England published, in 1826-27, his famous novel "Vivian Grey," the chief characters in which were faithful pictures of himself, and of persons well known in English society. The originality, vivacity, and wit of this book gave it great celebrity, and it was translated into the principal languages of Europe. It is said, by several of his biographers, that at this period he was made editor of a daily paper called "The Representative;" but this is not true. In 1828 he published, in one volume, "The Voyage of Captain Popanilla," a gay and good-humored but flimsy satire, which met with little success. The next year he commenced an extended tour in Italy, Greece, Albania, Syria, Egypt, and Nubia, and returned in 1831. Shortly afterward he published his second fashionable novel, "The Young Duke," and in the following year another novel, "Contarini Fleming, a Psychological Autobiography," which Heinrich Heine pronounced to be "one of the most original works ever written," and which received high praise from Goethe, and from Beckford, the author of "Vathek." Its subject is the development of the poetical nature, and it contains brilliant sketches of Italy, Spain, Greece, Asia Minor, Syria, and Egypt. The author himself has said of it recently, "It would have been better if a subject so essentially psychological had been treated at a more mature period of life." At this time Disraeli made his first attempt to enter Parliament. He presented himself to the electors of High Wycombe, Buckinghamshire, near his father's residence, as a Tory-Radical, and was defeated by the Whig candidate. In December, 1834, he was again defeated in Wycombe. He next appeared in May, 1835, at Taunton, as a thorough-going Conservative. It was on this occasion that, when charged by somebody in the crowd with "O'Connellism," he called the great Irish agitator a "bloody traitor;" to which Mr. O'Connell made the retort, "For aught I know, the present Disraeli is the true heir-at-law of the impenitent thief who died on the cross." Disraeli challenged O'Connell's son, Morgan O'Connell, who had taken up his father's quarrel; but the challenge was not accepted.

In the meanwhile Disraeli wrote and published several books. "The Wondrous Tale of

Alroy," an Oriental romance of extraordinary eloquence and power, depicting the adventures of a prince of the house of David, who, in the twelfth century, proclaimed himself the Messiah, and called the Jews of Persia to arms, appeared in 1833, accompanied by "The Rise of Iskander," a tale founded on the revolt of the famous Scanderbeg against the Turks in the fifteenth century; a political pamphlet entitled "What is He?" in 1834, in which he tried to explain his political views; "The Revolutionary Epic," and "The Crisis Examined," in the same year; and a "Vindication of the English Constitution," in 1835. In 1836 he published a series of letters in the London *Times*, under the signature of "Runnymede," which were read with great interest on account of their remarkable wit and sarcasm. Toward the close of the same year he published a love story, "Henrietta Temple;" and in the spring of 1837 appeared "Venetia," a novel, in which he portrayed the characters and appearance of Lord Byron and Percy Bysshe Shelley. At last he achieved the great object of his ambition. In the first Parliament of the reign of Victoria, being then thirty-two years of age, he obtained a seat as representative of the Conservative borough of Maidstone. His maiden speech was a failure; the House refused to listen, and clamored him down in the rude English fashion. He closed in the following words: "I am not surprised at the reception I have experienced. I have begun several times many things, and I have often succeeded at last. I will sit down now, but the time will come when you will hear me." In July, 1839, this prediction began to be fulfilled; he made a speech which was listened to with attention, and praised for its ability. In that year he published his five-act tragedy "Count Alarcos," founded on an old Spanish ballad, and in the same year contracted a most fortunate marriage with the wealthy widow of Wyndham Lewis, his friend and colleague in the representation of Maidstone. The happy influence of this union upon his career he has himself acknowledged, in the graceful dedication of one of his novels to a "perfect wife."

In 1841 he was elected from the borough of Shrewsbury, and in 1841 published "Coningsby; or, The New Generation," which achieved great success, and had a wide circulation. The cause of its extraordinary popularity, apart from its great literary merit, was the fact of its principal characters being drawn from well-known persons then living. It was regarded also as an exposition of the views and designs of the famous half literary, half political party then attracting public attention under the name of "Young England," of which Disraeli was one of the most conspicuous leaders. In 1845 he published "Sibyl; or, The Two Nations," which depicts, with much care, the condition of the English people at that period, and especially the Chartist agitation. In 1847 he was returned as one of the members from Bucking-

hamshire, and in the same year he published "Ixion in Heaven," with other tales; and also "Tancred; or, The New Crusade," in some respects the best of his novels. He himself says, in the preface to his collected works (1870), that "Coningsby," "Sibyl," and "Tancred," form a trilogy, the object of which was to delineate the origin and character of English political parties.

He now began to take a leading part in the House of Commons. His severe attacks on Sir Robert Peel, for alleged treachery to his party in the adoption of his free-trade policy, are among the most remarkable speeches in the annals of the British Legislature. They established Disraeli's reputation as one of the most powerful debaters and keen and polished satirists in that body. In 1849 he became the recognized leader of the Conservative party in Parliament. A biography of his father, Isaac Disraeli (1849), and a memoir of his personal and political friend, Lord George Bentinck (1852), were his next literary productions. In March, 1852, in the first Derby administration, he received the appointment of Chancellor of the Exchequer, was made a member of the Privy Council, and became leader of the ministerial party in the House of Commons. He went out of office with the rest of the Derby ministry, in December of the same year. In February, 1858, when Lord Derby again accepted the task of forming a new cabinet, after the downfall of Lord Palmerston, Disraeli again became Chancellor of the Exchequer. In February, 1859, he brought forward an elaborate plan of electoral reform, a principal feature of which was the extension of the suffrage to the whole body of the educated class, without regard to property. The bill was defeated in the House of Commons, March 31st, and Parliament was dissolved April 23d. The Derby administration retained its place till June 11th, when the new Parliament passed a vote of want of confidence, and the ministry resigned. It was succeeded by the Palmerston-Russell cabinet, and on the death of Lord Palmerston, October 18, 1865, by the Russell-Gladstone ministry, which remained in power till June, 1866, when, owing to the unsatisfactory nature of the reform bill proposed by them, a vote of want of confidence was passed, and they resigned. Disraeli, during this period, was the leader of the opposition in the House of Commons. A new ministry was formed July 6th, the Earl of Derby being Prime Minister, and Disraeli Chancellor of the Exchequer. He was the chief supporter of the reform bill, signed by the Queen, August 15, 1867, which extended the right of suffrage to all householders in a borough, and to every person in a county who had a freehold of 40s. The Earl of Derby resigning in February, 1868, Disraeli became Prime Minister; but a majority in Parliament was opposed to the position which the ministry took on the question of disestablishing the Church of Ireland. Parlia-

ment was dissolved, but the new election showed a strong majority for the opposition; and, without waiting for its meeting, Disraeli, with his colleagues, resigned, December 2, 1868, and was succeeded as Prime Minister by Mr. Gladstone.

In 1870, Disraeli published "Lothair," a politico-religious novel, aimed at the Fenians, Communists, and the Jesuits. It had a great success, its circulation in the United States alone exceeding 80,000 copies. In 1868 he was offered a peerage by the Queen, which he declined for himself, but accepted for his wife, who was made Viscountess Beaconsfield, on November 28th of that year. She died December 23, 1872. In February, 1874, the parliamentary elections having resulted in a Conservative majority, Mr. Gladstone resigned, and Mr. Disraeli again became Prime Minister.

On February 17, 1876, Mr. Disraeli introduced a bill in the House of Commons, to authorize the Queen to take, in addition to her other titles, that of "Empress of India." After much opposition the bill became a law, April 27th. On the 16th of August, Mr. Disraeli was raised to the peerage, with the title of Earl of Beaconsfield.

DOMINION OF CANADA. The year was marked by the close of the proceedings of the Fisheries Commission, under the Treaty of Washington, which had been in session for some time at Halifax.

The fishery question dates from the article in the Treaty of 1783, which conceded to the Americans the right to fish in the Gulf, the Grand Bank, and all other banks and waters in the deep sea; and the liberty to fish on certain British coasts, and in certain waters within the territorial jurisdiction of Great Britain, with liberty also to land on British coasts for drying and curing purposes. This article gave rise to no dispute until 1814, when, in negotiating the Treaty of Ghent, the British Commissioners maintained that the war had destroyed its validity. The Americans, on the other hand, contended that the fishery rights secured them by the Treaty of Independence were irrevocable and inalienable. The rival diplomatists left the question open, and nothing was said of it in the Treaty of Ghent. The controversy was revived in 1815, and an attempt was made to settle it in 1818 by the convention of that year, which granted the Americans the right to fish in the deep sea, and to dry and cure on British coasts, as by the Treaty of 1783, while they renounced all claim to fish within three marine miles of the British coasts, bays, creeks, or harbors; still retaining, however, the right to enter such coasts, bays, etc., for shelter, repairing damages, and purchasing wood.

This agreement did not allay the dispute, and the fishery question was embittered by the Canso and headland questions, involving, practically, the right of Americans to fish in the Gulf of St. Lawrence, the Bay of Fundy, and the Bay Chaleur. This dispute, so far as it re-

lates to the Bay of Fundy, was submitted to arbitration in connection with the seizure of the Washington, and was decided in favor of this country.

Angry contentions continued from 1824 to 1854, when the rival claims of New England and the Colonists were amicably adjusted by the Reciprocity Treaty. In 1866 that agreement was abrogated, and American and Canadian interests were again placed in conflict. Canada, at the instance of the Imperial Government,

adopted a license system, but soon tired of the trouble and expense it entailed. Matters remained in that condition until the Treaty of Washington, in 1871, when an attempt was made to settle the dispute definitely. By that instrument the fisheries of both countries were thrown open reciprocally; but, inasmuch as it was asserted by England that the privileges she accorded were of greater value than those given in return, the subject was referred to a commission, to be composed of one commissioner from

QUEBEC, FROM POINT LEVI.

the United States and one from Great Britain, and a third to be nominated by the Emperor of Austria.

After a delay of nearly 6 years the Commission was organized, the three arbitrators being Mr. De Forse, Sir A. T. Galt, and ex-Judge Kellogg, of Massachusetts. Judge Foster, assisted by R. H. Dana, Jr., and others, had charge of the American case. The interests of Canada were confided mainly to Mr. Doutre, an eminent lawyer of Montreal.

The British case was divided into two parts—one concerning Canada, the other Newfoundland. It held, in effect, that the privilege of fishing in American waters is worthless, and claimed an award of \$12,000,000 for the use by Americans of the Canadian inshore fisheries for 12 years—the period of the treaty—and of \$2,280,000 for the use of the Newfoundland fisheries. The American case denied substantially these claims. The Commission awarded Great Britain the sum of \$5,500,000, to be paid within a year.

The timber-trade of the year has been far from satisfactory. While the railways are making better returns, the shipping interest has not found the year quite so advantageous. Some of the manufacturers are in an unsatisfactory state, principally through the competition of

surplus American stock. In others, notably the boot and shoe trade, there are both activity and progress. The coal-trade of Nova Scotia continues depressed.

In 1875 there were 1,968 failures, with liabilities \$28,843,967. In 1876 there were 1,728 failures, liabilities \$25,517,991. In 1877 the failures numbered 1,890, liabilities \$25,510,147. There is an increase over 1876 in the amount of liabilities in each province save Quebec and Nova Scotia, although the increase in New Brunswick is principally chargeable to the disastrous fire in St. John. The average of liabilities per failure in 1877 was \$13,497, against \$14,767 in 1876.

A satisfactory treaty was completed in September between the Dominion Government and the Blackfeet Indians, by which the Indians cede a large tract of valuable territory to the Canadian Government. In return for the relinquishment of the Indian rights to the territory ceded, the Commissioners promised, on behalf of the Canadian Government, to set aside a certain reservation for each band of Indians, giving to each family of five persons one square mile of land; and, in addition, each chief is to receive a present of \$25 in cash, a coat, and a Queen's silver medal. Four head men of each band are to receive each \$15 in cash and a coat,

while the remainder of the band, men, women, and children, are to receive each \$12. There is also promised to each band a present of ammunition, blankets, and various miscellaneous articles; and thereafter the following annual payments: To each chief, \$25; each head man, \$15; and to all others, irrespective of age, \$5 per head. The chiefs and head men are to receive, moreover, every third year, a suit of clothing; and there is to be distributed yearly to each band included in the treaty ammunition and twine to the value of \$750. The Indians are to receive agricultural implements, seed grain and potatoes, cattle, and carpenters' tools. The Government undertakes to establish a school on each reservation when the Indians become settled and ready for instruction. The Indians are guaranteed the right of hunting, trapping, and fishing on the ceded lands, subject to such regulations as the Government may devise. The Indians pledge themselves to observe the conditions of the treaty, and conduct themselves as loyal subjects of the Queen. They promise to obey the laws by maintaining peace and order among themselves and with

the other tribes, and also with all the subjects of her Majesty, and not to molest travelers or other persons. They agree to assist all officers of the Queen in bringing to justice any Indian guilty of violating the laws.

The several tracts of northwest territory, as surrendered by separate Indian treaties, may be generally described as follows: Treaty No. 1, effected August 3, 1871, Province of Manitoba, 18,600 square miles. Treaty No. 2, effected August 21, 1871, adjoining and northwest of Manitoba, 32,000 square miles. Treaty No. 3, effected October 3, 1873, east of Manitoba, and extending to the limits of Ontario, 49,700 square miles. Treaty No. 4, effected September 15, 1874, and supplementary treaty, September 21, 1874, west of treaty No. 2, south of South Saskatchewan, and extending from Lake Winnipeg, goes southwest to the Cypress Hills, 75,700 square miles. Treaty No. 5, effected September 20, 1875, and supplementary treaty, September 24, 1875, embracing territory generally surrounding Lake Winnipeg, 102,000 square miles. Treaty No. 6, effected in 1876, territory traversed by the main Saskatchewan,

UNIVERSITY OF TORONTO.

extending from treaty No. 5 to the Rocky Mountains, 120,000 square miles. Treaty No. 7, effected September, 1877, embracing the country between the Cypress Hills and the Rocky Mountains, and extending northerly from the international boundary to the southerly boundary of treaty No. 6, 51,000 square miles. Total, 440,000 square miles.

The annual report of the Postmaster-General shows that the number of letters carried in 1877 was 45,510,000; postal cards, 5,450,000; registered letters, 1,842,000; free letters, 1,096,-

000; newspapers and periodicals, 39,000,000; books and miscellaneous articles, 4,638,000, and 90,000 parcels. The income for the year was \$1,501,134, and the expenditures \$2,075,618. Nearly \$7,000,000 passed through the money-order office in the course of the year. The number of miles of mail-travel was 15,126,676.

There are 416 light-house stations in the Dominion, showing 509 lights.

The following table exhibits the commerce of the Dominion, by provinces, for the year ending June 30, 1876:

PROVINCES.	Total Exports.	Total Imports.	Entered for Consumption.	Duty.
Ontario.....	\$24,782,744	\$37,559,446	\$37,637,738	\$4,408,682 18
Quebec.....	37,876,815	35,035,091	36,156,665	6,103,827 22
Nova Scotia.....	7,164,558	8,596,503	8,711,966	1,233,518 26
New Brunswick.....	5,950,824	5,885,154	6,118,768	1,043,915 28
Manitoba.....	770,183	1,803,651	1,735,427	253,045 88
British Columbia.....	2,755,787	2,996,996	2,944,975	483,384 52
Prince Edward Island.....	1,665,519	1,333,505	1,382,679	233,547 71
Northwest Territories.....	8,243 48
Totals	\$80,966,435	\$93,210,346	\$94,733,218	\$12,833,114 48

The total commerce of the Dominion for nine fiscal years has been as follows:

YEARS.	Total Exports.	Total Imports.	Entered for Consumption.	Duty.
1868.....	\$57,567,898	\$73,459,644	\$71,985,306	\$8,319,431 63
1869.....	60,474,781	70,415,165	67,402,170	8,293,909 71
1870.....	73,573,490	74,814,339	71,237,603	9,463,940 44
1871.....	74,173,613	96,092,971	86,947,432	11,843,655 75
1872.....	82,639,669	111,430,527	107,709,116	13,045,493 50
1873.....	89,789,922	123,011,231	127,514,594	13,017,730 17
1874.....	89,351,923	123,213,562	127,404,169	14,421,882 67
1875.....	77,896,979	123,070,238	119,613,657	15,361,882 12
1876.....	50,966,435	93,210,346	94,733,218	12,833,114 48
Aggregate for nine years.....	\$686,424,704	\$898,718,138	\$874,552,315	\$107,104,540 47

The values of exports and goods entered for consumption, by countries, for four fiscal years, are given below:

EXPORTS.

The exports for the year ending June 30, 1876, are thus classified :

	Produce.	Not Produce.	Total.
Produce of the mine.....	\$3,781,827	\$55,975	\$3,787,802
Produce of the fisheries.....	5,500,989	232	5,501,221
Produce of the forest.....	20,128,064	209,405	20,337,469
Animals and their produce.....	13,517,654	1,030,599	14,548,253
Agricultural products.....	21,139,665	5,169,024	26,308,689
Manufactures.....	5,953,867	619,546	5,972,913
Miscellaneous articles.....	490,283	150,180	640,463
Total.....	\$69,861,849	\$7,234,961	\$77,096,810
Coin and bullion.....			1,240,037
Estimated amount short returned at inland ports.....			2,629,588
Grand total.....			\$80,966,435

The number of coastwise arrivals during the year was 31,302, tonnage 5,167,528; departures, 30,273, tonnage 5,133,411. The number of vessels built during the year ending December 31, 1876, was as follows:

PROVINCES.	Vessels.	Tons.
New Brunswick.....	61	31,040
Nova Scotia.....	194	58,771
Quebec.....	51	17,500
Ontario.....	47	5,897
Prince Edward Island.....	62	14,571
British Columbia.....	1	121
Total.....	416	127,700

The number of vessels on the registry books of the Dominion on the last mentioned date is shown in the following table:

NATIONALITY.	Steamers.	Gross Tonnage of Steamers.	Net Tonnage of Steamers	Sailing Vessels.	Net Tonnage of Sailing Vessels.	Total Net Tonnage
British, including Colonies.....	3,299	3,362,992	2,216,606	20,265	5,807,865	8,023,971

The value of the fisheries for the season 1876 was \$11,147,590, viz.: Nova Scotia, \$6,029,050; New Brunswick, \$1,953,388; Quebec, \$2,097,667; Ontario, \$437,230; Prince Edward Island, \$494,967; British Columbia and Manitoba, \$135,288. The total product exceeds that of 1875 by upward of \$500,000.

The Dominion Government has seven public establishments devoted to the artificial reproduction of fish, as follows: at Newcastle, Ontario; Sandwich, Ontario; Tadoussac, Quebec; Gaspé Basin, Quebec; Restigouche, Quebec; Bedford, Nova Scotia; Miramichi, New Brunswick. These are employed chiefly in hatching white-fish and salmon eggs.

The number of applications for patents in

VOL. XVII.—17 A

1876 was 1,548; patents granted, 1,382; caveats, 185; transfers of patents registered, 761; designs registered, 47; trade marks registered, 238; copyrights registered, 178; timber marks registered, 17. Of the patentees, 575 were Canadians, and 736 residents of the United States.

The immigrants who enter Canada are divided into two classes—those who come with intention to settle, and those who simply make use of the Canadian route for the purpose of proceeding to the Western States. They may, therefore, be properly described as immigrants and immigrant passengers. The following table shows the relative numbers of these, as they have been reported, from 1866 to 1876, inclusive:

YEARS.	Immigrant Passengers for Western States.	Immigrant Settlers in Canada.	PROVINCES.		Indian Population.
1866.....	41,704	10,091	Ontario.....	15,549	
1867.....	47,212	14,666	Quebec.....	10,504	
1868.....	58,683	12,765	Nova Scotia.....	2,091	
1869.....	57,202	18,630	New Brunswick.....	1,440	
1870.....	44,313	24,706	Prince Edward Island.....	299	
1871.....	37,949	27,773	Manitoba and the Northwest Territories.....	25,945

1873.....	49,059	50,050	Rupert's Land.....	4,370	
1874.....	40,649	39,373			
1875.....	9,214	27,332			
1876.....	10,916	25,633			
			Total.....	92,513	
The inland revenue during the year ending June 30, 1876, was \$6,376,332, of which the sum of \$5,538,277 was from excise. Of this.					

These figures include the special Mennonite and Icelandic immigration (to Manitoba) during the year last named; the former numbering 1,357 and the latter 1,156. The Indian population of the Dominion in 1876 was as follows:

The inland revenue during the year ending June 30, 1876, was \$6,376,332, of which the sum of \$5,538,277 was from excise. Of this, spirits represented \$3,099,893; tobacco, \$1,775,450; malt, \$327,709; petroleum, \$285,553. The following were the transactions of the savings banks of the Dominion from July 1, 1875, to June 30, 1876:

CLASS.	DEPOSITS.			
	Balances July 1, 1875.	Cash.	Interest allowed.	Total.

Total.....	\$5,364,627 90	\$7,044,118 09	\$12,408,745 99

The debt of Canada on July 1, 1876, was as follows:

LIABILITIES.	
Without interest.....	\$28,109,916 35
At 4 per cent. interest.....	53,434,907 35
" 5 " ".....	46,281,617 45
" 6 " ".....	38,328,246 71
Total debt.....	\$161,204,687 86
Total interest.....	6,753,171 89
Average rate of interest.....	4 13

ASSETS.	
Without interest.....	\$21,167,834 23
At varying rates.....	1,615,987 86
At 4 per cent. interest.....	4,302,955 47
" 5 " ".....	7,674,341 29
" 6 " ".....	1,392,004 93
Total assets.....	\$36,658,173 73
Total interest.....	673,955 49
Average rate of interest.....	1 83
Total debt.....	\$161,204,687 86
Total assets.....	\$36,658,173 73
Net debt.....	\$124,551,514 08
Total interest on debt.....	6,753,171 89
Total interest on assets.....	673,955 49
Net interest.....	\$6,079,216 40
Average.....	4 88

The receipts and expenditures for 1875-'76 are shown in the following table:

ACCOUNT.	Receipts.	Expenditures.
Consolidated fund.....	\$22,587,587	\$24,488,372
Loans.....	16,986,976	*4,772,798
Premium and discount loan account.....		315,654
Open accounts.....	4,397,505	13,499,017
Total.....	\$43,972,068	\$43,075,841

Among the items of expenditure were \$11,122,359 charges for debt and provincial subsidies, \$3,569,774 for ordinary expenses, and \$4,796,239 charges on revenue. The banks of Ontario and Quebec, acting under charter, on December 31, 1876, had a paid-up capital of \$62,092,693; circulation, \$20,735,756; total liabilities, \$94,138,965; total assets, \$170,070,739, of which the sum of \$29,060,215 was immediately available. The following is a summary of the educational statistics of Quebec for 1876-'77:

INSTITUTIONS.	Number.	Instructors.	Pupils.
Universities.....	8	84	680
Secondary schools.....	262	1,326	40,732
Normal schools.....	8	47	309
Special schools.....	17	94	1,619
Primary schools.....	4,306	4,966	191,734
Total.....	4,591	6,517	235,064

*Redemption.

In New Brunswick the number of pupils in attendance during the term ending April 30, 1877, was 51,638; during the year ending on that date, 66,390. During the winter term of 1876, the attendance was 47,870; during the summer term, 52,020; during the year ending October 31, 1876, 64,689. The percentage of enrolled pupils in daily attendance during 1876, was 57.61 in the winter term, and 53.24 in the summer term. The whole number of schools in operation during the winter term was 1,134; summer term, 1,274; teachers, winter, 1,187; summer, 1,320. There were 325 graded school

WOLFE'S MONUMENT, QUEBEC.

departments, with an average daily attendance of 10,268; 49 superior schools, with 2,829 pupils; and 14 grammar-schools, with 2,463 pupils, of whom 829 were in the grammar-school departments proper. A new normal school, at St. John, was inaugurated on August 14, 1877.

The following are the more important edu-

cational statistics of Ontario for 1876: total receipts, \$3,393,655, of which \$270,576 were from legislative grants, \$793,161 from municipal school assessment, \$1,553,574 from trustees' school assessment, and \$776,344 from other sources; total expenditure, \$3,006,456, of which \$1,838,322 were for teachers' salaries, \$49,082 for maps, prizes, etc., \$150,745 for rent, repairs, etc., \$630,265 for building, sites, etc., and \$338,042 for other purposes; school population (5 to 16), 502,250; number attending public schools, 490,537; average attendance, 212,483; number of teachers, 6,185; highest salary paid male teacher, \$1,000; lowest salary paid male teacher, \$120; average salary of male teachers, \$533; average salary of female teachers, \$268; number of schools open, 5,042; number of school-houses, 4,926, of which 1,417 were brick, 514 stone, 2,253 frame, and 742 log; number of schools opened and closed with prayer, 4,173; number of schools using maps, 4,603; average time public schools were open, 11 months and 14 days; number of Roman Catholic separate schools, 167; receipts of same, \$106,488; pupils, 25,294; average attendance, 12,779.

DRAGOMIROFF, a Russian general, was born in 1830. In 1849 he left the military academy, and was appointed an officer in the active army. During the wars of 1859, in Italy, and of 1866, in Germany, he was attached in the one case to the Sardinian, and in the other to the Prussian army, as Russian military attaché. From 1860-'69 he was Professor of Tactics in the Nicholas Academy of the General Staff, and in his lectures on the war of 1866 he showed himself possessed of a vast amount of learning, and of great powers of observation. In 1868 he was created major-general, and in the following year chief of staff of the military district of Kiev. In 1873 he received the command of the 14th Infantry Division, and in 1877 was the first to cross the Danube at Simnitz. During the battles at the Shipka Pass he was badly wounded. His orders of the day, instructing his troops how to act during the battle, have established for him a reputation as one of the ablest Russian generals.

E

EARTH, THE.* *Comparative Statistics.*—

We present below, as in the two former volumes of the ANNUAL CYCLOPEDIA, the comparative statistics of the area and population of the large divisions of the globe, of the numerical relation of the sexes in different countries, of the largest cities of the earth, and of the progress of railroads and telegraphs.

I. *Present Area and Population.*—The area and population of the large divisions of the world were estimated as follows, in 1877:

* For an account of former estimates of the total population of the earth, beginning with Isaac Vossius, see ANNUAL CYCLOPEDIA for 1875.

DIVISIONS.	Square Miles.	Population.
America	15,882,600	85,519,500
Europe	8,828,370	311,596,600
Asia	17,291,390	824,548,500
Africa	11,557,600	199,921,600
Australia and Polynesia	3,423,200	4,671,200
Total	51,978,600	1,426,257,700

The increase in population over the total of 1876 (2,340,000) is due to the increase in Europe, where new censuses and calculations, in several countries, have taken place.

II. *Statistics of Sex.*—The numeric relations

of the sexes in the different countries of the earth were as follows:

COUNTRIES.	No. of Females for 1,000 Males.	COUNTRIES.	No. of Females for 1,000 Males.
Portugal.....	1,073	St. Pierre and Miquelon.....	852
Sweden.....	1,059	America.....	983
Great Britain and Ireland.....	1,058	Lagos.....	1,161
Finland.....	1,046	St. Helena.....	1,031
Switzerland.....	1,046	Egypt.....	1,025
Germany.....	1,036	Cape Colony.....	974
Norway.....	1,036	Gambia.....	942
Netherlands.....	1,028	Mauritius.....	647
Denmark.....	1,026	Réunion.....	618
Austro-Hungary.....	1,024	Mayotte and Nossi-Bé.....	522
Russia.....	1,022	Africa.....	930
Spain.....	1,018	Samos.....	983
France.....	1,007	Japan.....	972
Italy.....	989	British India.....	943
Luxemburg.....	989	Siberia.....	932
Belgium.....	935	French colonies in India.....	921
Serbia.....	946	Russian Cent'l Asia.....	909
Roumania.....	937	Caucasus.....	898
Greece.....	933	Ceylon.....	818
Europe.....	1,022	Labuan.....	618
Ecuador.....	1,189	Straits Settlements.....	537
Dutch West Indies.....	1,184	Hong-Kong.....	865
Greenland.....	1,181	Asia.....	943
Martinique.....	1,091	Australia, New Zealand, and Tasmania.....	812
U. S. of Colombia.....	1,061		
Guadeloupe.....	1,041		
Chili.....	1,007		
United States.....	973		
Peru.....	977		
Canada.....	976		
Dutch Guiana.....	969		
Argentine Republic.....	942		
Brazil.....	938		

III. *The Largest Cities.*—The population of the principal cities of the earth was as follows, according to the latest accounts:

CITIES.	Population.
1. London (1877).....	3,533,434
2. Paris (1876).....	1,983,806
3. New York (1875).....	1,028,622
4. Vienna (1875, without the military).....	1,001,999
5. Berlin (1877, without suburbs).....	1,000,309
6. Canton.....	1,000,000
7. Siantan (Hunan).....	1,000,000
8. Siangfoo (Shensi).....	1,000,000
9. Tchanchowfoo (Fokien).....	1,000,000
10. Tientsin (Chihli).....	930,000
11. Philadelphia (1876).....	817,448
12. Tchungkoofoo (Szechuen).....	800,060
13. Calcutta (India) (1871).....	794,645
14. St. Petersburg (1869).....	667,963
15. Bombay (India) (1871).....	644,405
16. Moscow.....	601,969
17. Constantinople.....	600,000
18. Fokien.....	600,000
19. Hangchowfoo (Chihkiang).....	600,000
20. Hankow (Hupeh).....	600,000
21. Shooching (Chihkiang).....	600,000
22. Tokio (1872).....	595,905
23. Glasgow (1876).....	545,144
24. Liverpool (1877).....	527,083
25. Bangkok (Siam).....	500,000
26. Peking.....	500,000
27. Soochow (Kwangsi).....	500,000
28. Wenchow (Chihkiang).....	500,000
29. Brooklyn (1875).....	484,616
30. { Manchester (1876).....	857,917
{ Salford (1876).....	138,425
31. Nanking (Kwangsi).....	450,000
32. St. Louis (1875).....	450,000
33. Naples (1871).....	415,549
34. Chicago (1875).....	410,000
35. Tachan (Kwangtung).....	400,000
36. Madras (India) (1871).....	397,552
37. Birmingham (England) (1877).....	377,436
38. Yangchoo (Kiangsu).....	360,000
39. Brussels { (1875, with suburbs).....	384,843
{ (1875, without suburbs).....	138,080

CITIES.	Population.
40. Cairo (Egypt) (1872).....	349,883
41. Hamburg { (1875).....	343,447
{ (without suburbs, 1875).....	264,675
42. Lyons (1876).....	242,800
43. Boston (Mass.) (1875).....	332,024
44. Warsaw (1876).....	320,136
45. Marseilles (1876).....	313,742
46. Dublin (1876).....	314,666
47. Buda-Pesth (1875).....	309,208
48. Amoy (Fokien).....	300,000
49. Kumamotoo (Japan).....	296,200
50. Amsterdam (1876).....	291,550
51. Leeds (1876).....	234,779
52. Lucknow (India) (1871).....	276,640
53. Shanghai.....	275,000
54. Lienkong (Fokien).....	274,972
55. Rio de Janeiro (Brazil) (1872).....	274,914

United States.....	124,674	Total.....	309,600
Cuba.....	646		
Chili.....	1,689		

The development of the railroads of the world will be found in the following table. The statements for the years 1830-'70 are according to Dr. G. Stürmer, "Geschichte der Eisenbahnen" (1872):

YEARS.	Kilometres.	YEARS.	Kilometres.
1830.....	332	1871.....	235,375
1840.....	8,591	1872.....	251,082
1850.....	38,022	1873.....	270,071
1855.....	68,148	1874.....	288,072
1860.....	106,886	1875.....	295,788
1865.....	145,114	1876.....	309,600
1870.....	221,980		

The average increase per year was as follows:

YEARS.	Kilometres.	YEARS.	Kilometres.
1830-'40.....	826	1870-'71.....	18,895
1840-'45.....	1,767	1871-'72.....	15,667
1845-'50.....	4,120	1872-'73.....	19,089
1850-'55.....	6,025	1873-'74.....	18,001
1855-'60.....	7,748	1874-'75.....	12,711
1860-'65.....	7,646	1875-'76.....	12,820
1865-'70.....	15,373

EASTERN QUESTION, THE. The Eastern question has again risen to prominence in European politics; it has been the most conspicuous topic in the negotiations and events of an international character that have occurred since 1875; and through 1877 so occupied the attention of all the great Powers, except France, as to throw all other foreign questions into the background. It is therefore a fitting time to review its present condition and aspects. The last especial notice which has been given to this question in the ANNUAL CYCLOPÆDIA was in the volume for 1871, when the demands of Russia for a revision of the clauses of the Treaty of Paris in reference to the Bosphorus and the Dardanelles, and the revision at the London Conference of 1871, were recorded. By that revision, Russia gained the right to build and maintain a fleet in the Black Sea—a

right which was denied by the terms of the original treaty. After the London Conference, matters in reference to the Eastern question were comparatively quiet until the insurrection in Herzegovina broke out, in 1875. Only a few events occurred to call to mind the excited discussions of the past, and they were comparatively insignificant, and their effect upon the bearing of diplomatic affairs was hardly perceptible. The settlement of the demands of the Bulgarians for the autonomy of the ecclesiastical organization in 1873 gave the Powers occasion to make representation of their views, but it was effected without paying attention to their suggestions. Russia obtained liberal concessions from the Porte regarding the rights of Russian subjects domiciled in Turkey, the negotiations relating to which were marked with a great appearance:

of cordiality and friendliness on both sides. Roumania claimed to exercise the right of concluding treaties with foreign powers, which called out a protest from the Porte, with a declaration that such a claim would not be tolerated, and Roumanian treaties concluded without consultation with the supreme Government would not be recognized by it. The Powers replied to the Porte that their interests on the Danube were too important to admit of their being interfered with by exaggerated pretensions of suzerainty on the Bosphorus, and on these grounds justified their direct negotiations with the Roumanian Government. The Porte replied to this that the Treaty of Paris must be maintained; but that, if Roumania would submit the treaties it proposed to make to the Porte, such adjustments could be effected as would meet the peculiar commercial necessities of the principalities. A difficulty arose between Turkey and Montenegro in 1874, on account of the murder of some Montenegrins, by Turks, at Podgoritz. An effort was made by some of the Powers to make this a question for joint settlement; but the Porte refused to allow them to interfere, and the adjustment was made without any help from abroad. Probably the most important event that happened during this period in reference to the Eastern question was the private agreement which the three Emperors of Russia, Germany, and Austria made in 1872, to act together in all matters relating to it, each Emperor covenanting to take no steps tending to reopen the difficulties with Turkey without first consulting the others, and exhausting, in conjunction with them, all means of reaching a peaceful understanding. This agreement, which has been called the League of the Three Emperors, was kept in the letter and spirit—at least as before the public—until the Russian declaration of war against Turkey; and Russia claims that it did all that could be demanded under the agreement before it issued its declaration.

When the insurrection broke out in Bosnia and Herzegovina, in 1875, all the resources of diplomatic skill were employed to confine the revolt to a narrow district, and to put an end to it, so that it should not lead to a reopening of the Eastern question, which all the Powers alike professed to dread. Representatives of the Powers were appointed to negotiate directly with the insurgents and with the Turkish officers, and intervene between them so as to adjust the difficulties, if possible, on the spot, and before they should make too much noise; this failing, the Porte was advised to make short and decisive work of suppressing the disturbance, and was afforded facilities by Austria for the movement of troops, which it had no right to claim except as a favor. As the insurrection spread, in spite of forcible measures, the efforts were renewed to bring about a settlement by negotiation. The discontented Christian provinces had made definite statements of their grievances and their demands

for reforms, and the Porte was advised by all the Powers, in the Andrassy note of January, 1876, to pacify them. Affairs had grown no better four months afterward, and the Berlin note, in May, renewed the suggestions of the Andrassy note, with a threat, concurred in by all the Powers but Great Britain. Servia and Montenegro rushed into war in July, but still the Powers struggled for a peaceful adjustment. Then came the conference at Constantinople, and the grant of the Turkish Constitution, both of which failed to secure the peace that was sought; and finally the protocol, demanding conditions which Turkey pretended to regard as an insult to its sovereignty, and flatly rejected. At last, Russia, declaring it would no longer suffer the interests of its fellow-Christians in Turkey to be trifled with, went to war, and compelled the world again to face the dreaded Eastern question, with all of its uncertainties, complications, and dangers.

This question seems to grow in complexity with every year, and presents at this time a network of conflicting claims, and interests, and difficulties, and contingencies, that may well puzzle the wisdom of statesmen, and excuse the desire of modern governments to push it aside. It is not a simple question of driving the Turks from Europe, or of redressing the wrongs of oppressed peoples; its solution involves a shock to the present adjustment of power in the whole Eastern world, concerns the conflicting interests of powerful and jealous nations, possibly the very existence of some of them, and is, in fact, beset with difficulties on every side and at every point.

Nearly all the chief Powers have interests in the settlement of Turkish affairs; but their interests are very unequal. Thus, Germany has hardly any direct interest involved. Its present close connection with Russia, and the moral support which it has given to its neighbor all through the war, are ascribed to its anticipation of future complications with France, and a desire to secure a powerful friend whenever hostilities should arise. France has been compelled, by its own internal situation, to be silent in the discussions of the last seven years. It had formerly very active interests both in Egypt and Syria, and is still determined to have a voice in whatever decision is made respecting the future fate of Syria. Italian interests are not large, but are important to the nation, and concern principally the acquisition of commercial facilities on the eastern coast of the Adriatic. The interests of Russia, Great Britain, and Austro-Hungary, are direct, and some of them vital. Russia needs a sea-coast and access to the Mediterranean, which it can get only by possessing the Black Sea and its double straits, or by pressing through Armenia and Syria; Great Britain is concerned about its routes to India and its commercial preponderance on the Mediterranean; Austro-Hungary anticipates being compelled to face the question of its national existence. With

these conflicts of interests are mixed up questions of the movements of races and the rights of nationalities, so closely that it is almost impossible to separate them, or judge of a single point upon its own merits.

The enemies of Russia assert that the protection of the Christian nationalities of Turkey is only the pretext which that Power is using to cover a plan for the extension of its dominions, and for carrying out the grand scheme of conquest which is the ambition of the Pan Slavist dreamers. They predict that the fall of Turkey will be followed by attacks on other nations which the Slavs claim. They allege that the events which led to the war, and gave the pretext for declaring it, were all produced from the beginning by Russian intrigue; that the discontent in the Turkish provinces is carefully excited and nursed by Russian agents; and that every device of ingenuity is exercised to promote misunderstanding between the Porte and its subjects. No evidence has been published to contradict the theory that the Russian Government acted in good faith through all the movements precedent to the war; but it seems to be well established that the Slavic committees, which represent the Pan Slavist organization of Russia, were very active in Bosnia and Herzegovina in 1875 and 1876, and afterward in Serbia and Bulgaria, and that they were the main supporters of the Bosnian insurrection. They had regular agents at Cettigne and Ragusa, who attended to the reception and distribution of the funds and supplies which were sent from Russia, ostensibly for the relief of the sick and wounded and fugitive insurrectionists, but really as much for the support of the insurrection; for their hospital director at Cettigne boasted that one half of the money sent was spent in procuring wounded to tend, while the other half was employed in healing them. They were likewise busy during the Servian war in organizing committees throughout Russia, exciting popular interest in their schemes, and manufacturing public opinion, with such success that the Czar was forced, by the pressure around him, to make his speech at Moscow on November 11, 1876, in which he styled himself the champion of the Slavic cause, and was regarded as committing himself to the programme of war.

The bearing of these facts upon the general question becomes more clear when it is understood that the efforts of the Slavic committees are not directed to the Slavic Christians of Turkey alone, but that their intrigues are aimed at all the Slavic communities of Europe, and that they aspire to separate such communities from whatever nations they may now be connected with, and to form of them a grand Slavic empire. This scheme is fraught with particular danger to Austro-Hungary, nearly half of whose people are Slavs of one name or another, not at all contented with the present rule; and especially to Hungary, whose scattered Magyars would be overwhelmed in the

case of a successful insurrection of the Slavs. It is quite natural, then, that the Hungarian statesmen should be alarmed at the prospect of Russian advance in the south, should cry out against it, as Klapka and Kossuth have done in addresses and publications, as the greatest disaster that could befall Hungary, and should have advised support of Turkey as a measure of protection against the growth of the Pan Slavist monster.

The interest of Great Britain is less strong than that of Austro-Hungary. It is purely commercial, and is, therefore, not vital to the existence of the nation, although very important in its bearing upon the safety of the Indian Empire. The appreciation of it was sharpened by the rapid advances which Russia made in Central Asia, and which threatened to bring a rival Power in dangerous proximity to the East Indian possessions, but has become less intense since the possession of the Suez Canal has given England a route to India independent of any influence which Russia may be able to exercise from the Black Sea or from Armenia. For many years a scheme for a railway from some Turkish port, through the Euphrates valley to the Persian Gulf, was favored by British statesmen and capitalists, as affording a favorable short route to India; and the idea of tolerating any advance of Russia, southward or westward, in Asia, was repelled as involving injury not only to the security of this route, but to the integrity of the Indian Empire. Since the British Government acquired a controlling interest in the Suez Canal, in 1875, its attention, and that of the British public, has been rather directed to developing and defending that route, which is already open and in operation, than to cultivating an extraordinary solicitude about a route which is as yet wholly in prospect, and involves the expenditure of immense sums of money. Under the influence of a calm discussion of the bearings of the case, the English have become less anxious about the fate of the Euphrates valley, and many statesmen, even of the anti-Russian party, have acknowledged that Russian extension in Asia will not justify interference. The British nation still expresses the determination to maintain the security of Egypt and the neutrality of Constantinople, the Dardanelles, and the Bosphorus, as toward the European Powers. The former is not at present endangered, and the latter is acknowledged by Russia to be a European question, subject to the decision of the Powers.

The most difficult question to decide, in case of a rearrangement of Turkey, is as to what disposition shall be made of the European provinces after the Turks are driven from them. No people among all the nationalities could take the place of the Turks as rulers, for not only is no single people strong enough to rule the whole country, but no one of the nationalities would submit to the exclusive rule of another under any conditions. It is agreed that

no great Power shall succeed Turkey, either at Constantinople or in the provinces, and it is understood with especial unanimity and stress that Russia must not be allowed to make any important acquisition in Europe. Further than this, counsels are divided and confused. The scheme for the formation of independent states, according to national or provincial lines, which some have proposed, has to encounter the objection that all of such states would be weak, and would either from the beginning, or eventually, have to fall under the protectorate of some powerful neighbor. This would be equivalent to giving them to one of the great Powers, or to the solution which has been rejected as not to be thought of. Moreover, the task of adjusting the claims of the rival nationalities would be a perplexing one. There are Roumanians in northern Bulgaria, as there are Greeks in southern Bulgaria, and Bulgarians among the Greeks in Macedonia, whose interests would have to be conciliated—and the interests of the Greeks and the Bulgarians seem almost irreconcilable.

Any settlement which does away with the existing condition of affairs will be resisted by Austro-Hungary with all its strength; for any possible settlement involves danger to the integrity, and even to the existence, of the empire and kingdom. If the settlement adds to Russia, it will strengthen Austria's most powerful and most dangerous enemy, and will weaken the attachment of some of the Slavic provinces. If new states are created, in whatever form, the whole Austro-Hungarian state will be in danger of falling to pieces; for some of its subject populations will be interested with their freed kindred, and desire to be joined with them, or to receive similar privileges. The Roumanians of Bukovina and Transylvania will wish to become part of the independent Roumania; the Croats and Servians of the Banat and Military Frontier will seek association with their fellow-Slavs in Servia and Bosnia; the Czechs and Poles will renew with increased vigor the demand for autonomy which they have hardly ceased to press since the Hungarian compromise went into operation. Steps would immediately be taken to carry into effect the idea of a great Servian or great Croatian kingdom, to embrace all the Servians and Croats, which has gained much strength on both sides of the Danube. Propositions have been mentioned to conciliate Austria to some of the schemes for a division of the provinces, by offering it a part of the territory, as Bosnia; but they have been repelled by the Austrians, for the reason that the empire has already all the Slavs it can get along with, and does not wish to be weakened with any more. The disposition of Constantinople is another point on which the Powers cannot agree. Regarding it as the most important single political and commercial point of the Eastern waters, the present arrangement seems to be the one best adapted

to prevent any state requiring an undue ascendancy there. Any new arrangement, however cautiously contrived, would be accompanied by the danger that it might leave an opening for some Power eventually to acquire influence at the expense of the others. Earl Derby, when he notified the Russian Government, at the beginning of the war, that the British Government was not prepared to witness with indifference its passage into the hands of any other than its present possessors, expressed a feeling which was common to all parties interested in its future.

These difficulties have not been overlooked by the statesmen and thinkers who have given their attention to the solution of the Eastern question, nor has their magnitude or importance been underestimated. A number of schemes have been proposed to obviate them, among the most feasible of which have been those which contemplated the erection of independent states, or a confederacy of states, under the joint protection of all the Powers, in European Turkey, and the establishment of Constantinople as the capital of a confederacy, or as a free city, under the same protection.

Count Capo d'Istria, an eminent Russian statesman, proposed the following plan in 1828: The Ottoman Empire in Europe should be replaced by five states of the second rank. These states should be: 1. The duchy or kingdom of Dacia, consisting of the principalities of Wallachia and Moldavia. 2. The kingdom of Servia, to include Bulgaria, Servia, and Bosnia. 3. The kingdom of Macedonia, to consist of Macedonia proper, with the islands of the Propontis and the islands of Imbros, Samothrace, and Thasos. 4. The kingdom of Epirus, to be formed out of Epirus, with the provinces of Upper and Lower Albania. 5. The Hellenic state, to include Greece proper, from the river Peneus in Thessaly to the city of Arta. Mazzini expressed the belief, several years ago, that the maintenance of the Austro-Hungarian and Ottoman Empires in their present shape was an impossibility, and that their place would be taken by four Slavic states or confederations.

Garibaldi has proposed the erection of a republican confederation of all the races, like that of Switzerland, in which each nationality should enjoy a provincial autonomy.

Signor Crispi, President of the Italian Chamber of Deputies, and afterward Minister of the Interior, visited Vienna and Pesth in October, and in a speech at a banquet given him by a number of Hungarian deputies, suggested an extension of Greece to the Balkans and a Slavic confederation, as a possible solution. His views were received with great disfavor by the Hungarian journals.

Mr. Foster, the English Liberal statesman, hinted at a possible disposition of Constantinople, when, in a speech made at Bristol, in November, 1877, he said that he should be glad to see it given to the Greeks.

Amid the discussions, the principle of recognizing the autonomy of the different nationalities of the provinces is gradually assuming shape, and it is becoming yearly more evident that the only scheme of permanent settlement, and the one that will eventually give the greater security, must rest upon it. Roumania and Servia have already achieved a substantial independence, and made considerable progress toward becoming established states. The reasonableness of the demands of Greece for an enlargement of its territories is acknowledged by all the world, and has been strongly supported in Mr. Gladstone's paper, published in November, 1876, entitled *The Hellenic Factor in the Eastern Problem*. It may be satisfied by giving to Greece the Grecian provinces north of it, Macedonia, and the islands. The surprising tenacity and strength which the Bulgarians exhibited in their contest with the Greek ecclesiastics, and their success, and the energy they have manifested in building up schools and creating a literature, have given their friends a high opinion of their latent qualities, and have strongly reinforced their demand to be recognized as entitled to a separate independent existence.

ECUADOR (REPÚBLICA DEL ECUADOR), an independent state of South America, extending from 1° 5' north to 5° 30' south latitude, and from 69° 52' to 80° 35' west longitude. It is bounded north by the United States of Colombia and Brazil, east by the empire just named, south by Peru, and west by the Pacific Ocean.

The territory of Ecuador, with an area of some 249,000 square miles, is divided into 13 provinces, including the Galapagos Islands, the capital of which is Albemarle.

The population of the republic, according to an official report published in 1875, was 866,137, exclusive of some 200,000 savage Indians, who lead a nomadic existence in the vast plains east of the Cordilleras, watered by the Napo and other rivers of considerable magnitude, for the most part tributaries of the Amazon.

The capital, Quito, situated at an elevation of 10,000 feet above the level of the sea, and almost immediately under the equator, had an estimated population of 80,000; but this figure appears to be considerably exaggerated, 76,000 to 77,000 being, in all probability, a closer approximation to the truth.

The President of the Republic is General Ignacio de Veintemilla, who succeeded Dr. Borrero, by force of arms, in December, 1876.

The standing Army is usually about 1,200 strong; the Navy consists of three small steamers.

Of the finances, no definite statement can be given for the past year, nor for 1876, there having been no official returns made since 1875. The revenue rarely exceeds \$2,500,000 United States gold,* while the expenditure is seldom below \$3,000,000. Almost one-half of the

national revenue is derived from Custom-house receipts.

The national debt was reported to stand as follows at the beginning of 1875:

	Pesos.
Foreign debt, £1,824,000—British loan of 1855...	11,764,500
Home debt.....	7,250,000
Total, in pesos.....	19,014,500*
" in United States gold	14,267,500

Owing to almost incessant civil strife in this truly unfortunate country, the British bondholders, spite of repeated promises on the one hand and vigorously-urged claims on the other, have, so far, obtained little satisfaction, either from Garcia Moreno's immediate successor, Dr. Borrero, or from the present occupant of the presidential chair, as will be seen from the following extract from a London financial journal published early in 1877:

The memorial addressed by the Council of Bondholders, in conjunction with the old-established Ecuadorian Commission of Agency, to the President, Dr. Antonio Borrero, as mentioned in the council's last annual report, was replied to in terms which encouraged the hope that the present Government of Ecuador would be disposed to observe faith toward its foreign creditors. The committee have taken immediate steps to act upon a suggestion of the President, and to appoint an agent for negotiating an arrangement at Quito, between the republic and the bondholders. A member of the committee, who has for many years taken an active part in the Commission of Agency, offered his services to conduct these negotiations. The committee have authorized him to proceed to Quito, and to secure, in coöperation with Mr. Douglas Hamilton, H. B. M.'s Minister in Ecuador, for whose non-official assistance they have throughout been under great obligations, some satisfactory arrangement of the foreign debt of Ecuador.

In the absence of official statistics of the foreign commerce of Ecuador, the following table will serve to show the approximate value of the exports in each of the six years, 1871-'76:

YEARS.	Value in pesos.
1871.....	8,585,592
1872.....	4,152,268
1873.....	5,894,589
1874.....	8,913,536
1875.....	2,688,978
1876.....	8,889,627

The quantities and value of the chief articles of export, exclusive of precious metals, were as follows in 1876:

COMMODITIES.	Quantities.	Value in pesos.
	Quintals.†	
Cacao.....	220,838	2,429,163
India-rubber	10,407	812,210
Coffee.....	4,160	83,200
Peruvian bark.....	3,981	79,620
Hats.....	76,800
Ivory nuts.....	156,286
Hides.....	156,286

The foreign trade is almost exclusively carried on through the port of Guayaquil.

Here follows a list of the exports from that

* In the ANNUAL CYCLOPEDIA for 1876 (p. 241), \$20,095,000 pesos was the result of an error in reduction.

† = 100 lbs.

* The Ecuadorian peso is equivalent to about 71 cents of United States money.

port, with the quantities and destination of each article, for the five months ending May 31, 1877:

The value of the imports from Great Britain in 1875 was 1,169,900 pesos.

There are 26 miles of railway open to traffic, from Pueblo Nuevo to Sibambe.

A decisive battle of three hours, fought at Galte on December 14, 1876, between the constitutional army, 2,500 strong, under General Aparicio, the Commandant-General of Quito, and the revolutionary troops under Generals Veintemilla and Urbina, terminated in the defeat of the government forces and the capture of their commander-in-chief. The encounter was a fierce one, and much bravery was displayed on both sides; the aggregate number of killed was 400, and that of the wounded considerably larger.

When tidings of the disaster reached Quito, the President (Borrero) is said to have taken refuge in the Colombian Legation, and the citizens pronounced in favor of the revolution. The victorious troops entered the capital about December 25th, and that event, as was expected, put an end, for the time being, to the war begun in the September previous.*

No sooner had the new order of things been established, however, than the peace of the country was disturbed anew by a series of conspiracies and attempted revolutions, the leaders of which were for the most part persons employed in the several ministerial departments, and creatures of the new administration. The plans of conspiracy involved, it is said, the murder of the President and his principal friends; and Borrero's tardiness in leaving the country was ascribed to his determination to take part in the plot. He had removed to a place called Ipiales, and was still there at the time the machinations were set on foot; but the leadership of the movement, when tendered to him, he declined to accept, laying himself open thereby to the accusation of cowardice, with which he was unsparingly stigmatized by his former friends and adherents. Though conducted with the utmost secrecy, the conspiracy was discovered when it was yet time to frustrate the designs of the conspirators, most of whom were apprehended, while others sought safety in flight from the capital. It was presumed that the chief actors in the plot would have to pay the penalty of their turpitude and treachery with their lives. Meantime, President Veintemilla was blamed by the members of his immediate party (the Liberals)

* See the ANNUAL CYCLOPEDIA for 1876.

for having been so weak as to admit the Conservatives to any share in the Government.

Another short-lived and unsuccessful uprising took place a month later, at the instigation, according to report, of the Clerical party.

But the most serious outbreak of the year was that known as the revolution of the "Terrorists of the North," in which General Yépez was the leading, if not the guiding, spirit, the latter part being attributed to high ecclesiastical dignitaries. The Conservatives were this time overcome as before, though, in order to insure the triumph of the Liberals, Colombian troops had been invited to cross the border, and actually reached the capital. After the victory—which was gained, it would appear, without their aid, by the intrepidity and energy of General Vernaza—the Colombians withdrew, after "payment to them of an indemnity" (writes a newspaper correspondent from Guayaquil) "for war expenses." Order was once more established, but disaffection was prevalent in the ranks of the Liberals, who had begun to suspect the President of the Republic and chief of their party of undue confidence in, and favor toward, the Clerical party. Several impolitic, and not a few arbitrary, acts of his since his arrival at Guayaquil—whither the Government had been transferred in August, preparatory to the meeting of a convention to be summoned for some time in December—provoked the overt expression of unqualified dissatisfaction on the part of the Liberals themselves. "Order has been established," writes the correspondent already alluded to, "but the future political prospects of the country are as uncertain as ever."

An unusually disastrous eruption of the volcano Cotopaxi took place on June 26, 1877, devastating the surrounding country, and enveloping Quito in almost total darkness for a time. The loss of property was estimated at \$2,000,000, and 1,000 persons are said to have perished. The only inconvenience felt at Quito was that caused by the darkness and a continuous shower of ashes from the cone.

EDHEM PASHA, the successor of Midhat Pasha as Grand Vizier, was born at Chio, of Greek parents, in 1823. He was saved, when a child, by Turkish soldiers, during the massacre of the Christian inhabitants of Chio, and was brought up in the Mohammedan faith, while his brother, who escaped, remained true to Christianity, and was for a number of years a priest in one of the suburbs of Constantinople. While yet a boy, Edhem was sold as a slave to Khossev Pasha. His master, however, gave him his liberty, and sent him, with some other boys, to Paris, to be educated. Here he remained from 1832 to 1835; and after having traveled through France, Germany, and Switzerland, he returned to Constantinople in 1839, and was at once appointed a captain on the general staff. In 1849, the Sultan appointed him his adjutant, and at the same time he became Abdul Medjid's French instructor, and

tutor of the late Sultan Murad and Sultan Abdul Hamid II. He was also frequently intrusted with political missions. In 1856 he became a member of the Council of State; was then appointed Minister of the Interior, being at the same time created Mushir, but resigned his portfolio within a year. He nevertheless retained considerable influence in the councils of the Empire, which he represented in 1876, for a short time, at Berlin. At the conference of Constantinople, in 1876-'77, he was one of the representatives of the Porte, and in February, 1877, was appointed Grand Vizier.

EGYPT,* a country of Northeastern Africa, nominally a pashalic of the Turkish Empire, but virtually an independent state since 1811. The ruler of Egypt, who has the name of Khedive, is Ismail Pasha, born at Cairo, December 31, 1830, second son of Ibrahim, the son of Mehemet Ali; succeeded to the Government at the death of his uncle, Said Pasha, January 18, 1863. The eldest son of the Khedive, Mohammed Tewfik, born in 1852, is President of the Privy Council; his eldest son, Prince Abbas Bey, was born July 14, 1874. The second son of the Khedive, Prince Hussein Kamil, born in 1853, is member of the Privy Council, and Minister of War and Colonies. The third son, Hassan, also born in 1853, is major *à la suite* in the Prussian army.

By the annexation of Darfour and other territories, Egypt has largely increased in both area and population. At the beginning of 1875, the area and population of the large divisions of which Egypt is now composed were as follows:

TERRITORIES.	Square Miles.	Population.
1. Egypt proper.....	212,606.7	5,252,000
2. Nubia.....	338,792.52	1,000,000
3. Egyptian Soodan.....	322,992.10	10,670,000
Total.....	869,391.32	16,922,000

J. C. McCoan, in "Egypt As It Is" (1877), gives the following official classification of Egypt proper as approximately correct:

Settled Arabs.....	4,500,000
Bedouins.....	300,000
Turks.....	10,000
Copts (according to an estimate of the Coptic Bishop of Cairo).....	500,000
Abyssinians.....	3,000
Nubians and Soodanis (mostly slaves).....	40,000
Jews.....	20,000
Rayah Greeks.....	20,000
Syrians.....	7,000
Armenians.....	10,000
Various foreigners.....	90,000
Total, about.....	5,500,000

The public debt amounted, according to J. C. McCoan, to £80,390,000 ("Egypt As It Is," p. 129).

The imports and exports from 1866 to 1875

* For latest statistics of foreigners, of population of large cities, of movement of shipping in the principal ports, etc., see ANNUAL CYCLOPEDIA for 1874. For an account of the public revenue and expenditure, see ANNUAL CYCLOPEDIA for 1876.

were as follows, according to the same authority :

YEARS.	Imports.	Exports.
1866.....	24,662,210	29,723,564
1867.....	4,399,097	8,623,974
1868.....	3,532,969	8,094,974
1869.....	4,021,601	9,089,866
1870.....	4,502,969	8,680,702
1871.....	4,512,143	10,192,021
1872.....	5,005,995	13,317,825
1873.....	6,127,564	14,203,882
1874.....	5,322,400	14,801,143
1875.....	5,694,820	12,730,195

The three staple exports from Egypt are cotton, cereals, and sugar. The production and export of cotton have been steadily on the increase. In 1867, 1,260,946 quintals (1 quintal = 220.46 lbs.) were exported, which figure had risen in 1875 to 2,615,120 quintals. The produce of wheat differs greatly according to the state of the Nile. Thus, while in 1868 1,147,147 ardebs (1 ardeb = about 5 English bushels) were exported, in 1874 there were but 186,723 ardebs, and in 1875 836,997 ardebs. The quantity of sugar exported rose from 8,194 sacks (about 55,000 quintals) to 159,185 sacks (equal to 986,000 quintals) in 1875, after having attained 433,853 sacks in 1874, and 269,378 sacks in 1872. The chief articles of import are manufactured cotton goods, silk, coal, charcoal, building materials, oil, wine, spirits, and machinery. Great Britain stands first as a source of supply, for about 45 per cent. of the whole; Turkey and Syria next, for about one-fifth; France, for rather more than one-tenth; Austria, for about one-fifteenth; Italy, for one-eighteenth; and Barbary, Greece, Belgium, Russia, and Sweden, for the remainder, in the order mentioned.

In May, 1877, the aggregate length of railways which were in operation was 1,763 kilometres (1 kilometre = 0.62 mile). The telegraph-lines, according to J. C. McCoan, had, in 1876, a length of 5,500 miles, and the telegraph-wires of 10,400 miles.

There are at present 140,977 pupils under instruction in the schools. Of these, 111,803 are in primary Arab schools, 15,835 in those attached to mosques, 1,385 are educated by Government, 8,961 by missions and religious communities, and 2,960 in the municipal schools. There are only two female schools returned, those organized by the Khedive; but in the Copt and mission schools, little girls may be found, though very few indeed.

The new Turkish Constitution, published at the close of 1876, met with little favor in Egypt. By successive firmans, the country had arrived at semi-independence, and this reform was looked upon with very suspicious eyes, as it did not expressly recognize any of the concessions that had been won from the Porte. It simply declared that the Ottoman Empire is indivisible, and all subjects of it, without distinction, are Ottomans. Egypt, on the other hand, wished to maintain an individuality as distinct

as possible from the rest of the Empire. Certain of the clauses of the new Constitution seem not only to disregard the firmans of Abdul Aziz, but also to overlook the important transactions which have taken place between the Khedive and Europe—those relating to the reorganization of the native administration of justice, and providing for complete equality of taxation, are in direct conflict with the agreement made by the Khedive with foreign Powers.

The Russian declaration of war was received with little interest in Egypt, although a tributary to Turkey. At first sight, indeed, it seemed to be almost impossible for Egypt to hold herself aloof. As a part of the Ottoman Empire, she was bound, in case of danger to the territorial integrity of the Empire, to furnish troops, money, and all other aid in her power. But to comply at that time with all the demands of the Porte would have been to break faith with Europe. The arrangement entered into with Mr. Goschen and M. Joubert, approved by the Khedive in November, 1876, was looked upon as an international obligation. Both England and France were too deeply involved to allow the revenues of Egypt to be applied to anything but the public debt, without making a protest. Under these circumstances, hesitation on the part of Egypt as to the course to be pursued was natural. Envoys came from the Porte, calling for aid, and Egypt answered that, while troops were ready, the expenses of transport and maintenance were beyond Egypt's power. The Egyptian Parliament was convoked to consider the question, and at first adopted the same policy. Later on, however, it voted a special war-tax, which was to be raised on the land, as an additional impost of 2s. per acre. About 10,000 men were collected in Alexandria, and were placed under the command of the Khedive's third son, Prince Hassan. On June 9th, 6,500 of the Egyptian troops were embarked on a large number of vessels belonging to Egypt, and set sail for Constantinople, escorted by five Turkish men-of-war, while the remainder followed in the course of a month.

In February, the Khedive appointed Colonel Gordon Governor of Soodan. In a private letter, dated Cairo, February 17th, Colonel Gordon, speaking of his appointment, says:

His Highness, to-day, has signed the firman. He could not have given me greater powers. He has given me over the Soodan, in addition to the province of the Equator, and the littoral of the Red Sea, absolute financial authority, etc. I am astounded at the powers he has placed in my hands. With the Governor-Generals of the Soodan, it will be my fault if slavery does not cease, and if these vast countries are not open to the world. So there is an end of slavery, if God wills, for the whole secret of the matter is in the government of the Soodan, and if the man who holds that government is against it, it must cease.

The remonstrances of the Antislavery Society with the English Foreign Office, concerning the slave-trade in the Red Sea, reached the

Khedive in January, and resulted in the organization of an expedition for the suppression of this trade. Three vessels of the Egyptian navy, and one of the Egyptian postal line, were made ready, and placed under the command of McKillop Pasha. It was expected, however, that he would encounter great obstacles, as the greater part of the trade was carried on in Indian vessels, carrying the British flag.

The Khedive, during the early part of the year, sent Morice Bey, a commander in the British navy, on a tour of inspection along the

dignitaries on May 4th. Missionaries and merchants, priests and ulemas, consuls, cadis, and fellaheen, all crowded to see him. "But," says an eye-witness, "it is, above all, the poor country people who look upon him as their savior."

The relations with Abyssinia were of a peaceful character throughout the year. (*See ABYSSINIA.*)

On September 18th, the French Controller-General, the English Financial Commissioner, and the Secretary of the Egyptian Ministry of

Finance, left for Europe, for the purpose of laying before Mr. Goschen and M. Joubert the necessity of making some arrangement for meeting the Egyptian floating debt of £4,500,000, which was unprovided for in the Khedive's decree of November 18, 1876. The plan proposed was, either to abandon the surplus arising from the Moukbalah, or to increase the verified debt to the requisite amount.

The annual general meeting of the shareholders of the Suez Canal Company was held in Paris, on June 6th, and was unusually well attended. M. de Lesseps's report to the shareholders stated that the net profit of last year had exceeded

2,000,000 francs, an amount which would enable the Company to pay a dividend of 3 francs 55½ centimes per share. The dividend paid last year had been only 1 franc 88 centimes per share. During the first five months of the current year the number of ships passing through the canal had increased nearly 9½ per cent. on that of the similar period of 1876. The largest ship which had hitherto passed through the canal was an English steamer of 5,000 tons, while another English steamer passed easily from one sea to the other, drawing 24½ feet of water. Two questions which had remained unsettled with the Egyptian Government had now been amicably arranged with England. By these arrangements, on the one hand, the British Government, specially represented at the shareholders' meetings as proprietors of 176,602 shares, would deliberate and vote with a maximum of 10 votes; and, on the other hand, the capital of each of the 176,602 shares which might be redeemed, would be handed over to the English Government, the revenue of this capital to be invested in Eng-

ISMAILIA, ON SUEZ CANAL.

coasts of the Red Sea. Although the slave-season had passed, he brought back very valuable information as to the chief centres of the trade, and the manner in which it is conducted. The Khedive at once forwarded the document to Colonel Gordon, with a long autograph letter, in which he assured the colonel that Egypt would loyally coöperate with England in this "measure of humanity and civilization." "Use all the powers I have given you; take every step you think necessary; punish, change, dismiss all officials as you please." Gordon was free to govern as he pleased: he could levy his own army, form his own administration; he had his own Ministry of Finance, and his own fiscal organization. In short, he had as much power at the Equator as the Governor-General of India has in Hindostan, and Egypt, for all administrative purposes, had sundered herself from Central Africa. The character Gordon Pasha made for himself in his first administration was fully shown by the enthusiastic reception he received at his capital town, Kartoum, when his firman was read to a crowd of

lish consols, for the benefit of the *délégateurs* of the Company, till the end of the period of regular delegation—that is to say, for 8 years, unless, in the mean while, parties should desire the question to be decided by a judgment. The most interesting part of the report was that referring to the situation of the canal as affected by the war between Russia and Turkey. Several shareholders had manifested alarm as to the danger of interruption which the navigation of the canal ran amid the events passing in the East. M. de Lesseps hastened to London, in order to come to some understanding with her Majesty's ministers on a question so important to the Company. The proposition to maintain, by a general agreement, the complete freedom of navigation in the canal, which had existed since its opening, in 1869, had been seriously considered, and on his return he received the following declaration from Lord Derby:

Any attempt to blockade or hamper, by any means whatsoever, the canal or its approaches would be considered by her Majesty's Government as a menace to India, and as a serious injury to trade in general. From these two considerations, any such act, which her Majesty's Government hopes and trusts neither of the belligerents will commit, would be incompatible with the maintenance by her Majesty's Government of an attitude of passive neutrality.

MODERN EGYPTIANS.

Lord Lyons, on making this declaration to the Company, added that her Majesty's Government was glad to see that it agreed with the French Cabinet in all that concerned the canal. "Henceforth," the report concluded, "the canal created by your capital and sustained by your union and perseverance will remain outside political complications, because it has now become indispensable to the relations of all nations." After having read the report, M. de

Lesseps observed, amid general applause, that the attitude of the British Government and its categorical declaration were certainly preferable to the scheme of international guardianship he had himself proposed in London.

In an official communication to the Department of State at Washington, it was stated that the Suez Canal, up to the close of 1876, cost the Egyptian Government, in addition to the amount of shares sold to the English Government, over \$71,000,000, about half of this sum being interest. This includes the cost of the fresh-water canal from Cairo to Ismailia, and thence to Suez, for the use of the Suez Canal and the stations on its line, including the cities of Port Said, Suez, and Ismailia. This enterprise, so useful to many nations, and especially to England, was one of the first causes of the present financial embarrassment of Egypt. Notwithstanding this great sacrifice in the interests of commerce, Egypt to this time has received no benefit from this canal; but, on the contrary, has sustained constant loss. By the passage of all classes of vessels, with their passengers and cargoes, directly through the canal, considerable commerce is lost to Egypt, and also a large business in freights and passengers, that would otherwise be transported from Alexandria to Suez on the Egyptian railways. It appears from a statement, showing the navigation through the Suez Canal from December 1, 1867, to December 31, 1875, that the entire number of vessels was 6,275—the largest numbers being 4,347 English, 292 Italian, 168 Dutch, 140 Ottoman, 345 Austrian, 118 German, 48 Russian, 82 Spanish, and 10 American. Of the entire number of vessels, 4,406 were commercial steamers, and 1,197 postal steamers. The total number of passengers was 359,036.

The Court of Appeals, on February 18th, gave a decision in which all Egyptian creditors were interested. Two claims had recently been preferred, in first instance, for execution of judgments against the Egyptian Government. In the one case the claim arose on a judgment of the new tribunals for money due—£50,000—for work done by a contractor on one of the big canals of the country, and distraint was asked for on the money lying in the public Treasury. In the other case, the claim arose on a judgment for £1,500, awarded by an arbitration court, composed of three appeal judges—Messrs. Lapenna, Giaccone, and Scott—appointed by the Khedive to decide certain old claims against the Government. Distraint was sought to be levied on the public money in the hands of the Governor of Alexandria. The lower courts decided that public money could not be seized in distraint at the suit of any private person. The question was again raised, and fully argued before the Appellate Court. The appellant argued that, by the Judicial Treaty, the Egyptian Government is subject to the jurisdiction of the new tribunals; that it comes therefore within the provisions

of the Codes which accord execution on unpaid judgments. The advocate for the Government argued that the money claimed as seizable was devoted to the public service, and was therefore protected from seizure. The court adopted the latter view, following the rule of all Continental jurisprudence.

The unofficial opening of the Ismailia Canal, from Cairo to Lake Timsah, took place on April 15th. It was stated at one time that the Suez Canal Company had become the propri-

FELLARS.

etors of this new work; but this was afterward contradicted. When the Egyptian Government failed to provide the advances necessary to enable the contractor, M. Paponot, to continue the work, the Suez Canal Company advanced him 1,300,000 francs. They then agreed to lend him a further sum of 700,000 francs, making M. Paponot's debt 2,000,000 francs in all. In addition to the debt, the Viceroy owed the Company about 500,000 francs, thus establishing a total charge of two millions and a half. It was agreed that the Suez Canal Company should have the right to appoint a commissioner to take over a portion of the tolls and dues collected from the new canal until this debt was liquidated. This arrangement was made with the sanction of the European financial controllers. The Company was to have no power to interfere with the management. Their commissioner should merely draw the money as it was paid into the Treasury.

Among the works of the year having information on Egypt are J. C. McCoan's "Egypt As It Is" (London, 1877); E. De Leon's "The Khedive's Egypt" (London, 1877); A. B. Edwards's "A Thousand Miles up the Nile" (London, 1877).

ELLET, Mrs. ELIZABETH F. L., died in New

York City, June 3, 1877. She was born at Sodus Point, on Lake Ontario, N. Y., in October, 1818. At an early age she was married to Dr. William H. Ellet, who was Professor of Chemistry at Columbia College. In her 17th year she published a volume of poems, and about the same time wrote "Teresa Contarini," a tragedy founded on Venetian history. In 1841 she published "The Characters of Schiller," and subsequently "Women of the American Revolution" (1848); "Evenings at Woodlawn," "Family Pictures from the Bible," "Domestic History of the American Revolution" (1850); "Watching Spirits" (1851); "Pioneer Women of the West," "Novelettes of the Musicians" (1852); "Summer Rambles in the West" (1853), "Women Artists in All Ages and Countries" (1861), "Queens of American Society" (1867), and "Courts of the Republic" (with Mrs. R. E. Mack, 1869). She also contributed to the leading magazines.

ENGINEERING. The improvements in the methods and instruments of engineering have kept even pace with the increased demands which the rapid extension of commerce is making upon this art. With the same capital and labor, works of triple the magnitude of those which could be built a few years ago, can now be accomplished. It is not, therefore, to be wondered at that the action of the Americans, in constructing steam highways from ocean to ocean, through vast uncultivated expanses of territory, is to be emulated in South America, in Canada, and in Asiatic Russia; that the Alpine tunnels and the railroad of the Semmering Pass may soon be repeated in the Andes; that, as the narrow stream which flows through the city of Glasgow has been broadened into the magnificent harbor of one of the first seaports in the world, so the basin for the great German naval arsenal has been scooped out of the marsh at Kiel. Paris is now to become a seaport; and already ocean steamships can anchor before the levée at New Orleans. With every successive great work of engineering, some new plan or invention is devised, which makes still greater triumphs over nature possible, as witness the great iron caissons and the admirable excavating apparatus, by whose aid the massive piers of the Tay bridge were founded 18 feet down in the earth, under a deep and rushing tide, and raised through 45 feet of water. As regards railroad construction, although the systems of Europe are nearly complete; although the great arteries of the American system have been built, and the short feeding branches are being added at a rate of progression only about corresponding to the increase of the population, yet the occupation of the railroad engineer is not gone. The progress of commerce justifies the people and governments of South America, of the Russian Empire, of India—where 5,000 miles of new railways are laid out—of Japan, of Canada, of the Australian colonies, of Egypt, in undertaking long lines and great networks of the

iron path, and thousands upon thousands of miles are already in contemplation; while the day may soon come when, like the Japanese, the Chinese and the implacable nations of Central Asia may open their inhospitable gates to Western commerce and arts, and when the fertile regions of inner Africa will be subjected to cultivation, and whizzing trains will convey to the sea-coast the precious materials which that neglected region can produce. In the pause which follows the, perhaps, too rapid extension of railroads in the United States, the question of the materials and modes of construction which are most economical or secure, will be more ripely considered. A greater uniformity in the gauge will perhaps be arrived at after a time; many of the road-beds, as they need repairs, will doubtless be more solidly rebuilt; and the question will present itself to railroad managers, as to whether stone, when applicable, is not a better, and really more economical, material for bridges than iron, which requires constant painting, and even then soon perishes with rust, its tender joints and bolts being inaccessible to the painter. A more frequent use of stone may be forced upon them by public opinion, if criminal ignorance in construction, and carelessness in examination, should result in any more such disasters as that at Ashtabula.

The new iron truss-bridge which is being constructed over the gorge of the Kentucky River is a remarkable structure, from the character of its site, and the novelty of its design and mode of erection. The chasm over which it suspends is 275 feet deep. The bridge will be in 3 spans, 375 feet each, resting on the two bluffs, and on iron columns, supported by 2 stone piers, 120 by 42 feet at the base. The iron piers have 4 legs each, with a base of 71½ by 28 feet, which come to a point at the end, and terminate in a 12-inch pin, on which the truss rests, as on a rocker; the piers rest on double roller beds, and can be moved about on the masonry. The truss is a continuous girder, projecting 75 feet at each end beyond its points of support, with hinges to compensate the thermal contraction and expansion of the iron piers; it is 37 feet deep and 18 wide, each span being divided into 20 panels. The ties, posts, and chords are hinged on pin connections, while the chords are riveted to each other, and the pin carrying the tie-bars is driven into the chord by hydraulic pressure, so that it partially serves as a rivet. The bridge was built out panel by panel, the support being the resistance of the towers, built by Roebling for the projected suspension bridge of 1,236 feet span, commenced in 1854, and left incomplete in 1857, to the base of which towers the top chords were fastened by anchor-bolts, the lower chords resting against the rock, to which they were forced by jack-screws. The structure was thus held in mid-air until it reached a temporary wooden tower, 196 feet 10 inches out, from the top of which it was raised by huge jack-screws, until the strain on the Roebling towers and anchor-bolts

was sufficiently relieved, when the work was carried out in the same way to the top of the first iron pier, 178 feet further. The work is thus extended from either shore to the nearest pier, and then from each pier to midway between them, where the two sections are joined. There are 2,855,000 lbs. of iron in the spans, and 798,000 lbs. in the piers; the masonry measures 12,915 cubic yards. The engineer who planned this important work is Shaler Smith, of the Baltimore Bridge Company.

The high truss-bridge over the Ohio River, built for the Cincinnati Southern Railroad, was tested on November 8th. It consists of 10 spans, 5 overhanging the river, and 5 the streets and houses of Cincinnati. The river spans include one draw and one great channel span, the longest in any truss-bridge in the country. The river spans were built by the Keystone Bridge Company, and the shore portion by the Baltimore Bridge Company. The piers are all of masonry, except one, which is of iron, resting on a base of stone-work. The height of the bridge, from top of rail to low-water mark, is 105½ feet; the height above the mark of the freshet of 1832 is 43 feet. The long span is 515 feet between the centres of the end piers; the depth of the truss is 51½ feet. The two trusses are divided into 20 panels of 25½ feet each; their distance apart, from centre to centre, is 20 feet. The stone piers on which this great span rests are, respectively, 119 and 110 feet in height, and are founded on the solid rock; their breadth at the top, below the coping, is 11 feet; their length 26 feet. The cost of the structure was \$700,000.

A steel-wire suspension bridge is being built at Cotteneva, in Mendocina County, Cal., 270 feet long, measuring from the centres of the saddles on the towers. The cables are of No. 11 Birmingham wires, coated with zinc; 11 go to the strand, and 7 strands to the 1½-inch cables. The strands are not twisted together, but gathered by bands 6 feet apart. The fall of the cables is 23½ feet. Each strand is tested for a strain of 60 tons, and is fastened to an independent anchor-bar, and connected by 18-foot links with the anchorage. The anchors, of 1,000 lbs., are imbedded 14 feet in the rock, and secured by cross-beams, while the pits are hemispherical, and the filling or stone-work, set in Portland cement, is wedged against the sides of the rocky chamber. The towers are of red-wood. The dead weight of the bridge is 1,000 lbs. per lineal foot; the strain for which it is calculated is 7½ tons per foot, or five times the load to which it will be subjected.

The use of malleable iron in girders is on the increase. The bridge company in Canton, N. Y., has the building of the new bridge over the Connecticut, at North Hampton, 1,219 feet long, with 8 spans, 18 feet roadway, contract \$27,000; also a 6-span bridge, 930 feet long, and 16 broad, at Columbus Junction, Ia.; and one of 6 120-foot spans, at Paris, Ontario. They have built, recently, a 160-foot span on iron piers,

with 30 feet of roadway, and two 8-foot walks, at San José, Cal., and a 256-foot span, at Preston, W. Va. All the details in their patent truss-bridges are in wrought-iron.

Two spans of the great bridge across the Mississippi, at Council Bluffs, were swept away on August 25th, but were replaced, and trains were run across on September 16th. Although the spans were 250 feet long, and of 4 trusses, the actual work was accomplished in a single fortnight. Another still more remarkable example of quick work in repairing was the clearing away of the broken parts of a fallen span in the Chicago and Northwestern bridge over the Des Moines, and putting up the new span of 170 feet, and laying the ties and rails ready for the passage of trains, in the time of 17 hours, the materials having arrived at the spot from Clinton within 20 hours of the accident.

The great Tay bridge, crossing the estuary of the Tay, near Dundee, in Scotland, was opened to traffic on September 25, 1877. Its length is almost fully 2 miles, thus making it the longest railroad bridge in the world. It has been built for the North British Railway, which has hitherto been obliged to transfer goods and passengers across the Tay by means of a ferry. The plans of the bridge were prepared by Thomas Bouch. The foundation-stone was laid on July 22, 1871. The south end of the bridge is $1\frac{1}{2}$ mile above Newport, where the depth of the water at spring tide is 45 feet, and its velocity sometimes 5 knots an hour. The original plan was for a bridge of 89 spans, with double cylindrical supports. The bridge, as it was afterward constructed, consists of 85 spans, varying from 67 to 245 feet in length. The longest, to the number of 13, overhang the navigable part of the river; and shipping must pass under them to reach the ports of Perth and Newburg. In these widest spans, over the centre of the river, the floor has a height of 88 feet clear above high water, from which elevation it descends in a gradient of 1 in 356 to the Fife side, and of 1 in 73 to the Dundee side; in the latter part it takes a bend to the eastward, so as to meet the land line. The earliest laid piers consisted of cylinders of iron, $9\frac{1}{2}$ feet in diameter, lined with brickwork set in Portland cement, with a hollow shaft through the centre, of $3\frac{1}{2}$ feet diameter, for the workmen to descend. From the bottom of these cylinders, after the water had been expelled by compressed air, by the bell-chamber process (mentioned below in the account of the Severn bridge), the laborers excavated the mud and sand underneath until they sank to the rock, in which a level bed was cut for them. They were placed in couples, 12 feet apart from centre to centre. An intermediate wall of brickwork, about 5 feet wide, braced them at the top. They were floated out to their position between barges, and lowered by means of hydraulic machinery. These double piers weighed about 120 tons. They were made of such length that their tops

would stand a little above low-water mark after they had sunk to their beds. The plan was originally to have all the piers made of this description; but after a good number of the double piers had been laid, a point was reached where the rock suddenly declined to a great depth, under beds of clay, sand, and gravel. It being impracticable to construct cylinders of such great length as to rest on the rock beyond this declivity, the form and dimensions were so changed as to give them a firm seat on a gravel foundation. Single cylinders of 31 feet diameter replaced the coupled ones. Wrought-iron was used in the shell, instead of the cast-iron of which the double cylinders were composed. The mode in which these huge masses, weighing some 200 tons, were carried out to their positions was by fastening to them a framework of iron girders, under which the barges were floated at low water; when the tide rose they were lifted clear into the water, and were towed out to their places while hanging perpendicularly between the barges. The brickwork was only filled in at their bases, which held them plum, iron columns taking the place of the brick lining in the upper portion. A new invention, the idea of one of the engineers of the bridge, was used to excavate under the base of the cylinder. It is a kind of pump which makes a cavity at the bottom from the inside, expelling the sand or mud with great rapidity, the great pier sinking by its own weight into the hole thus formed. This invention may hereafter prove of great service in dredging operations, as well as in bridge construction. The suitable foundation was found about 18 feet below the river-bed. All the subsequent piers were built in this way; 142 of these caissons were sunk in all with Reeves's excavator. The cylinders, after they were set, were filled to the top with concrete, and then the iron casing was stripped off down to the river bottom. On this base of artificial stone a hexagonal pier of brickwork, of oblong form, was superimposed. This brick superstructure, 20 feet long by 10 wide, and about 20 feet high, was also built on shore, and floated out between barges. When in place on the concrete basis it rose to a point just above low-water mark. The brickwork was then raised by masons at low tide, and capped at the high-water mark with 4 or 5 feet of stone-work, laid in four courses. The piers of 14 spans of the bridge were built in this manner. They were so disposed that their narrow sides cut the tide. The portion of the piers above the high-tide mark is composed of iron columns of 12 and 15 inches diameter. The 245-foot girders, weighing 190 tons for each span, were towed out and deposited on the piers, and then raised by hydraulic machines to their places, in lifts of 20 feet at a time. Each span has 2 girders, of depths varying according to the length of the span, which are joined by transverse braces. The smallest girders are 12 feet deep. On either side of the 13 high

245-foot spans, the lengths of the spans are gradually less toward the shores. The girders are so fastened to the piers as to allow a certain amount of free play to compensate for expansion by heat; the whole range of contraction and expansion amounts to about 7 feet for the whole length of the bridge. The strain calculated for is 21 ton to the square inch, or a rolling load of $1\frac{1}{4}$ ton to the foot run; it would bear an endless train of loaded freight-cars. It will not be subjected to a greater strain than 4 tons to the square inch. The stock company which has built the bridge is separate from the railway corporation. The capital stock is \$1,750,000. The allowance of Parliament was obtained in 1870, and the contract given out in the succeeding year.

There are, besides the 13 great 245-foot spans, 1 with a bowstring girder of 170 feet, 1 of 162 feet, 13 of 146 feet, 21 of $129\frac{1}{2}$ feet, 2 of 88 feet, 14 of $70\frac{1}{2}$ feet, 14 of $67\frac{1}{2}$ feet, 6 of 27 feet. The girders are of the lattice kind, continuous in sets of 4, with sliding beds on the end ones of every set. They have the double triangulation, and trough booms at top and bottom, from 15 to 24 inches wide. The rule for the depth of the girders, that it should be equal to $\frac{1}{4}$ of the span, was decided upon after long experimentation. A vertical tie binds the top boom to the crossing of the struts and ties at every alternate crossing. The cross-girders, of pitch-pine, bear the rails, laid on longitudinal timbers, and the whole is planked with 3-inch Memel covered with asphalt. Over the 13 long spans the rail-platform rests on the lower booms, the trains running between the girders; but in the other portions of the bridge it is supported by the top booms; by this arrangement the grade was made more equal, while the cost of construction was diminished. During the nights of the winter of 1876 the work was continued; two of Serrin's electrical lamps connected with Gramme machines, each furnishing a light of 1,000 candles, illuminating the works.

The system of pneumatic excavation, employed in sinking the great piers, was devised by the assistant engineer Reeves. The apparatus consisted of 4 wrought-iron tanks, placed upon a barge. They were connected with 2 air-pumps. The tanks were cylindrical, with funnel-shaped bottoms, through which the excavated material was discharged through the bottom of the barge. The air-pump could be changed from one of each pair of tanks, when that was full of the mud, gravel, or other excavated matter, and connected with the other. Air being then admitted into the full tank by an inlet-cock, a valve closes over the pipe connected with the suction hose, while a similar valve opens in the companion pipe, connecting that with the suction hose. The action of the air entering the one tank and being exhausted in the other also opens a discharge-valve over the conical bottom of the full tank or drum, allowing its contents to empty, while it closes

a similar valve in the other tank, creating a vacuum, into which the moist matter is pumped from the bottom of the caisson, so that the one drum is filling while the other is voiding the excavated material. The mouth of the suction hose could be moved to any part of the caisson by a man at the bottom. The attendance of 2 men and a boy was required for each barge; the quantity of material excavated was over 400 tons per day of 10 hours, at a cost of about 8*d.* per yard.

The Severn bridge, another English structure, nearly three-quarters of a mile in length, will connect the Great Western and the Severn & Wye Railways with the Midland. The engineers are G. W. Owen and G. W. Keeling. It consists of 22 spans, bridged by bowstring girders of from 134 to 327 feet in length, and 12 arches 70 feet high in the northern approaches. One of the spans at the southern end is crossed by a swing-bridge. The coupled iron cylinders which form the piers are sunk through 28 feet of sand to the rocky foundation, and bedded in the rock to the depth of 4 feet. The excavation under the cylinders was, in the beginning, accomplished from the interior by a proceeding similar to that at first used on the Tay bridge. A bell-shaped chamber is fixed to the cylinder a few feet above high-water mark. Compressed air is driven in, and the water expelled, allowing the workmen to descend to the bottom. Later the Reeves excavator was applied, with which the piers could be sunk much more rapidly. The piers, when bedded, are filled with concrete. The height of the piers above high water is 60 feet. Between the concrete and the iron cylinders is a felt lining, to guard against unequal expansion or contraction of the materials.

The Ilkeston viaduct, in the Derbyshire extension of the Great Northern Railway, is a structure of extraordinary lightness, the honey-combed ground underneath being unable to bear a great weight. It crosses the Erewash Valley in 19 spans, each 77 feet in length. The piers are mainly composed of hollow columns of malleable iron, riveted together in 4 sections and joined by cross-braces and ties. The floor is formed by ridges and furrows of plate iron, riveted at the angles and ends, which answer for cross-girders and stays as well as flooring. The weight of this floor is 734 lbs. per foot run. The columns rest on brick masonry, which has a broad concrete base, and the weight of the whole on the foundation is but 1,200 lbs. per square foot. The peculiar corrugated floor is very elastic. The furrows are filled in with ballast, in which the sleepers are dropped. The height of the bridge is 42 feet.

The Marguerite Bridge at Buda-Pesth, commenced in 1873, was opened in April, 1877. The total length is 570 metres, the width 17 metres. The spans are 6—2 each with 74, 83, and 88 metres opening. Over 15 million pounds of iron were used in the construction,

and 40 thousand cubic metres of masonry. The centres, supporting plates on which the wooden and macadam pavements are laid, are of wrought-iron, and have a radius of 135 metres. The designs for the bridge were by S. Guion, & Co., of Paris.

An iron bridge has recently been constructed over the river Douro, in Portugal, whose single span is an arch 520 feet long, with a rise of 138½ feet.

It awakens a feeling of sadness to learn that one of the triumphs of English engineering art, a work built as solidly as the pyramids, must be removed, because the rocky cliff on which it is founded is shattered and tottering. It is intended soon to take down the Eddystone lighthouse, Smeaton's great work. The reason is that the western wall of the reef is so undermined by the action of the waves, that there is constant danger of the lighthouse being precipitated into the sea with the portion of the rock on which it stands. The plan is to erect a new lighthouse, 120 feet to the eastward of the present one. It is believed that the site of the lighthouse considerably overhangs the base of the rock. The editor of the *Engineer* advocates, as a surer and better precaution than the building of a new lighthouse, that the whole reef be razed, by charges of dynamite inserted in its top, to the depth of 8 fathoms or more under water.

The Philadelphia & Atlantic City Railroad was commenced on the 1st of April, and was ready for the running of trains on the 7th of July. The length of the line is 55 miles; the deepest cut is 30 feet, the deepest fill 35 feet; one of the excavations was 40 thousand cubic yards, and there were embankments of 20 to 30 thousand cubic yards, one, 1,800 feet long, having been made in one week. There are more than 100 bridges and culverts, the 8 longest having a combined length of 1,300 feet, one of them with a 100-foot draw. The directing engineer was T. F. Wurts. The cost of grading and embankments was 10 cents per cubic yard; total cost of the road, \$770,000, including equipments. The gauge is 3½ feet. A number of the Centennial buildings have been turned into the depots and offices of the road.

The Billerica & Bedford Railroad, connecting at North Billerica with the Boston, Lowell & Nashua line, was first tried on August 31st. It has the remarkable gauge of only 24 inches. The sharpest bend is 127 feet, with a radius of 45 degrees; the steepest grade is a rise of 158 in 2,600 feet. The rails weigh 25 lbs. per yard. It has two Hinkley locomotives, of 11 tons weight. The cost was \$6,000 per mile, including equipments.

The commission appointed, in 1875, by the Russian Government to decide upon the best railroad route from Orenburg into Central Asia, have decided upon one from Orenburg to Orsk and Djita Koul, on Lake Kouiouk; to divide at that point into a northern branch, passing Troitsk, and a southern one to Tash-

kend, by way of Kouhaldjar and Djulek. Such a line crosses a well wooded and watered country, capable, in its southern portions, of producing cotton and silk; the route is free from quicksands and marshes. It would connect at Ekaterinburg with the Siberian railway. The European division of this long-projected Central Asian route consists of the completed road from Moscow, through lower Novgorod, to Samara, on the Volga, 600 miles, and the road to be built from that point to Orenburg, on the Ural River. The route runs from Orenburg, along the Ural, eastward to Orsk, and thence southeastward to Tashkend; there intersecting with the contemplated route from Ormus in the Persian Gulf, across Afghanistan into Kashgar, whose objective point will be Peking. The construction of the Central Asiatic road involves gigantic engineering undertakings—bridges, tunnels, and excavations—in the division between Orsk and Tashkend, of 800 miles. The length of the proposed route is 1,800 versts—600 versts from Orenburg to Lake Kouiouk, and 1,200 from there to Tashkend; that of the Troitsk branch 300 versts—in all 2,100 versts, or about 3,150 miles.

Among the new railways, built for strategic purposes by the Russian authorities, is one running from Berder to Galatz, first in a westerly course to Formosa, then southward to Reni, and westward to Galatz, connecting with the Roumanian railway. The total length is 200 miles. The Pruth is crossed by a wooden bridge. A railroad is to be built from Lasy to Ivangorod, to connect the Warsaw and Vienna line with the Weichsel branch.

The Government of Nicaragua intends to build a railroad from Corinto, on the Pacific, to a point on Lake Managua, *via* Realejo, Chinandega, and Leon. It will pass through a fertile, healthy country. The wagon and boat traffic over the proposed route is now considerable. The road will be a 3½-foot gauge, 70 miles long, and will be calculated for a maximum speed of 25 miles an hour, and a load of three tons per wheel.

The Brazilian Government is zealously endeavoring to bring about the long-desired railway connection with the western coast of South America. A first-class railway is now being built along the Madeira River, from the village of San Antonio, situated at the head of navigation, 1,300 miles from the Atlantic coast, to a point on the Rio Mamora. When completed, it will afford direct communication with Bolivia. The road is 180 miles in length, and, besides being of great immediate value, is an important link in the interoceanic connection. The materials have been shipped from the United States. The Brazilian Government has devoted \$6,000,000 to the construction of the road. The contractors are Philip and Thomas Collins, and the engineers and laborers are Americans. After the completion of this road and of the tunnel through the Andes, which has been commenced, railroad connection with

Lima, in Peru, can be easily made, and may be accomplished within a period of three years.

Two important railways are contemplated in Buenos Ayres. One is a transcontinental road, for which Clark & Co. have obtained a concession from the Argentine Government. It will start from some station on the Western Railway of Buenos Ayres, pass Mercedes and San Juan, and reach to Mendoza on the east side of the Andes. The road is to have a gauge of 5 feet 7 inches; its length will be about 700 miles. To extend the road across the Andes to Valparaiso will require vast engineering works, and the difficulties to be overcome transcend those of the Semmering route from Vienna to Trieste. The other projected railway is a narrow-gauge line, 500 miles long, to run from Bahia Blanca to Salinas, and then along the Rio Colorado toward Mendoza, terminating at the foot of the Planchon Pass in the Andes. It would thus traverse the rich La Plata region, which has now no railroad communication with the Atlantic. The cost of the road is estimated at \$25,000 per mile. The gauge is to be 3 feet 8 inches.

A railroad is being built in Nubia, from Wadi Halfa to Dongola, under the direction of M. Jansen. Its first section has been opened to traffic. A bridge will have to be thrown over the Nile at Koye. The completion of this railroad, which is being constructed out of the surplus revenues of Soodan, and is not affected by Egyptian finances, will give an immense impetus to commerce, which will even be felt in Darfour and Wadai.

The railways of India are being extended as fast as the Treasury will allow. Better railway connections for the rapid transport of grain are considered one of the best precautions against the reoccurrence of a great famine; but there is a difference of opinion as to whether they are a more important safeguard than canals and reservoirs for irrigation, which can serve for transportation as well as the fertilization of the soil. The question of broad and narrow gauge railroads has been hotly discussed in connection with the projected lines, the most important of which are routes from Ajmere to Indore, and from Ajmere to Ahmedabad. The latter road the Government has authorized to be constructed with the metre-gauge, in spite of the protests of the military authorities, who insist, for strategical reasons, on the retention of the 5-foot-8-inch gauge, on which the Indian railways have all been built. It is probable that, admonished by the fact that the Indian roads have never proved remunerative, the Indian Government will correct its mistake, and build metre-gauge roads hereafter.

The new Japanese railway, between Osaka and the seaport Kobe, has been built very completely, under the direction of an English engineer, John England. The first section is tunneled in three places, one bore being 365 feet in length. The road passes over a vast number of water-courses and irrigation-canals. The

numerous bridges are chiefly of wood, in the portion of the road toward Osaka, some of them being 80 feet in length, and some of the spans 30 and even 40 feet, the wooden girders resting on stone piers; there are also bridges and culverts of arched masonry. Toward the other end of the road are 3 iron Warren girder bridges, with spans of 70 feet, resting on iron screw piles, of 2 feet 9 inches diameter, with wrought-iron blades of 5 feet diameter and 5 feet pitch. That over the Muko-gawa River has 12 spans. Beyond this there are 6 flood openings, of from 100 to 180 feet, with 20-foot spans, built of granite backed with brick. The next bridge, crossing the Kansakigawa, has 17 spans. Passing over 5 more culverts, the last one bridged by Warren girders 60 feet in length, the road crosses the last bridge, stretching over the Jusho-gawa with 9 spans. The bends in the railway are frequent, and some of them very sharp curves. The terminal stations are very complete, that at Kobe covering 64 acres, with 5 miles of side-tracks, large freight-house, workshops, etc. A pier built out into the sea is 450 feet long and 40 broad; there is 20 feet of water next the dock. The station at Osaka, covering 40 acres, has likewise 5 miles of rail in sidings. The road between Kobe and Osaka, together with the Ajikawa extension, built later, is 22 miles in length. In 1876 the road was extended to Kioto, 27 miles additional. This road, with the 18 miles of railroad between Yedo and Yokohama, opened in 1872, makes 67 miles of railway now finished in the Japanese Empire. The Government is seriously considering the construction of a route across the island from Yedo to Kioto, and surveys have been made by English engineers to determine the best course.

In the Prussian capital a city railroad is being built, which has 4 tracks—2 for the through traffic of the railways, 6 in number, with which it connects, and 2 for local traffic. It has a length of 7 miles, extending from the terminus of the Lower Silesian Railway to Charlottenburg. There will be 3 stations for each of the railways and 6 for the city tracks. The estimated cost is about 7½ million dollars. A street-railroad has recently been opened in Rome. It runs from the Porta del Popolo to the Ponte Molle, a distance of 2,740 metres. The cars are first and second class, drawn by a single horse, and running every 10 minutes. An underground city railroad is to be built in Paris. It will pass through two tunnels under the Seine.

The problem of the best pavement for city streets is considered by Prof. Haupt, of the University of Pennsylvania, to have been greatly simplified by the invention of a horseshoe with a grooved bottom, into which a tarred rope is fastened. The shoe is of iron, of the ordinary shape, and is put on without heating. Such shoes have been found to wear as well and as long as those in general use. Rubber

tires have also been tried on vehicles, and would give satisfaction on a smooth pavement. If streets were paved with concrete, which might be laid down in movable blocks in the parts overlying sewers, the waste of power, the wear of vehicles and pavement, and the strain on the nerves of the citizens, now incurred by the jarring and rattling of carriages on the rough stone pavements now in use, would all be avoided. Under the present conditions of locomotion, parallel trams for the wheels, with a footway of ordinary pavement for the horse, would be immensely superior to the cobble, spall, or boulder pavements now in use.

A subterranean telegraph between Berlin and Mayence, a distance of 600 kilometres, was completed July 23d. It passes through Halle, Leipsic, and Frankfort. The wires are twisted together and protected by a covering of hemp and iron. This is the first long underground cable which has been laid since the failure of the wire between Berlin and Cologne, laid in 1848; although Germany has several shorter lines. The cost of the subterranean telegraph is six times as much as that of the same number of overground wires. This line is one of seven underground telegraphs which are to be laid between Berlin and the western frontier. The mileage of underground telegraphs in Great Britain has been increased from some 2,000 miles in 1870 to over 8,000 miles in the spring of 1877. All the metropolitan wires are laid below the earth, on account of the dangers from aerial telegraphs in cities. A short telegraph-wire has been put up in China, for the use of Li Hung Chang, the Viceroy of China, to the construction of which no opposition was shown by the populace. Several lines are projected in Formosa by the governor of the island.

The new tunnel of the Delaware and Lackawanna Railroad through Bergen Hill, near Hoboken, in New Jersey, was commenced in September, 1873. It was prosecuted by hand-drilling from both ends, and each way, from 6 perpendicular shafts. In January, 1876, the headings were all connected. The bottom was leveled in the following May, but the work of enlarging the roof and lining the insecure portion with masonry took still a year, and the tunnel was first opened to the passage of trains in May, 1877. The length of the bore is 4,210 feet. The masonry projects 35 feet farther at each end, as a protection against falling stones and earth. The tunnel is back-arched, with masonry 22 to 34 inches thick, for 3,100 feet, or nearly three-quarters of the entire length. The eastern entrance is 2,700 feet to the north of the Bergen tunnel of the Erie Railroad, which the Delaware and Lackawanna trains have hitherto used. It forms an angle of 40° with this tunnel, and emerges, on the west side of the hill on a higher level, within 50 feet of it, so that the trains cross the Erie track over a bridge. The width of the new tunnel is 27

feet in the clear, and its height 20 feet 7 inches. It is ventilated by 7 air-shafts, all brick-lined except one. The new line is more direct than the old one through the Erie tunnel, the actual saving in distance being two-thirds of a mile. Besides the boring of the tunnel, the approaches, involving the filling up of bog on the east side of the hill for the distance of three-quarters of a mile, and the construction of no less than 11 bridges, have necessitated a large outlay of capital, altogether \$2,787,000, of which the boring of the tunnel through the trap-rock stands for \$800,000, and the brick arching for \$105,000. In Hoboken there are 3 bridges, over which pass 7 tracks over one street, and a 4-track bridge over another, besides an iron skew-bridge of 193 feet span over Hoboken Avenue. On each side of the hill there is a bridge over the Erie track, the oil-cars crossing the route again on the east side. The skew-bridge across the Hackensack is a noteworthy structure, on account of the difficulty of securing a foundation in the soft bottom of the river. The stone piers, which support the iron structure, themselves rest upon 1,700 large piles. The bridge has 2 spans and 1 draw, each of 200 feet. The engineers of the tunnel were the engineer of the road, James Archbald, and Samuel Rockwell. Besides these works, the Delaware and Lackawanna Railroad has commenced a ship canal for dock purposes, 3,000 feet long, 100 wide, and 20 deep.

The longest tunnel in America is that which is being bored for the Baltimore water-works, from the Gunpowder River to Lake Montebello, the distributing reservoir, which is about a mile and a half from the city. The length of the bore is 36,510 feet, or 6 $\frac{1}{2}$ miles. It is bored entirely by hand-drilling, through hard gneiss and granite for four-fifths of the distance. The source of the water-supply lies 8 miles distant from the city. It is near enough the surface to allow numerous shafts to be sunk, from which the tunneling has proceeded rapidly. The bore is circular in section, and 12 feet in diameter. It passes under a rolling surface, and varies from 67 to 353 feet in depth. There are 15 perpendicular shafts, the deepest of which runs down 294 feet. From Lake Montebello the water is conveyed in a conduit, 4,120 feet long, called Clifton tunnel, to a point 1,900 feet outside the city, whence it is distributed to the different parts of the town by 6 mains of 4 feet diameter.

A great work is now approaching its conclusion in Saxony—the Rothschoenberg water adit, for the drainage of the Freiberg mines. This extraordinary tunnel, after 33 years of incessant labor, is now completed for 43 kilometres, or 26 English miles, including the branches. When completed, it will have a length of 51 kilometres, or 31 $\frac{1}{4}$ miles. It is already used throughout the length completed. The bore is perfectly straight for 5 miles, and the bends in the remaining portions are very

slight. It lies 400 feet below the deepest previously existing drainage course in the mines. The rock through which it passes is solid gneiss the whole length, requiring 40 to 50 holes to the face with hand-tunneling; the Burleigh compressed-air drill was first employed in 1876. Quicksands and floods of liberated water greatly increased the difficulties, and retarded the work. The height of the tunnel is 9.84 feet, and its breadth somewhat less. It is ventilated by 8 shafts. The gradient is only 3 in 10,000, so that it will be necessary to clear the tunnel occasionally, which can be easily accomplished with boats and dredges. The work was commenced toward the end of 1844, the surveys having been made the previous year. The entire cost is estimated at 12,000,000 marks, which will be recouped by a levy on the mines benefited. An unknown mine, at least 400 years old, was struck in 1876, in which the timbers were yet sound. Of two new veins discovered, one will be worked. The Freiberg mines and foundries are 700 years old; and, at the present time, 6,000 laborers, with their families, depend upon them for support. The point where the tunnel will empty into the Elbe is Rothschoenberg, $7\frac{1}{4}$ miles above Meissen. The out-turn of the Freiberg mines has fallen off of late years, owing to the constant flooding of the deeper mines. The completion of the tunnel will allow the exploitation of many veins, which could not heretofore be followed down below a certain depth.

The Severn tunnel, being constructed by the Great Western Railway, to connect Bristol with South Wales, will be $4\frac{1}{2}$ miles in length, one-half of it lying under the Severn, not far from the new Severn bridge. The gradient is 1 in 100, descending from both ends; and the depth at the lowest level, under the swiftest part of the river, is 100 feet below high water. This important work is conducted under the management of Charles Richardson, and is attended with unusual difficulties, owing to the infiltration of water and the varying nature of the rock.

The work of enlarging the Welland Canal to the capacity of the largest lake-vessels will, it is expected, be completed in the autumn of 1879. The canal, after the improvement, will have a width of 100 feet at the bottom and a minimum depth of 15 feet, and will be capable of receiving ships of 2,500 tons burden. The locks will be 278 feet long and 45 feet wide, with a depth of 14 feet on the sills.

Preparations are being made for the construction of a ship-canal along the Seine, from Havre to Tancarville—a point on the river 60 miles below Rouen. It will be in a single section, 17 miles long, and issuing at the Eure dock in Havre. The plans are for a cutting 25 metres broad, with a towing-path of 6 metres breadth on each bank. The bed of the Seine, from Rouen to Paris, is concurrently to be improved, so as to have a minimum depth of

3.20 metres. The canal will be made $4\frac{1}{2}$ metres deep, and navigable for brigs, schooners, and steam colliers up to Harfleur on the Seine; and above that point it will be given a minimum depth of $3\frac{1}{2}$ metres. The estimates are 21,000,000 francs for the canal, a branch 500 metres long running up to Harfleur, the planting of trees along the banks, and a basin, 500 by 60 metres, at Havre.

On November 1, 1877, an Inman steamship, drawing 21 feet 8 inches, passed through the jetty at the mouth of the Mississippi without touching. The means of deepening the channel of the South Pass of the Mississippi are not only the jetties, funnel-shaped at their upper end and parallel below, which concentrate the action of the water on the obstructing bars, but also embrace the closing the Grand Bayou and the regulation of the outflow through the Pass à l'Ostre and the Southwest Pass. The works for the control of the water in these passes are now in progress. A sill of willow mattresses has been extended across the beds of both passes, from the head of the South Pass to the other side of the river, about $1\frac{1}{2}$ mile in length, which is only the foundation of a more complete wicker dam yet to be made. The scouring efficacy of the increased current, and the groundlessness of the fears of a new bar formation, are now assured; recent surveys show that there is an average increase of depth of $4\frac{1}{2}$ feet in an area of 500 feet broad, beyond the mouth of the pass for 1,000 feet out. The amount of the same, from June, 1876, to June, 1877, was 1,145,976 cubic yards, or 1 foot 3.7 inches over the area mentioned. A broad channel, 24 to 95 feet deep, was running through the jetty at last account; and there is no doubt that the desired passage of 30 feet depth by 350 breadth will be attained in time.

The extensive labors carried on by the German Government in the preparation of the naval station at Kiel are now not far from their completion. The site of the naval establishments, covering 100 morgen, or 53 acres, had to be leveled to a plane 10 feet above the water in the harbor—a labor of nine years, involving the clearing away of several hills. Two large basins, one 1,700 by 1,200 feet, the other somewhat smaller, and both 66 feet deep, have been dug out, in many places blasting having been resorted to. These basins can hold all the men-of-war in the German Navy at one time. The docks, 4 in number, open at their south ends into the smaller basin; their northern ends are fronted by rows of workshops. The land inclosure is surrounded by a high stone wall. The water-front is protected from the action of the waves by stone walls and groins.

The Chatham naval docks, in England, are being enlarged by three immense basins, with a total area of 74 acres. Four graving-docks, of enormous capacity, are among the extensive works which are being added to this navy-

yard. When completed, it will have a river frontage of over 3 miles.

The western part of the continuation of Glasgow harbor, called Stobcross Docks, was opened in September. These works when completed, in three or four years, will cover over 60 acres—33 acres of water and 27½ acres, or 3,344 lineal feet, of quayage. There will be 3 basins. Their average depth is to be 20 feet at low tide. The basin just completed is the largest one—695 feet wide at the broadest part. The estimated cost of the whole works, which were planned by James Deas, is £1,600,000. The basin now opened is called the Queen's Dock; it is a tidal harbor, the entrance being 180 feet wide. A swing-bridge crosses the entrance, which, although weighing 800 tons, is moved from one side to the other in a minute and a half by its hydraulic machinery.

Two new forms of floating docks have been devised by Clark & Standfield, an English firm of engineers. One is a tubular dock, similar to the usual rectangular floating dock, but capable of being towed in rough weather, and of docking laden vessels or large iron-plated war-ships. Its bottom consists of 6 or 8 parallel longitudinal tubes, connected transversely by an iron framework, the 2 outer tubes, which support the sides of the dock, running up higher than the others, and having a flat upper side, forming a box-girder, on which are fixed the vertical cylinders, which form the sides of the dock. Some of these hollow cylinders are perfectly tight, and some have valves for admitting or expelling water; those in the centre contain the engines and pumping apparatus. The dock is provided with a new kind of rest for the ship, consisting of inflated cushions of many thicknesses of canvas imbedded in India-rubber, supporting every part of the bilge and sides of the ship as evenly as though she were riding in the water. The air-cushions can be removed from the parts requiring repairs. The principle of this floating dock with air-cushions might also be applied in ship-floats for lifting vessels over shoals and bars into rivers and harbors, or conveying iron men-of-war through ship-canals, like that of Suez. The other novel device of the Messrs. Clark & Standfield is the gridiron depositing dock, whose chief advantage over the ordinary kinds of dry-docks is, that a number of vessels can be docked and repaired at the same time. It lifts the vessel out of the water, and deposits it high and dry upon a staging of piles and timber, which can be made long enough to receive any desired number of vessels. It is, therefore, adapted to the needs of a naval arsenal for a means of preserving gunboats and war-vessels from the decay which attends them if kept in water. The float consists of pontoons of boiler-plate, about 3½ feet apart, running crossways to the ship's keel, which are divided within into hollow compartments. The pontoons are some 10 or 12 feet broad, and 12 to 18 feet deep; the side of the dock joins the pontoons together; and in some of

its hollow chambers are contained the engines, boilers, and pumps. It balances the weight of the vessel when on the dock; and is furnished with an outrigger, consisting of a broad pontoon, which holds the dock upright when submerged. The transverse section of the dock is like the letter L. The spaces between the pontoons fit in between the rows of piles which form the stage; and when the ship is safely deposited and braced, the pontoon float is lowered from under the bilge and retired. This floating dock, like the one before described, is provided with air-bags, for the protection of the vessel from strains. All the numerous compartments in the dock are provided with separate pipes and valves, which are brought to a centre, and controlled by the director, who knows by the indicators the amount of water in each chamber, and is able, with the valves and pumps, to keep the dock always on a level. The same inventors have proposed a dock for the raising of sunken ships. It is to descend over the vessel; and from the projecting feet grappels are to be pressed under the keel of the ship by the inflation of air-bags behind them. Then, from the hollow compartments the water will be pumped until the hull is brought to the surface. Another new type of a floating dock has been worked out by Ercole Lauria, an Italian engineer. An iron or oak pontoon, larger than the vessel to be docked, and capable of floating it, is filled with water, and introduced under the keel of the ship, and then emptied gradually, the vessel adjusting itself, when the pontoon is at the proper level, to its cradle, which rests upon beams of iron, whose ends project beyond the sides of the pontoon. The pontoon is then towed into a dock, and again sunk, while the projecting beams rest on ledges of masonry, thus holding the vessel suspended; the pontoon is again introduced under the hull when the repairs are accomplished, and the same floating and sinking operation is repeated. The interior of the pontoon is divided into 12 compartments, furnished with 24 India-rubber tubes, half of which are filled with water to sink the pontoon, and half with air to buoy it. The time necessary for docking a ship would be about 6 hours.

The water-supply of Lyons, France, is derived from filtering galleries and reservoirs in the gravel-bed which forms the centre of the Rhône's valley, below the city. The filtering surface covers 7,700 square yards. The floors of the galleries are 10 feet below the low-water mark of the river. The supply, in times of low water, has been only 6,500,000 gallons daily. To increase this supply, it was judged to be useless to extend the galleries; but, it being ascertained that below the conglomerate beds underlying the gravel there was another stratum of fine, porous gravel, this conglomerate rock has been pierced by 7 octagonal wells, lined with cast-iron framing, 6½ feet in diameter, and 26 feet deep, sunk from the bottom of the filtering galleries. These wells

yield about 400,000 gallons each per diem, and make up easily the 9 million gallons, or 264 gallons per head of the population, at present required. The water is pumped by powerful engines into reservoirs in different parts of the city, one 160, one 815, and one 512 feet above the filtering well; in the park, on the opposite side of the river, is a fourth reservoir.

The deepest artesian well in the world is being sunk by Zsigmondy, at Pesth. He has already reached the depth of 951 metres, or about 3,000 feet, which is 404 metres deeper than the well at Paris. The boring at that

depth is in dolomite. The water obtained is perfectly clear, and rich in sulphur and alkali, and shows, when it reaches the surface, a temperature of 57.6° Réaumur; the jet amounts to 693,930 litres per diem. The pressure of the upward-streaming water is made by an ingenious appliance, invented by Bela Zsigmondy, to assist in the boring operations. The thermometer shows a temperature of 65° at the reported depth.

EUROPE. The area and population of the states of Europe, arranged according to the density of population, were as follows in 1877:

COUNTRIES.	Area in English Square Miles.	Area in Square Kilometres.	Population.	Year.	Inhabitants on 1 Sq. M.
1. Belgium.....	11,873	29,455	5,403,006	1875	476

Europe.....	*310,673,966	100.

The European Conference which had met in Constantinople in December, 1876, for the peaceable solution of the Eastern complication,

* Without dependencies.

proved a failure, because the Turkish Government rejected the propositions of the Conference as irreconcilable with the integrity, independence, and dignity of the Ottoman Empire. As another collective demand of the great Powers of Europe, laid down in the London protocol of March 31st, was likewise not acceded to by the Turkish Government, Russia, on April 24th, declared war against Turkey. The new Eastern war which was thus begun ranks among the most memorable wars of the 19th century, and is the most prominent event in the history of the year 1877. The hope of the Turks, that some of the great Powers, especially England, might be induced, by their opposition to Russia, to aid them, was disappointed, and the only cordial sympathy they met with was among the kindred Magyars, who, however, were unable to exert a decisive influence upon the policy of the Imperial Government of Austro-Hungary. The resistance which the Turks made to the vastly superior force of Russia excited the admiration of the world; but at length they were overpowered, and at the close of the year the situation of Turkey was hopeless. One of the European dependencies of Turkey—Roumania—availed itself of this war to declare its independence. Servia, which in 1876 had been so unsuccessful in its war against the Turks, concluded peace in February, 1877, and did not join in the Russo-Turkish war until toward the close of the year, when there was no longer any fear of the Turks being victorious. Montenegro could not come to an understanding with Turkey about the conclusion of peace, and, after a short armistice, continued the war throughout the year. The Greek population of Turkey and the kingdom of Greece repeatedly assumed a threatening attitude, but did not take an active part in the war. Amid the din of war, the proceedings of the first Turkish Parliament, which was opened in March, did not attract as much attention as otherwise might have been the case. (See TURKEY, RUSSIA, and EASTERN QUESTION.)

England was throughout the year kept in a state of excitement by the Eastern war. The Ministry was strongly opposed to the aggressive policy of Russia, but refrained from rendering any aid to the Turks, and contented itself with demanding the protection of the Suez Canal and the freedom of the Dardanelles. Mr. Gladstone expressed the views of the majority of the Liberal party by resolutions declaring that the Porte had forfeited all claim to the moral and material support of the world; but his resolutions were defeated by a majority of 131, a number of Liberal members voting on this question with the Ministry. The coronation of the Queen as Empress of India greatly added to the prestige of England in the East. The territory of the Empire received once more a large increase by the annexation of the Transvaal Republic, in Africa. (See GREAT BRITAIN.)

The attention of Austro-Hungary was likewise engrossed by the Eastern war. The Rou-

manians, Servians, and Croats manifested an enthusiastic sympathy with the successes of Russia, and the prospective growth of the Roumanians and Slavs of Turkey. The Magyars, on the other hand, were so alarmed at this project, that they clamored for an open and prompt support of Turkey. But the Imperial Government did not dare to separate from the tri-imperial alliance, and declared that it would observe a strict neutrality as long as Austrian interests were not directly involved. (See AUSTRO-HUNGARIAN MONARCHY.)

In Germany, the most notable feature at the election of a new Reichstag, in January, was the largely increased vote of the Socialists. This party counts in the new Reichsrath 12 members, a larger number than it had ever before, and polled an aggregate of 485,000 votes, or 8.5 per cent. of the entire vote cast. Its progress appeared so alarming that the Emperor, in opening Parliament, sounded a warning against anarchical agitation. Prince Bismarck repeatedly expressed a wish to resign, on the ground of ill-health, but the Emperor did not consider it safe to dispense with his services, and preferred to give him additional leave of absence. The prestige of Germany in the political councils of Europe maintained itself in 1877, and it was looked upon as the real arbiter of the Eastern question. (See GERMANY.)

In France, the first four months of the year were remarkably free from any excitement. In May, President MacMahon suddenly dismissed the Prime Minister, Jules Simon—although he was supported by a two-thirds majority in the Chamber of Deputies—and expressed in a very emphatic manner his disagreement with the principles of the Republican party. When the Chamber declared that no ministry that was not Republican would be acceptable, it was prorogued, and soon after, with the consent of the Senate, dissolved. Contrary to the hopes of the President, the general elections again resulted in a decisive Republican victory, and after wavering for some time as to the course to be pursued, he finally concluded to make favor with the Chamber of Deputies, and appointed a ministry consisting of moderate Republicans. (See FRANCE.)

In Italy, the conflict between Church and state continued unabated, and was the chief topic which engaged the attention of Parliament. The instability of Italian ministries manifested itself also in 1877. In the Eastern question, the Italian Government sympathized with Russia and Germany. (See ITALY.)

EVANGELICAL ALLIANCE. The 9th annual meeting of the *Evangelical Alliance for the United States* was held in the city of New York, January 29th. The Rev. Dr. A. D. Gillette presided, in the absence of the president of the Alliance, William E. Dodge. The work of the organization had been performed during the year without salaried officers. A meeting of the Executive Committee had been held to consider what was the duty of the AL-

liance in reference to the sufferings of the Christians in Bulgaria, at which it was decided that, while the sympathies of the body with their sufferings were deep, and the members would contribute with others to their relief, the political complications of the case rendered it inexpedient to act in reference to the subject. At the same meeting a committee was appointed to prepare a paper in reference to the Protestant Christians of Spain, who were restrained in their freedom of religious worship, to be presented to the American Minister in that country, and also given to the public. This paper, which recites the doctrines generally accepted by the Protestant churches in the United States in regard to religious liberty, was presented to Mr. Cushing, the Minister of the United States to Spain, and, in return, he gave an account of the provisions of the laws and constitution of the kingdom on the subject, and of the difficulties in the way of securing for the Protestants the privileges which were desired. The publication of the protest and memorial of the committee in Spain led to a request from that country to send the necessary documents to enable the Spanish Protestants to organize a branch of the Evangelical Alliance.

The Council of the British Organization, in June, forwarded to the Emperor of Germany an address, thanking him for the reception accorded, in 1876, to their secretary, the Rev. James Davis, and for the communication which was then made to him on the subject of holding, in 1878, a general conference in the city of Berlin. In this address the Council stated that, "after mature deliberation, however, and after consulting with influential friends interested in the subject, the Council have been compelled to arrive at the conclusion that the year 1878 would be too soon for the proposed conference in Berlin; and that, in order to secure the unanimity required, and thus to obtain, under the Divine blessing, a success commensurate with the objects sought to be advanced, it seemed desirable that the next Alliance Conference should be held in Switzerland; and the Swiss branch having kindly given their consent to this proposal, the town of Basle has been selected for that purpose."

A *conversazione* was given by the Council of the British branch of the Alliance in London, May 17th, which was attended by persons connected with the religious societies whose anniversaries had been recently held, and by visitors from abroad. Lord Waveney presided. The Rev. James Davis, secretary, gave a narrative of the work of the Council during the past year, and spoke of what the Alliance had accomplished within 30 years. New branches had been opened in Egypt, Spain, and elsewhere. The Council had successfully interfered on behalf of persecuted Christians, and their action had been very thankfully received by those for whom it was set on foot. The annual week of prayer had been very generally

observed, especially on the Continent, where, in some parts, the people had assembled in thousands and tens of thousands. The next annual conference of the British Organization has been appointed to be held in Oxford, and it was hoped that many friends from a distance would be induced to attend. With regard to the next general conference some difficulties had arisen in the way of holding it in Berlin, as had been originally intended. On the invitation, however, of various committees in Switzerland, it was resolved to meet in Basle in the autumn of 1878. Reference was made to the persevering efforts of friends in Geneva to establish a confederation for the better observance of the Lord's day all over the Continent. Signor Gavazzi spoke of the progress of the Free Christian Church of Italy, which had now 27 regular stations, besides 20 other preaching places. Dr. Kalopathakes gave an account of the condition of the Alliance at Athens, Greece; and the Rev. W. Farnworth described the organization of a Protestant church in Cæsarea, with a congregation of 600 people.

Another *conversazione* was given by the same branch on July 14th, to a number of Presbyterian ministers from the United States, who had been attending the Presbyterian Council at Edinburgh. The Earl of Shaftesbury presided, and made an address, in which he expressed gratification that the denominational distinctions which stood in the way of united action among Protestants were fast passing away. Lord Waveney, in the name of the Council of the Alliance, made an address of welcome to its guests, and Sir Charles Reed spoke of the need of a closer coöperation of Christians. Appropriate addresses of response were made by the American visitors, in which their British hosts were invited to attend the conference of the American branch of the Alliance, to be held in Philadelphia, Pa., in 1880.

The meeting of the British branch of the Evangelical Alliance was held at Oxford, beginning September 25th. Visitors were present from Germany, France, Switzerland, Spain, Holland, Italy, the United States, Australia, Persia, and South Africa. The presiding officer was changed at each sitting, the Rev. D. Martin, of the Congregational Church, presiding at the opening session. An address of welcome was delivered by the Rev. A. M. W. Christopher, rector of the Church of St. Aldatas, which was responded to by the Dean of Canterbury and several of the foreign delegates. The annual address was delivered by the Rev. Dr. Campbell, of Bradford, and described the Alliance as the symbol of the spiritual unity of the churches whose members were represented in it. The annual report narrated the efforts which the Alliance had made in behalf of religious tolerance in different countries. It had induced the Foreign Office to address the Government of Egypt on the subject, and had, in several instances, pro-

vided liberty of worship for Christians in that country; and the Khedive had been induced to give a plot of ground to the Protestants of Koos, on which to erect a chapel. It had made efforts to secure a better observance of the Lord's day in Switzerland, which, it was said, were not so chimerical as some people in Great Britain might imagine. The invitation that the Alliance had received from the mightiest of the crowned heads of Europe (the Emperor of Germany), to hold its next general conference in his capital, showed that its repute and influence abroad were considerable. It was stated that the Count von Moltke was president of the Prussian branch of the Alliance. A larger number of members were reported to have joined the Alliance during the past 12 months than in any previous year.

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of the Evangelical Association, as given in the *Christian Family Almanac* for 1878:

CONFERENCES.	Itinerant Preachers.	Local Preachers.	Members.	Churches.
East Pennsylvania.....	84	68	14,794	1904
Central Pennsylvania....	76	70	10,870	1614
Erie.....	25	12	2,959	894

The increase of members over the number reported in the previous year was 4,893. Number of Sunday-schools, 1,741½; of officers and teachers in the same, 19,295; of Sunday-school scholars, 106,314; of catechetical classes, 537; of catechumens, 6,960; number of children baptized during the year, 7,511; number of adults baptized, 1,824; probable value of the churches, \$3,233,971; number of parsonages, 388½; probable value of the same, \$414,970; amount of conference contributions, \$4,393.82; of missionary contributions, \$67,448.17; of contributions to the Sunday-school and Tract Union, \$2,084.22. The high-schools of the denomination are the Northwestern College, at Naperville, Ill.; the Union Biblical Institute, Naperville, Ill.; and Union Seminary, New Berlin, Pa. The Ebenezer Orphan Institution, at Flat Rock, Ohio, has a school and manual labor department connected with it. The periodical publications

of the Association comprise a monthly religious magazine, a general denominational weekly newspaper, and four periodicals for Sunday-schools and children, in the English language; one weekly newspaper, one monthly magazine for the Sunday-school and family, three papers for Sunday-schools, in German, published in the United States; and one weekly newspaper and one paper for Sunday-schools, published in Germany.

The 38th annual meeting of the *Missionary Society* and the meeting of the *Board of Missions* were held at Racine, Wis., October 12th and 13th. The treasurer of the Missionary Society reported that the receipts to the principal treasury for the past year had been \$13,119.24, of which sum \$7,618.35 had come in the shape of contributions and bequests for home missions, and \$3,538.65 for missions in Europe. The total expenditures had been \$36,496.32, showing a deficit of \$23,377.08. The sum of \$49,353.14 had also been received into the conference treasuries, and \$61,658.69 had been expended from them. The receipts on account of the Heathen Mission Fund had been \$5,291.24, and the expenditures on the same account \$6,256.11, leaving \$26,603.50 in the treasury at the end of the year. The total amount of the standing fund was \$53,416.01. The total amount of receipts for the year had been \$67,771.90, and the total amount of expenditures had been \$83,651.69, showing an increase of \$3,196.37 in receipts and \$1,376.59 in expenditures over those of the previous year. Favorable reports were made of the condition of the missions of the Society in Europe and in Japan.

The Japanese mission had completed the first year of its operations, and had received its first convert. The Executive Committee were advised to send another missionary to Japan, who should be the superintendent of the mission. Every member of the church was invited to make a special gift on Christmas-day for the reduction of the debt of the Society, which now amounted to \$25,000.

The annual meeting of the *Board of Publication* was held at Cleveland, Ohio, October 16th. The book-agent reported that his gross receipts had been \$138,247.11, and his gross expenditures \$111,443.12, showing a net profit for the year of \$26,803.99. The resources of the establishment were estimated at \$366,224.58, and its liabilities at \$9,573.68. Additions had been made to the machinery and stock of the publishing-house to the value of \$15,067. The 16 periodicals published at the establishment had an aggregate circulation of 171,803 copies. The publication of a "Bible History," and the erection of an additional building, were determined upon.

EVARTS, WILLIAM MAXWELL, was born in Boston, February 6, 1818. He was the son of Jeremiah Evarts, who was born in Sunderland, Vt., February 3, 1781, and died in Charleston, S. C., May 10, 1831. The latter graduated at

* Statistics of last year. † Statistics not fully reported.

Wm. L. Hunt.

SECRETARY OF STATE

Etched by H. B. Hall from a Painting by Thos. Hicks N.A.

J. Appleton & Co.

Yale College in 1802, was admitted to the bar in 1806, practised his profession in New Haven for about four years, and from 1810 to 1820 edited the *Panoplist*, a religious monthly magazine, published in Boston. In 1812, he was chosen treasurer of the American Board of Commissioners for Foreign Missions, and in 1820, when the *Panoplist* was discontinued, and the *Missionary Herald* was issued by the Board in its stead, he took charge of the latter periodical. He was chosen corresponding secretary of the Board in 1821, and retained that office until his death. He wrote 24 essays on the rights of the Indians, under the signature of "William Penn," which were published in 1829. William Maxwell graduated at Yale College in 1837, studied in the Harvard Law School under Judge Story and Prof. Greenleaf, and was admitted to the bar in New York, in 1841. In 1849, he was appointed Deputy United States District Attorney in New York City. He held this position for 4 years. In 1851, while temporarily acting as District Attorney, he distinguished himself by his prosecution of the persons engaged in the "Cleopatra Expedition," a Cuban filibustering scheme. In 1853 he was counsel for the State of New York in the famous Lemmon slave case. In 1861 he and Horace Greeley were rival candidates, before the Republican Caucus, for United States Senator from New York. The name of Mr. Evarts was finally withdrawn, and Ira Harris was elected. In the impeachment trial of President Johnson, in the spring of 1868, Mr. Evarts was principal counsel for the defendant. From July 15, 1868, to the close of President Johnson's administration, he was Attorney-General of the United States. In 1872 he was counsel for the United States before the Tribunal of Arbitration on the Alabama Claims, at Geneva, in Switzerland. Mr. Evarts is a member of the law firm of Evarts, South-

mayd & Choate, in New York, and is President of the State Bar Association. For many years his reputation as a lawyer has been national, and he has been engaged in many of the most important cases tried in the country. Among others may be mentioned the celebrated Parrish will case, and the contest of the will of Mrs. Gardner, the mother of President Tyler's widow. He was the senior counsel retained by Henry Ward Beecher in the action brought by Theodore Tilton, the trial of which lasted six months. The most important cause in which Mr. Evarts has recently appeared as an advocate was that of the Republican party, before the Electoral Commission at Washington, in the early part of 1877. Mr. Evarts is also widely known as an orator. On many important occasions he has delivered addresses, some of which have been published. Among his more recent public addresses may be mentioned the eulogy on Chief Justice Chase, at Dartmouth College, in June, 1873; the Centennial oration, in Philadelphia, in 1876; and the speeches at the unveiling of the statues of William H. Seward and Daniel Webster, in New York. Mr. Evarts has been a Republican from the organization of that party. As the leader of the New York delegation in the National Convention of 1860, he presented the name of William H. Seward in an effective speech. Just before the presidential election of 1876, he made a forcible speech in Cooper Union, New York, in behalf of the Republican candidates. When the result of the election was declared to be in favor of Hayes and Wheeler, public sentiment unanimously centred on Mr. Evarts as the best selection for the first position in the Cabinet, and President Hayes promptly appointed him Secretary of State. Mr. Evarts received the degree of LL.D. from Union College in 1857, from Yale in 1865, and from Harvard in 1870.

F

FARLEY, JAMES T., who has been elected United States Senator from California, for the term beginning, March 4, 1879, is a native of Virginia, 49 years of age, and has resided in California for 27 years. He is a lawyer, and for several years has been the recognized leader of the Democratic party in California. He was the Democratic nominee for United States Senator in 1874, when Governor Booth was the successful candidate. He is reported to be opposed to Chinese immigration, and to Government subsidy to the Texas Pacific Railroad, and to be in favor of free trade.

FEIZI PASHA, Mukhtar Pasha's chief of staff, is a Hungarian refugee, whose original name was Kohlmann. He went to Turkey about 30 years ago, and has been in the Turkish service ever since. But although he frequently distinguished himself during that time, it was

not until quite recently that he was created a pasha, and then only through a caprice of Abdul Aziz, who was specially pleased with Feizi's conduct on the occasion of some sham manœuvres. He is an officer of great merit, and in the war of 1877 again distinguished himself as chief of the engineering staff of Mukhtar Pasha.

FINANCES OF THE UNITED STATES. The same depression which existed in the financial affairs of the country for the previous three years continued, with increased effect, through 1877. In some departments a temporary and limited improvement appeared, but without any extensive or permanent influence.

In the annual report of the Secretary of the Treasury, made December, 1876, there was presented a statement of the receipts and expenditures of the Government for the first

quarter of the fiscal year, ending June 30, 1877, and an estimate of the same for the remaining three-quarters of the fiscal year.

The receipts of the first quarter above mentioned, ending on September 30, 1876, which is the first quarter of the fiscal year ending June 30, 1877, were as follows:

From customs	\$37,554,723 53
From internal revenue.....	23,813,336 37
From sales of public lands.....	252,005 63
From tax on circulation, etc., of national banks	8,534,707 87
From repayment of interest by Pacific Railways.....	97,902 59
From customs' fines, etc.....	17,635 27
From consular, patent, and other fees	425,634 75
From proceeds of sales of Government property.....	171,875 36
From miscellaneous sources.....	2,123,069 16
Net ordinary receipts.....	\$72,991,005 53
Premium on sales of coin.....	119,518 96
Proceeds of bonds of 1881, Geneva award..	\$73,110,524 49
	2,403,445 53
Total net ordinary receipts.....	\$75,513,970 02
Balance in Treasury June 30, 1876.....	121,507,732 30
Total available.....	\$197,321,702 32

The expenditures during the same period were as follows:

For civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenues.....	\$15,937,208 41
For Indians.....	1,434,755 93
For Pensions.....	8,332,357 98
For military establishment, including fortifications, river and harbor improvements, and arsenals.....	9,715,661 35
For naval establishment, including vessels and machinery, and improvements at navy-yards.....	6,174,358 96
For interest on the public debt, including Pacific Railway bonds.....	37,107,550 63
Total ordinary expenditures.....	\$73,751,593 26
Redemption of the public debt, \$3,618,648 77	
Judgments of Court of Alabama	
Claims.....	2,358,634 21
	5,972,282 98
Total expenditures.....	\$84,724,176 24
Balance in Treasury September 30, 1876.....	112,597,526 08
Total.....	\$197,321,702 32

For the remaining three-quarters of the same fiscal year, ending June 30, 1877, it was estimated that the receipts would be:

From customs.....	\$39,445,271 47
From internal revenue.....	91,511,638 64
From sale of public lands.....	800,000 00
From tax on national banks.....	3,600,000 00
From reimbursement by Pacific Railways.....	300,000 00
From customs' fines, penalties, and forfeitures.....	75,000 00
From consular, patent, and other fees.....	1,200,000 00
From proceeds of sales of public property.....	250,000 00
From miscellaneous sources, including premium on coin.....	4,000,000 00
Total net receipts.....	\$191,181,925 10

For the same period it was estimated that the expenditures would be:

For civil and miscellaneous, including public buildings.....	\$39,000,000 00
For Indians.....	4,000,000 00
For pensions.....	20,000,000 00
For military establishment.....	26,500,000 00
For naval establishment.....	7,500,000 00
For interest on the public debt.....	61,376,860 09
Total ordinary expenditures.....	\$153,876,860 09

From the statement of actual receipts and expenditures for the first quarter, ending September 30th, and of the estimates of the same for the remaining three-quarters, based upon existing laws, it was expected that the revenues for the fiscal year would yield the sum of \$264,-292,449.59, and that the expenditures would amount to \$237,628,753.35, which would leave a surplus revenue of \$26,663,696.24. The amount which should be applied to the sinking-fund was estimated at \$33,705,806.67. The surplus revenues would fall below this amount, by not less than \$7,042,110.43.

But the ordinary revenues from all sources for the fiscal year ending June 30, 1877, were as follows:

From customs.....	\$130,956,493 07
From internal revenue.....	113,630,407 33
From sales of public lands.....	976,253 83
From tax on circulation and deposits of national banks	7,078,550 96
From repayment of interest by Pacific Railway Companies.....	1,661,998 64
From customs' fees, fines, penalties, etc.....	1,044,712 84
From fees—consular, letters-patent, and lands.....	1,727,611 97
From proceeds of sales of Government property.....	333,954 96
From premium on sales of coin.....	249,530 78
From profits on coinage, etc.....	3,273,239 03
From miscellaneous sources.....	3,067,782 81
Total ordinary receipts.....	\$269,000,586 62

The ordinary expenditures for the same period were:

For civil expenses.....	\$15,794,138 34
For foreign intercourse.....	1,229,758 79
For Indians.....	5,277,007 22
For pensions.....	27,963,752 27
For the military establishment, including river and harbor improvements, and arsenals.....	37,082,735 90
For the naval establishment, including vessels, machinery, and improvements at navy-yards.....	14,959,935 36
For miscellaneous expenditures, including public buildings, lighthouses, and collecting the revenue.....	39,223,119 47
For interest on the public debt.....	97,124,511 53
Total ordinary expenditures.....	\$238,660,003 93

Leaving a surplus revenue of..... \$30,340,577 69

Which was applied as follows:

To the redemption of United States notes, etc.....	\$10,071,617 00
To the redemption of fractional currency.....	14,043,453 05
To the redemption of 6 per cent. bonds for the sinking-fund.....	447,500 00
To increase of cash balance in the Treasury..	5,778,002 64
	\$30,340,577 69

The amount due the sinking-fund for the year was \$33,729,833.20, leaving a deficiency on this account of \$3,389,255.51.

Compared with the previous fiscal year, the receipts for 1877 have decreased as follows: In customs revenue, \$17,115,491.54; in proceeds of sales of public lands, \$153,213.27; in sales of coin, \$3,473,965.02; in semi-annual tax on banks, \$250,022.33; in prize-money, \$321,370.92; in sales of public property, \$1,-288,212.73; and in miscellaneous items, \$934,-512.81. There was an increase in the following items: In internal revenue, \$1,929,675.80; in profits on coinage, \$1,532,121.27; and in miscellaneous items, \$1,593,539.01—making a net

decrease in the receipts from all sources, for the year, of \$18,481,452.54.

The expenditures show a decrease as follows: In the War Department, \$988,152.74; in the Navy Department, \$4,003,374.46; in the Interior Department, \$983,194.37; in civil and miscellaneous, \$10,706,307.18; and in the interest on the public debt, \$3,118,769.65—due to the funding of 6 per cent. bonds in new 5s and $4\frac{1}{2}$ per cent. bonds—making a total reduction of \$19,799,788.40.

The large apparent reduction in the expenses of the Navy Department, however, is not real; for, by reason of insufficient appropriations to pay the current liabilities of that department, Congress has, by deficiency bill, during the recent session, appropriated the sum of \$2,003,861.27, which is properly chargeable to the expenditures of the last year.

The receipts for the first quarter of the present year, ending June 30, 1878, and the estimates for the remaining three-quarters of the same fiscal year, were as follows:

RECEIPTS.	For the Quarter ending Septem- ber 30, 1877.	For the Remaining Three-Quarters of the Year.
	Actual.	Estimated.
From customs.....	\$36,993,531 56	\$92,516,463 44
From internal revenue....	28,393,382 53	59,606,617 42
From sales of public lands..	213,791 19	751,203 51
From tax on circulation and deposits of national banks.....	3,449,936 84	3,550,063 16
From repayments of interest by Pacific Railway Companies.....	236,162 18	863,837 52
From customs' fees, fines, penalties, etc.....	295,340 32	704,659 63
From fees—consular, let- ters-patent, and lands....	441,604 35	1,308,395 65
From proceeds of sales of Government property...	65,588 36	234,411 64
From premium on sales of coin.....	130,432 67	369,567 33
From profits on coinage, etc.	427,777 10	1,272,222 90
From miscellaneous sources	595,022 67	2,704,977 33
Total receipts.....	\$71,537,569 32	\$193,962,430 13

The expenditures for the same period, actual and estimated, will be:

EXPENDITURES.	For the Quarter ending Septem- ber 30, 1877.	For the Remaining Three-Quarters of the Year.
	Actual.	Estimated.
For civil and miscellaneous expenses, including pub- lic buildings, lighthouses, and collect'g the revenue.	\$15,221,376 05	\$36,198,623 95
For Indians.....	1,658,572 96	3,191,427 04
For pensions.....	7,416,733 59	21,038,216 41
For military establishment, including fortifications, and river and harbor im- provements, and arsenals.	2,072,037 48	25,927,962 52
For naval establishment, in- cluding vessels and ma- chinery, and improve- ments at navy-yards...	3,895,545 51	12,604,454 49
For interest on the public debt.....	40,466,589 96	52,694,053 76
Total ordinary expen- ditures.....	\$70,730,905 55	\$161,699,738 17

From the actual receipts for the first quarter

of the fiscal year and the estimates for the remaining three-quarters, based upon existing laws, the total revenues for the current year will amount to \$265,500,000, and the expenditures to \$232,430,643.72, which will leave a surplus revenue of \$33,069,356.28; and as the amount required for the sinking-fund is \$35,424,804.80, there will be a deficit on this account of \$2,355,448.52. The Secretary of the Treasury in his annual report says:

In the last annual report my predecessor stated that, had the resources of the Treasury, during each fiscal year, commencing with 1862, been sufficient to make a literal compliance with the conditions of the sinking-fund law practicable, a total of \$433,848,215.37 would have been applied to that fund July 1, 1876, whereas the actual reduction of the debt, including accrued interest, less cash in the Treasury at that date, amounted to \$658,992,226 44. On the same basis the amount in the sinking-fund would have reached \$475,313,888.78 on the 1st of July, 1877, on which date the reduction of the debt, including accrued interest, less cash in the Treasury, since its highest point in 1865, amounted to \$696,273,343.17, or \$220,954,459.39 in excess of the amount required by law to be provided for that fund.

This contract of August, 1876, for the negotiation of \$300,000,000 $4\frac{1}{2}$ per cent. bonds, had so far been executed that \$90,000,000 had been sold to the associated contractors on March 1st. In May, the Secretary gave notice of \$200,000,000 to be sold, and subscriptions were rapidly made until the aggregate reached that amount. In June, the Secretary entered into a contract for the sale at par, in view of the 4 per cent. bonds authorized to be issued by the refunding act. Under this contract, invitations having been published, subscriptions were opened on June 16th. Within a period of 30 days thereafter, they reached the sum of \$75,496,550, payable within 90 days. Every subscription has been paid, and of the proceeds \$50,000,000 were applied to the redemption of 6 per cent. bonds. The residue has been applied to resumption purposes. The annual reduction of interest on the public debt thus made is, in the aggregate, \$3,750,000.

In October last, after the payment of the popular subscriptions, arrangements were perfected to open further subscriptions to the 4 per cent. loan, and a call was about to issue for \$10,000,000 6 per cent. bonds, but it was temporarily postponed by reason of the agitation of the repeal of the resumption act and the remonetization of silver, which the associates believed would prevent further sales of these bonds. For this reason they declined to offer them, and no further call of 6 per cent bonds was therefore made.

On the 19th of June, the Secretary informed the associates that it was not anticipated that any future legislation of Congress, or any action of the Government, would sanction the redemption of the principal, or the payment of the interest, in coin of less value than gold coin.

The following is a statement of the outstanding principal of the public debt of the United States on June 30, 1877:

FINANCES OF THE UNITED STATES.

PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES, JUNE 30, 1877.

TITLE.	Length of Loan.	When redeemable.	Rates of Interest.	Price at which sold.	Amount authorized.	Amount issued.	Amount outstanding.

The reduction of interest on the public debt, in consequence of further funding the debt at a lower rate of interest, during the year had been as follows:

By the sale of \$185,000,000 4½ per cent. bonds....	\$2,775,000
By the sale of \$500,000,000 4 per cent. bonds.....	1,000,000
Aggregating.....	\$3,775,000

The approach of the date fixed by law for a resumption of specie payments on all obligations of the Government has led the Secretary to make a statement of the condition of the Treasury, in anticipation of such resumption. He says:

By the resumption act approved January 14, 1875, the Secretary of the Treasury is required to redeem legal-tender notes to the amount of 80 per cent. of the sum of national-bank notes issued, and to continue such redemption, as circulating notes are issued, until there shall be outstanding the sum of \$300,000,000 of such legal-tender United States notes, and no more.

In obedience to this act, there have been issued, since March 1, 1877, to national banks, \$16,123,995 of circulating notes, and there have been redeemed, retired, and canceled, \$12,899,196 of United States notes, leaving outstanding, on the 1st instant, the sum of \$351,340,288.

By the same act it is provided that, on and after January 1, 1879, the Secretary of the Treasury shall redeem, in coin, the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the Assistant Treasurer of the United States, in the city of New York, in sums of not less than \$50. "And, to enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July 14, 1870, entitled, 'An act to authorize the refunding of the national debt,' with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purposes aforesaid."

In obedience to this provision, the Secretary has sold at par, for coin, \$15,000,000 4½ per cent. bonds, or \$5,000,000 during each of the months of May, June, and July last, and has sold \$25,000,000 at par, in coin, of 4 per cent. bonds, or \$5,000,000, for each of the months of August, September, October, November, and December. Of the coin thus received, \$4,000,000 have been sold for the redemption of United States notes, and the residue is in the Treasury. The surplus revenue has also, under the same authority, been applied to the redemption of the residue of United States notes, not redeemed by the sale of coin as above stated, and the balance is held in the Treasury in preparation for resumption.

These operations, aided greatly, no doubt, by the favorable condition of our foreign commerce, have advanced the market value of United States notes to 97½ per cent., or within nearly 2½ per cent. of coin.

The resumption act contemplates the reduction by January 1, 1879, of the amount of United States notes to \$300,000,000, by the cancellation of such notes to the extent of 80 per cent. of the circulation issued to national banks.

The amount of circulation so issued may not be sufficient to accomplish the reduction contemplated; the Secretary, therefore, recommends that authority be given to gradually fund into 4 per cent. bonds all United States notes in excess of \$300,000,000, the bonds to be issued at par for coin or its market equivalent in United States notes. This will be in har-

mony with the declared object of existing law, and will open an easy way by which the people may invest their savings in a public security. Or the reduction of United States notes to the maximum of \$300,000,000 may be accomplished if Congress will authorize the coining of the silver dollar, to be exchanged for United States notes on the demand of the holder, such notes to be retired and canceled.

Existing laws do not clearly define whether United States notes, when redeemed after January 1, 1879, may be reissued. The first section of the resumption act plainly provides for the permanent substitution of silver coin for the whole amount of fractional currency outstanding. Section 3 plainly provides for the permanent reduction of United States notes to an amount not exceeding \$300,000,000. No distinct legislative declaration is made in the resumption act that notes redeemed after that limit is reached shall not be reissued; but section 3579 of the Revised Statutes of the United States provides that "when any United States notes are returned to the Treasury they may be reissued, from time to time, as the exigencies of the public interest may require."

The Secretary is of the opinion that, under this section, notes, when redeemed after January 1, 1879, if the amount outstanding is not in excess of \$300,000,000, may be reissued as the exigencies of the public service may require. A note redeemed with coin is in the Treasury and subject to the same law as if received for taxes, or as a bank-note when redeemed by the corporation issuing it. The authority to reissue it does not depend upon the mode in which it is returned to the Treasury. But this construction is controverted, and should be settled by distinct provisions of law. It should not be open to doubt or dispute. The decision of this question by Congress involves not merely the construction of existing law, but the public policy of maintaining in circulation United States notes, either with or without the legal-tender clause. These notes are of great public convenience—they circulate readily; are of universal credit; are a debt of the people without interest; are protected by every possible safeguard against counterfeiting; and, when redeemable in coin at the demand of the holder, form a paper currency as good as has yet been devised. It is conceded that a certain amount can, with the aid of an ample reserve in coin, be always maintained in circulation. Should not the benefit of this circulation inure to the people, rather than to corporations, either State or national? The Government has ample facility for the collection, custody, and care of the coin reserves of the country. It is a safer custodian of such reserves than a multitude of scattered banks can be. The authority to issue circulating notes by banks is not given to them for their benefit, but for the public convenience, and to enable them to meet the ebb and flow of currency caused by varying crops, productions, and seasons. It is indispensable that a power should exist somewhere to issue and loan credit-money at certain times, and to redeem it at others. This function can be performed better by corporations than by the Government. The Government cannot loan money, deal in bills of exchange, or make advances on property.

The Secretary ventures to express the opinion, that the best currency for the people of the United States would be a carefully-limited amount of United States notes, promptly redeemable on presentation in coin, and supported by ample reserves of coin, and supplemented by a system of national banks, organized under general laws, free and open to all, with power to issue circulating notes secured by United States bonds deposited with the Government, and redeemable on demand in United States notes or coin. Such a system will secure to the people a safe currency of equal value in all parts of the country, receivable for all dues, and easily convertible into coin. Interest can thus be saved on so much of the public debt as can be conveniently maintained in

permanent circulation, leaving to national banks the proper business of such corporations, of providing currency for the varying changes, the ebb and flow of trade.

The legal-tender quality given to United States notes was intended to maintain them in forced circulation, at a time when their depreciation was inevitable. When they are redeemable in coin this quality may either be withdrawn or retained, without affecting their use as currency in ordinary times. But all experience has shown that there are periods when, under any system of paper money, however carefully guarded, it is impracticable to maintain actual coin redemption. Usually contracts will be based upon current paper money, and it is just that, during a sudden panic, or an unreasonable demand for coin, the creditor should not be allowed to demand payment in other than the currency upon which the debt was contracted. To meet this contingency, it would seem to be right to maintain the legal-tender quality of the United States notes. If they are not at par with coin it is the fault of the Government and not of the debtor, or, rather, it is the result of unforeseen stringency not contemplated by the contracting parties.

In establishing a system of paper money designed to be permanent, it must be remembered that heretofore no expedient has been devised, either in this or other countries, that in times of panic or adverse trade has prevented the drain and exhaustion of coin reserves, however large or carefully guarded. Every such system must provide for a suspension of specie payment. Laws may forbid or ignore such a contingency, but it will come; and when it comes it cannot be resisted, but should be acknowledged and declared, to prevent unnecessary sacrifice and ruin. In our free Government the power to make this declaration will not be willingly intrusted to individuals, but should be determined by events and conditions known to all. It is far better to fix the maximum of legal-tender notes at \$300,000,000, supported by a minimum reserve of \$100,000,000 of coin, only to be used for the redemption of notes not to be reissued until the reserve is restored. A demand for coin to exhaust such a reserve may not occur, but, if events force it, its existence would be known and could be declared, and would justify a temporary suspension of specie payments. Some such expedient could no doubt be provided by Congress for an exceptional emergency. In other times the general confidence in these notes would maintain them at par in coin, and justify their use as reserves of banks and for the redemption of bank-notes.

The subject of the restoration of the silver dollar as a legal tender for the payment of debts was extensively discussed during the year. For the details of this discussion, *see* CURRENCY. In Congress, at the extra session of October and November, the following bill was introduced by Mr. Bland, of Missouri, and passed in the House by a vote of 163 to 34:

SEC. 1. There shall be coined, at the several mints of the United States, silver dollars of the weight of 412½ grains, troy, of standard silver, as provided in the act of January 18, 1837, on which there shall be the devices and superscriptions provided by said act, which coins, together with all silver dollars heretofore coined by the United States of like weight and fineness, shall be legal tender at their nominal value for all debts and dues, public and private, except where otherwise provided by contract; and any owner of silver bullion may deposit the same at any United States coinage mint or assay office, to be coined into such dollars for his benefit, upon the same terms and conditions as gold bullion is deposited for coinage under the existing laws.

SEC. 2. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

This bill not only restores the coinage of the silver dollar, which was discontinued under the law of 1873, but also makes it a legal tender, in any sum, for all debts where there has been no special contract. The value of this dollar, as compared with greenbacks and gold, was about 90 to 92 cents. In the Senate, all propositions to limit the legal-tender feature were voted down, although the amount of coinage monthly was fixed at two to four million dollars. The bill was not finally acted upon during the year.

The following bill, to repeal the act requiring the resumption of specie payments, was passed by the House on November 23d, by a vote of 133 to 120:

A bill to repeal all that part of the act approved January 14, 1875, known as the Resumption Act, which authorized the Secretary of the Treasury to dispose of United States bonds, and redeem and cancel the greenback currency.

That all that portion of the act approved January 14, 1875, entitled "An act to provide for the resumption of specie payments," which reads as follows, to wit: "And whenever and so often as circulating notes shall be issued to any such banking association, so increasing its capital or circulating notes, or so newly organized as aforesaid, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes in excess only of the \$300,000,000 to the amount of 80 per centum of the sum of national-bank notes so issued to any such banking association as aforesaid, and to continue such redemption as such circulating notes are issued until there shall be outstanding the sum of \$300,000,000 of such legal-tender United States notes, and no more. And on and after the first day of January, Anno Domini 1879, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the Assistant Treasurer of the United States, in the city of New York, in sums of not less than \$50; and to enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress, approved July 14, 1870, entitled 'An act to authorize the refunding of the national debt,' with like qualities, privileges, and exemptions to the extent necessary to carry this act into full extent, and to use the proceeds thereof for the purposes aforesaid, he and the same is hereby repealed."

An analysis of the vote shows the following local division:

The bill was not voted on by the Senate during the year.

The condition of the banks in relation to the resumption of specie payments is the most important aspect in which they can be considered. This is brought out very fully in the Report of the Controller of the Currency by a comparison with the condition of the State banks during former periods of suspension.

The banks in this country, with the exception of those in the New England States, suspended specie payment in September, 1814. The New York banks resumed specie payment on February 20, 1817, but resumption was not general throughout the country until about the close of the year 1819. There was also a

general suspension in May, 1837; but in May of the next year the New York and New England banks again resumed specie payment. The banks in Pennsylvania finally resumed, under the coercion of the State Legislature, in March, 1842. Banks in other portions of the country resumed at about the same date. A general suspension again occurred in October, 1857, the banks resuming specie payment in the following year.

From such data as are now obtainable, the following table has been prepared, giving the items of circulation, deposits, and bank balances of all the State banks, and of the specie held by them, for a series of eight years, covering both of the periods of suspension and resumption:

YEARS.	Circulation.	Deposits and Bank Balances.	Total.	Specie.	RATIOS OF SPECIE TO	
					Circulation.	Circulation and Deposits.
					Per cent.	Per cent.
1835.....	\$103,692,495	\$83,081,365	\$186,773,860	\$43,987,625	42.4	23.5

1877.....	201,874,286	577,191,727	869,065,963	137,434,137	47.1	15.8
Averages.....	\$315,267,361	\$544,163,417	\$859,435,778	\$143,469,370	45.5	16.7

By reference to these tables, it will be seen that, from 1835 to 1842, the average ratio of specie to circulation held by the State banks was 31.67 per cent., and to circulation and deposits 18 per cent.; and that from 1850 to 1858 it was 32.1 and 16.01 per cent., respectively. The ratio of specie and legal tenders to circulation of the national banks, for the eight years named, was 45.5, and to circulation and deposits 16.7 per cent.

The returns of the State banks in the New

England States, and in the State of New York, were more regular and reliable than those of the banks in any other portion of the Union.

A comparison between these banks, for the periods named, with the national banks for the last eight years, is given in the following tables, which, together with those preceding, are tabulated from reports of the condition of the banks at the date nearest January 1st of each year given:

NEW ENGLAND STATES—STATE BANKS.

In the above tables the 5 per cent. redemption fund required by the act of June 20, 1874, and which consists of deposits with the Treasurer for the purpose of redeeming circulation, is included in the legal-tender fund.

The yearly average circulation of the banks of the State of New York for the ten years from 1851 to 1860 was \$29,698,094, and of deposits \$82,364,349. The average amount of specie held by those banks yearly during the same period was \$16,287,377, of which about one-eighth only was held by the banks outside of the city of New York, and the remaining seven-eighths by the banks in that city. The average ratio of specie to circulation for the ten years named was 54.8 per cent., while to circulation and deposits the ratio was only 14.5 per cent.

The banks of New York City, during the month of December in the last eight years, have held in lawful money an average of 224.4 per

cent. upon their circulation, and of 26.8 per cent. upon their circulation and deposits combined. The average amount of lawful money held by the banks in the principal cities during the same periods has equaled 59.2 per cent. of their circulation, and, including the amount due from their reserve agents, it has equaled 26.5 per cent. of both circulation and deposits. The national banks of the whole country have held during the same periods an average of 43 per cent. of their circulation, and, including, as before, the amounts due from their agents, an average of 23.2 per cent. upon deposits and circulation.

The ratios stated above are shown by the following table, which gives the average circulation, deposits, and reserve funds of the national banks in New York City, in the other principal cities, and in the remainder of the country, separately, and the average of the whole, for the last eight years:

CITIES AND STATES.	No. of Banks.	Circulation.	Deposits.	Legal-tender Funds.	Due from Reserve Agents and Redemption Fund.	Total Reserve Funds.	RATIOS OF LEGAL-TENDER FUNDS TO		Ratio of Reserve Funds to Circulation and Deposits.

States and Territories..	1,724	221.42	270.62	40.43	56.92	97.36	18.3	8.2	19.8
Averages.....	1,954	\$315.26	\$638.98	\$135.70	\$35.97	\$221.08	43.0	14.2	23.2

It will be seen from the various tables given that the average strength of the national banks for the last eight years is fully equal to that of the State banks during periods of suspension and resumption in former times; and, if resumption is to take place upon any fixed date, the national banks will be certain, as a matter of precaution, to strengthen their reserves beyond the averages here given. It cannot be doubted, therefore, that the national banks will be prepared to redeem their circulating notes at any date of resumption which may be fixed upon.

The movement of coin and bullion for the year ending June 30, 1877, and the amount in the country at the latter date, are shown by the estimates of the Director of the Mint to have been as follows:

Estimated amount of coin and bullion in the country June 30, 1876.....	\$151,678,000
Estimated product of the mines for the year....	82,000,000
Importations for the year.....	40,732,595

Total.....	\$304,410,595
Deduct exports.....	\$56,054,737
Amount used in the arts and manufactures.....	5,500,000
	61,554,737

Total estimated amount of coin and bullion in the country on June 30, 1877..... \$242,855,858

Of this amount, \$192,720,230 was in gold coin and bullion, and \$50,135,628 in silver coin and bullion. The increase for the fiscal year was \$61,177,858, of which \$41,155,230 was in gold coin and bullion, and \$20,022,628 in silver coin and bullion. The Director estimates the amount of gold coin and bullion in the country on October 31, 1877, at about \$185,000,000,

and of silver coin and bullion at about \$50,000,000.

The coin values of the exports and imports of the United States for the last fiscal year, as appears from returns made to and compiled by the Bureau of Statistics, are as follows:

Exports of domestic merchandise	\$589,670,224
Exports of foreign merchandise.....	12,804,996
Total	\$602,475,220
Imports.....	451,828,126
Excess of exports over imports	\$151,152,094
For the fiscal year 1876 there was an excess of exports over imports amounting to.....	79,642,481
Showing an excess for the last fiscal year over the preceding year of.....	\$71,508,613
Exports of specie and bullion.....	\$56,162,287
Imports of specie and bullion.....	40,774,414
Excess of exports over imports.....	\$15,387,823
Total excess of exports of merchandise and the precious metals over imports	\$166,539,917

The principal sources of revenue to the Government are the receipts from customs, and the collections of internal taxes.

The receipts from customs for the year ending June 30, 1876, were \$148,071,984.61, and at the corresponding date of 1877 they were \$130,956,493.07—a decrease of \$17,115,491.54.

SOURCES.	1876.	1877.	Increase.	Decrease.
Spirits.....	\$56,426,865 18	\$57,469,429 72	\$1,042,564 59
Tobacco.....	89,795,339 91	41,106,546 92	1,311,207 01
Fermented liquors.....	9,571,280 66	9,480,759 17	\$90,491 49
Banks and bankers.....	4,006,698 03	3,829,729 33	176,968 70
Penalties, etc.	409,284 48	419,999 41	10,714 98
Adhesive stamps.....	6,518,487 61	6,450,429 15	68,058 86
Back taxes under repealed laws.....	509,681 09	238,260 55	271,870 54
Total.....	\$117,287,086 81	\$118,995,184 25	\$2,364,986 53	\$606,889 09

The increase in the aggregate receipts from the sources specified, during the past fiscal year, amounts to a little more than \$1,750,000, and is chiefly derived from spirits and tobacco. The increase in the receipts from spirits is due in part to the greater quantity of whiskey withdrawn from warehouses at 90 cents per gallon during the current year than was withdrawn in 1876, and in part to the greater quantity of brandy distilled from fruit the past year. The aggregate quantity of tax-paid spirits withdrawn at 70 cents per gallon under the act of June 6, 1872, and at 90 cents per gallon under the act of March 3, 1875, was nearly the same; whereas the number of gallons withdrawn paying 90 cents was greater by 3,795,369 gallons during 1877 than in 1876.

The quantity of manufactured tobacco on

The receipts for the first quarter of the last fiscal year, 1876-'77, were \$37,554,728.53, while for the corresponding period of this year, 1877-'78, they were \$36,983,531.56—a decrease of \$571,196.97.

There was withdrawn from bond for consumption, in excess of that entered for warehouse, during the past fiscal year, merchandise of the value of \$7,629,861. The total exportation of specie and bullion was less than that for the preceding year by \$344,165, while the exports of domestic goods increased in value \$64,087,977. Importations of merchandise decreased to the amount of \$9,418,064, as compared with those of the preceding fiscal year; and of \$81,682,310, as compared with the year ending June 30, 1875. There was an increase in the value of imports of the following articles, which are free of duty: Hides and skins, \$1,927,994; crude India-rubber and gutta-percha, \$1,478,507; raw silk, \$1,368,529. The largest increase in the value of dutiable goods was in brown sugar, chiefly for refining purposes, \$25,484,601.

The following tabular statement exhibits the receipts from the several sources of taxation under the internal-revenue laws, for the fiscal years ending, respectively, June 30, 1876, and June 30, 1877:

which a tax of 24 cents per pound was paid in 1876 was 107,040,234 pounds; in 1877 the quantity amounted to 112,716,534 pounds, the increase being 5,676,300 pounds.

The Register of the Treasury reports the total tonnage of vessels of the United States to be 4,242,600 tons, a decrease of 36,858 tons from that of the fiscal year ending June 30, 1876.

The actual decrease is believed to be about 13,563 tons, this amount being the excess of the losses over the gains during the last fiscal year, the balance being accounted for by dropping canal-boats, exempt under the act of Congress approved April 18, 1874.

The following table exhibits the number of vessels and the total tonnage for the last two years:

CLASSES.	1876.		1877.	
	Vessels.	Tons.	Vessels.	Tons.
Registered, engaged in foreign trade.....	3,009	1,592,821	2,988	1,611,193
Enrolled and licensed, engaged in domestic commerce.....	22,925	2,686,637	22,398	2,681,407
Total.....	52,984	4,279,458	25,386	4,242,600

The tonnage of vessels built, as given by the Register, is 176,592 tons, being a decrease from that of the previous year of 26,994 tons, or over 15 per centum.

The number of vessels built is 1,029.
The number of entries of American vessels into ports of the United States from foreign ports for the fiscal year ending June 30, 1877, was 10,660; the number of clearances of American vessels, foreign, for the same period was

10,790. The number of entries of foreign vessels into ports of the United States from foreign ports during the same period was 18,379; the number of clearances of foreign vessels, foreign, for the same time was 18,174, showing a preponderance of foreign over domestic tonnage.

The range of prices in New York for Government securities, for the year 1877, and the amount of each class of bonds outstanding, January 1, 1878, were as follows:

Gold opened in January at 107½, and gradually declined to 105½ at the end of the month, notwithstanding the great political excitement

over the presidential election. Within this range it fluctuated, owing to various circumstances, such as market influences at home, or political news here and abroad, as well as the excitement of the labor riots, until August, when a steady decline commenced, in consequence of the small demand, the large surplus of domestic products, and the low prices of foreign exchange, and it reached 102½ as the lowest point of the year.

The business failures of 1877, as reported by Messrs. R. G. Dunn & Co., presented the following results:

STATES.	No. Failures.	Percentage of Failures.	Amount of Liabilities.	Average Liabilities.
Eastern	1,853	1 in every 58	\$26,088,007	\$19,281
Middle	3,049	1 in every 78	77,178,750	25,311
Southern	1,078	1 in every 85	17,271,920	16,022
Western	2,756	1 in every 84	56,187,074	20,387
Pacific and Territories	636	1 in every 41	13,949,185	21,982
Total for U. S.	8,872	1 in every 73	\$190,669,936	\$21,491
Canada	1,892	1 in every 30	\$25,523,908	\$13,490

FLORIDA. Peace and quiet have reigned in Florida since the completion of proceedings relating to the result of the election of 1876, a full account of which, appeared in the previous volume of this work. The Legislature continued in session until the 1st of March. There were several contested election cases, turning on allegations of fraud in the election returns of 1876; but all were decided in favor of the sitting members. A committee of five was appointed in the Assembly "to investigate the rumors being rife throughout the State reflecting upon the honor and dignity of certain members of this body, to wit, the members from Alachua, of bribery, forgery, and corruption during the late elections and connected therewith." Charges in a somewhat specific form were made against two members, L. G. Dennis and W. K. Cessna. On the 7th of February, the committee made a report in the case of Mr. Dennis, to the effect that there was "not sufficient evidence to sustain the charges." In the case of Mr. Cessna the majority of the committee reported on the 17th of February, that the evidence was "pointed and conclusive as to the guilt of the said W. K. Cessna, who, with every opportunity to do so, has failed to successfully invalidate such evidence." The minority of the committee, after discussing the nature of the evidence, concluded that, as the testimony came from a person who was "known in the community in which he resides as a common liar, utterly unworthy of belief or confidence," the report of the majority was unwarranted and the accused should "stand fully exonerated before this Assembly." A resolution was adopted by a vote 29 to 12, declaring that "the evidence adduced against W. K. Cessna, a member of this Assembly, charged with bribery, perjury and fraud during the late election, is not sufficient to convict him of such charges." Early in the session the following resolution was adopted by the Assembly:

Whereas, It is published that Hon. R. B. Archibald, Circuit Judge of the Fourth Judicial Circuit of this State, as a witness before a committee of the United States Senate testified as follows:

"The State Senate stood twelve Republicans to twelve Democrats, and Johnson was selected because his district was a close one, and deliberately murdered for the purpose of giving the Democrats the ascendancy in that branch of the Legislature. The evidence against Richard, the assassin, was clear, connected, and amounted to a certainty of mathematical demonstration, and yet the jury refused to convict him. The moment he was arrested the whole Democratic bar of Jacksonville, and nearly every Democratic lawyer in the State, volunteered their services in his defense, while every

effort was made by the best citizens to throw the officers of justice off the track, and facilitate the escape of the murderer."

Therefore, resolved, That the Committee on Judiciary be, and they are hereby, instructed to procure a sworn copy of the testimony given by said Archibald before said committee of the Senate of the United States, and report to this Assembly on the liability of said Archibald to impeachment on account of said testimony.

Subsequently a committee of three was appointed "to inquire whether or not cause exists for the impeachment of Robert B. Archibald," with power to send for persons and papers. A majority of the committee reported in favor of impeachment, and the minority against it. A resolution of impeachment was defeated by a vote of 31 to 20, two-thirds not voting in the affirmative. An investigation was also made into the conduct of William Bryson, Judge of the Third Judicial Circuit, to ascertain whether he had "done any acts or been guilty of any conduct that would warrant this Assembly in preferring charges of impeachment against him." The Committee of Investigation reported

That there was information filed before us charging Judge Bryson with reprehensible rulings as a judge in cases before him in the county of Suwannee of his circuit; that some of the above gentlemen were engaged in those suits as attorneys, and while they differed from him in some of the judicial conclusions reached, they fully exculpated him from corruptly and intentionally doing or intending to do wrong. The evidence before us has impressed your committee favorably as to his administration of the criminal law in his circuit; that crime has decreased since he commenced his ridings in that circuit. We herewith file an answer made by Judge Bryson before your committee, vindicating himself from the charges made, and the evidence before us sustains his answer very fully. We have been unable to find that his honor W. Bryson is other than a just and upright judge, and fully acquit him of all intention to do otherwise than to faithfully perform his duties as judge.

Several attempts were made to have acts passed amending the constitution of the State in respect to elections and sessions of the Legislature, but they failed. The general legislation of the session was unimportant.

No State election took place this year, and as there was no session of the Legislature in 1878, official reports on state affairs are wanting. There was no action taken by political parties; but a convention of colored men was held at Tallahassee on the 4th of July. An address to the colored people of the State was adopted, setting forth the importance of education, of acquiring homesteads, and of fostering habits of industry and sobriety. The address concluded as follows:

We are aware that recently in our own State, as well as throughout the whole South, a political revolution has taken place, and it is our hope that now the race issue in politics, with all its accompanying evils, will pass away, and that intelligence and integrity will now dominate without regard to color or previous condition. The policy of pacification is right then, and President Hayes's course was inevitable—public opinion in the North as well as in the South demanding such a course.

We hope that throughout the South we shall now have peace, order, confidence, more tolerance of opinion than ever before, and better protection to life, liberty and property; and we believe that a political organization founded upon such principles as these, without regard to the past, without regard to color, to nationality, race or previous condition of servitude, or former residence, or place of birth, will do honor to our State and the nation, and promote the best interests of our country; and such an organization, and such only, will be entitled to, and will hereafter receive, our support.

The following resolutions were also adopted:

Whereas, It is reported that unauthorized colored men from this State have recently called upon President Hayes, as a delegation from Florida, consulting with him upon matters appertaining to the interests of the colored people of this State; and, *whereas*, such persons were unauthorized by the colored people to act as such delegation: therefore, be it

Resolved, That this convention hereby denounces the action of such gentlemen, they having no authority from the colored people of this State, and that a copy of this resolution be forwarded to the President.

Whereas, The press of the country is an educator of the people, and in this particular the colored race of this State is deficient: therefore, we suggest to the colored people the importance of starting and maintaining a newspaper for the purpose of diffusing knowledge as to agriculture, etc., and the fostering of morality and education.

Whereas, Education is the one great need of the colored people of the South, and any one coming to our State and devoting his time and energies to the material culture of our race is entitled to our highest encomiums: therefore, it is

Resolved, 1. That we do herein record our cheerful appreciation of the efforts of all true friends who willingly devote their time and means to raise the standard of moral and social culture by means of education among the youth of our race in this State.

2. That among the institutions of learning, none has challenged our admiration and emulation more than the Cookman Institute and Staunton School of Jacksonville—the former showing the truly Christian efforts of Prof. S. B. Darnell, and the last the philanthropic feeling actuating Rev. J. C. Waters—and each harmonizing into glorious results for the future.

3. We look upon the establishment of an Agricultural College in this State as the great industrial medium which is to aid largely in the material development of our race, and recommend all to take advantage of its provisions.

4. That we hope the day is not far distant when the Seminary Fund of our State may be opened to the enjoyment of our race without the necessity of forcing its trustees to recognize our rights.

5. That all we ask is an equal recognition of all our rights to a place in the great race of life, and, if distanced, will feel that “to the victor belongs the spoils.”

The town of Fernandina was visited by a severe epidemic of yellow fever, beginning about

KEY WEST.

the middle of August and lasting until the end of October. A census taken on the 28th of September showed a population of 1,632, of whom 518 were whites and 1,114 colored; 1,073 adults and 559 children; 814 males and 818 females. At that time 293 were sick with the fever, and 853 had been sick. The number of deaths from August 21st to October 31st was 94, or about $5\frac{1}{2}$ per cent. of the population.

The death-rate among the whites was about

16 per cent., only 10 negroes having died. The town was forced to appeal for outside assistance, and for some weeks all business was at a stand-still. Physicians and nurses were obtained from other parts of the country, and contributions for relief amounted to \$17,000, which left the Sanitary Committee \$2,000 in debt at the end of October. The suffering of the people during the epidemic was terrible, and it left them in an almost destitute condition, with all business and industry, which

had depended chiefly on the shipping of the port, utterly prostrate.

FORREST, General NATHAN BEDFORD, the Confederate cavalry officer, died in Memphis, Tenn., October 29, 1877. He was born at Chappel Hill, Tenn., in 1821, and when he was 13 years old went with his father to Mississippi. Here, at the breaking out of the war, he was a wealthy planter. He entered the Confederate service as a private, but soon afterward raised a regiment of cavalry, which he commanded at Fort Donelson in February, 1862, from which he escaped with Generals Floyd and Pillow, after the Confederate defeat on the 15th. Forrest joined General A. S. Johnston in his retreat from Bowling Green, Ky., and took a prominent part in the battle of Shiloh, where he was wounded. In July, 1862, he made a bold and successful attack on Murfreesborough, Tenn., for which he was made a brigadier-general. When General Bragg advanced from Chattanooga to Kentucky, General Forrest rendered important service in Middle Tennessee; but on August 30th, his brigade was routed by a Union force near McMinnville. In December he made a bold raid in West Tennessee, but was again routed near Parker's Cross Roads. In March, 1863, General Forrest repulsed an attack made by General Greene Clay Smith, and soon after followed Colonel Streight in his raid into Alabama and Georgia, and compelled him to surrender after several days of severe fighting. Forrest was now assigned to the command of the cavalry corps of the Army of the Tennessee, and took part in the battle of Chickamauga. In March, 1864, he led a cavalry force 5,000 strong from Mississippi into Tennessee, occupied Union City and Hickman, made two unsuccessful assaults on Paducah, Ky., and in April, captured Fort Pillow. He continued his active operations during the summer and autumn; in November attacked and destroyed Johnsonville, a Federal depot for supplies on the Tennessee river, and was afterward engaged in the fighting around Nashville. General Forrest was made a major-general at the close of 1863, and a lieutenant-general early in 1865.

FRANCE, a republic of Europe. President, Marshal Marie Edme Patrice Maurice de MacMahon, Duke of Magenta, elected May 24, 1873. Chief of the cabinet, Colonel Robert; Secretary of the President, Viscount d'Harcourt; Vice-President of Council of Ministers, at the close of the year 1877, Jules Armand Stanislas Dufaure.

The legislative body consists of a Senate and a Chamber of Deputies. The Senate consists of 75 life-members, elected by the late National Assembly (*see* ANNUAL CYCLOPEDIA for 1875 for a complete list and the biographies of the life-senators), and 225 elected for 3, 6, and 9 years respectively, by a direct vote of the people. The President of the Senate in 1877 was the Duke d'Audiffret-Pasquier. The Chamber of Deputies consists of 532 members.

The President of the Chamber of Deputies in 1877 was François Paul Jules Grévy.

The area of France, according to the official report on the census of 1872 ("Statistique de la France"), was 204,092 square miles. The population, according to the census of 1876, was 36,905,788.

The table on page 300 exhibits the area of each department, its population according to the new census of 1876, and the movement of population during the year 1874.

The census of 1876 has, moreover, given the following figures: there were 362 arrondissements, 2,863 cantons, and 36,050 communes. The cantons have decreased two, owing to the regulation of the frontier with Germany. The total population has increased 802,867, or 2.17 per cent., since 1872. According to sex, the population was divided as follows: males, married 7,587,259, widowers 980,619, single 9,805,761; females, married 7,567,080, widows 2,020,683, single 8,944,386. The increase has been greatest in the departments of Seine, Nord, Loire, Meurthe-et-Moselle, Gironde, Finistère, and Marne; a decrease showed itself in 20 departments, principally in the Basses-Alpes, Calvados, Eure, Gers, Lot, Manche, Orne, and Vaucluse. The population of the principal cities was as follows in 1876 and 1872.

CITIES.	1876.	1872.
Paris.....	1,986,748	1,851,792

The number of still-born children from 1870 to 1874 was as follows:

1870.....	45,169
1871.....	40,815
1872.....	43,967
1873.....	44,487
1874.....	44,613

Of the 950,975 children born in 1875, about 66,000 were illegitimate. The relation of births to the total population from 1869 to 1874 was as follows:

YEARS.	Total Population.	Births.	Births for 100 Inhabitants.
1869.....	86,855,178	943,526	2.57
1870.....	86,965,212	943,515	2.55
1871.....	86,544,067	826,121	2.26
1872.....	86,102,921	966,000	2.67
1873.....	86,260,928	946,864	2.61
1874.....	86,833,431	954,652	2.62

The relation of deaths to the total population from 1869 to 1874 was as follows:

YEARS.	Total Population.	Deaths.	Number of Deaths to 100 Inhabitants.
1869.....	86,855,178	864,820	2.34
1870.....	86,965,212	1,046,909	2.83
1871.....	86,544,067	1,271,010	3.45
1872.....	86,102,921	798,064	2.19
1873.....	86,260,928	844,588	2.33
1874.....	86,833,431	781,706	2.15

The relation of marriages to the total population from 1869 to 1874 was as follows:

YEARS.	Total Population.	Marriages.	Number of Marriages to 100 Inhabitants.
1869.....	86,855,178	303,432	0.82
1870.....	86,965,212	223,705	0.60
1871.....	86,544,067	262,476	0.72
1872.....	86,102,921	352,754	0.98
1873.....	86,260,928	321,238	0.89
1874.....	86,833,431	303,113	0.83

The number of voters who, in 1876, were entitled to vote at the general and municipal elections was as follows: General election, 9,948,070; municipal election, 9,691,442.

MEN.		Class of 1874.	Class of 1873.
1. Declared fit for service.....		140,863	6,304
2. Exempted on account of family relations (eldest son of a widow, etc.).....		42,268	1,155
3. Exempted partly, or conditionally, on account of their calling (priests, teachers, etc.).....		30,073	41
4. Reserved for sanitary and other services.....		21,259	1,908
5. Put back for one year.....		19,508	8,991
6. Rejected on account of bodily infirmities.....		29,797	2,956
Totals.....		288,768	21,855

Of the 8,769 men of the class of 1872, put back for one year in 1874, 2,041 were declared fit for service.

Of the men declared fit for service in 1875, 7,040 were assigned to the Navy for a service of 5 years. The remaining 133,823 of the class of 1874, the 6,304 of the class of 1873, and the 2,041 of the class of 1872, were divided into 2 sections:

The budget for 1877, voted by the National Assembly, comprised the following sources of revenue and branches of expenditures (in francs):

REVENUE.	
Direct taxes.....	412,470,600
Stamps and enregistrement.....	634,605,451
Produce of forests.....	88,548,680
Duties.....	268,855,800
Indirect taxes.....	1,039,293,800
Produce of posts.....	116,126,000
Miscellaneous receipts.....	99,275,060
Extraordinary receipts.....	128,325,421
Total.....	2,737,008,812

EXPENDITURES.	
Ministry of Justice.....	87,960,485
Ministry of Foreign Affairs.....	12,720,500
Ministry of the Interior.....	81,528,856
Ministry of Finances.....	1,497,042,632
Ministry of Public Instruction.....	56,628,762
Ministry of Agriculture and Commerce.....	19,762,888
Ministry of Public Works.....	288,246,535
Ministry of War.....	581,148,886
Ministry of the Navy.....	186,622,116
Administration of colonies.....	
General civil government of Algiers.....	24,587,322
Total.....	2,736,247,962

The interest on the public debt, according to the budget of 1877, was as follows:

Consolidated debt.....	747,571,080
Capital that may be called in.....	800,226,686
Dette viagère.....	123,863,049
Total.....	1,171,160,765

On January 1, 1873, the new Army law of August 16, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for 20 years, namely, 4 years in the standing army, 5 years in the reserve of the standing army, 5 years in the territorial army (Landwehr), and 6 years in the reserve of the territorial army (Landsturm).

The recruiting in 1875 showed that the number of the young men registered in the military lists as becoming 20 years old in 1874 ("class of 1874") was 283,768. In addition to these there were 21,355 properly belonging to the class of 1873. Of these numbers there were:

SECTIONS.	Class of 1874.	Class of 1873.	Class of 1872.
1. For five years' service in the standing army (class of 1873 four years, class of 1872 two years).....	88,748	3,882	1,310
2. Embracing all those who may be furloughed after a service from six to twelve months.....	45,075	2,472	781

By a law of July 24, 1873, on the reorganization of the Army, France is divided into 18 districts, each of which is occupied by an army corps. One army corps, moreover, is organized in Algeria. Each of the 18 army corps consists of 2 divisions of infantry, 1 brigade of cavalry, 1 brigade of artillery, 1 battalion of engineers, 1 squadron of the train, a general staff, and the subordinate staffs. The composition of the Army, in time of peace, will be as follows:

Infantry (156 regiments, 505 battalions, 2,445 companies).....	281,601
Cavalry.....	68,617
Artillery.....	66,381
Engineers.....	10,960
Train.....	9,392
Staff.....	26,407
Gendarmes.....	27,014
Total.....	490,322

To this number may be added the second division of the yearly contingent, amounting to about 60,000 men, who serve from 6 to 12 months, and swell the number of the Army to 551,007 men. In time of war the Army will be composed as follows:

Field army (divided into 19 army corps and 9 divisions of cavalry).....	800,000
Battalions, squadrons, batteries, etc., of the <i>armée active</i> remaining in France and Algeria.....	50,000
Garrison troops.....	220,000
The territorial army.....	560,000
Garrison troops of the territorial army.....	20,000
Corps forestier and douaniers.....	20,000
Total.....	1,750,000

The degree of instruction received by the "class of 1874" is indicated by the following table:

DEGREE OF INSTRUCTION.	Men.	Percentage.
Not able to read or write.....	45,177	15.92
Able to read only.....	5,591	1.93
Able to read and write.....	37,962	13.36
Able to read, write, and cipher.....	183,238	64.59
Number having received diplomas as bachelors of arts or sciences.....	1,893	0.66
Unknown.....	9,912	3.49

The Navy was composed as follows, on January 1, 1877, according to a report submitted to the Chamber of Deputies by the Budget Committee: There were in all 226 vessels; of these 19 were iron-clads of the first class, 10 iron-clads of the second class, 6 iron-clad coasting vessels *gardes-côtes*, 18 gunboats, 39 cruisers, 40 dispatch boats, 27 transports, 7 torpedo-boats, and 60 sailing vessels. The fleet was manned in 1876 by 48,303 sailors, and 16,000 men marine infantry.

The total commerce of France with foreign countries and its colonies was as follows (in francs):

YEARS.	Imports.	Exports.
1873.....	3,554,800,000	3,787,300,000
1874.....	3,507,700,000	3,701,100,000
1875.....	3,536,700,000	3,872,600,000

The imports in 1876 amounted to 3,950,174,000 francs, and the exports to 3,569,891,000 francs. These figures were distributed as follows:

IMPORTS.	1876.	1875.
Articles of food.....	959,307,000	747,451,000
Raw materials.....	2,310,012,000	2,153,864,000
Manufactured goods.....	496,275,000	466,763,000
Other merchandise.....	184,580,000	168,576,000
Total.....	3,950,174,000	3,536,654,000

EXPORTS.	1876.	1875.
Manufactured goods.....	1,931,979,000	2,138,907,000
Raw materials and articles of food.....	1,448,705,000	1,527,771,000
Other merchandise.....	189,207,000	205,954,000
Total.....	3,569,891,000	3,872,632,000

According to the official report, the commerce of France was very unsatisfactory in 1877. During the first 10 months of the year, the imports and exports were both less than in the corresponding period of the previous year. The report is as follows (value in francs):

IMPORTS.	1877.	1876.
Articles of food.....	778,550,000	764,714,000
Raw materials.....	1,762,004,000	1,913,630,000
Manufactured goods.....	374,712,000	836,022,000
Other merchandise.....	165,211,000	215,495,000
Total.....	3,080,477,000	3,284,861,000

EXPORTS.	1877.	1876.
Manufactured goods.....	1,518,017,000	1,627,899,000
Raw materials and articles of food.....	1,179,592,000	1,222,972,000
Other merchandise.....	155,476,000	161,511,000
Total.....	2,853,085,000	3,012,382,000

It is a noticeable fact that the imports of raw materials, as well as the exports of manufactured goods, have decreased since 1876, while the import of articles of food has increased.

The number of laden vessels entered and cleared in 1875 was as follows:

NATIONALITY.	TOTAL.		STEAMERS.	
	Vessels.	Tons.	Vessels.	Tons.
French.....	18,988	4,884,000	6,277	3,267,000
Foreign.....	85,106	8,586,000	16,321	5,676,000
Total.....	54,089	13,470,000	23,098	8,943,000

The commercial navy on December 31, 1875, was as follows:

CLASSES OF VESSELS.	Vessels.	Tons.	Crews.
Sailing vessels.....	14,904	822,808	96,164
Steamers.....	587	205,420	
Or—			
For port service.....	498	9,848	2,127
Fishing vessels.....	9,479	136,093	53,255
Coasting vessels.....	2,748	122,645	10,570
Long voyage.....	2,437	736,140	30,212
Vessels out of use, or probably lost.....	284	23,507
Total, 1875.....	15,441	1,028,228	96,164
Total, 1874.....	15,524	1,037,272	98,022

Of the 15,441 vessels in 1875, 10,445 were of more than 30 tons.

The following table exhibits the movements of French commerce from 1859 to 1875:

YEAR.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1875..	4,462,000,000	4,807,000,000	3,536,700,000	3,872,600,000	228,000,000	219,000,000
1874..	4,422,500,000	4,702,100,000	3,507,700,000	3,701,100,000	252,000,000	159,000,000
1873..	4,576,400,000	4,822,300,000	3,554,800,000	3,787,300,000	265,000,000	492,000,000
1872..	4,501,600,000	4,756,600,000	3,570,300,000	3,761,600,000	283,000,000	384,000,000
1869-1873..	4,107,000,000	4,061,300,000	3,342,500,000	3,259,700,000	482,000,000	871,000,000
Annual average.. { 1864-1868..	3,813,800,000	3,988,800,000	2,855,700,000	2,961,800,000	799,000,000	451,000,000
1859-1863..	2,546,600,000	3,088,200,000	2,121,100,000	2,271,000,000	607,000,000	513,000,000

The foreign countries chiefly interested in the trade of France in the years 1873, 1874, and 1875, were the following:

COUNTRIES.	IMPORTS.			EXPORTS.		
	1873.	1874.	1875.	1873.	1874.	1875.
Great Britain.....	595,900,000	591,700,000	624,300,000	920,500,000	987,100,000	1,067,200,000
Belgium.....	474,600,000	409,300,000	439,200,000	470,200,000	523,500,000	527,200,000
Italy.....	345,900,000	288,900,000	322,500,000	229,800,000	204,200,000	218,700,000
Germany.....	311,100,000	315,500,000	349,000,000	463,300,000	413,600,000	426,900,000
Switzerland.....	91,800,000	96,200,000	98,700,000	387,200,000	299,700,000	315,200,000
Spain.....	141,000,000	129,900,000	94,100,000	110,100,000	139,200,000	140,600,000

The commerce of France with its colonies during the same period was as follows:

COLONIES.	IMPORTS.			EXPORTS.		
	1873.	1874.	1875.	1873.	1874.	1875.
Algeria.....	148,600,000	112,900,000	108,600,000	140,800,000	135,600,000	146,100,000
Senegambia.....	10,800,000	11,600,000	9,600,000	4,700,000	4,800,000	4,800,000
Réunion.....	19,100,000	23,300,000	20,000,000	10,700,000	10,900,000	8,300,000
St.-Pierre and Miquelon.....	28,800,000	25,500,000	24,300,000	7,500,000	7,000,000	6,200,000
Martinique.....	19,800,000	21,500,000	23,900,000	15,100,000	13,100,000	15,400,000
Guadeloupe.....	21,000,000	15,300,000	17,800,000	14,100,000	12,200,000	12,200,000
French Guiana.....	200,000	500,000	300,000	5,400,000	4,400,000	5,200,000
Possessions in India.....	11,200,000	8,100,000	7,800,000	600,000	700,000	900,000
St.-Marie, Mayotte.....	2,800,000	2,300,000	1,700,000	700,000	400,000	300,000
French colonies.....	262,300,000	216,000,000	215,000,000	199,100,000	188,900,000	199,400,000

The population of Paris, according to the provisional returns of the census of 1876, was 1,986,748, or 134,965 more than according to the census of 1872. The number of births in

1875 was 53,878, or 27,541 males and 26,337 females; and of deaths 45,544, or 23,457 males and 22,087 females. Of the births 14,212, or more than 26 per cent., were illegitimate. The

number of marriages was 18,845. The budget of Paris for 1877 was as follows (in francs) :

Ordinary receipts	218,848,277
Extraordinary receipts	57,496,983
Total	271,345,210
Ordinary expenditures	211,848,277
Extraordinary expenditures	59,496,983
Total	271,345,210

The French colonies and dependencies had, according to the latest official reports, the following area and population :

COLONIES AND DEPENDENCIES.	Area, sq. m.	Population.
Algeria (1876)	258,217	2,490,888
I. COLONIES.		
<i>Asia.</i>		
1. India : Pondichéry, Chandernager, Karikal, Mahé, Yanam (1874)	191.35	270,523
2. French Cochín-China (1874)	21,716.49	1,563,180
Total possessions in Asia	21,907.84	1,633,653
<i>Oceanica.</i>		
1. New Caledonia and Loyalty Islands (1874)	7,614.51	68,827
2. Marquesas Islands (1871)	478.86	4,200
3. Clipperton Island	2.12
Total, Oceanica	8,094.99	73,027

Total, dependencies	85,490.89	910,288
Colonies and dependencies	872,995	6,099,638

All the railroads of France are private roads, which are assumed by the Government at the expiration of their charters. According to the *Statistique Centrale des Chemins de Fer*, the number of kilometres in operation on January 1, 1875, 1876, and 1877, was as follows :

YEAR.	Kilometres.
1875	20,771
1876	21,761
1877	22,671

The statistics of telegraphs were as follows :

Government stations in 1875	2,817
Length of lines in 1875 (kilometres)	51,700
Length of wires in 1875	143,234
Inland dispatches in 1876	7,018,452
International dispatches in 1876	1,029,374
Total dispatches in 1876	8,047,826
Receipts in 1876 (francs)	17,461,986

On December 31, 1874, there were 529 authorized savings banks. Of these, 159 had 694 branches. Of the 529, 16 had not been in operation during the year and one had not reported, leaving 512 which had reported at that date. The number of books out on December 31, 1874, was 2,170,066. On January 1, 1874, there was due to depositors 535,286,498 francs, and 195,495,861 francs were deposited.

The session of the French Chambers was opened on January 9th. The proceedings were entirely formal, with the exception of a remarkable speech by M. Gauthier de Rumilly, on taking the chair in the Senate as senior member. He said that, in the course of a long career, he had seen many governments fall which made no account of public opinion. He hoped the Senate, by moderate conduct, would avoid giving occasion to the adversaries of a Second Chamber to say that, since the two Chambers were also in conflict, it was better to have only one. The present ministry, in accord with the Constitutional President of the Republic, had issued a liberal programme. The hope of France was in the loyal execution of this programme, which was the only way to repair the disasters of the insane war of the Empire, and to restore the country to her proper rank among nations. The Duc d'Audiffret-Pasquier was reelected President of the Senate, and M. Grévy of the Chamber of Deputies. The Senate, after adopting the new extradition treaty between Great Britain and France, adjourned, a week later, for an indefinite period.

In the Chamber of Deputies, on January 11th, M. Léon Say, the Minister of Finance, laid on the table his budget for 1878. It included uniform and lower rates of postage, made some change in the tax on lucifer matches, and, finally, abolished the tax on soaps and oils. The expenditure was estimated at 2,785,716,713 francs, and the revenue at 2,971,427,804 francs. On January 25th the Budget Committee was elected in 11 bureaux, into which the Chamber of Deputies is periodically divided by lot. M. Gambetta was elected president of the committee by a vote of 29 out of 32 votes, and, on returning thanks, disclaimed any hostility to the ministry, and said he hoped to be a useful auxiliary to it. On February 5th a proposition in the Chamber of Deputies, by M. Madiet de Montjou, repealing the severe Press Decree of January 17, 1852, was adopted ; as well as another, supported by M. Jules Simon, temporarily reviving the laws repealed by that decree. The Government, said M. Jules Simon, could not expose itself unarmed to the attacks of the press, but experiments with the freedom of the press must be carefully made. The whole force of law would be exerted to prevent attacks on the Constitution and provoca-

tions to civil war. M. Raoul Duval charged the ministry with a change of opinion. M. Simon replied that in different political situations different doctrines might be held. In presence of a strong and despotic government, theories on the press might be discussed. The men of that Government were now a minority, seeking to overturn the established *régime*. In such a situation, the Government must refuse arms to that militant faction which would use them against the Republic. In view of the law about to be repealed, a humiliating attitude would best become the Bonapartists who passed it. The Chamber would simply revive the law existing under a constitutional system before France underwent the shame of despotism. This speech was applauded by the Left and Centre.

On February 22d M. Simon appointed 53 new sub-prefects, a change of officers which had long been expected, but did not prove satisfactory to any of the parties; the Republicans desiring a radical sweep, and the other parties being opposed to any change. In the Senate, which had met again early in February, M. Dufaur de Gavardie, of the Right, on February 27th, introduced a motion for the dismissal of M. Simon by President MacMahon, on account of the minister's former connection with the International Association. The Senate, however, refused to allow M. de Gavardie to proceed with his motion. The death of General Changarnier created a vacancy among the life-senators. The Left nominated M. Alfred André, of the Left Centre, and an orthodox Protestant, while all the factions of the Right again, as in 1876, united upon one candidate, M. Dupuy de Lôme, a Bonapartist. The latter was elected, on March 10th, by a vote of 142 to 140. On March 6th the Legitimist organs published a speech delivered by the Count de Chambord, at Goritz, to a deputation of merchants from Marseilles. The speech was as follows:

I thank you, gentlemen, for having felt that you will find, by coming to me, help and counsel amid existing difficulties. You have told me of the disquietudes which paralyze in France the elasticity of public prosperity with a frankness for which I thank you. You have not, moreover, disguised the persistent calumnies which attack truth not less than my honor. Yes, I know it already, people have presumed to say that in order to remain in an easy repose I left France in peril, and renounced all hope of saving her. It is by this detestable falsehood, against which I protest, that the enemies of the tutelary principle of hereditary monarchy keep up doubt in men's minds, trouble and discouragement in their souls. Discouragement, gentlemen—there is the great peril which I point out to you, and which it is necessary to combat. The Revolution is in its proper rôle in seeking to abuse public credulity; but I remain firm in my rights, and perfectly resolved to do my duty when the propitious hour for my direct and personal action shall arrive. I ask my friends, and all men of good intentions, to pave the way for it and to have confidence. With their coöperation, if it please God, the monarchy will not leave free course either to the ventures of the Empire or the violence of Radicalism, which preludes the triumph of which it thinks itself already assured in insulting all that

a nation is bound to respect, if it will itself be respected—the clergy and the magistracy—that is to say, Religion and Justice, and the Army, that living image of the people and of its honor. As you have come to me, say, on your return, what are the firm resolutions inspired in me by my love for France, and the events which menace her.

On March 16th, the Chamber of Deputies considered the request of the Government for authority to prosecute Deputy Paul de Cassagnac, for violation of the press laws. M. de Cassagnac commenced by charging the Republicans with having, for 80 years, advocated liberty, and in its name overturned all monarchies, and he asked what justification there could be for the Republic if it did not renounce what it considered the mistakes and abuses of monarchy. He admitted that he himself was no partisan of the liberty of the press, but he claimed to be judged by the doctrines of the party in power. Now, the extreme section of that party, having the feeling of reciprocity, and being as ready to receive as to give blows, were against the prosecution, which was supported by the Moderates, who wanted nothing of the Republic but the name. He denied having attacked the Chamber itself, though he had attacked particular Deputies and groups; and, even if otherwise, the Chambers, since 1819, had been sole judges of attacks on themselves. His articles were directed against the Republic as a form of government, but he had always declared that he would respect the existing Government till 1880. He next referred to M. Simon's former advocacy of liberty of the press and other extreme doctrines, and charged him with leniency toward demagogic papers, and he urged that the Marshal and the Senate were attacked with impunity, while the Bonapartists were insulted even in the Chamber. This naturally provoked a certain warmth of language. For putting in practice M. Simon's own doctrines, he was now exposed to 14 days' imprisonment and a fine of 20,000 francs. He hoped that MM. Simon, Ferry, and others who formerly voted against the Rochefort and Ranc prosecutions, would vote against this. He should accept with respect the decision of the Chamber, but if called to appear before the justice of his country he should do so unabashed. M. Simon, in reply, said the question was one concerning the welfare of society, and had nothing to do with the liberty of the press, which is, and will remain, his passion. He asked authorization to prosecute, because M. de Cassagnac had attacked the Government with extreme violence, and had thus committed, through the press, an offense at common law. It was not an offense of doctrine or of thought, but an offense which no Government could tolerate. The prosecution was by virtue of an existing law, which must be enforced till abolished. The articles were full of insults, and might be characterized as inciting to civil war. In reply to the charge that other newspapers were not punished, the minister replied that this was so untrue, that the day on which he asked authorization to

prosecute the *Pays* he also demanded proceedings against the *Droits de l'Homme*. Articles had been cited that were certainly detestable, and deserved punishment; but it belonged to the judicial power to proceed against them. The *Pays*, however, had been chosen as an example, because its articles, emanating from an

inviolable writer, gave the signal to the whole press of its party. The country wished peace, and did not wish violent articles, or any more of the theory according to which Bonapartist Deputies only came to the Chamber to create uproar. The demand of the Government was finally granted, by a vote of 296

to 197. The minority was composed of extreme Radicals and Monarchists. On March 24th the Chambers adjourned.

Early in April, the Catholic Committee of Paris, a body formed with the permission of the Government five years previously, as a connecting link between a number of Catholic agencies

throughout France, was dissolved by the Prefect of Police, under instructions given by M. Jules Simon. This measure was taken on the eve of the annual Catholic Congress, or general meeting of Catholic committees; but the conference, nevertheless, was opened on April 4th, the precaution having been taken of sending

out fresh invitations, in which it was simply described as a private meeting of Catholics. The congress sat till the 7th. The concluding speeches were made by M. Chesnelong, a Senator, who affirmed his conviction that a few sophists and demagogues would not stifle a faith which had resisted the laugh of Voltaire and the axe of the Reign of Terror; and by Monseigneur Freppel, who described Freemasonry and the International as the two destructive agencies at work in society.

The Chambers met again on May 1st. The Duc Decazes, on presenting the Yellow Book, containing the diplomatic correspondence relating to the Eastern question, made a speech, in which he said:

From the commencement of the crisis we have remarked how earnestly all the Governments which are anxious to prevent Europe from being disturbed by the vicissitudes of the Eastern question have desired a localization of the war. Europe has observed our sincerity, and our lasting desire to remain in harmony with her. Never during the last seven years have our relations with foreign states been better. The neighboring Powers, like ourselves, have no direct interest in the present events. The language used by their Governments leaves no room for doubt as to their pacific sentiments, or the price they attach to the strengthening of their good relations with France.

In conclusion, he said:

In the Eastern question the most absolute neutrality, guaranteed by the most scrupulous abstention, will remain the basis of our policy.

On May 2d and 3d the Chamber of Deputies discussed the interpellation of Leblond as to the doings of the priests. M. Simon, in the session of May 2d, declared the respect of the Government for religion, and at the same time their earnest desire not to permit the clergy to exceed their spiritual prerogatives, but, above all, to prevent an attack upon a neighboring country.

On May 3d, an order of the day was finally adopted, by a vote of 361 to 121, and was concurred in by the cabinet, requesting the Government to use all means to oppose the manifestations of the Ultramontanes, "who are a standing menace to peace both at home and abroad." This order produced great bitterness among the Clericals; and in the Senate Franchieu gave notice of an interpellation, but withdrew it again, as the leaders of the Right did not consider the time for it to have come.

In the month of April the Bishop of Nevers wrote a letter to MacMahon, calling upon him to draw the sword against Italy for the "Prisoner of the Vatican." In answer to this, the Minister of Justice, in the beginning of May, wrote to the bishop that he had exceeded the functions of his office.

On May 16th, President MacMahon addressed the following letter to M. Simon:

I have just read in the *Journal Officiel* the report of yesterday's sitting. I have seen with surprise that neither you nor the Keeper of the Seals urged from the tribune all the serious reasons which should have prevented the repeal of a law on the press,

passed less than two years ago, on the proposal of M. Dufaure, and the application of which you yourself quite recently demanded from the tribunals. Yet, at several meetings of the Council, and even at yesterday morning's, it had been decided that the President of the Council, as also the Keeper of the Seals, should undertake to combat it. There had already been room for astonishment that the Chamber of Deputies, in its latest sittings, had discussed a whole municipal law, and even adopted some provisions, the danger of which you yourself had recognized in the Council of Ministers, such as the publicity of the sittings of Municipal Councils without the Minister of the Interior having taken part in the discussion. This attitude of the head of the cabinet naturally suggests the inquiry whether he retains over the Chamber the influence necessary to make his own views prevail. An explanation on this point is indispensable; for, if I am not responsible, like you, to the Parliament, I have a responsibility to France, with which I must now more than ever be preoccupied.

This letter was considered one of the most serious events which had happened in France after the fall of M. Thiers. Since the general election of 1876, the parties then defeated had been preparing for a conflict, and were resolved to profit by it. The new Chamber, however, had foiled this attempt; and had resisted every temptation to excite it, and justify a dissolution. On several occasions the President had declared that if he were led too far, he would form a Right and Dissolutionist Ministry. This simple threat had been sufficient to moderate the actions of the Chamber. When the Jules Simon ministry came in, it was hoped that the ministry would not be able to exist very long, and that its fall would force the President to ally himself with the Right. Religious discussions were finally relied upon to afford the opportunity of raising a conflict. But again a compromise was made between the cabinet and the Chamber, and the conflict once more avoided. But the elections of one-half of the Councils General were drawing on; to which bodies, together with the Municipal Councils, were intrusted the next senatorial election. These could not be left with the existing Republican cabinet; and so the Right forced on the conflict which the Chamber had avoided. The result was the above letter of the President. As soon as M. Simon had received this letter, written without the knowledge of any member of the cabinet, he waited on the President, and said: "I offer you my resignation." "I expected it, and accept it," was the answer. M. Simon also addressed the following reply to the President's letter:

In view of the letter you have thought fit to write to me, I feel myself bound to hand you my resignation of the functions you were good enough to confide to me. I am obliged, however, at the same time, to tender explanations on two points. You regret, M. le Maréchal, that I was not present on Saturday in the Chamber, when the first reading of the Bill on Municipal Councils was discussed. I regretted it also. I was detained at Paris by indisposition; but the question of the publicity of the sittings was only to have been discussed on the second reading. I had come to an agreement on this

point with M. Bardouy. M. Perras's amendment, which passed, took the Assembly unawares; and I had an appointment with the committee on Friday morning to try and make it reverse its decision before entering on the debate in the Chamber. All this is known to everybody. As to the bill on the press, M. le Maréchal, you will be good enough to remember that my objections related solely to the case of foreign sovereigns. I had always explained myself in this sense, as you yourself must remember at yesterday morning's council. I repeated my reservations before the Chamber. I abstained from elaborating them for reasons which everybody knew and approved. As to the rest of the bill, I was in agreement with the committee. You will understand, M. le Président, the motive which leads me to enter into these details. I have to define my position in a distinct manner at the moment of my quitting the council. I scarcely venture to add—though as a citizen, and no longer as a minister—that I earnestly desire to be succeeded by a man belonging, like myself, to the Conservative Republican party. For five months it has been my function to give my advice; and the last time I have the honor of writing to you I allow myself to express a wish which is solely inspired by my patriotism. Pray accept, M. le Maréchal, the homage of my respect.

The excitement produced by this correspondence throughout France, and even abroad, was so intense, that the Havas Agency published, by order, the following:

The President of the Republic received various political personages this morning, and expressed to every one his firm desire to maintain the policy of peace with all the Powers; and to repress, with the greatest firmness, the Ultramontane demonstrations which might be made.

In the sitting of the Chamber of Deputies, on May 17th, which did not begin until three in the afternoon, no member of the cabinet, except M. Christophle, took his place on the ministerial bench. A Deputy asked leave to interpellate the out-going cabinet on the crisis, observing that the situation was a strange one. M. Christophle remarked that he was alone, and requested a postponement till the following day, adding that some of the late ministers were in the gallery allotted to the Senators, and, not forming part of the Chamber, had ceased to present themselves in it. M. Gam-

VIEW OF THE SEVEN BRIDGES, PARIS.

betta objected to delay, observing that there was no *interregnum*, and therefore the cabinet still existed and could answer. The Chamber decided that the interpellation should be made at once. M. Gambetta then ascended the tribune amid profound silence, and made a speech said to excel any of his former productions. He concluded by moving an order, declaring

That the confidence of the majority can only be accorded to a cabinet free in its action and resolved to govern according to Republican principles, which alone can guarantee order and property at home and peace abroad.

This was adopted, by a vote of 355 to 154,

the entire Left voting for it. The new cabinet was published in the *Journal Officiel*, on May 18th. The list was as follows: Justice, Worship, and Prime Minister, Duc de Broglie; Foreign, Duc Decazes; Home, De Fourtou; War, Berthaut; Navy, Gicquel de Touches; Education, Brunet; Finances, Caillaux; Public Works, Paris; Commerce, De Meaux.

On May 18th, the following message from the President was read in both Chambers; in the Senate by the Duc de Broglie, and in the Chamber of Deputies by M. de Fourtou:

MM. LES SÉNATEURS: I have had to part with the ministry presided over by M. Jules Simon, and to form a new one. I must give you a sincere explana-

tion of the grounds which have led me to take this decision. You all know with what scrupulousness, since the 25th of February, 1875, the day when the National Assembly gave France a Republican Constitution, I have observed in the exercise of the power confided to me all the prescriptions of that fundamental law. After the elections of last year, I wished to choose as ministers men whom I supposed to be agreed in opinions with the majority of the Chamber of Deputies. With that idea, I have successively formed two ministries. The first had at its head M. Dufaure, a veteran of our political Assemblies, one of the authors of the Constitution, as much esteemed for the honesty of his character as illustrious for his eloquence. M. Jules Simon, who presided over the second, attached from all time to the Republican form, wished, like M. Dufaure, to reconcile it with every Conservative principle. In spite of the loyal coöperation which I have given them, neither of these ministers has been able to form in the Chamber a compact majority secured to his own ideas. M. Dufaure vainly endeavored last year, in the last discussion on the budget, to prevent innovations, which he justly regarded as very deplorable. The same defeat was reserved for the President of the late cabinet on very serious points of legislation, as to which he had agreed with me that no modification should be allowed. After these two attempts, equally devoid of success, I could not take a step further in the same path without appealing to or demanding support from another section of the Republican party—that which thinks the Republic cannot be firmly established without having as a complement and consequence the radical modification of all our great institutions—judicial, financial, and military administrations. This programme is well known. Those who profess it are agreed on all that it contains; they differ among themselves only as to the suitable time and means of carrying it out. Neither my conscience nor my patriotism permits me to share, even afar off and as regards the future, in the triumph of these ideas. I do not think it opportune either to-day or to-morrow, or at any period, that they should prevail. They would only engender disorder and the degradation of France. I will neither try its application myself, nor facilitate its trial by my successors. As long as I am the depository of power, I shall make use of it to the whole extent of its legal limits to oppose what I regard as the ruin of my country. But I am convinced that the country thinks as I do. It was not the triumph of these theories which it wished at the last elections. That is not what was announced to it by those who took advantage of my name, and declared themselves resolved to sustain my power. Were it questioned anew, and in a way to prevent any misunderstanding, it would, I am sure, reject this confusion. I have had, then, this confusion. I have had, then, to choose—and it was my constitutional right—advisers who think like me on this point, which is, in reality, the only one in question. I remain none the less now, as hitherto, firmly resolved to respect and maintain the institutions which are the work of the Assembly from which I hold power, and which have constituted the Republic. Until 1880, I am the only man who could propose a change. I meditate nothing of the kind. All my advisers are, like me, determined to conduct the institutions loyally, and are incapable of striking any blow at them. I offer these considerations to your reflection and to the judgment of the country. To allay the emotion caused by recent incidents, I shall invite you to suspend your sittings for a certain time. When you resume them you will be able, suspending all other business, to apply yourselves to the discussion of the budget, which it is so important to bring soon to a conclusion. Meanwhile, my Government will watch over the public peace. At home it will suffer nothing which would imperil it abroad. It

will be maintained, I am confident, notwithstanding the agitations troubling one part of Europe, thanks to the good relations we maintain and mean to keep up with all the Powers, and to that policy of neutrality and abstention which has quite recently been explained to you, and which you have confirmed by your unanimous approval. On this point no difference of opinion arises among parties. They all desire the same end by the same means. The new ministry thinks exactly like the old; and, to attest this conformity of sentiments, the direction of foreign policy has remained in the same hands. If imprudence of speech or of the press endangered this accord which we all desire, I should employ all the means the law puts in my power to prevent it, and I appeal to the patriotism which, thank God! is never lacking in France in any class of citizens. My ministers are about to read you the decree which, conformably with Article 24 of the Constitutional Law of the 16th of July, 1875, adjourns the Chamber for a month.

In the Senate, upon the conclusion of the reading of the message, M. Simon claimed the privilege of speaking, on the ground that the message necessitated a protest; but the Duc de Broglie objected, declaring the sitting over, and the president so decided. In the Chamber of Deputies, M. Fourtou was received with menacing gestures, cries, and outbursts of anger from both the Right and Left. M. Gambetta tried to speak at the close of the reading, but was compelled to sit down. The Chamber was then prorogued until June 16th.

The immediate result of the change of ministry was, that on May 22d, four days after they entered into office, prefects in 62 departments were removed. Enforced resignations, transfers, placing on the unattached list, and all other known and even unusual proceedings, were resorted to.

After the session of the 18th, the Deputies of the Left held a meeting, in which an address to the country was adopted, and signed by M. Thiers, M. Léon Renault, M. Germain, and others of the most moderate Republicans, who had hitherto kept aloof from all party declarations. In this address they said:

After the 24th of May, the nation will show, by its coolness, patience, and resolution, that an incorrigible minority cannot wrest from it its own government. However painful this unexpected trial may be which is disturbing the interests, and which might compromise the success of the grand efforts of our industry for the great and pacific Universal Exhibition of 1878, whatever be the national anxiety amid the complications of European politics, France will let herself neither be deceived nor intimidated. She will resist every provocation. The Republican functionaries will remain at their posts, and await the decree which separates them from constituencies whose confidence they have. Those of our countrymen who have been called into the Elective Councils of the nation will redouble their zeal and activity, their devotion and patriotism, to maintain the rights and liberties of the country. We shall enter into direct communication with you. We call upon you to pronounce between the policy of reaction and ventures, which overturns all that six years have so painfully gained—the wise and firm, pacific and progressive policy which you have already consecrated. The trial will not be long. In five months at most France will speak; the Republic will issue, stronger than ever, from the popular

urns; the parties of the past will be finally vanquished; and France will be able to face the future with calmness and confidence.

Although the position of the new cabinet was by no means an agreeable one, they immediately set to work. On May 28th and 29th, 225 out of 277 sub-prefectures in France received new officers; 100 being the subject of transfers, 83 of dismissals, and 16 of resignations, while 26 officials were placed on the unattached list, or were appointed to other employments. On the 28th, the Duc de Broglie sent a circular to the *Procureurs-Généraux*, explaining that President MacMahon, exercising his constitutional prerogative, intervened to arrest the progress of radical theories incompatible with the peace of society and the great-

ness of France. The minister invited public prosecutors to use redoubled vigilance and firmness to insure respect for the law established for the protection of morality, religion, and property, and particularly those laws defending them against the attacks of a licentious press. He recommended the procureurs to repress apologies for the Commune, offenses against the President, and, above all, false news, particularly the calumny that there existed in France a party in favor of a foreign war. Among the elements composing the Right, the Legitimists were decidedly dissatisfied with the situation. On June 11th, three Legitimist delegates—MM. Chesnelong, Belcastel, and Rhodes-Bènavent—called on the President, who received them without his

THE TUILERIES AND LOUVRE, BEFORE 1871, PARIS.

ministers being present. They represented to him that their party had in no respect hostile intentions against him; but that they wished explanations on three points, about which they were deeply concerned: first, as to the composition of the present cabinet, from which the Legitimist element had been completely excluded; then, as to the Legitimist candidates, who, it was feared, would be beaten at the next election; and, lastly, as to the prolongation of his power, which the President was alleged to meditate, and which the Legitimist party could not but receive with alarm. To these questions the President replied as follows:

You know the difficulties surrounding the constitution of a cabinet—difficulties which have been just as great on this occasion as before. I could not change this cabinet without exposing myself to the charge of what was seen in the last change—a change of policy. My relations with foreign countries are necessarily a very serious concern to me. My duty

forbids that I should risk a change of the elements composing my present cabinet, seeing that it has offended none of the Powers with which France stands on friendly terms, although the contrary has been said. As to the Legitimist candidates, they belong to the Conservative groups, and any Legitimist candidate really having any chance of success will be openly and loyally supported by the Administration. With respect to schemes of prolonging my tenure of office during the prorogation, you may rest assured that I entertain none. I have received my right to remain in office until 1880 from the Assembly, and I shall remain, unless a contingency I shall immediately point out to you shall arise. In 1880 we shall see. Perhaps you will then be the first to come and ask me to prolong my tenure. Till then, therefore, nothing can be said; but I may tell you that the question of prolonging my office will not be considered during the prorogation, and that I shall lend myself to no *coup de main* whatever. Let me also tell you that I shall lend myself to no venture of Imperial, of monarchic restoration. I have *souvenirs*, and this from the Empire, just as I have *souvenirs* and connections with Legitimism. I am on excellent terms with the Orleans princes, and wish to preserve those terms; but I shall participate in nothing favor-

able to the restoration, either of the Prince Imperial, or of the Comte de Chambord, or of the Comte de Paris. I am, till 1880, invested with definite power by the Constitution. I shall exercise that power, according to circumstances, to its full extent; but I can pledge myself to no enterprise contrary to the constitutional laws to which you, also, are subject. Nor do I ask any pledge of you. It will, perhaps, be necessary to demand a dissolution. If you accord it me, I shall use it as well as possible. If you refuse it, I should then have two forces out of three against me, and should withdraw.

The month's prorogation expired on June 16th, when both Chambers reassembled. In the Senate, the Duc de Broglie ascended the tribune, and read the following message:

MM. LES SÉNATEURS: By virtue of article 3 of the constitutional law of the 25th of February, 1875, the President of the Republic is invested with the right of dissolving the Chamber of Deputies, with the concurrence of the Senate. This serious step now appears to me necessary. I ask you to give your assent to it. My ministers are deputed to explain to you the reasons which actuate me. On the 16th of May I had to declare to the country that disagreements existed between the Chamber of Deputies and myself. I showed that no ministry could maintain itself in that Chamber without seeking the alliance and meeting the conditions of the Radical party. A Government bound to such a necessity is no longer master of its own actions. Whatever its personal intentions, it is reduced to serving the ends of those whose support it has accepted, and to paving the way for their accession. It is this to which I would no longer lend myself. When such want of accord exists between the public powers, dissolution is the means provided by the Constitution itself for putting an end to it. I should, however, have preferred the date of it being delayed, in particular that before separating the Chambers should have been able to vote the budget of 1878. The month's prorogation which has just elapsed might have served to pacify men's minds and restore to them the calmness necessary for the discussion of affairs. This result has not been obtained. Scarcely was the prorogation pronounced when more than 300 Deputies protested in a manifesto, with whose terms you are acquainted, against the use I had made of my constitutional right. That manifesto has been circulated wholesale. A large number of those who signed it have supported it either by their letters to their constituents or by speeches delivered at numerous attended meetings. Some, even under the protection of parliamentary privilege, have made use of such expressions, that justice has had to proceed against the newspapers which reproduced them. Such an agitation could not be prolonged without causing profound trouble. Those indulging in it cannot be surprised at my summoning them before the country which they have themselves addressed. I confine myself, therefore, to asking the Chamber of Deputies to vote some urgent bills which the patriotism of all parties will surely not allow to be challenged. The dissolution, then, promptly pronounced, will enable the new Chamber to meet in time to insure the supplies of next year. I shall address myself with confidence to the nation. France, like me, desires to maintain intact the institutions which govern us. She desires as much as I do that these institutions should not be disfigured by the action of Radicalism. She does not desire that in 1880—the day when the constitutional laws may be revised—everything should be prepared beforehand for the disorganization of all the moral and material forces of the country. Warned in time, guarding against all misunderstanding and ambiguity, France, I am sure, will do justice to my intention, and will choose for her representatives those who will promise to second me. You will feel the

necessity of deliberating without delay on the important resolution which is submitted to you.

This message was received with applause on the Right, and with protests and interruptions on the Left. It was finally referred to a committee. In the Chamber of Deputies, the session was characterized as the stormiest for many years. Every Deputy was present, feeling that not only his personal interest, but that of his party and his country, was at stake. The session extended over five hours and a half, and during most of that time there was one prolonged roar of vociferations from one end of the chamber to the other. After some formal business, M. Fourtou, the Minister of the Interior, read the message of the President. The following paragraph is of peculiar interest:

The President of the Republic remains convinced, after two sincere but fruitless trials, that no ministry can hope to muster a durable majority in this Assembly without asking to be backed by the party which professes Radical doctrines, and without thereby promoting the progress of them. Full of respect for the institutions which govern us, and resolved to maintain them intact, he thinks himself entitled to employ all the prerogatives which they give him to resist another step being taken in a path which seems to him to lead to the ruin and degradation of the country. He has chosen ministers who share his idea in this respect, and assume, in the eyes of France, the responsibility of it.

After it had been read, M. Paul Bethmont, in the course of a speech, made the following remarks:

The reason for the proceeding of the 16th of May was that the country was showing every day more and more enthusiasm for the Republican Assembly it had created. You have acknowledged in your newspapers that you were in despair. Even in Ille-et-Vilaine there has been a fresh manifestation of opinion in favor of Republican institutions.

At this point M. Mitchell cried out, "It is false." The President saying, "M. Mitchell, your words are very unbecoming," M. Mitchell repeated his words. The President then said: "And I repeat that you are guilty of an impropriety which requires a censure. I shall consult the Chamber." The censure was then pronounced against M. Mitchell, several members of the Right, and M. Mitchell among them, voting ironically for it. During the whole of M. Bethmont's speech there were heard imprecations and insults which M. Grévy, the President, declared had never been equaled in the annals of French legislative history. After M. Bethmont, M. de Fourtou ascended the tribune to speak on behalf of the Government. The substance of his speech was as follows:

The disagreement between the majority of the Chamber and the President of the Republic can only be solved by the nation. M. Bethmont's speech is only a production of the protests against the act of the 16th of May. The Government have regretted, for the sake of the repose of the country, the false alarms and unfounded disquietudes which those manifestations tended to excite. They have regretted that the voice which counseled pacification was not

listened to. But Marshal MacMahon has not doubted for an instant that he will receive the coöperation of France in doing justice on the attacks directed against his power. You want to argue that we have violated the Constitution on behalf of I know not what monarchical hopes or clerical influences. But you well know it is not true. You know very well that we, too, are the friends of the France of '89, and that we are the France of '89 rising up against the France of '93. You know very well that if we are profoundly respectful to religion, we are no less so to liberty of conscience; that we are sincerely attached to the independence of civil society, and that we shall never permit foreign intrusion into its domain. You say the country has condemned the 16th of May. I reply that the country understands and applauds it. . . . It is 15 months since you were elected, and, judging by your election circulars, you were going to make new France calm and strong, free from all political agitation, remodeling its institutions quietly, and, by vigorous reforms, giving a new spring to the fertility of the national labor. These are your promises. Where are your deeds? I see on your records many barren debates, invalidations, interpellations, empty

discussions, but no act promoting the public business. Yet in 1876, as the result of the election circular, there were submitted 67 bills connected with finance, industry, and commerce, 47 of which have not even been reported upon. M. Gambetta, indeed, to do him justice, has not been inactive. He has presented a report recasting our system of taxation, substituting for the four direct taxes the income-tax, the tax on rentes—that is to say, the impairing of public credit—the tax on salaries—that is to say, the tax on the very labor of the poor. France has deeply and cruelly suffered. She is now at one of the decisive hours of her history. If she gives herself up to politics and goes with the Left in disorganizing all her financial, administrative, and military institutions, she runs toward an abyss. If, on the contrary, she preserves her faith in the loyal soldier who has just called her to the path of safety—if, at his call, she repudiates old party quarrels, and, in the fertile union to which she is invited, concentrates all her forces on labor—the day is not distant when nobody will know which to admire the more—the greatness which has never fallen or the greatness which has risen up from a temporary fall.

NEW OPERA HOUSE, PARIS.

After M. de Fourtou had concluded, M. Gambetta ascended the tribune. His first sentences were met with a storm of disapprobation and insult from the Right. In vain the President rang his bell and tried to preserve order. Every appeal he made was met by scorn and insult. Such was the violence of Paul de Casagnac, that the President demanded a vote of censure against him. It was at once passed. This had no effect in allaying the storm. Almost every word uttered by Gambetta was met with howling and imprecations from the Right, the Left responding with vociferous applause. At every successful hit made by the orator, a number of the members of the Right would rush into the area in front of the tribune, and menace him with threats and uplifted arms. At this the Left would also rush into the area,

and at times a collision seemed inevitable. For five minutes the Chamber became a perfect pandemonium, the President losing all control over its angry elements. All this time, Gambetta, with folded arms, stood unmoved. During the remainder of his speech there was scarcely a pretense of order. Interruptions, denunciations, oaths were hurled against him from the Right, and were met with the wildest applause from the Left.

The Duc Decazes ascended the tribune at seven o'clock to reply to Gambetta; but the Left, irritated beyond endurance at the treatment of the latter, refused to listen, and, after a vain effort, he gave way, and the Chamber adjourned until the 18th. On the 18th the Duc Decazes, in the course of a speech, read a dispatch from the French Ambassador to Ber-

lin, testifying to the excellent relations existing between France and Germany. He said similar assurances had been received from St. Petersburg, Vienna, and Madrid. M. Auguste Paris, the Minister of Public Works, said the Republicans were too anxious to discount the retirement of President MacMahon, who was not the kind of man to weary of the performance of his duty. The minister then proceeded to defend President MacMahon's right to dissolve the Chamber, and, discussing his right of revising the Constitution, said, amid exclamations from the Left, that he did not admit that the Republic could be represented as definitive. He reproached the Left with desiring to replace gradually the present Government by a convention. He declared the President was not a blind instrument in the hands of Parliament, but ought to have a policy of his own. The minister acknowledged that the Conservatives were divided as to the form of government, but the Republicans were divided on the question of principles. He concluded that whatever order of the day the House might pass, the final decision rested with France. M. Jules Ferry said the present conflict was between personal and parliamentary government. He expressed regret that the Constitution had not been locally carried out, and reminded the functionaries who abused power during the elections that the House would judge them upon its reelection. Replying to the arguments of the Government, that the President is bound to have a policy of his own, M. Ferry pointed out that the Constitution provides for the trial of the President if he commit high treason. M. Ferry was repeatedly interrupted by the Right, and at one time was compelled to leave the tribune.

The discussion upon the report of the bureaux in favor of the dissolution of the Chamber of Deputies was begun in the Senate on June 21st. M. Jules Simon, speaking in justification of the late ministry, said:

Complaints respecting his conduct of public business were mere pretexts. The real cause of the fall of his ministry was that it had been in harmony with the Republican majority. M. Simon continued: He was pained to see the rules of parliamentary government trampled under foot with terrible unceremoniousness. The present proposal for the dissolution of the Chamber was intended to complete the ruin of parliamentary government. He appealed to the Duc de Broglie to repudiate his intention of setting up official candidacies, and to disavow the disgraceful language of papers which proposed to sweep away the Republic. He concluded that the ministers would not and could not be Bonapartists, but were neither Legitimists nor Orléanists. They were an ambiguous government, and the Republic would finally triumph. The Duc de Broglie demonstrated that the proposal for dissolution was not contrary to the Constitution. He said: "President MacMahon is in harmony with the tendencies of the majority of the Senate. Do not abandon him." In reference to the charge that the ministers are not Republicans, the Duc said they kept within the spirit of the Constitution. In reference to other accusations, he said the ministers were sincerely attached to the Church, but they disowned no principle of

public law. None of them desired to compromise the country in religious intrigues or war on religious questions. He concluded: "The country will not hesitate between President MacMahon and the Dictator of Bordeaux, the chief of the Radical army."

The Chamber subsequently refused to vote direct taxes, but unanimously voted supplementary grants to the Ministry of War, the reporter of the Budget Committee observing that although the Chambers refused to pass any vote which would imply confidence in the Government, it was disposed to vote all that was necessary for the conduct of the public service.

On June 22d, after a short debate, the question of dissolution was voted on in the Senate, and it passed by a vote of 150 to 130. The last session of the Chamber of Deputies opened at two o'clock of June 25th. M. Grévy, after silence was restored, said:

Before informing it of the communication which I have received, I wish at the last moment to thank the Chamber for the great honor it has paid me and the good-will it has shown me. The country before which it is about to return will soon tell it that it has never for a single day ceased to deserve well of France and the Republic.

M. Grévy then read a letter from the Minister of the Interior, asking him to notify to the Chamber the decree by which the President of the Republic, with the sanction of the Senate, dissolved the Chamber, and that the Electoral Colleges would be convoked for fresh elections within three months. The whole Left then rose, cheering the Republic, peace, and France. The bureaux of the four sections of the Left, at a meeting on June 23d, considered, among other matters, the issue of an election manual and the appointment of a vigilance committee, to organize the elections, and, in concert with a committee of juriconsults, watch the proceedings of government functionaries from the standpoints of legality. The bureaux also agreed to the following declaration:

That the 363 Deputies who voted for want of confidence in the ministry of the 17th of May, remaining united in a common idea, shall offer themselves collectively, and on a footing of equality, to universal suffrage when the electors are convened in their *Comitia*.

The political campaign on which France now entered was one of the most bitter through which the country ever passed. The Republicans of all shades acted in perfect unity. In no electoral district was there more than one Republican candidate, and he received the united support. The Government, on the other hand, although using every means in its power to influence the elections, found itself seriously hampered by the dissensions between the different monarchical factions upon whom it depended for support.

On July 1st, President MacMahon, after having reviewed the troops stationed in and around Paris, issued the following order of the day:

SOLDIERS: I am satisfied with your bearing and the regularity of the movements which you have just executed. I know, moreover, by the reports of your

chief, the zeal and spirit which you exhibit in all the details of the service. Yes, you comprehend your duties; you feel that the country has intrusted to you the custody of its dearest interests. On every occasion I count on you to defend them. You will help me, I am certain, to maintain respect for authority and law in the discharge of the mission which has been confided to me, and which I shall fulfill to the end.

A circular to the prefects, issued by the Minister of the Interior on the following day, was as follows:

The President of the Republic appealed to the Conservatives of all parties. He was heard by all. They all perceived, with the head of the state, the peril of the acts and tendency of the Chamber of Deputies to France. A parliamentary majority, dominated more and more every day by the advanced elements of the Radical party, was drawing France toward political and social disorganization. In arresting us in this career, the President of the Republic has so manifestly responded to the public sentiment, that men the most profoundly diverse have joined together to rally round him in approval of his patriotic resolution. But it must not be forgotten that the act of the 16th of May elicited among the Conservatives of all shades of opinion such a concord, because the President of the Republic accomplished it in the regular exercise of his constitutional rights, affirming, with the authority attaching to his words, that respect for the institutions to which we are subject would be the constant basis of his policy. Thus alone could the chief of the state combine in one idea men from many sides; thus only could he unite them under a programme which, in consequence of the revisable nature of the Constitution, implies the sacrifice of no conviction, but till 1880 closes the arena to rival claims by the faithful

those violent crises of which our history affords so many unfortunate examples, and in which all regular institutions succumb. In bringing the country to an exact appreciation of the facts, you will prepare it for the great electoral manifestation to which it will soon be convened. In all times and under all régimes the intervention of the Government in the elections has been much discussed. This oft-debated question I do not hesitate to deal with in my turn with the greatest frankness. The Government has not only the right, it is its duty to point out to the electoral body the candidates who support and those who oppose its policy, and to say to the people, "You are at liberty to choose, but, thus warned, you will choose in full knowledge of what you are doing." By such language the Government does nothing but enlighten the electors, and it would be strange were its right to use it contested. Do we not too often see our adversaries endeavoring to influence the public mind by falsehoods and calumnies, by threats, by the most reprehensible manoeuvres? Do we not often see public places transformed into veritable sinks of electoral corruption, where ignorance and credulity are pandered to in the grossest manner? With such facts, how should we hesitate to put universal suffrage on its guard against the snares to which it is constantly exposed? Your action cannot be hampered by those who in any degree represent the Government. Functionaries of every kind are knit to the Government which has appointed them by ties which they are bound not to forget. We cannot permit any of them to be hostile to us. Any who are not afraid to use against the Government the authority they hold from it need expect neither toleration nor indulgence.

An effective measure of the Government in controlling the elections, consisted in prefectorial changes. In addition to those gazetted on May 28th, 37 more were made on July 4th. On July 4th, a map of France was issued, in which all the arrondissements the Deputies for which voted want of confidence in the cabinet were colored red, while green and white indicated those on the other side and the few neutrals. The red, of course, greatly predominated, covering, with few exceptions, the whole eastern half of the country, from the Pas-de-Calais to the Pyrénées-Orientales. Only 30 anti-Republican constituencies lay to the east of this line, and these were mostly comprised in four or five groups, leaving a large south or central track, including 10 entire departments, without a single trace of Conservatism. Turning to the west of the line, the anti-Republican constituencies formed a broken fringe on the coast and on the Spanish frontier, constituting four or five groups, extending up to the line in the southwest quarter of France, but elsewhere hugging the coast. Even on the coast, however, there were dots of red, sometimes forming large groups; and toward the

THE BOURSE, PARIS.

and strict observance of the first law of the country. The Conservative party has always respected institutions regularly established. On it devolves the duty of first giving the example of a sincere and loyal observance of the laws by which the National Assembly constituted the Republic. You will, therefore, take care to direct public opinion well in this respect. Let every one know that in opposing while there was still time the predominance of an Assembly which tended rapidly to annul the Executive power and the Senate, Marshal MacMahon averted one of

line there were considerable unbroken tracks of red. On the whole, the map showed that northeast France is Republican, with a few patches of Conservatism; southwest France is also Republican, with less admixture of Conservatism; northwest France is pretty equally divided, Republicanism being more inland, and Conservatism more on the coast; and southwest France is predominantly Conservative, but with considerable Republican tracts on the northeast and southeast corners, and more scattered patches elsewhere. The Republicans monopolize 23 departments, while the Conservatives hold sole possession of none.

A severe loss for the French nation in general, and the Republicans in particular, was the death of M. Thiers, the first President of the Republic, which occurred on September 3d. For the Republicans particularly, the loss was a severe one, occurring as it did shortly before a general election, and depriving them of their recognized leader, the only man in their ranks who was thought fit to succeed Marshal MacMahon, in case of a Republican victory.

On September 19th, President MacMahon issued a manifesto to the French people, of which the text was as follows:

FRENCHMEN: You are about to be called upon to nominate your representatives in the Chamber of Deputies. I do not assume to exercise any pressure upon your choice, but I feel bound to dispel any doubt upon what you are about to do. What I have done is this: For the last four years I have maintained peace, and the personal confidence with which I am honored by foreign sovereigns enables me daily to render our relations with all Powers more cordial. At home public order has never been disturbed for a moment, owing to the policy of concord, which brought around me men devoted before all things to their country. Public prosperity, momentarily arrested by our misfortunes, has recovered its elasticity; the general wealth has increased, notwithstanding the heavy burdens borne by the people; the national credit has been strengthened, and France, peaceable and confident at the same time, sees her army, always worthy of her, reconstituted upon a new basis. These great results were, however, threatened with danger. The Chamber of Deputies, daily throwing off the leadership of moderate men, and more and more dominated by the avowed leaders of the Radical party, at length forgot the share of authority which belonged to me, and which I could not allow to be diminished without involving the honor of my name before you and before history—contesting at the same time my rightful influence in the Senate—aimed at nothing less than substituting for the necessary equilibrium of public powers established by the Constitution the despotism of a new convention. Hesitation was no longer permissible. Exercising my constitutional right, and in conformity with the opinion of the Senate, I dissolved the Chamber of Deputies. It is now for you to speak. They tell you I seek to overthrow the Republic, but you will not believe it. The Constitution is intrusted to my guardianship, and I will make it respected. What I look for from you is the election of a Chamber which, raising itself above party rivalries, will occupy itself before all things with the country's affairs. At the last elections an abuse was made of my name among those who then proclaimed themselves my friends. Many have not ceased to oppose me. People still speak to you of their devotion to my person, and assert that they only attack my ministers. Do not be duped by this

artifice. To frustrate it my Government will designate among the candidates those who alone are authorized to make use of my name. You will maturely consider the bearing of your votes. Elections favorable to my policy will facilitate the regular conduct of the existing Government. They will affirm the principles of authority sapped by demagoguery, and will assure order and peace. Hostile elections would aggravate a conflict between the public powers as well as impede the course of business and maintain agitation, and France, in the midst of these fresh complications, would become for Europe an object of distrust. As for myself, my duty would increase with the danger. I could not obey the mandates of the demagogues. I could neither become the instrument of Radicalism, nor abandon the post in which the Constitution has placed me. I shall remain to defend conservative interests with the support of the Senate, and shall energetically protect the faithful public servants who, at a difficult moment, have not allowed themselves to be intimidated by vain threats.

Frenchmen, I await with full confidence the manifestation of your sentiments. After so many trials, France desires stability, order, and peace, and, with God's help, we will secure to the country these benefits. You will listen to the words of a soldier who serves no party, and no revolutionary or retrograde passion, and who is guided by nothing but love for his country.

It created a storm of excitement throughout France. The Bonapartist and Clerical papers applauded this document as a declaration of "No surrender." The Republican papers, on the other hand, were very bitter in their denunciation.

This address from the President was answered by one from M. Thiers, to the electors of the 9th arrondissement. Under the circumstances it produced a great impression, not only in the arrondissement for which it was intended, but throughout the whole of France. It was published on September 24th, and had been written entirely by M. Thiers, but he only revised the first portion previous to his death. In the first place he justified the Chamber lately dissolved, and praised the moderation and wisdom displayed by the members in their proceedings. He pointed out that it did not deserve the reproach of Radicalism, and explained that the reason of his preference for a republican form of government was in consequence of the impossibility of establishing a monarchy.

M. Thiers then went on to describe the actual situation of affairs as intolerable, there being a republican form of constitution with an anti-republican *personnel*. He said that the Republic was the government necessary for France, with all men desirous of making her prosperous; and he strongly protested against the authors of the crisis of May 16th.

He denounced, as a violation of the rights of all free peoples, the long and extra-legal postponement of the elections, the newspapers' threats of repeated dissolutions, and of levying taxes without parliamentary sanction—a monstrous step, never entertained even by the Empire. As to the excuse that France was in danger of perishing, and must be saved, this fatal word had been the forerunner of all the

faults of governments which had fallen into madness before falling to pieces; but while pretended saviors had themselves perished, and sometimes drawn France into the abyss, she had always extricated herself. He enjoined the electors to insist on the principle that the elected head of the Executive could govern only with the coöperation of both Chambers and of ministers approved by the majority; that taxes voted only by one Chamber could not be legally collected; that after the holding of elections, resistance to the will of the nation would be a resistance to the Constitution itself, and that a fresh dissolution could only be resorted to after a session which had raised new questions on which the country had not already pronounced.

Official decrees were issued on September 22d, ordering the elections on October 14th, the second ballots for October 28th, and the

all declarations of policy would be read, in order not to allow the publication of outrages against the chief of state, violent languages, menaces, or falsehoods.

In the beginning of October, M. Gambetta issued his manifesto to the electors of his arrondissement, in which he repeated his famous expression that the President would have to "submit or resign." For this offense a second prosecution was begun against him, and he was again sentenced to three months' imprisonment and a fine of 4,000 francs, a similar penalty having been imposed upon him previously for a speech delivered at Lille.

The elections took place on October 14th, and resulted in a victory for the Republicans, although not so complete as had been expected by some. Exclusive of the four colonial Deputies, 815 Republicans and 199 official candidates were chosen, while in 15 cases a second

ballot was necessary. Of the Republicans, 291 sat in the last Chamber, and 24 were new men. Of the official candidates, 140 were in the last Chamber, and 59 were new men; of these 21 were Bonapartists, 15 Legitimists, 4 Orleanists, and 21 MacMahonites. The Left had lost 53 seats and gained 17; the Bonapartists losing 10, and the Royalists 7. As to the geographical distribution of these gains and losses, it may be observed that, dividing France into four tolerably equal parts, the Republicans gained 12 seats and lost 12 in the northeast; gained 1 and lost 13 in the southeast; gained 1 and lost 14 in the southwest, besides two losses in Corsica, which is now completely in the hands of the Bonapartists. Northeastern France would have become nearly exclusively Republican but for the loss of 4 seats in the Nord, another in the Ardennes, and 2 in the eastern half of the Pas-de-Calais, all lying so close together that the Republicans may be said to have lost the belt of territory on the Belgian frontier. On the other hand, they gained sufficient seats in the remainder of the section to counterbalance this loss, and to re-

tain an overwhelming preponderance in northeastern France, whose vicinity to Germany renders foreign policy a vital question. The southeast, bordering on Italy, likewise remained Republican, though the preponderance was not so decided; and the loss of 4 constituencies out of 7 in Vaucluse, which had veered round from Radicalism to Legitimacy, was not set off in the adjoining departments, but was, indeed, further swollen. In the northwest, which in the late Chamber was mainly anti-Republi-

CHURCH OF NOTRE DAME, REAR VIEW, PARIS.

meeting of the Chambers for November 7th. The Minister of Justice followed up these decrees by a circular to the Procureurs-Généraux, in which he reminded them of the chief regulations for electioneering. He mentioned among these the right of a judicial or administrative official present at any meeting to order it to disperse, as also the liability for delivering an illegal speech. He directed that electoral circulars and placards must bear the official signature of the candidate, and said that

can, the Left retained their hold of Seine-et-Oise, Eure-et-Loire, Loiret, and Loir-et-Cher, but lost 3 seats in the Côtes-du-Nord, which has now but 1 Republican Deputy, against 8 Conservatives; and Vendée and Finistère, which formerly returned 1 and 2 Republicans respectively, have become Royalist monopolies, except a single Bonapartist seat in each. The religious question had evidently influenced the northwest, and in the southwest it had manifestly operated, the Left losing all their seats near the Pyrénées and others scattered farther north, the Bonapartists, however, sharing the advantage with the Legitimists. In the late Chamber the southwest was the least Republican division of France, and it is now still less Republican than it was then, though Creuse, Haute-Vienne, and half Gironde remained true. In the second ballots of October 28th, the Republicans gained in 11 out of the 15 districts, lost votes in 1 district, and abstained from voting in 3, claiming that their candidates had been elected on the 14th. The final result of the election was that in the new Chamber the Left would have 325 members, including the 3 disputed seats, the Bonapartists 112, and the Royalists 96.

The combined Royalists and Bonapartists suffered another defeat on November 4th. On that day elections were held throughout France for members of the Councils General, the Assemblies of the Departments. In these elections the Republicans gained over 100 seats from the Conservatives. In some departments this success changed the majority in the Departmental Assembly.

The supplementary elections held on November 11th still further improved the position of the Republicans. Out of 90 Councils General, the Republicans had a majority in 49 and the Reactionaries in 38, while 3 were doubtful. The Left had gained the majority in 15 departments, and had lost it in 5. The new Chambers met on November 7th. No business of any importance was transacted beyond the election of M. Grévy as provisional president, and afterward as permanent president. On November 12th, M. Grévy, in returning thanks for his election as permanent president, said he would strive to show himself equal to the occasion in the same manner as the Chamber, by its moderation and firmness, would know how to act up to its responsibility, guided by the admirable wisdom and will of the country. Urgency was then voted for a motion to modify the standing orders, so as to better enable the president to repress disturbances during debate. M. Albert Grévy moved the appointment of a committee to inquire into election abuses. He declared the country expected a condemnation of the system of official candidatures, and he asked that urgency be voted for his motion. The Duc de Broglie, in the name of the Government, supported the demand for urgency. He said he wished light to be thrown on the accusa-

tions against the Government. The ministry would meet the inquiry with more readiness than did the members of the Government of the 4th of September on a former occasion, although, perhaps, it might ask for more impartial judges than a committee of inquiry. It was a strange theory which required that two of the established powers ought immediately to bow to the will of the third. Urgency was voted, and the bureaux immediately appointed a committee to examine the motion, with M.

ARC DE TRIOMPHE DE L'ÉTOILE, PARIS.

Albert Grévy as reporter. On resumption of the sitting the committee presented a report explaining that the persons aimed at by the motion as responsible for electoral abuses are those agents who are recognized as responsible by the Constitution, and not the President of the Republic, whom the law renders irresponsible. M. Gambetta, replying to a question by a member of his bureau, gave a similar explanation of the object of the motion. These declarations were considered to represent the unanimous opinion of the Left. After a violent debate, extending over three days, the motion was adopted on the 15th. On the 16th the committee was appointed, consisting entirely of Republicans. On the 17th, a Conservative Senator, M. de Kerdrel, gave notice of the following interpellation: "I have the honor of submitting a demand of interpellation to the Government as to the measures it means to take respecting the investigation ordered by the Chamber of Deputies." M. Jules Simon asked whether such a question could be put, and two other members characterized it as a revolutionary step. The president said that he had anxiously considered the legality of the question. M. de Kerdrel had declared that he merely intended to ask what instructions the Government meant to give to its agents, and within these limits the question would be in order. The House was not, however, the Senate of the Empire, and

had no right to sit in judgment upon the Chamber. If the latter had exceeded its powers, which he did not admit, the Government could have recourse to a dissolution. On the 19th, M. Arago moved the previous question when M. de Kerdrel's question was brought forward, on the ground that the question was unconstitutional and an encroachment on the rights of the Chamber. This motion was rejected by 155 to 180 votes. M. de Kerdrel then put his question, and said that his sole object was to prevent the prerogatives of the Executive and Judicial Powers from being threatened by the inquiry. The Duc de Broglie, in reply, maintained that the inquiry was an encroachment upon the rights of those powers. M. Laboulaye held that the Chamber had the right to carry out the investigation. The president then read the order of the day drawn up by the Right, which declared that the Senate, having taken cognizance of the declarations of the Government, would not suffer any infringement of the prerogative of either of the public powers. After some remarks from M. Dufaure, defending the course adopted by the Chamber, and advocating a policy of conciliation, the order of the day moved by the Right was adopted.

One fact became patent during the struggle in the Senate, that the Senators of the Right Centre, belonging to the Orleanist party, and led by the President of the Senate, had almost all severed themselves from the Government, declining to share the responsibility of its electoral acts, and had rejected all idea of a fresh dissolution. The new Budget Committee met on November 21st, all the members being Republicans, and elected M. Gambetta its president. On the 20th the *Journal Officiel* announced that the ministers had handed in their resignations to the President, who had accepted them. The new ministry was formed on November 24th. It was composed as follows: President of the Council and Minister of War, General Grimaudet de Rocheboust; Minister of Foreign Affairs, the Marquis de Banneville; Minister of the Interior, M. de Welche; Minister of Justice, M. Lepelletier; Minister of Finances, M. Dutilleul; Minister of Commerce, M. Ozenne; Minister of Public Works, M. Graeff; Minister of Public Instruction, M. Faye; Minister of Marine, Admiral Roussin. On the same day General Grimaudet de Rocheboust, the newly appointed President of the Council, made the following statement:

In consequence of the recent discussions in the Chamber of Deputies, President MacMahon has intrusted the ministry to men outside of political struggle. They will faithfully observe the law and afford the Marshal the support he requires, important to facilitate commercial intercourse and the preparations for the Exposition. We shall respect and require respect for the republican laws by which we are ruled. The Constitution will pass intact from us to our successors when President MacMahon judges opportune to replace us by parliamentary ministers. We rely upon your coöperation in our work of appeasement.

M. Lepelletier, Minister of Justice, read the

same statement in the Chamber of Deputies, whereupon M. de Marcère, in behalf of the Left, interpellated the ministry respecting its formation. M. de Welche, Minister of the Interior, asked for a postponement of the interpellation till the next day, but the Chamber decided to discuss it. M. de Marcère urged that the cabinet represented personal, not parliamentary, power. He said "better tell the Marshal the truth and spare the country a fresh crisis." M. de Welche urged the Marshal's constitutional rights. Jules Ferry moved, on behalf of the Left, that the Chamber consider that the ministry, by its composition, is a denial of the national rights of parliamentary law, and can only aggravate the crisis which has cruelly weighed business since the 16th of May, and cannot enter into relations with this ministry. The motion was adopted, 323 against 208, after a Bonapartist motion for an order of the day, pure and simple, had been rejected by a similar number. After this unparalleled event, the rejection by the Chamber of a ministry on its first appearance before the Chamber, the struggle between the President and the Chamber continued unabated for some time. But in the beginning of December President MacMahon began to make overtures to the Republicans, by inviting M. Grévy and the Duc d'Audiffret-Pasquier to an interview, and finally even called upon M. Dufaure to form a cabinet. But, as he insisted on retaining the selection of the Ministers of War, Marine, and Foreign Affairs, M. Dufaure declined to undertake the formation of a cabinet on these conditions. Finally, on December 14th, President MacMahon gave M. Dufaure full power to form a cabinet from the Left, and the following cabinet was, in consequence, organized: M. Dufaure, Justice and President of the Council; M. de Marcère, Interior; M. Léon Say, Finance; M. Waddington, Foreign Affairs; M. Bardoux, Public Instruction and Worship; M. de Freycinet, Public Works; M. Teisserenc de Bort, Agriculture and Commerce; General Borel, War; and Admiral Pothuan, Marine. The first decree, nominating M. Dufaure, was countersigned by General Rocheboust, and the other decrees by M. Dufaure. M. Dufaure then sent the following message to the Chambers:

GENTLEMEN: The President of the Republic has charged my colleagues and myself to present to you the following message:

The elections of the 14th of October once more affirmed the confidence of the country in republican institutions. In obedience to parliamentary rules, I have formed a cabinet selected from the two Chambers, composed of men resolved to defend and maintain those institutions by the sincere practice of the constitutional laws. The interest of the country demands the termination of the crisis we are traversing. It demands, with not less force, that it shall not be renewed. Recourse to the right of dissolution is only, in fact, a supreme mode of consulting a judge without appeal, and cannot be erected into a system of government. I deemed it my duty to make use of that right, and I conform to the reply of the country. The Constitution of 1875 founded a parliamentary republic by establishing my irresponsibility, while it

instituted the joint and individual responsibility of the ministers. Thus are determined our respective duties and rights. The independence of the ministers is the condition of their new responsibility. These principles, derived from the Constitution, are those of my Government. The end of this crisis will be the starting-point of a new era of prosperity. All the public powers will cooperate in promoting its development. The accord established between the Senate and the Chamber of Deputies, henceforth certain of regularly reaching the expiration of its commission, will enable the great legislative works demanded by the public interests to be completed. The Universal Exhibition is about to be opened. Commerce and industry are about to take a new spring; and we shall give the world a fresh testimony of the vitality of our country, which has always revived through labor, through thrift, and through its profound attachment to ideas of conservation, order, and liberty.

This termination of the crisis which had kept France in suspense during the greater part of 1877 was hailed with satisfaction throughout the country. The Chamber as well as the Senate, in accordance with the wishes of M. Say, voted the four direct taxes and a credit of 529,500,000 francs, which was declared sufficient for the first two months of 1878. They then adjourned on December 18th. The important work of clearing the Administration of reactionary officials was promptly taken in hand by M. de Marcère. On December 19th, 82 new prefects were appointed, one prefect was transferred, and only four prefects were left undisturbed. The departmental councils met on December 31st, and it was found that the Republican victory was much greater than appeared from the official reports. The Left had a majority in 45 departments, against 36 in the previous elections. This was of particular importance, as it secured to the Republicans a majority in the Senate after the senatorial elections of 1878.

France acquired a new colony in 1877, or, rather, had one of her former colonies restored to her. The island of St. Bartholomew, one of the group of the Lesser Antilles, known as the Windward Islands, was ceded to Sweden in 1784, and was the only colony ever possessed by that nation. Finding, however, that the island was more trouble than it was worth, Sweden prudently parted with it to France for a "mere trifle." It has an area of about eight square miles, and a population of 2,898. St. Bartholomew labors under one disadvantage—namely, that of having no natural supply of water; and its inhabitants are dependent for this convenience on the neighboring island of St. Christopher, which belongs to Great Britain. Notwithstanding this drawback, sugar-cane, cocoa, tobacco, and cotton are successfully cultivated.

The Premier of the cabinet appointed on May 16th, the Duc ALBERT DE BROGLIE (*see* ANNUAL CYCLOPEDIA for 1878, page 306), born in 1821, is well known to the public by his successful efforts, in 1873, to overthrow the Government of M. Thiers. Under President MacMahon he became the Premier of the new Gov-

ernment. This position he retained until May, 1874, when he was dropped by the Legitimists, and was compelled to retire. In the National Assembly he was hated so bitterly, that all his efforts to be elected a life Senator by that body were unavailing. The Bonapartists then nominated him for the Senate in the department of Eure, and elected him. In 1877, after the summary dismissal of the Simon cabinet, he was again appointed Premier by President MacMahon.

MARIE FRANÇOIS OSCAR BARRY DE FOURTOU, the Duc de Broglie's Minister of the Interior, was born January 3, 1836. During the Empire he was a distinguished advocate of Ribérac, and, as mayor of that city, was one of the most liberal magistrates of the day. It is said that even under the Empire he gained the reputation for successfully managing elections, the talent for which he again displayed since his recent accession to power, and that he materially contributed to secure for the Emperor his large majorities. In 1871 he was elected to the National Assembly from the Dordogne, and in that body, while being at the same time Liberal and Conservative, soon gained a prominent position as an orator and a political manager. Struck by his remarkable talents, M. Thiers, in December, 1872, appointed him Minister of Public Works, which department he exchanged on May 18, 1873, for that of Worship; but on May 24th he was forced to retire, with President Thiers. On November 20th, however, he entered the cabinet again, as Minister of Public Instruction, of Worship, and of Fine Arts; and on May 23, 1874, was appointed Minister of the Interior. He retired from the ministry on July 20, 1874, in consequence of a difference of opinion with his colleagues. In 1876 he was elected to the Chamber of Deputies by the Dordogne, where he voted with the Right. He had always retained the esteem and confidence of the President, who was said to have frequently consulted him; and when, in 1877, President MacMahon formed a Conservative ministry, M. de Fourtou was again given the Department of the Interior. Here he immediately undertook to prepare for the elections, introducing the same political measures that had given to the Empire its immense majorities. He is considered a Bonapartist.

M. EUGÈNE CAILLAUX, the Minister of Finances (*see* ANNUAL CYCLOPEDIA for 1875, page 314), who was appointed Minister of Public Works in 1875, retired with the Buffet ministry, in 1876. In the same year he was elected a Senator for Sarthe. He is a moderate Bonapartist.

The Viscount CAMILLE ADRIENNE DE MEAUX (*see* ANNUAL CYCLOPEDIA for 1875, page 314), the Minister of Commerce, held the same position during 1875-'76, and in 1876 was elected a member of the Senate from the Loire. He is considered a good executive officer. In politics he is a Legitimist.

M. AUGUSTE PARIS, the Minister of Public

Works, was a member of the National Assembly, and in 1876 was elected a Senator from the Pas-de-Calais. He is an adherent of the Duc de Broglie.

DUc LOUIS CHARLES ÉLIE AMANIEU DECAZES, the Minister of Foreign Affairs (*see ANNUAL CYCLOPEDIA* for 1874, page 330), has held that position in all the different cabinets since 1874. In 1876 he was elected to the Chamber of Deputies from the 8th arrondissement of Paris. He was retained in the cabinet as a guarantee to Europe in general, and Germany in particular, that no change in the foreign policy was contemplated.

JOSEPH MATTHIEU BRUNET, the Minister of Public Instruction, was born March 4, 1829. Up to 1876, when he was elected to the Senate from the department of the Corrèze, he had not occupied a prominent position in general politics. In the Senate he was a member of the Right Centre, vacillating between the Legitimists and the Bonapartists.

DUFAURE, JULES ARMAND STANISLAS (*see ANNUAL CYCLOPEDIA* for 1875, page 314), at the elections for the Chamber of Deputies, in February, 1876, was returned from the Charente-Inférieure, and in August was elected a life Senator, to fill the vacancy caused by the death of Casimir Périer. In March, 1876, he succeeded M. Buffet as President of the Ministry, but was forced to resign in December, 1876. During 1877 he did not take a very prominent part in national affairs, until, in December, he was called upon by President MacMahon to form a new cabinet.

MARCÈRE, ÉMILE LOUIS GUSTAVE DESHAYES DE, was born March 16, 1828. In 1871 he was elected to the National Assembly, and there belonged to the Left Centre, of which he soon became one of the most distinguished members. He was a frequent speaker in the Assembly, and, together with M. Ricard, was the reporter on the municipal electoral law. In 1876 he was elected to the Chamber of Deputies from the Nord, and was appointed Under-Secretary of State in the Department of the Interior. After the death of M. Ricard, he took his place as Minister of the Interior, and in December, 1876, resigned, with the entire cabinet. In December, 1877, however, he was again called upon to take the Department of the Interior in the cabinet of M. Dufaure.

SAY, JEAN BAPTISTE LÉON, the new Minister of Finance, was born in 1826. He was the grandson of the distinguished political economist, Jean Baptiste Say. Under the Empire Léon Say published a number of works on political economy, and bitterly attacked the financial administration of Baron Haussmann, the Prefect of the Seine. After the overthrow of the Empire, in 1870, he heartily indorsed the Republic; and as administrator of the railroads of the Nord took an active part in the provisioning of Paris during the investment of that city. In 1871 he was elected to the National Assembly from the Seine, and took his

place in the Left Centre. In June, 1871, he was appointed Prefect of the Department of Seine, and in December of the same year Minister of Finance, which position he retained until the resignation of M. Thiers, in May, 1873. He now became one of the ablest defenders of the Republic in the Assembly; and on March 10, 1875, again entered the cabinet as Minister of Finance. He retained this position in the cabinet of M. Dufaure, of March 9, 1876, and also in that of Jules Simon, of December 13, 1876; but resigned, with the latter ministry, in May, 1877. Upon the formation of a Republican cabinet by Dufaure, in December, 1877, he was again appointed Minister of Finance.

WADDINGTON, WILLIAM HENRI, was born in Paris, of English parents, in 1826. He studied in the University of Cambridge; and having returned to France, he devoted himself to the study of numismatics, being in possession of an independent fortune, and in 1869 was elected a member of the Academy. In 1871 he was elected to the National Assembly from the Aisne; and in 1873 was, for a few days, Minister of Instruction. In 1874 President MacMahon offered him a portfolio, which he refused, in order not to separate himself from his friends of the Left Centre. In 1876 he was elected to the Senate from the Aisne; and in M. Dufaure's cabinet of March 9, 1876, was appointed Minister of Instruction, and retained this position under Jules Simon, but retired in March, 1877. In December, 1877, he became Minister of Foreign Affairs.

FREYONNET, CHARLES LOUIS DE SAULCES DE, was born November 14, 1828. He received his education in the Polytechnic School, and held various positions under the Empire. He was a delegate to the Government of National Defense at Tours, in 1870; and in 1876 was elected Senator from the Seine. In the Senate he voted with the Republicans; and in December, 1877, was appointed Minister of Public Works.

BARDOUX, AGÉNOR, was born January 15, 1830. He is a distinguished lawyer, and in 1871 was elected to the National Assembly. He was for a time, in 1875, Under-Secretary of State in the Ministry of Justice; in 1876 was elected to the Chamber of Deputies from Puy-de-Dôme; and in December, 1877, was appointed Minister of Education.

TEISSERENC DE BORT, PIERRE EDMOND, was born in 1814; was elected a Deputy in 1846, a member of the National Assembly in 1871, and a Senator for Haute-Vienne in 1876. He was Minister of Agriculture and Commerce from April, 1872, to May, 1873; again from March, 1876, to May, 1877, and was appointed to this office a third time in December, 1877.

General BOREL, the Minister of War in M. Dufaure's cabinet, was born in 1819. He has been since 1854, almost uninterruptedly, Marshal MacMahon's adjutant, and accompanied him in the campaigns in the Crimea, Algeria, and Italy. In 1869 he became chief of staff of the

National Guards of the Seine, but soon returned to Algeria. In the war with Germany he was chief of staff of the Army of the Loire, and together with General de Paladines conducted the battle of Coulmiers. When the insurrection of the Commune broke out, Marshal MacMahon appointed him chief of staff of the Army of Paris, and in this position he remained until 1873. He then became General Barail's chief of cabinet, and as such took part in the preparation of the new army organization law of June, 1873. Upon the retirement of General Barail, he became the commander of the 12th Infantry Division, and shortly after chief of staff to the Governor of Paris. In this position he remained until called to the Ministry of War.

POTHUAU, LOUIS PIERRE ALEXIS, who was appointed Minister of the Navy in 1877, held this position in 1875. (See ANNUAL CYCLOPÆDIA for 1875, page 322.)

FREE CHURCH OF ENGLAND. The 15th annual Convocation of the Free Church of England was held at Spa Fields, London, beginning June 20th. An opening address was made by the presiding bishop, the Rev. Dr. Price, in which the speaker gave a general view of the state of the Evangelical and Ritualistic parties in the Church of England, and discussed the necessity of pushing forward the work of the Free Church. In reviewing the course of the Free Church during the year preceding, the bishop referred to the visit of Bishop Cridge, of the Reformed Episcopal Church, to England, and the service he had rendered in connection with the meeting of the Convocation of 1876, and the consecration of the two bishops of the Free Church. By this consecration, the ministry of the Free Church had been raised to the level of other Episcopal Churches, not excepting that of the Church of England, conferring upon it an authority which even High-Churchmen could not afford to deny; not that the ministry of the Free Church should be considered one whit more valid than it was before, for the validity of the Christian ministry did not depend on any Episcopal consecration, but on a Divine appointment; nevertheless, the consecration was supposed to have put the ministers of the Free Church in a more advantageous position to do their work, and should therefore be regarded with interest. The relations between the Free Church of England and the Reformed Episcopal Church were discussed. A correspondence which had been carried on between the two Churches, through their representatives, was read, after which the following resolution, reported by a committee appointed for the purpose, was unanimously adopted:

Resolved, That this Convocation, having heard the correspondence with the Rev. M. B. Smith, president of the standing committee of the General Council of the Reformed Episcopal Church, and referring to the Articles of Union solemnly agreed upon by the Reformed Episcopal Church and the Free Church of England, severally, as set forth in the Appendix to the "Journal of the Second Council of the Reformed

Episcopal Church" (p. 25), while cordially admitting the full and perfect right of the Reformed Episcopal Church to establish itself in Great Britain and Ireland, or elsewhere, nevertheless deeply deplores even an appearance of division and rivalry between two ecclesiastical bodies so thoroughly one in the great work of evangelization, in the maintenance of Protestant Christian principles, and in Church order and discipline; and would earnestly and prayerfully suggest to the governing authority of the Reformed Episcopal Church to consider whether it would not be promotive at once of the greater usefulness of the two Churches and the advancement of religion in the spheres of their several operations, so to arrange that they might form in each country but one ecclesiastical organization. And further, this Convocation would suggest, with a view to this desirable end, that a joint committee or delegation of the two bodies might be empowered to meet and consider the subject, and present a report thereon to the governing authorities of the two Churches.

FRIENDS. The 200th meeting of the *London Yearly Meeting of Friends* was held in the Devonshire Meeting-House, Bishopsgate, London, beginning May 23d. At the preliminary sitting of the lately enlarged meeting on Ministry and Oversight, several ministers were set free for fields of foreign religious service, among them Mr. Isaac Sharp, who proposed to undertake a long missionary journey to South Africa, Madagascar, and other distant parts. The yearly meeting was attended by ministers from America and Ireland. Epistles were presented from the yearly meeting in Ireland, and from eleven yearly meetings in America. These epistles gave accounts of the educational operations as well as of the direct religious affairs of the meetings. Some of them reported a large increase of membership. They contained full accounts of the work of the Friends among the Indians. In North Carolina, it was stated, the yearly meeting had doubled its numbers since the war, but help was required for the erection of school and meeting houses. A committee was appointed to consider whether anything could be done by Friends in England to help in this purpose. The statistical statements showed that the present number of members of the Society in England was 14,441, of whom 7,490 were female and 6,951 were male members. The increase during the year had been 188. A larger number of members had been received by "convincement" than in any year since returns had been made, and probably, it was said, than in any year during the last half century. Several closed meeting-houses had been reopened, as the result of Friends being appointed to attend the meetings in them, resulting in the gathering of attendants and the addition of several members to the Society. This, it is remarked, was a mode of action which at one time would have been thought to show an unwarrantable dependence on human arrangement. The conclusion was drawn from a comparison of the statistics of the body for several years past, that it had fully overcome the tendency toward decline it had so long manifested, and was now increasing; but "it

was equally evident that less prominence was given to some of the views which had conferred a distinct character upon the body." The number of marriages in accordance with the usages of the Society had been above the average. The reports made at the school conference showed that the 12 public schools of the meeting had been attended by 620 boys, and 425 girls, making a total of 1,045 pupils. The expenditure at Ackworth, the largest school, had been £2,890, or £9 19s. 10d. per scholar. The London Tract Association reported that it had sold 64,645 tracts, and 48,757 leaflets, and distributed gratuitously 22,235 tracts, and 18,105 leaflets, making a total of 8,111,005 tracts and leaflets distributed since the formation of the Society. Reports from branch societies were also presented. A proposition from the quarterly meeting at Durham, that the yearly meeting should impress upon the various meetings the necessity of instructing their members in the principles of the Society, with a document which accompanied it, setting forth certain doctrines and views, excited discussion. The necessity for instructing the members of the Society was fully admitted, but the issuing of anything which might be construed into a "Confession of Faith" was strongly opposed. It was decided simply to draw up a minute, recommending to the meetings the general instruction of their members. A discussion also took place on the subject of "General Meetings," which partake of the character of revival meetings, and of the practice of singing at such meetings, but no conclusions were reached. The fact is mentioned that a young man rose during one of the meetings and sang a hymn as a solo, and that no notice was taken of the irregularity. Epistles were read from Friends in Syria, New Zealand, Victoria, and Tasmania. A statement was made of the work in Madagascar by a Friend who had labored in that island for 10 years. The sum of £5,000 had been spent during the year in foreign missions, of which £4,000 had been devoted to Madagascar. In Bulgaria, 4,769 houses had been built by Friends, besides a number of school-houses, and 9,300 persons had had seeds supplied to them. A special meeting was held on temperance.

The 9th biennial *First-day School Conference* of Friends (Orthodox) in America met at Indianapolis, Ind., November 13th. Delegates were present from 10 of the 12 yearly meetings of the United States and Canada, besides a considerable number of visitors from distant States. Charles F. Coffin, of Indiana, was chosen president, but declined to serve, and

Dr. James E. Rhoades, of Philadelphia, was chosen in his stead. The statistical reports of the First-day schools of the Society were incomplete; but it appeared that when the last official returns were received, the number of scholars was 32,844, with an average attendance of 19,768, and that the schools were conducted by 2,895 officers and teachers. More than one-half of the scholars were children of members of the Society. The schools are officially recognized as a department of Church work by all the yearly meetings, except that of Philadelphia, where they are conducted independently of the Society. The report of the treasurer showed that his receipts had been \$335.08, and his expenditures \$330.25. The First-day school work had been rapidly developed in England during the last 30 years. When the first Conference was held at Birmingham, in 1847, only 12 schools were reported, with an aggregate attendance of 2,000 scholars; now the number of scholars was 19,000, an increase of 2,000 having been made during the year. The English schools partook more of the nature of mission-schools than of Sunday-schools operating within the Church, and gave attention to young men and women, rather than to children.

An Educational Convention of the Orthodox Friends of America was held at Baltimore, Md., December 21st and 22d. The principal educational institutions of the Society, and all the yearly meetings of the continent, were represented, either by delegates or by letter. Francis S. King, of Maryland, presided. The object of the meeting was to discuss the means of giving greater unity of purpose and concentration to the educational efforts of the Society, and the method of avoiding the excessive diffusion of energies which was in danger of taking place under the independent action of the yearly meetings. The Convention had also in view the provision to be made for the education of the children of the new members who were being rapidly added to the Society in the South and West. A standing committee was appointed, to consider the subject of education, as affecting the Society of Friends, to whom was also referred the question of establishing a permanent Board of Education, and appointing a permanent general secretary. The committee was empowered to call another conference during next year. A committee was also appointed to prepare an address embodying the conclusions of the conference. The subject of establishing a college for young women, of the grade of Hanerford College, was favorably considered.

G

GEOGRAPHICAL PROGRESS AND DISCOVERY. The year has been an unsuccessful one for explorers. Several of the numerous expeditions which have ventured into the unknown parts of Africa have succumbed to the triple dangers of those fatal regions. The fate of the German expedition to the west coast of Africa, and the mishaps which have befallen the Marquis Antinori's enterprise, are new illustrations of the rule that the nearly invariable record of expeditions sent out for definite purposes, and equipped by wealthy associations, is one of disappointment and disaster. The only brilliant discovery to chronicle is the identification by Stanley of the Congo with the Lualaba; this was first theoretically affirmed five years ago. The barbaric countries which Antinori and Largeau are endeavoring to penetrate will probably remain closed to intercourse, by the ferocity and fanaticism of their inhabitants, long after a highroad of commerce shall have been opened through the lands of the cannibal savages who harassed Stanley's march and hourly menaced his life. The knowledge of the great natural resources of inner Africa will, no doubt, cause in time the replacement of the inhuman slave system by a rational method of commercial intercourse. The aggressions and subjugations effected by Russia in Central Asia, in the name of civilization, have benefited science, in opening up to investigation regions of high interest to the ethnologist and to the physical geographer. There is reason to expect that Weyprecht's notion of Arctic stations for simultaneous observations will be realized, not through official organization, but through the solidarity which is customary among scientific investigators. The first results of this method of research will probably be collected by Lieutenant Weyprecht himself, and the Howgate Polar Colony.

The Norwegian deep-sea sounding expedition continued its hydrographical researches during the summer of 1877 in the same vessel, the *Voringen*, under Captain Wille, with Professor Mohn as naturalist. They sailed from Tromsø on the 14th of July, and first took three cross-sections of soundings off Fuglø, latitude 71° , with a greatest depth at the northeast limit of a submarine bay, which abuts on the steep bank outside Vesteraalen and Loffoden. They next sailed to Jan Mayen. The transition from the Gulf Stream to the Polar current was found to be exceedingly abrupt. In the chart of Jan Mayen, following the surveys of Zorgdrager and Scoresby, the only inaccuracy of importance is that the island is placed by half a degree of longitude too far to the east. The height of the Beerenberg was found to be 5,886 feet. They sounded in 1,032 fathoms, seven miles northwest of the island. The expedition

returned to Bergen on August 23d. The programme for 1878 is to examine the region between North Cape, Jan Mayen, and to the north of Spitzbergen, with, perhaps, a trip eastward toward Nova Zembla, in order to determine the isothermal line of 0° at the bottom, which is taken to be the limit of the codfish.

The curious phenomenon which has been observed, that the minimum of temperature is found at a certain depth below the surface, while the water at the bottom is again warmer—as, for instance, in the outer part of the West Fiord, where the surface temperature is 45.7° , in 60 fathoms depth 38.8° , and in 140 fathoms, 10 fathoms from the bottom, 41° —is ascribed to the action of the winter cold upon the water; the water is chilled at the surface in winter and sinks, this action ceasing when warm weather comes, and the surface waters are warmed and rendered lighter. This phenomenon is observable all along the coast, and can be detected with Negretti and Zambra's deep-sea thermometer. The deepest sounding was in 1,710 fathoms off Vesteraalen, latitude 70° , longitude $6^{\circ} 15' E.$ At this depth animal life is scarce. A specimen of the *Umbellularia* has been taken. The boundary line between a bottom temperature above and one below 32° lies, between latitude 65° and the Arctic Circle, as far west as $5^{\circ} 30' E.$; beyond the Arctic Circle there is a curvature toward the coast; farther north it is only 5 to 10 geographical miles off the coast of the islands of Loffoden and Vesteraalen. Here the northern edge of the bank is very steep, and falls rapidly toward the deep part of the Arctic Ocean. Out at sea the isothermal plane of 32° is found at very different depths in different latitudes; in the channel between Faroe and Shetland, in 800 fathoms; between Iceland and Norway, 400 fathoms; between Jan Mayen and Norway, 580 fathoms, rising again to the westward. Near the coast the level of 32° is considerably higher.

Lieutenant Weyprecht and Count Wilczek intend undertaking an Arctic expedition, and contemplate an absence of about twelve months. They will establish their station for observations in one of the northern havens of Nova Zembla. They recommend establishing half a dozen other stations for comparative observations at points around the North Pole, not difficult of approach, between latitude 71° and $80^{\circ} N.$, as on Spitzbergen; on one of the new Siberian islands near the mouth of the Lena; at Maguire's wintering station near Point Barrow; at Upernavik in West Greenland; and on the west coast of Greenland, with a subsidiary station in Norwegian Finmark. It would be also of the highest importance to establish stations, or at least one, near the South Pole for

simultaneous observations. Synchronous observations on the Arctic and Antarctic borders would help much to clear up the subject of terrestrial magnetism and the theory of the aurora borealis; important meteorological facts might also be gathered. The other sciences might not be advanced by simultaneous observations, though much valuable research in geography, natural history, and physical science would be conducted at each of the stations.

W. Lord Watts, an Englishman, took a sledging journey, in 1876, across the Vatna Jökull, the vast glacial tract in Iceland, 8,000 square miles in extent, by a course nearly coinciding with the meridian $17^{\circ} 20'$ W. longitude. It is a plateau, all the valleys being filled with ice. There is every indication that this vast glacier is constantly rising; and the view that it is encroaching on the outer country, both to the north and south, is confirmed by Mr. Watts. There is every reason to believe that the interior of Greenland is also one vast, impenetrable glacier, which is growing in the same manner.

Although the desired government donation, for the equipment of a polar colony after Captain Howgate's plan, was not granted by Congress, nevertheless the pioneer expedition, fitted out by the private subscriptions of Captain Howgate and others, set sail on the 16th of August in the stanch schooner *Florence*, of 53 tons burden, 64 feet long, with 19 feet beam, and drawing 7 feet of water. The proposition brought before the last session of the 44th Congress was for an appropriation of \$50,000 to provide for one or more expeditions to the polar regions, and to establish a temporary colony at some point near the shore of Lady Franklin Straits. The present expedition, in the whaling vessel *Florence*, intends to push up to Cumberland Island, or some point beyond, and there to go into winter-quarters, after making up a cargo of whalebone and oil. The promoter of the scheme, Captain H. W. Howgate, of the United States Signal Service, started with the expedition. The ship's officers are: Captain George E. Tyson, master; William Sisson, first mate; Dennison Burroughs, second mate; Eleazor Cone, steward; the crew consists of six men. Orray Taft Sherman and Ludwig Kumlien accompany the expedition, the first as photographer and meteorologist, the latter as naturalist. The Signal Service Bureau have furnished instruments for meteorological observations. The wintering station is to be known as the Howgate Polar Colony. They are provided with food to last for a year. The plan is to establish a series of stations, with abundant supplies and within communication-distance from each other, extending northward, each nearer one serving as a base from which the advance is to be made to the one next beyond, or, if necessary, as a goal of retreat. The colonists, while becoming acclimated and experienced in Arctic life, shall, at the same time, be making the meteorological, zoological,

and geological researches, which are really the chief benefits to be gained from Arctic exploration. Captain Tyson is an old whaler, and was a member of the ill-starred *Polaris* expedition. These pioneer colonists are to engage the services of some dozen Esquimaux families, to provide a supply of native clothing and of the best dogs for sledges. As the ice breaks in the summer, the *Florence* is to run over to Disco and transfer the explorers and the stores to the vessel, which, it is expected, will be there in June to meet them, and which shall convey them to Lady Franklin Straits. The prophylactic on which Captain Tyson relies is plenty of fresh blood. The combined raft and sledge, invented by Commodore Ammen, is expected to do good service in explorations; balloons will probably be tried for reconnoitring purposes.

Thomas A. Barry, a whaler, reports that while wintering in Hudson's Bay in 1876-'77, he fell in with a party of Esquimaux, who told a story of a company of white men coming

AN ESQUIMAUX HUNTER.

among them many years ago, while they were settled at Cape Inglefield, who afterward perished of cold and famine. They showed some relics of the lost voyagers, among which were spoons marked with the crest of Sir John Franklin. They offered to conduct the whalers to the spot where these last survivors of the *Erebus* and *Terror* were buried, with their books and papers, beneath mounds of stones, on Cape Inglefield. Mr. Barry is expected to start, in the spring of 1878, in charge of an expedition for the recovery of the records of the Franklin expedition, upon the information thus unexpectedly obtained.

Selah Merrill, of the American Palestine Exploring Expedition, speaks with admiration

of the fertility of the country east of the Jordan. The Gilead hills are well wooded, and occasionally covered with dense and ancient forests. The wadis Yâbis and Ajlun are in a fine state of cultivation, and rich in orchards of walnut, olive, and fruit of all kinds. Wadi Ajlun, the larger valley, contains four flourishing villages, and is sprinkled in every direction with flour-mills. He saw, also, a great number of deserted mills, many of which were abandoned on account of the depredations of the Arabs. The wide plateau stretching eastward from the Lake of Tiberias to the Lejah, and southward to Gerash, is a natural wheat-field. The country south of Bozrah and east of Gerash is full of ruined towns; into this fertile but dangerous neighborhood numerous settlers have recently migrated. The deserted plains in this region could produce vast quantities of the finest wheat. Along the course of the Zerka are the remains of an elaborate system of irrigation; this valley is under cultivation to a considerable extent. The whole east valley of the Jordan is capable of irrigation from the river: somewhat over half of the valley, which contains as much as 180 square miles of rich arable land, is now reached by irrigating canals; though portions of it are uncultivated, and covered by a luxuriant growth of thistles and weeds. The plains of Oele-Syria, along the Leontes, and those in the valley of the Orontes, could also, without great difficulty, be transformed from deserts into gardens. Some of the tribes in the upper Jordan valley till their own land, but the more aristocratic Bedouins employ fellahin laborers for all work. Large numbers of Christians go from Es Salt to the Zerka every year to cultivate the land on shares, receiving each a pair of shoes and the seed, while they furnish their labor and all the cattle, tools, and men, and their maintenance; the share received is only one-quarter of the produce. The labors of the American Palestine Exploring Expedition were discontinued at the close of the season of 1877, and its members have left the field.

The British survey of Palestine was continued during the year, under the direction of Lieutenant Kitchener. The war did not interfere with their operations, although they were kept under constant military surveillance by the jealous Turkish Government. They commenced at Haifa, completing the chart of the Acca plain, and filling in the line of levels between the Mediterranean and the Sea of Galilee as far east as Mejdél. From Haifa they changed their base to Tiberias, Safed, Meiron, and Taiyibeh, successively. The levels determined extended over 35½ miles. The depression of the Sea of Galilee is found to be 682.544 feet below the Mediterranean, which is 40 or 50 feet lower than has been supposed. The plane of the Dead Sea is over 600 feet lower, being 1,292 feet below the level of the Mediterranean. This fall of 600 feet is nearly even throughout the length of the Jordan, which has, however, two

rapids. The deepest depression of the Jordan valley is some 1,300 feet below the plane of the Mediterranean.

The popular topographical names are carefully recorded, and studied with the view of detecting their etymological descent from the Biblical names; and where a modern name resembles a name mentioned in the Scriptures, while the location and description of the site also correspond, the identity is considered established, the double induction furnishing a strong and clinching proof. The modern names are noted by an Arab secretary, from the lips of the peasants and guides, and up to the beginning of this year 6,000 were collected and translated. In all, 150 identifications are proposed by Lieutenant Conder for Biblical sites not previously identified. The relics of Egyptian, Samaritan, early Christian, Talmudic, and Crusader's geographical names also are thought to have been, or have been, detected; for instance, *Kolonyeh* for Colonia, *Burjmus* for Pergamos, *Küstül* for Castellum, *Sinjil* for St. Gilles, *Bar-dâwil* for Baldwin, *Dastrey* for district. In Philistia there is found a *Hatteh*, and, in the centre of the country, also the Kefr *Hatteh*, which may have their names from the Hittites, whose dominion once stretched to the borders of Egypt. The *Avim*, who dwelt in walled towns, may have left their name to *Beit Aima*, on the borders of Philistia, where the ruins of great flint walls are still seen.

Colonel Macgregor and Captain Lockwood, in a journey across Khuzistan and Baluchistan to India, made the following interesting discoveries. They passed within 40 miles of an active, snow-capped volcano, lying south of Sistan. It is the Kuh Taftan, mentioned from hearsay by Major Lovett, which is situated in the unexplored Sarhad Mountains, north of Bampur and extending to the Afghan boundary. Their report confirms the existence of a great mountain range running westward of Lake Sistan, and observed three lesser ranges parallel with the southern bend of the Helmund. The strange fact was noticed that the three rivers, the Mashkid, Lura, and Budur, become lost in depressions in the desert, called *hamuns*, and do not unite with one another, nor have any connection with the great Sistan swamp.

The Russian Governor-General of Turkistan dispatched a military force, in the summer of 1876, into the mountains south of Khokand, for the purpose of bringing into subjection the troublesome Kara Kirghiz. This expedition was accompanied by a scientific corps, which had an opportunity of surveying and studying the plateau of the Alai, which extends along the course of the Kizyl-Su, affluent of the Amu-Daria, and which is the principal resort of the Kara Kirghiz. Colonel Kostenko collected the geographical notes, and Messrs. Bonsdorf and Oshonin were intrusted with the astronomical and barometrical labor and with the natural history department respectively. Their route was along the Gulsha River, on

high mountain ledges, then across the Kizyl-Kurt mountains, and through the Archat defile to the pass over the Archat mountains (10,800 feet), which leads to the Alai steppe. On the other side the road was crossed by the Kizyl-Su River (two-thirds of a mile in width). The plain was covered with feather-grass and a grass called *kipez*, which is excellent fodder. They crossed the trans-Alai range by the Kizyl-Yart pass (11,700 feet). They visited the Kara-Kul lake, 43 miles distant from the foot of the mountains; it consists of two bodies of water connected by a narrow channel, and has a length of 22 versts and a width transversely through the connecting strait of 17 versts; it contains many islands and promontories; the water is cool, with a bitter taste. There is no outlet; rain seldom falls, yet there is a singular rise in the water about once a week. Colonel Kostenko set out from this lake for the Riangu-Kul lake in the Sari-Kul district toward Kashgar, journeying by the Ala-Baital defile, and along the Uzbek-Su to the Uzbek pass (12,500 feet), from which, to the eastward, a range of towering mountains closes the view, whose summits appeared to be 25,000 or 26,000 feet high; this is, undoubtedly, the range seen by Hayward and mentioned by Yule. It lay about 53 miles beyond the Uzbek pass and 40 miles nearer than Kashgar. Humboldt also affirmed the existence of a meridional range, which he called the Bolor mountains, east of the Pamir, but later travelers have denied its existence. He was not able to reach the Sari-Kul on account of the failure of his provisions. The Pamir is limited on the north by the trans-Alai mountains, which have the appearance of a grand, white-crested wall. The land beyond, which is very elevated, rises toward a central point, and is crossed in all directions by mountain ranges, some snow-capped and some not, and none of them rising much above the adjacent plains and valleys, which are very narrow, and run in all directions. The whole region is barren, with only small patches of succulent grass along the edges of the mountain streams. The ground in the Pamir is covered in spots with a glistening coat of magnesium. Traces of many wild animals were observed, but the *arkhara* (*Ovis Poli*), which, a few years ago, was very plentiful, seems to have become extinct, though the ground was everywhere covered with the huge horns of these animals. The tracks observed were those of horses, goats, wolves, and deer. Eagles, kites, and red-beaked crows were among the birds met with. The Pamir is frequented by pastoral nomads. The climate is excessively severe and the atmosphere oppressively rare, even in summer; in this season the days are exceedingly hot, but the nights frosty. Exploring the Tuz-Altyn Daria, the curious phenomenon was observed that its head-stream splits and forms the source also of another river flowing in an opposite direction. This other stream is called the Tero-Agar, and flows into the Muk-Su, a con-

siderable river. The mountains by which this stream passes are covered with snow over two-thirds of their height. Whether the Kyzyl-Su or the Muk-Su is the more considerable of the two confluent which form the Surkhab, he was unable to determine.

Captain Kurapatkin left Osh (Ferghanah) on the last of July, 1876, intending to cross to Kashgar by the Terek-Davan (12,000 feet), but was attacked and wounded by the Kara Kirghiz near Gulcha, and was obliged to return to Osh. Starting again on the 19th of October, he passed the Terek-Davan, and, arriving in Kashgar, he was arrested, but was again set at liberty after three days. He followed the course of the Kashgar-Daria as far as Aksu. The country is cultivated within 70 kilometres of Kashgar. In the large villages of Faizabad, Hanarik, and Artush, an excellent cloth, called *matta*, is manufactured, which is exported to the amount of 1,000,000 rubles yearly. The Kashgar-Daria is bordered on both sides by forests of a kind of poplar (*Populus diversifolia*), 13 or 14 feet high, and growing thick together. Tamarisks are also plentiful. The soil is everywhere impregnated with salt. He passed through a rocky and sandy desert to arrive at Kurla, a town of considerable importance, which is not down on any of the maps, although Karashar, an insignificant village, is marked on all the maps. Kashgar was formerly called Altishar, or the land of six towns, and now, since the taking of Kurla, bears the name of Djitishar, or the land of seven towns, which are Kashgar, Yarkand, Khoten, Aksu, Utsh-Turfan, Kutsha, and Kurla. The country is fertile, but exhausted by the recent wars. The people are a mixed race of Utgurs, Turks, Arabs, and Chinese, grafted on an Eranian stock. The Eranian type is noticeable at Khoten, Yarkand, and Kashgar, but is completely lost in Aksu, Kutsha, and Kurla; in Sari-Kul are found, among the Galchas, many blondes with blue eyes.

Colonel Prjevalsky has visited Lob-Nor, passing through the valley of the Tekes, and crossing the Tian-Shan to Kurla, by a defile nearly opposite the town. He was kept under arrest here for 11 days. The country is full of the poplars seen by Kurapatkin, and mentioned above, on each side of the Tarim. He met with a village of ichthyophagists, of Kalmuk origin, who called themselves Lob-Nortsi, south of Lake Lob. The lake he describes as an immense marsh, covered and surrounded with reeds, with spots of open water here and there in the middle. The desert has the same character around the lake as along the valley. He killed a tiger near the lake, and hunted the wild camel. About 120 miles south of Lob-Nor was a range which is called the Altyn-Tag; it rises to a height of over 10,000 Russian feet, and seems to be formed by the outlying spurs of an important central chain which was not visible. The camels were killed in this region; they were of about the same height

as the tame ones, but their hair was shorter and thicker. Prjevalsky intended, after remaining a while on the Kunge, the right-hand affluent of the Ili, to strike out for Tibet from Kuldja, passing through Chinese territory.

Gregor N. Potanin, another Russian traveler, made a journey through the Altai mountains in the autumn of 1876. Starting from the Zaisan post, he reached Bulun-Tokhoi in 17 days; following the eastern shore of the Uluungur lake, and crossing the deep and rapid Black Irtysh at Durbeljin, he reached the Kran on the 29th of August, where the grain had already been harvested and hoar-frosts had set in. The valley of the Kran furnishes the Kirghiz with corn, and also produces opium. After some trouble with the Chinese authorities of the town of Tulta and with the priests of the neighboring monastery of Phara-Sume, the party proceeded through the valley of the Kandagatai, and crossed the Altai by the pass of Urmogaity (9,000 feet), which is south of the Jamaty pass. They came across a mountain lake, the Dann-Kul, which gives rise to the Kutan, an affluent of the river Kobdo. They met with Kise Kirghiz, who had first crossed the Altai seven years before, as far as the Tal Nor, which is within three or four days' march from the town of Kobdo. The country east of the Urmogaity is a hilly table-land, containing many lakes, which descends to the east in terraces separated by mountain ranges. The last of these, running north and south, divides the valley of the Dyalun river, which flows into the Buyantu, from the valley in which is situated the town of Kobdo. This range was passed by the Teretky-asu pass (10,000 feet). A route survey was made, with determinations of three latitudes and numerous altitudes. The party spent the winter in Kobdo. They set out again toward the end of March, 1877, the baggage being sent direct to Lan-chow. Messrs. Potanin and Rafailof took the road to Hami over the Ektag Altai range, by way of the Ulan Daban pass, and by Barkul. From Hami they passed northward, crossing the Tian-Shan by the pass over which Sosnovsky had previously gone, and then, turning to the east, they skirted the eastern prolongation of the Tian-Shan, which range is covered by perpetual snow; and then turning their course northward again, they traversed the Gobi desert, striking the Adjai-Vogdo, a spur of the Altai mountains, which they crossed by the Kernuru-Davan pass, between the valleys of the Saksa and Tsitsirigol; then crossing the Taimir-Ola chain, they reached Uliassutai on the 25th of July. A large collection of the flora of the Altai and Tian-Shan was made; the flora of the plains, however, was found to be excessively meagre. The next excursion was to be to the sources of the Yenisei, lakes Kossogol and Ubsa, and then, by way of the Chui river, to Biisk.

M. de Ujfalvy, of Hungarian birth, a professor in the Lyceum Henri IV. in Paris, a scholar profoundly versed in the ethnography and

linguistics of Asiatic races, is engaged in a prolonged study of the region which was the cradle of our race. He intends to visit Bokhara, Khokand, Kashgar, and the Pamir. During a sojourn in Russia he has studied some interesting peoples of the Magyar type, the largest of which tribes are the Bashkirs. He was greatly interested in the Galchas of the valley of Sarafshan, who differ materially from the Tadshiks. The Galchas, the inhabitants of Karategin, Darvas, Shinyan, and Badakshan, as well as the dwellers on the Sari-Kul, are all of Eranian origin; they are the descendants of the trans-Oxanian tribes, which, isolated in inaccessible mountain valleys, have preserved the pure Aryan type from the earliest times.

By the account of the abbé Desgodin, who, in the quality of a missionary, has had exceptional opportunities to study the geography of Tibet, the identity of the Yarkio-tsangpo with the Brahmaputra is confirmed. The head of the Irrawaddy cannot be above latitude 30° N. He thinks that the Himalayas cannot extend farther east than longitude 94° or 95° E., beyond which limit two chains, which run to the extremity of the Indo-Chinese peninsula, commence in latitude 34° or 35° N., between the Kinsha and Lan-tsang, and the latter and the Lu-tze rivers. Between 28° and 29° N. latitude, a tributary joins the Lu-tze, which is marked on no map except Delisle's; it is called the Oo-klo, and rises about 31° N. latitude. The Lan-tsang or Mekong rises in the Kuen-Lun range near Koko-Nor, latitude 33° or 34° N. The Thibetans are not allowed to transport their salt into Yunnan beyond a certain boundary, where they are met by Yunnanese merchants. The boundary between Yunnan and the dominion of Lhasa is at the water-parting between the Lan-tsang-kiang and the Kinsha-kiang. There are mines of silver, mercury, and iron along the Lan-tsang. Fine forests of cypress, of which there are two species, which covered the mountains, are being fast cut down since the Chinese conquest, as this wood is in great request in China. The fauna of these mountains is very rich. By the account of an old lama, the Tsangpo or Sanpu rises near the Tso-ma-pang lakes, in the west of the province of Ngari, by the frontiers of the tribe of savages called the Lhopa. A few days' marches east of Lhasa the river takes a long bend, turning its course to the southward, and traversing the district of Hia-Yul, in Tibet, a well-peopled and fertile region, governed by the Kalun Doring of Lhasa. Its course through this country is between steep rocks, which are passed only by rope-ladders. It then enters the Lhopa country, which lies to the southward of Hia-Yul, and after some distance it falls into a valley from an enormous height. The river here is as big as the Mekong by the salt mines or the Kinsha-kiang at Bathang. It does not enter the country of the Nahongs or Mishnis, but disappears farther west near the country of the Lhopa or Abords. A similar account

of the river had been previously given by a slave, and the abbé places full faith in it. Lieutenant-Colonel Godwin-Austen, who in the campaign against the Daffas, made some valuable geographical observations in the Eastern Himalayas, thought that he sighted the course of the Tsangpo or Brahmaputra. From mounts Tornputa (7,800 feet) and Shengarh (6,700 feet), in the farther Himalayan chain, he could follow with his eyes the main valley toward the north. The northwest branch of the valley of the Subansiri river (latitude 28° N., longitude 93° E. of Greenwich), rises among the group of snowy peaks (23,000 feet) which are seen from Tezpur, in Assam; while a second deep break in the mountains lies east of the 94^{th} meridian, which runs into the northwest valley in about $27^{\circ} 40'$ N. latitude. This northwest arm Colonel Godwin-Austen thinks is the fork which the Pandit Nain Singh crossed on his way from Lhasa to Tansang, and the other branch he holds for the Tsangpo. His grounds for considering the Subansiri as the upper course of the Brahmaputra, rather than the Lohit or the Dihong river, are summed up as follows: the temperature of the Subansiri at its junction with the Brahmaputra is lower than that of any other stream; Lieutenant Harman judged it to be the largest tributary, and found that the mountaineers considered it identical with the Tsangpo; the Tsangpo's course, as it was observed by Nain Singh, lay in the direction of the Subansiri.

Dr. Schweinfurth made a trip through the mountain region between the Nile and the Red Sea, which, partly owing to the jealous fears of the Egyptian Government, has never been explored to any purpose before. In a 56 days' journey, starting the 24th of March from Heluan below Cairo, he surveyed and mapped a considerable portion of this tract, with special reference to its geological character: his survey embraced that part of the Arabian desert which lies between Cairo and Keneh. Leaving Heluan he crossed an eocene limestone plateau and several wadis to the mouth of the southern wadi As-Khar, which leads up to the southern Hamāda (4,100 feet): this wadi As-Khar is distinguished among all the valleys of the Arabian desert by its rich vegetation, embracing many species of the flora of Palestine, which are found nowhere else in Egypt; it is bordered, like the northern wadi As-Khar, by picturesque cliffs of the nummulitic plateau. Mount Sinai, across the gulf of Suez, is the connecting link between this plateau and Palestine. He visited the monastery St. Antonius, and crossed the mountains to the monastery of St. Paul (1,290 feet), which lies at the foot of a precipice of 3,940 feet, to which the beautiful wadi Rigbe ("the path") leads down. This wadi shows the traces of glacial action in remarkable accumulations of *débris*, forming perpendicular walls along the bed of the torrent; the pistachio tree grows wild here. The water divide between the Nile and the Red Sea is an

important geological boundary, where the porphyry and hornblende rocks meet the sandstone formation which underlies the middle chalk and nummulitic limestone beds, which latter crop out at the base of the great plateau. In the chalk-beds of the wadi Mor he picked up new species of ammonites of unusual size. Across the line of contact between crystalline and sedimentary rocks, he crossed a barren plateau, south of wadi Hauashieh, and passed Gebel Gharib or Rāghib ("the isolated")—which is the highest point undoubtedly of the porphyry chain, and probably of all Egypt, and whose solitary mass culminates in a dozen conical peaks—to Gebel Mangul, and along the eastern slope of the central range, where he passed a large number of peaks of over 5,000 feet altitude, to wadi Abu Sidr, which extends from Gebel-el-Dukhan (the ancient *Porphyrites Mons*) to the sea. The Sidr trees (*Zizyphus Spina Christi*), which give the name to the valley, grow wild near a Roman cistern, but are not met with elsewhere in Egypt; above the trees, on the northwestern slope of the mountain, are the famous porphyry quarries; on the western side of the valley are the ruins of a Roman town and a temple. The Roman road from the quarries to the seaside is still practicable for carriages. East of Gebel Gattar is a remarkable serrated group of mountains, whose conical summits succeed each other like the ribs in a fish-bone. Along the old porphyry roads are the ruins of three other Roman settlements, which contain enormous cisterns of massive masonry. As rain had not fallen in this region for five or six years it was devoid of all vegetation except acacias. Schweinfurth, in his journey, found that the western boundary of the nummulitic plateau was a line drawn from Keneh to Suez. The eocene limestone hills do not extend far to the south of Keneh, nor far to the east. To the north of the town the plateau is intersected by the wadi Keneh, which is the largest in Egypt, and is separated by a low ridge from wadi Hauashieh. Several wadis descend to wadi Keneh from the eastern border of the plateau. Wadi Tarfeh is the only other wadi which crosses the plain from west to east, and this is formed from the union of five small valleys.

Captain Roudaire in his laborious and hazardous survey of the great depression in Tunisia and Algeria, in 1875 and 1876, ascertained that the region lying below the low-tide mark of the Mediterranean, and capable of inundation, has a length of about 400 kilometres. The Algerian depression of Mel'rir occupies a surface of about 6,700 square kilometres; and the Tunisian depression, occupied by the *chotts* El Fejej, Djerid, and Rharsa, covers about 10,000 square kilometres. These *chotts*, called by that name in Arabic, but named *sebkahs* by the Tunisians, are level and utterly devoid of vegetation. The bed of the Djerid *chott* is occupied by a strange body of water of unknown depth, covered by a salt crust, whose thickness is only

a couple of feet. Every year numbers of men and animals, who venture on this treacherous shell, find their grave in the waters below; the crack through which they fall closes over again instantly, so that the most experienced eye cannot detect the spot of their tomb. The water of this remarkable hidden sea is bitter and viscous, and so salt that the hand, when dipped into it, comes out encrusted with white crystalline particles. These *chotts* occupy, without doubt, the bed of the ancient lake of *Triton*, and indicate a gulf of the primeval ocean of Sahara. Captain Roudaire, for this survey, was awarded a gold medal by the Paris Geographical Society, the grand medal being given to Commander Cameron for this trans-continental expedition through Africa.

Captain Roudaire, in this careful final survey of the depression of Mel'rir, has ascertained the extent of the surface lying below the low-tide mark of the Mediterranean and its boundaries. The surface which can be inundated contains about 16,700 square kilometres. Narrow bars separate the depressions of Djerid from Rharsa, and the latter from Mel'rir. The *chott* Djerid, which is full of water, covered with the solid saline cake of varying thickness, whose surface is actually above low-water mark, would empty its aqueous contents into the Rharsa and Mel'rir basins—which are 24 and 27 metres below low tide—if a cutting were made through the isthmus of Djerid, whose highest point has an absolute elevation of 45 metres. Then a channel cut through from the *chott* of Fejej to the Gulf of Cabes, 20 kilometres long—the highest point in the intervening isthmus being 47 metres—would inundate the entire region from Cabes to Chegga.

Commander Cameron proposed, before the British Association, a plan for the exploration of Central Africa, through the means of trading societies similar to the Hudson's Bay and East India Companies. A system of central stations should be established 200 or 250 miles apart. The stations would be useful in map-making; in obtaining meteorological, botanical, and zoölogical information, and knowledge of the commercial resources of the surrounding districts; accustoming the neighboring peoples to civilized social order; suppressing the slave-trade, and diverting the resources employed in this traffic to the development of the legitimate wealth of the continent. The Seyyid of Zanzibar might protect such societies, since European opinion opposed granting and supporting special commercial privileges. He called attention to the great productivity of the regions of Central and Eastern Africa, which could supply the starving millions of India with corn. Belgium has, at the call of King Leopold, contributed £12,000, and Portugal £20,000, for the exploration of Africa; and the British public should do its part toward civilizing that continent. The more rapidly the light of civilization is introduced the more speedily will the slave-trade and domestic slavery become ex-

tingent. In a public meeting called to consider steps for the civilization of Africa, Commander Cameron declared that Africa was one of the most fertile countries in the world; coffee grows wild; India-rubber is produced in large quantities, notwithstanding the Seyyid of Zanzibar has diverted some of the capital of his subjects to the slave-trade. He had seen five and six villages depopulated to furnish a miserable string of 50 slaves, the rest of the inhabitants being killed, or driven into the jungles to starve. Domestic slavery would be more difficult to repress than the slave-trade, since slavery was an ancient custom of the people. The Archbishop of York stated that 20,000 slaves are annually exported from the single port of Quiloa, being brought principally from the west of Lake Nyassa; while for every 1,000 slaves secured for labor, 1,450 perished, or were sacrificed in their capture. He denounced the treaty with the Seyyid, which allowed slaves to be imported for domestic purposes, and stated that 20,000 are imported yearly, when the domestic demand cannot exceed 4,000.

The Livingstonia Mission of the Scottish Free Church is established on the third plateau of the Shire hill, at the elevation of about 3,000 feet, a site free from malaria, and where the thermometer ranges from 70° to 80° in the shade. Water-courses are numerous in the surrounding country, and fine trees and a rich vegetation distinguish that district from the rest of the region, which produces only stunted trees, mostly acacias. The mountains are steep and covered with trees. The natives are intelligent and peaceful. Their average height is 5 feet 6 or 8 inches; their proportions, head 21½ inches in circumference, chest 34½ inches. They are well built, active, and supple. They use the bow and arrow, cultivate corn and pumpkins, and are fond of the malt liquor made from millet, called *pombe*. They work iron, and are very skillful in basket-making, and in weaving bark and cotton cloth. The elder women are disfigured by tattoo marks, and wear lip-rings. Smoking is universal; the pernicious Indian hemp is smoked as well as tobacco.

The exploration of the interior of Africa was energetically commenced this past year; but delay and disaster have attended many of the expeditions, and death has made sad havoc among the ranks of the explorers. The one great achievement of the year—the following by Stanley of the Congo's course, from the point where Cameron abandoned it last year, down to the sea—was accomplished, amid incessant perils, with an amount of quickness of resource, energy, and endurance, possessed by few travelers. Dr. E. von Bary proceeded to Jebel Hogar in the Tualeg country; but in the midst of his labors this accomplished explorer died, from the effects of the deadly climate. M. V. Largeau visited the same place, on his way across the desert to Timbuctoo; after long

delays he could not gain permission to pass through Insalah territory, and had to choose some other route to the Niger. Hildebrandt visited the Kenia, but was obliged to return to Europe; Dr. Lenz was unable to remain longer in the climate of the west coast, and Baron Barth, who was examining the geology of the Portuguese possessions, fell a victim to the fever; E. Mohr was another much regretted martyr to science. The Marquis of Antinori, after many delays and mishaps, owing to the coldness and hostility of the Egyptian governor of Zeyla, reached Shoa in the latter part of 1876, but without his stores and instruments, which had been plundered and lost on the route, so that Captain Martini was obliged to return to Italy, to procure a new outfit. He was subjected to further delays and complications on his return, and at last accounts was unable to rejoin his chief. Dr. Schnitzler has discovered a colony of Wahabites in Mtesa's country. Dr. Junker has explored the lower Sobat and the Makaraka country. Dr. G. A. Fischer and A. Denhardt made an excursion along the Dana river, and through the country lying between the coast and the Ukerewe Nyassa. Dr. Crevaux, in Guiana, was kept a sort of prisoner by the Buis, who would hardly allow him food; he also suffered from fever, yet he was able to examine the mineral resources of the country, and expected to be able to cross the Tumachumac mountains. The members of the King of Belgium's International African Expedition are Captain Crespel, leader, and Cambier, geographer, Dr. Maes, naturalist, and the experienced Austrian traveler E. Marno. Keith Johnson, the geographer, is spoken of as the first explorer to be sent out from the English African Exploration Fund.

Colonel Gordon, in his steamboat excursions up the Nile, noticed that the river began to widen 20 miles south of Duffi, and the current to slacken, and describes it from that point on as nothing more than a continuation of the Albert Lake, having a width sometimes of 2 and 3 marine miles; it is filled with islands of papyrus; the natives here wear a skin garment; further up they clothe themselves with bark. It was the most thickly populated portion of Africa that he had seen. He was unable to see the fork of the river described by Gessi. The Mwutan Nzige or Albert Nyanza is dismal, and the surrounding scenery dull. The mouth of the Victoria Nile is difficult to find, in a labyrinth formed by the papyrus islands. The left bank of this river is thickly speckled with villages. Up to the Murchison falls the current is slow, but above these are many rapids. The country here is an uninhabited forest. In a distance of 10 to 15 miles there is a fall of 700 feet. Carlo Piaggia, who was a member of Gessi's expedition of 1876, ascended the Somerset Nile to Mruli, and made a long examination of Lake Ibrahim. The lake is 32 to 85 miles long, running north-northwest, and is 12 to 15 miles in width. Its southwestern half is

full of islands. The Somerset Nile issues from its northern extremity. He discovered what he thought to be a second outlet connecting it with the Sobat or with the White Nile. He followed this stream, to which he gives the name of Massanga, until it lost itself in a network of swamps, after a course of short length.

Stanley visited Karagwe, Rumanika's country, in March, 1876. He gives the name of Kagera to the river called Kitangulé in Speke's account, and says that Speke's Ingezi River is a series of lagoons. He passed within sight of the Lake Akanyara of Speke, otherwise called Nyanza Cha Ngama, to which he gave the new name of Alexandra Nyanza. A river is reported to flow into it from the west. He calls the entire river the Alexandra Nile, including the western affluent of the lake and the outlet into the Victoria Lake through the Ingezi, with its continuation, the Kagera or Kitangulé. Captain Speke's account of this river system was materially the same as that sent by Mr. Stanley. The natives spoke of a lake or marsh, called the Kiou, to the southward, which receives part of the waters of the Akanyara Lake; this lake gives rise to a river, the Rusizi, which is an affluent of the Tanganyika: Stanley did not see this lake and river, and therefore cannot confirm this strange report of a double outlet to the Akanyara.

Stanley left Karagwe for Lake Tanganyika on March 25, 1876, and arrived at Ujiji after a two months' march. He sailed around the lake in 52 days, and explored the Lukuga outlet, discovered by Cameron. It appears that this is not properly an outlet, but a channel connecting the lake with an extensive marshy bottomland, into which the water is drifted by the heavy southeasterly winds, which blow almost daily, the current, setting back however, into the lake when the wind subsides. He sailed up the stream, which is 90 to 450 yards wide, for about three miles, where a dense thicket of papyrus checked his progress. Here he could not detect any current with a level. Exploring this swampy bottom he found nothing but marsh beyond the point where his boat was stopped, with here and there a pool of standing water, while the brooks which flowed into the marsh all trended southeastward; until, over six miles out, beyond where the Kibamiba joins the swampy bed, which also flows southeastward, he came to a stream whose current was westward, with a temperature 7° cooler than the Lukuga. This creek bears the name Lukuga, until it passes through the Kiyanja ridge of hills, a mile or two farther on; then it is called the Luindi or Luinbi. The Luindi flows into the Kamalondo, a tributary of the Lualaba. Natives report that the intermediate space between the westerly and southeasterly water-courses was once comparatively dry land, where tamarinds grew. Stanley has a theory that the lake is rising, that it formerly had no outlet, and that in the marshy tract, which receives the overflow of the lake, a river-bed is

forming. Stanley reports that Ubwari, in the northern part of Tanganyika Lake, is not an island but a peninsula, inclosing a deep bay, which he has named after Captain Burton. From the facts that this bed, called also the Mitwansi, is filled with alluvial deposit, and that the Kibamiba and other creeks which enter the old river-bed have a southeasterly course, he makes the deduction that the Lukuga was at one time an affluent of the lake, and that the same bed is now being transformed into an outlet by the rising of the lake, and he conjectures that before many years there will be a continuous flow by this channel from the lake down to the Lualaba.

When Stanley returned to Ujiji, August 1, 1876, he found the smallpox broken out in the town, and committing fearful ravages. He determined to depart as soon as possible, although nearly prostrated with fatigue, in order to preserve his followers from infection, the provision of lymph which he had brought being spoiled. From August 24, 1876, the day of his departure, nothing more was heard of the expedition for a twelvemonth. His next letter was dispatched from Kabinda, near the mouth of the Congo river on the west coast of Africa. The journey from Ujiji to Nyangwe, in the country of the cannibal Manyemas, took 40 days; the distance is about 350 miles. This town, known already from the descriptions of Livingstone and Cameron, is situated on the north bank of the Lualaba, in the centre of Africa, and is inhabited by Mussulmans from Zanzibar—whites, Arabs, and mulattoes—who make it the base of their slaving expeditions. The field of operations of the Mohammedan slavers embraces the region surrounding Tanganyika, the empire of Uganda, the country north of Lake Nyanza, the country of the Manyemas on the Lualaba, and other lands more to the southward. Of all these lands, that of Marungu, southwest of Nyangwe, and northwest of Lake Mweru, extending to the very banks of Tanganyika, is the most prolific field for the slaving bandits, who are recruited from the Unyamweze, and armed and sustained by the Arab slave-merchants of Zanzibar. It is the practice of these monstrous people to destroy whole villages, firing the cabins, killing the adults, and exposing their mutilated remains on trees to terrify the neighboring towns; the youths and women are saved to be sold to the Arabs. Stanley accuses the Seyyid Burghash, Sultan of Zanzibar, of countenancing the traffic, and denounces Seyyid bin Salim, the governor of Unyamweze, as one of the principal slave-traders in Africa. Sometimes six to ten slaving expeditions go out in a month from Nyangwe; one, which was carried out while Stanley was there, resulted, after six days' slaughter, in the capture of 300 slaves and 1,500 goats. According to the story of his attendants, the country lying between Mana Mamba and Nyangwe, now almost a desert, was, eight years before, full of villages, gardens, and herds of goats and hogs; it had been devas-

tated by the slavers, and the process of depopulation is spreading on all sides. The slaves are employed by the Arabs to bring down ivory from the interior.

At Nyangwe, Stanley found out that Cameron had abandoned the Lualaba. This decided him to complete the task which Cameron had been obliged to leave unaccomplished, and follow the course of the Lualaba down to the sea. Attended by an Arab escort, which he had engaged to accompany them for 60 day's marches, they plunged into a thick forest; and after journeying three weeks on foot, at every step treating with the inhospitable natives for the right of advancing, they struck across for the river, which they reached in latitude $3^{\circ} 35' 17''$ S., 41 geographical miles north by Nyangwe. Here he put together his boat, the *Lady Alice*, and, eliciting a promise from his Zanzibese followers not to turn back until they had followed the course of the river down to the sea, he divided his band, mustering about 500 fighting men, into a land-party, which descended on the left bank of the river, and a water-party. The course of the Lualaba is northerly, in some places even trending to the eastward, as far as the equator, being skirted on the right by the Ullegga mountains, which divide the Nile and Congo basins. The first natives met with were the timid and crafty tribe of fishermen called Wagenya. From the point where they launched the boats, they were obliged to battle with the natives for every step of their way, and repulsed them in 32 separate conflicts. The first day the land division lost their way in the woods, and the encampment of the boats' crew at the mouth of the Riuki river was assaulted. Two days' march from there brought them to the falls of Ukassa, which were passed by letting the boat and canoes shoot the cataract, and picking them up and righting them below. On December 6th, they entered the Usongora Meno country, peopled by a large and warlike tribe, who set upon them in 14 large canoes, responding to their friendly overtures with flights of poisoned arrows. The land-party encountered the fierce Bakusus the same day. Smallpox was spreading among the Arab escort, 18 dying in two or three days, while dysentery and ulcers had prostrated many of the others, when they came to Vinya Njara, whose inhabitants attacked them, and which they took possession of and fortified, defending themselves for two days and nights against a horde gathered from all the neighboring tribes, until the land-party arrived to reinforce them. At Vinya Njara, 125 geographical miles north of Nyangwe, the Arab escort left them. The band, now numbering 146 souls, men and women, proceeded in the boat and 6 canoes. On January 4th they came to a series of cataracts, below the mouth of the Lumami, latitude $0^{\circ} 32' 36''$ S., which are called the Baswa falls. To pass these falls they had to cut a road in the bush, and drag their boats around each cataract, and to build a barricade about

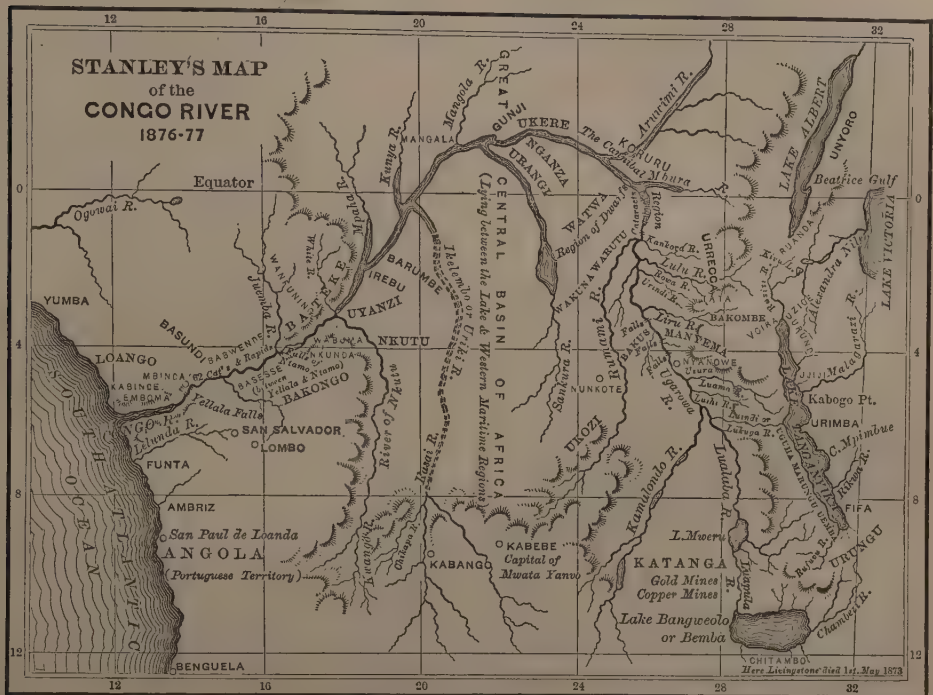

their camp every night, as the savages of the falls islands and the Mwana Ntaba cannibals hovered constantly about them, launching their poisoned shafts incessantly. They passed 6 falls in this way, dragging their boats over 13 miles of tracks which they hewed for them with prodigious labor. From the beginning to the last of these falls the distance is 42 geographical miles. The last one is in latitude $0^{\circ} 14' 52''$ N. Above, the breadth of the river was 1,500 to 2,000 yards; below, large feeders began to pour into it, and islands covered its face, so that it soon had a breadth of 2 to 3 miles, and widened farther on to from 4 to 10 miles. They had reached the "great basin lying between the maritime and lake regions." In this part of the voyage they ran the gantlet through incessant attacking bands of cannibals. North of the equator they came to the second largest of the Congo's affluents, a magnificent river, 2,000 yards broad at the mouth, called the Aruwini, which, Stanley conjectures, may be the Welle of Schweinfurth. At the confluence, in mid-stream, they withstood a most formidable attack, made by about 2,000 savages in 54 huge canoes. One of the canoes, driven by over 80 paddles and steered by 8 10-foot paddles, had through its centre a platform, upon which the chiefs executed a war-dance, and another platform at the bow for 10 of the best warriors. In half an hour this fierce assault was successfully repulsed. They passed down the river for five days without molestation, being hidden from the sight of the savages by the islands which studded the bosom of the river. Hunger then drove them to land at a village, latitude $1^{\circ} 40' N.$, longitude $23^{\circ} E.$, whose inhabitants were well-disposed; here they first heard the river called Congo. On February 14th, they were attacked by the fierce Mangalas, who were armed with muskets; they fought from noon till sundown. They then regained the current between the islands, which they had lost, and floated down four more days unobserved, the river being five to ten miles broad; they then encountered a friendly people, at a place called Ikengo, near where a great river, called Sankura, enters the Congo; this is doubtless identical with the lake noticed, under a similar name, by Cameron and Livingstone. Below, the Kassai empties into the Congo. This stream at its mouth seems nearly as great as the main river. Their waters do not mingle for 180 miles, below which the clear water of the Congo is turned light-brown by the muddy flood of its affluent. The next feeder is the Kwango, a deep stream, 500 yards wide, which enters through a ridge of hills. Six miles below here they were attacked for the last time. Below this point commenced the lower series of falls and rapids, extending 180 miles, and embracing 62 cataracts, with a total fall which Stanley estimates at 585 feet.

In the passage of these cataracts, owing to the inaccuracies of the chart with which he was provided, the party passed through a series

of mishaps, in which 16 lives were lost, including that of the gallant English companion of Stanley, Francis Pocock, who was drowned in one of the 80 cataracts and rapids which were marked as a single one in the map. They were five months in working their way through this region for a distance of 180 miles; and at last, hearing that there were still five more falls below, they drew up the boats above Isangila cataract. Their trade-goods and ivory were expended, and they were living on short rations; but two merchants of Bomba, or Emboma, as it is also called, responded to Stanley's request sent by messengers, with full supplies of food. The 8th of August they marched into Bomba, and on the 13th they arrived at Kabinda, at the mouth of the Congo. It was 34 months since Stanley had left Bagamoyo with 300 Zanzibar negroes. Of these, 186, and his single European attendant, had died or been killed. At Kabinda he fell in with the Portuguese exploring expedition, Major Serpa Pinto and Captain Brito Capello. Stanley's voyage on the Congo, which occupied nine months, was the most difficult enterprise accomplished by him, and can be compared with any recent exploration in the difficulties overcome, and the dangers passed, and in the importance of the results as well. The whole length of the river, from the point where it issues out of Lake Bangweolo as the Luapala, is about 2,400 miles. The length before unexplored, from Nyangwe, the last point reached by Livingstone and Cameron, to Yellala falls, 100 miles from the mouth, the easternmost point attained by Captain Tuckey, in 1816, is 1,700 miles. This journey first settles the identity of the Lualaba with the Zaire or Congo. Its course is nearly northward as far as the equator, and then northwest until it mounts to latitude $1^{\circ} 45' N.$, a parallel which strikes near the centre of Lake Albert; the second half of its course is in the main southwestward down to the sea. The highest rise of the river was from 20 to 50 feet in the narrows, and 12 feet in the broad parts; it took place from the 8th to the 22d of May. Ivory was found in great abundance, and oil-palms were seen in extensive groves. Copper and gold fields were heard of. The tribes through whose country he passed were for the most part cannibals, and wily and skillful warriors. The travelers were attacked with spears, assegays, poisoned arrows, muskets; at one time they were surrounded the camp with hidden nets, at others they drove pointed sticks, dipped in poison, into the ground, that the defenders of the camp might wound themselves while repelling attacks. In some cases, however, he succeeded in establishing friendly relations with the natives, and found them intelligent, trustful, kind-hearted, and eager for trade. Stanley believes that the trader can do more to civilize the negroes of Western Africa, who are divided up into little tribes and clans; while the missionary's field is in the large despotic kingdoms on

the eastern side, such as Uganda with its 5 million inhabitants, Ruanda with 5 millions, Urindi with 3 millions, Usagara, both Usuis, Unyoro, Karagwe, Usongora, Ukerewe. The

tract traversed by Stanley, which promises to become a rich commercial field, contains some 600,000 square miles, and 2,000 miles of unbroken water communication.

Dr. Emil Holub, an intrepid Bohemian traveler, made a third journey into the heart of Africa from the southeast, which lasted from March, 1875, till November, 1876. His course was from the salt basin of Moffato, by way of the town of Molema (Molapo), to the town of Moila (Linokana); from Linokana by the Dwar mountains, along the Limpopo, and by the Sirorumé, to Shoshong; from Shoshong to the small river of Panda ma Tenka, passing along the vast group of saline basins in the middle of East Africa; from the Panda ma Tenka, by the confluence of the Chobé and the Zambesi, to Shesheke; from the Panda ma Tenka to the Victoria cataract; from Shesheke to the country south of Barotse; from the Panda ma Tenka across the Nata river, and along the Maitangwe, to the Makalaka country, and, by way of Tati, back to Shoshong. Dr. Holub mastered the most widely spoken languages, and gathered information from the natives concerning the whole region between the Zambesi and lakes Bangweolo and Nyassa. He reports that the Maitangwe river, which is the "soul" of Makalaka land, loses itself in a marshy plain, that is entirely dry in winter. He says that there exist seven different varieties of rhinoceros in Africa, and asserts that he has found four distinct varieties of the lion and three of

the elephant. He made careful ethnographical studies, and brought away many objects illustrating the customs of the people. The enthusiastic explorer has defrayed his expenses with the earnings of his profession, that of a physician, which he practised in the intervals of his expeditions in the diamond placers of South Africa.

The French in an expedition up the Ogowe, under Count Savorgnan di Brazza, who was accompanied by Dr. Ballay and M. Marche, were impeded in their journey up the river at first through the hostility of the natives, the failure of supplies, and the sickness of the members. They succeeded in establishing amicable relations with most of the tribes, and thus unwillingly brought upon themselves the enmity of those hostile to their friends. The natives zealously aided them in transporting their baggage, except when retarded by the menaces of their enemies or their own cupidity. They established their first base of operations at Lope, the quartermaster Hamon remaining to watch over the stores. M. di Brazza set out alone at the end of April, 1876, with his two Senegalese attendants and a Pahuin interpreter. Ascending through the country of the warlike Ossyebas, who attacked the expedition of Compiegne and Marche, to the mouth of the Ivindo, he entered,

on the 2d of June, the unexplored region. He established friendly relations with the inhabitants—the Ossyebas and Adumas—although he was impelled to kill the chief of one of the Ossyeba villages, who behaved in a surly and threatening manner, and to have an Aduma chief beaten by his attendants. When he was taken with vomiting, after having had the chief Dyamba bound, the natives attributed his sickness to the *etish*, or enchantment of Dyamba; it was this same negro whom he afterward killed in the act of overturning his boat. Leaving this village, he commenced to descend the river with only his two attendants, but the same day met Dr. Ballay with twenty-three laden canoes. Brazza was very ill at this time, yet they proceeded upward as far as the village Ngeme in the Aduma country. M. Marche explored the river above that point, beyond the entrance of the Sibe and the cataract of Dume, as far as the point where a river called the Kilei flows in, the eastern boundary of the country of the Alzanas, lat. $1^{\circ} 16' \text{ S.}$, $1^{\circ} 48' \text{ E.}$ of Lope. He went a short distance above the confluence, and reached his farthest point the 26th of September. Beyond the Ivindo the direction of the river's course changes from east and west to northwest, ascending in the direction of the river Congo. Above the fall of Buwe they had encountered many strong rapids, extending for a long distance; again beyond the Dume cataract, which has a considerable fall, there were many more rapids. The necessity of carrying a large amount of merchandise, beside their accoutrements, made their progress slow and difficult. Dr. Ballay had long to wait for the departure of Okandas, a tricky and avaricious race, who trade with the interior. They conveyed the stores as far as Ngeme. The intrigues of these people prevented the other tribes from assisting as much as they would have done. M. di Brazza must descend to Lope again with the Okanda boatmen, in order to protect them from the Ossyebas, and there had to wait three or four months for the floods to cease on the river. He acquired considerable authority among the negro tribes, and intermediated in their quarrels. His person was always respected, and he assumed, like the native chiefs, a staff for his messengers, which was always held inviolate. He made friends with the Ossyebas, who had shown themselves hostile in the beginning. This tribe he identifies with the Fans of the Mundah river, and with the Pahuins, and conjectures that they may belong to the same race with the Niam-niams encountered by Schweinfurth on the Welle. He describes them as exceedingly bellicose and courageous. The Ossyeba chiefs told him that they were his friends, but would not be friends with the Okandas, who before they, the Ossyebas, had guns (about 1860), robbed them of their wives and children, and massacred their men. He purchased several slaves from the interior, who would have an interest in ascending the river, not being able

to depend further on the Okandas; to these slaves he offered their liberty, but they staid by him. Dr. Ballay removed the effects from Ngeme as far as the Dume cataract. They expected to depart for the interior by the opening of the dry season, about the middle of May. They had explored the Ogowe so far about 500 miles. M. Marche returned to Europe in October. He expressed the opinion that the Ogowe would be found to be a mouth of the Congo, branching off further to the north, but did not think it probable that the expedition would be able to penetrate much farther into the interior. Dr. Lenz divides the multitude of small *peuplades* who inhabit the basin of the Ogowe into three classes: 1. The aboriginal inhabitants, who have been dispersed and displaced in the successive immigrations, to which class belong the scattered Abongo (Akkoa) people, the so-called dwarf races. 2. The people whose occupation dates back hundreds of years, which class includes (a) all the Mpongwe or Gaboon tribes, such as the Mpongwes, Orungus, Inin-gas, Ncomis, Ajumbas, and (b) all the Okanda tribes, as the Okotas, Yalimbongos, Apinshis, Okandas, Asimbas, etc. 3. Those who have intruded within the last 20 or 30 years; such are the Akelle tribes, among which are the Mbangwes, which tribe came probably from the south, and such also the Fans, who are also called the Ossyebas and Mpangwes. The southern limits of the Fan nations may be set at the right bank of the Ogowe river, whose course ranges between the equator and lat. 1° S. ; they extend northward up to lat. 4° or 5° N. They have a few settlements on the coast. They extend eastward far back into the unexplored country, and are undoubtedly nearly related to the Niam-niams and the Monbutts of Schweinfurth. They seem to belong to a great family of tribes, which occupy a broad belt stretching entirely across equatorial Africa; as tribes have been found in widely separated regions showing strong analogies in their form and characteristics, all of them cannibals, and possessing the same arts, particularly great skill in working iron, giving the same forms to their weapons, and showing other resemblances.

In a hypsometric map of equatorial Africa, from 15° N. latitude to 15° S. latitude, which has been prepared by Guido Cora, the following elevations are distinguished: (a) depressions below the level of the sea, to wit, the salty flats around Lakes Alebad and Assal near the coast of Abyssinia; (b) from the level of the sea to 500 metres, embracing the great depressions of lake Tsad and that of the White Nile as far as Gondokoro, the eastern littoral of the continent, and the basin through which run the Ogowe, the Congo, and the Lualaba; (c) from 500 to 1,000 metres above the level of the sea, which includes the whole interior from the lake-region to the Atlantic coast lands, from the basin of the Congo on the south, whose northern limit nearly coincides with the equator, up to about latitude 8° N. , with a

tract running up to Egyptian Soudan between the White Nile and Tsad basins, taking in a good part of Darfur and Wadai, also strips lying back of the eastern coast, and below the Congo basin, and one dividing the interior basin from the Loango coast; (*d*) above 1,000 metres above the ocean-level, including the great lake region, with a tract extending northward up to and around the higher parts of Abyssinia and Shoa, and another running across the continent below latitude 10° S. This latter is a great, curved, irregular belt running from the Red Sea to the Benguela coast, incasing the highlands of Nubia and Abyssinia, which include the greater part of the lands of Davro, Waratta, Shoa, and the central part of Abyssinia, and the mountain systems among the lakes; these regions range from 2,000 to 3,000 metres altitude. In the Abyssinian region are several mountainous groups which surpass 3,000 metres in altitude, also the single peaks Gambaragare by Lake Victoria Nyanza (4,000 to 4,500 metres) and Livingstone by Lake Tanganyika (3,600 to 3,800 metres), and in the Kenia system, Mounts Kenia (5,500 metres) and Kilima Njaro (about 5,500 metres), which two, with Mount Wosho in Abyssinia (5,060 metres), are the only elevations which rise above 5,000 metres that are known. The expanse of territory, between the 15th parallels above and below the equator, which rises above 1,000 metres is less than the area of from 500 to 1,000 metres elevation, and greater than that below the plane of 500 metres above the sea.

Rev. S. Macfarlane, in a voyage along the southern coast of New Guinea, in the steamer *Ellangowan*, found, at the eastern side of Hood Bay, a lagoon, 15 miles in circumference, into which a river flows, which rises behind the Astrolabe range, and is 80 yards wide and 8 yards deep at its mouth. Farther eastward, near Dufaure Island, he discovered a fine harbor, 8 miles by 4, and 8 to 10 fathoms in depth. Along the coast from Amazon Bay to China Straits, the natives are more numerous and more intelligent and healthy. They had a very fine quality of flax. Baron Schleichnitz, who was a member of the Gazelle expedition, found the natives of McCluer Gulf and Melan-*asia* very different from the true Papuans of the interior of New Guinea. The complexion of the inhabitants of New Hanover and New Ireland was a rusty brown, and sometimes hardly darker than that of the people of Southern Europe. They were a remarkably well-built race. Only those in the south of New Ireland and New Britannia resembled the Papuans of northwestern New Guinea. They are divided into numberless tribes, and each one speaks a different language. Their boats are too light for the open sea. The men go naked. The women have strings about the waist, or aprons of bass, cut their hair short, and wear ponderous leaves as sun-shades. Their ornaments are pearls, shells, teeth, and tortoise-

shell. The chiefs wear feather plumes, and sometimes collars ornamented with rows of teeth. They pay much attention to their head-gear, sometimes dyeing one side of the head white, the other red, and the top yellow; great wigs are also worn, particularly in New Britannia. Teeth, thorns, etc., are stuck through the nostrils. The natives of McCluer Gulf are, in part, mixed with Malays. They are dolichocephalous, and 1,595 metre tall on the average. Dr. Miklucho Maklay describes some additional customs of the Papuans. They do not celebrate a birth or a death with any ceremony, but have a rite for circumcision. They prepare a beverage by masticating leaves and young shoots of the cocoa-palm. He thinks the Papuan language does not contain over 1,000 roots. The island of Yap in the Caroline group, it appears, is inhabited by Papuans, who, though less civilized, seem to dominate the neighboring islanders. After an extended tour through the Malay peninsula, this courageous Russian traveler returned to his old quarters on the coast of New Guinea, where he was warmly welcomed back by the natives. The maize introduced by him in 1872 is thriving finely. An earthquake has destroyed a number of villages on the hills.

Don F. P. Moreno, the Argentine explorer, visited, in the beginning of the year, the partly unexplored lakes which form the sources of the Santa Cruz, in Patagonia. He ascended the Rio Santa Cruz in a boat, with one companion, three boatmen, and two servants with the horses. The head of the river was reached with difficulty on account of the rapid current. The lake from which the river emerges lies in latitude $50^{\circ} 14' 20''$ S., longitude $71^{\circ} 59'$ W. from Greenwich. He then crossed a tableland of 2,500 to 3,000 feet elevation in a northerly course. It belongs to the tertiary period. Crossing the Chalia—a river described by Viedma in the last century, whose existence was questioned by Captain Muster, and which Moreno had explored from its junction with the Chico, for 90 miles, a few weeks before—he then came to a series of lagoons, surrounded by pasture-land, and to the west of these to a hitherto undiscovered lake surrounded by snow-capped mountains, 3,000 to 5,000 feet high, which he supposes to be an arm of a still larger lake. The latitude was $49^{\circ} 12'$ S. He named it the Lago San Martin. Returning southward through a fertile valley, and crossing a mountain plain of basaltic character, he came to Viedma's Lake, discovered by that traveler in 1782, which is falsely called Opar Lake on the maps. It was the largest lake he had seen. It extends to the foot of the cordillera, the active volcano Chalten rising from its upper end. From the southern end, a river 200 yards in width issues, latitude $49^{\circ} 48'$ S., connecting it with the lake out of which the Santa Cruz flows; it enters the latter lake in latitude $50^{\circ} 11'$. As this lake, which, being distinct from Viedma's, wanted a name, he gave that of the

Argentine Lake. Huge masses of ice were observed floating in the lake. The Santa Cruz was much flooded on the return voyage, showing a depth of 70 to 84 feet, and the boat drifted down with terrific rapidity, making the distance in 24 hours which had taken them a month to ascend.

J. B. Minchin, an English engineer, has corrected some of the altitudes in the Andes as follows: Lake Titicaca, 12,545 feet; Alto de la Paz, 13,389 feet; Plaza Mayor, La Paz, 11,946 feet; Peak of Illimani, 21,224 feet. Aconcagua, in Chili, appears then to be the highest summit of the Andes (by Fitz Roy, 23,910 feet); Humboldt's height of Chimborazo is 21,422 feet. Mr. Minchin ascertained the elevations above the sea-level by Casella's boiling-point thermometer. Assisted by Commander Musters, he has made a new map of Bolivia, after a thorough survey based upon astronomical observations.

The late Prof. Orton, of Vassar College, had started on an expedition to examine the important tributaries of the Beni, especially the Madre de Dios and the Ynambari, when he was seized with the malady which carried him off at the very threshold of his discoveries, while crossing Lake Titicaca. This is the most important region in South America yet unexplored. He started for the mouth of the Beni, up the Mamore River, in May, 1877. A freshet, which destroyed many of his instruments and stores, and the mutiny and desertion of his attendants, compelled him to give up the exploration of the Beni; so he concluded to explore the smaller Canpolican. He had arrived at Apollobamb, near the boundary of Peru and Bolivia, in the latter part of August, and his unexpected death took place on September 25th.

The following corrections in latitudes and longitudes have been made by Commander F. M. Green, for the Hydrographical Bureau in Washington, by the aid of the newly laid telegraphs to the West Indies and Panama; the places are all north of the equator, and the longitudes are reckoned west from Greenwich: Havana (Morro lighthouse), latitude $23^{\circ} 9' 20.98''$, longitude $82^{\circ} 21' 30''$; Santiago de Cuba (Blanca battery), latitude $20^{\circ} 0' 16.4''$, longitude $75^{\circ} 50' 30.15''$; Kingston (Port Royal flagstaff), latitude $17^{\circ} 55' 55.8''$, longitude $76^{\circ} 50' 37.8''$; Aspinwall (lighthouse), latitude $9^{\circ} 22' 8.8''$, longitude $79^{\circ} 54' 44.7''$; Panama (south tower of the cathedral), latitude $8^{\circ} 57' 6.15''$, longitude $79^{\circ} 32' 12.3''$; San Juan de Puerto Rico (Morro lighthouse), latitude $18^{\circ} 28' 55.86''$, longitude $66^{\circ} 7' 27.75''$; St. Thomas (Fort Christian), latitude $18^{\circ} 20' 23.15''$, longitude $64^{\circ} 55' 52.5''$; Santa Cruz (Lang's observatory), latitude $17^{\circ} 44' 42.7''$, longitude $64^{\circ} 41' 17.4''$; St. Pierre, Martinique (St. Martha battery), latitude $14^{\circ} 43' 53.9''$, longitude $61^{\circ} 11' 11.7''$; Bridgetown, Barbadoes (Rickett's battery), latitude $13^{\circ} 5' 42.5''$, longitude $59^{\circ} 37' 18.45''$; Port Spain, Trinidad (water battery), latitude $10^{\circ} 38' 39.21''$, longitude $61^{\circ} 30' 38.4''$.

The Geological and Geographical Survey of the Territories was inaugurated at the time when Nebraska was received into the Union, \$5,000 being appropriated for the purpose of surveying the new State in the year 1867; Dr. F. V. Hayden was then appointed superintendent of the works. In 1868 the same sum was granted, and the labor was extended over a part of Wyoming Territory. In 1869 the survey was organized in its present shape, and placed under the control of the Department of the Interior, the appropriation being doubled; the work of the year was a reconnaissance of Cheyenne, in Wyoming, along the eastern edge of the Rocky Mountains to Santa Fé, in New Mexico. In 1870 the work took larger dimensions; and, with 20 surveyors, a portion of Wyoming Territory and a belt along the Union Pacific Railroad line were measured. In 1871 the Expedition investigated a part of the region drained by the sources of the Yellowstone and Missouri Rivers, with a strip up the Yellowstone from Fort Ellis; a trip was also made to Yellowstone Lake and the Geysers on Fire-Hole River; the descriptions of the Yellowstone region created a sensation in Europe as well as in America, and a part of the wonderful country was reserved by Congress as the "National Park." The Expedition was divided in the following year into two parties, each having a geologist, topographer, meteorologist, and naturalist. One division made a detailed survey of the head-sources of the Yellowstone, Gallatin, and Madison Rivers; the other reconnoitred the head of Snake River, or the Lewis Fork of the Columbia, and a little-known part of Idaho and Wyoming Territories. The survey in 1873 was extended into Colorado, and a systematic triangulation of the east front of the Rocky Mountains was begun, which was afterward extended over the entire Territory. The topographical corps was increased, and divided into five parties; 21,000 square miles were measured, and 300 geodetical stations located, most of them on the highest peaks of the Rocky Mountains. In 1874 two new divisions were added, one to examine the land and water communications in the parts already surveyed, and the other for the investigation of the geology of the Elk range. In this year 19,000 square miles were surveyed, the greater portion of the area being in the lofty San Juan Mountains; in this year the ruins in southwest Colorado were examined and described by W. H. Jackson. In 1875 the work was extended westward into Utah, and southward toward New Mexico, and covered 24,000 square miles. The explorations in 1876 are described in detail in the last volume of the CYCLOPEDIA.

The list of summits in Colorado surpassing 10,000 feet, as published by Mr. Wilson, includes 39 names. Those of above 14,000 feet in altitude are the following 17: Blanca Peak, 14,413; Mount Harvard, 14,375; Massive Mount, 14,368; Torrey's Peak, 14,336; Mount Evans, 14,330; La Plata Mount, 14,311; Mount Lin-

coln, 14,296; Mount Wilson, 14,280; Long's Peak, 14,271; Uncompahgre Peak, 14,235; Crestone Peak, 14,233; Mountain of the Holy Cross, 14,176; Mount Sneffels, 14,158; Pike's Peak, 14,147; San Luis Peak, 14,100; Oulebra Peak, 14,079; Mount Ouray, 14,043.

The primary triangulation, under Mr. Wilson, covered this season about 25,000 square miles. This party established 26 stations, and located many points by foresight intersections, on which monuments were set up by the secondary surveying parties. The area covered by the Snake River party's triangulation was 12,500 square miles; the monuments erected numbered 104. This division was under the direction of Henry Garnet, with J. E. Mushback, assistant topographer, and Dr. A. C. Peale and F. M. Eastman, geologist and assistant geologist. Mr. Beckler's party surveyed 6,000 square miles and erected 40 monuments. The work laid out for the survey in 1877 included over 30,000 square miles, lying mainly in Wyoming Territory, but partly in eastern Idaho and Utah. It was divided into three districts: the Green River and Sweetwater districts to extend as far south as parallel $41^{\circ} 45'$, where they about meet Clarence King's survey of the 40th parallel, and as far north as the parallel 43° ; the Sweetwater or eastern district was bounded on the east by the 107th meridian; and the Green River division was bounded on the west by the 112th meridian—meridian $109^{\circ} 30'$ dividing the two fields. The Snake River division explored the territory extending to latitude $44^{\circ} 15' N.$, and covering the whole area north of the two other districts.

During a part of the summer of 1877, the primary triangulation party, under Mr. H. D. Wilson, was engaged in establishing astronomical locations in the Wind River range of mountains in Wyoming Territory. Fremont's Peak was found to be situated 15 miles to the north of the mountain so designated in Captain Jones's map, whose true name is Wind River Peak. The range extends from the Sweetwater River, beginning about latitude $42^{\circ} 15'$, longitude $109^{\circ} W.$, in a straight line northward to Union Pass; its length is about 75 miles. It is the greatest mass of mountains in Wyoming Territory, and contains the highest peaks, unless the unexplored Big Horn Mountains surpass them. In form it is a double parallel ridge of mountains, with connecting mountains or "saddles" running across at short distances apart, thus forming a series of circular links, inclosing deep valleys, each containing a lake, whose waters are frozen over four-fifths of the year. These valleys contain only a few scattered trees around the edges of the lakes, which fill nearly the whole of the bottoms, the sides of the mountains rising abruptly, sometimes in vertical walls 1,000 to 2,000 feet high. The outer descents of the mountains are in terraces, separated by cañons, with rugged foot-hills below: the traces of glacial action on the most gigantic scale are visible in

all the forms of the landscape. The Wind River Mountains yield a larger drainage, in proportion to the extent of their area, than any other system of mountains in the country; the Sweetwater, Wind, Big Horn, Green, and Snake Rivers rise in these mountains, as well as the principal feeders of the Yellowstone, Gros Ventre, and Clarke's Fork of the Columbia. It is the most stormy region in the western country. The mountains consist of granite, with some gneiss. Indications of gold, silver, and other metals were frequent, and every variety of metalliferous quartz was met with.

GEORGIA. The regular session of the Legislature of Georgia began at Atlanta on the 10th of January. On the 12th, Alfred H. Colquitt was inaugurated Governor for a term of four years. On the 16th N. O. Bartlett was elected Secretary of State, J. W. Renfro State Treasurer, W. L. Goldsmith Controller-General, and James P. Harrison State Printer. These officials were chosen by the Legislature in joint convention of the two Houses. A United States Senator was elected for the term of six years, beginning March 4, 1877, to succeed Thomas M. Norwood. Several ballots were taken before an election was made. The first stood 95 for Thomas M. Norwood, 77 for B. H. Hill, 29 for James M. Smith, 10 for H. V. Johnson, and 4 for D. A. Walker. The final and decisive ballot, taken on the 26th of January, was 116 for Hill, 86 for Norwood, 5 for Smith, 5 for Johnson, and 1 for Charles J. Jenkins; and Mr. Hill was elected.

Benjamin H. Hill was born in Jasper County, Ga., in 1823, and was educated in the private schools of his native county and the University of Georgia at Athens, where he graduated in 1844. He was admitted to the bar the following year, and practised his profession without interruption for several years. In 1851 he was elected to the Legislature as a Whig, and took a prominent part in its debates. In 1855 he appeared as a leader in the Native American or "Know-Nothing" party. In 1859 he was elected to the Legislature again by the Whigs and "Know-Nothings," and in 1860 supported the Bell and Everett ticket in the national canvass. He was a delegate to the convention that adopted the ordinance of secession, but joined with his old political antagonist, Alexander H. Stephens, in opposing that measure. Having failed to prevent the secession of the State, he yielded to the majority, and took a prominent part in support of the Southern Confederacy, being chosen by the Legislature to the Confederate Senate. After the war he opposed the reconstruction measures, and naturally found himself working in the ranks of the Democratic party, to which he had never before belonged. He was elected to the 44th Congress from the 9th district, to fill a vacancy caused by the death of Garnett McMillan, where his course was generally liberal and conciliatory. His successor

in the House of Representatives is Hiram P. Bell, elected at a special election on the 13th of March.

One of the earliest subjects to engage the attention of the Legislature was a bill providing for a convention to revise the Constitution of the State. It was passed after a prolonged debate, and provided for an election of delegates on the second Tuesday in June. The

convention was to assemble on the second Wednesday in July, and to consist of 194 delegates, apportioned by the act among the several senatorial districts. In voting for delegates the people were at the same time to vote on the question of having the convention held. The Constitution prepared, in case of an affirmative vote, was to be submitted to the people for ratification. The sum of \$25,000

STATE SEAL OF GEORGIA.

was appropriated for the expenses of the convention. The session of the Legislature came to a close on the 22d of February. On the last day the following preamble and resolutions were unanimously adopted:

We, the representatives of the people of Georgia in General Assembly met, deem it a duty which we owe to ourselves, our common country, and posterity, to utter a voice of condemnation as well as of warning, in view of the state of the Republic. The disregard which for years has been shown for the strict letter of the law, has naturally degenerated into a disregard and defiance of its spirit, and we now stand confronted with tremendous peril to liberty itself. Our servants have been our masters, and neither the laws nor the Constitution can protect us. Could reason be left free to combat error, and the people to effect reforms where they are needed, we should be hopeful of the future. But the facts of our present political history declare that the very safeguards of the ballot have been taken away from us by the wicked instrumentalities which have been devised for the purpose of robbing the people of power and free suffrage, and we are powerless to redress our wrongs. The patriotic of all parties can but feel how earnest the effort was in our recent presidential election to redress the evils which were affecting the country, by a peaceful and honest use of the ballot, and the whole world proves how a wicked oligarchy has defeated the purpose. If fraud no longer vitiates the actions of men or States, then, indeed, are we hopeless of the corrupt and lawless who now hold power and may hold it forever. If the highest tribunal in our land, which we have fondly looked to as the last stronghold of freedom, has declared that frauds on liberty and law must stand unreversed and irreversible, then, indeed, we are a doomed people. With the law trampled upon, the name of State sovereignty a byword of reproach, governments, in the South, at least, set

up and pulled down at will, and the foundation of justice itself polluted, it does seem that the overthrow of our common government is imminent. In the present state of the Republic the voice of every patriot is needed; apathy is a crime, and silent acquiescence in the conspiracy against our liberties is ruin.

Resolved, by the Senate and House of Representatives in General Assembly met, That we hereby declare it to be the sense of this Assembly, as well as the firm belief of the people of Georgia, that Samuel J. Tilden was fairly elected President of the United States for the ensuing four years, and that Thomas A. Hendricks was elected for the same term Vice-President, and if they shall fail of a peaceful inauguration, then will the people of the United States have been defrauded of their choice, and a fatal blow be given to public honor, and to the stability and integrity of the Government.

Resolved, by the authority aforesaid, That the General Assembly views with alarm and most decided condemnation, and hereby enters into a solemn protest against, the interference of the authorities of the General Government with the full exercise of the ballot in the several States, whether that interference is manifested in the control of returning boards, or in the presence of United States troops at the polls, or in the arbitrary elevation of its favorites to supreme power in place of those chosen by the people.

There were 409 acts and 17 resolutions passed during the session, but nearly all of them were of purely local concern. Many county lines were changed, and a large number of acts related to county courts, the sale of liquor in certain localities, municipal affairs, special corporations, and other matters of local administration. Among the few general laws was one "To prevent joint stock companies,

corporations, and other associations, from declaring dividends when they have not realized an income on investment," and one "To prevent the maintaining or carrying on of any lottery in this State."

The question of holding the constitutional convention excited a good deal of interest, and occasioned considerable discussion prior to the election, which was held on the 12th of June. The result was 87,238 votes cast: for the convention, 48,181; against the convention, 39,057; majority for the convention, 9,124. The Governor issued a proclamation, calling upon the delegates chosen to meet at the Capitol, in Atlanta, on the 11th day of July. The convention assembled at the time appointed, and promptly organized, with ex-Governor Jenkins as President. Robert Toombs was Chairman of the Committee on Revision, and among the delegates were many of the most conspicuous public men in the State. The convention continued its session until the 25th of August, when the Constitution as completed was adopted as a whole by a unanimous vote, and an ordinance passed requiring the Governor to "issue his proclamation ordering an election for members of the General Assembly, and a vote upon the ratification or rejection of the Constitution as therein provided, and a vote upon the capital and homestead questions as provided by ordinances of this convention." The matters which had occupied the largest share of attention, and occasioned most discussion, were the Bill of Rights, the provisions regarding the elective franchise, the location of the capital, the mode of selecting judges of the Supreme and Superior Courts, and the adjustment of the financial obligations of the State. The preamble of the Constitution is as follows:

To perpetuate the principles of free government, insure justice to all, preserve peace, promote the interest and happiness of the citizen, and to transmit to posterity the enjoyment of liberty, we, the people of Georgia, relying upon the protection and guidance of Almighty God, do ordain and establish this Constitution.

Among the declarations of the Bill of Rights, comprising Article I. are the following:

SECTION I.—1. All government, of right, originates with the people, is founded upon their will only, and is instituted solely for the good of the whole. Public officers are the trustees and the servants of the people, and at all times amenable to them.

2. Protection to person and property is the paramount duty of government, and shall be impartial and complete.

3. No person shall be deprived of life, liberty, or property, except by due process of law.

4. No person shall be deprived of the right to prosecute or defend his own cause in any of the courts of this State, in person, by attorney, or both.

5. Neither banishment beyond the limits of the State, nor whipping, as a punishment for crime, shall be allowed.

6. No inhabitant of this State shall be molested in person or property, or prohibited from holding any public office, or trust, on account of his religious opinions; but the right of liberty of conscience shall not be so construed as to excuse acts of licentiousness,

or justify practices inconsistent with the peace and safety of the State.

7. No money shall ever be taken from the public treasury, directly or indirectly, in aid of any church, sect, or denomination of religionists, or of any sectarian institution.

8. No law shall ever be passed to curtail or restrain the liberty of speech of the press; any person may speak, write, and publish his sentiments on all subjects, being responsible for the abuse of that liberty.

9. There shall be within the State of Georgia neither slavery nor involuntary servitude, save as a punishment for crime, after legal conviction thereof.

10. The social status of the citizen shall never be the subject of legislation.

11. There shall be no imprisonment for debt.

12. All citizens of the United States, resident in this State, are hereby declared citizens of this State, and it shall be the duty of the General Assembly to enact such laws as will protect them in the full enjoyment of the rights, privileges, and immunities due to such citizenship.

SEC. II.—4. All lotteries and the sale of lottery tickets are hereby prohibited; and this prohibition shall be enforced by penal laws.

5. Lobbying is to be declared a crime, and the General Assembly shall enforce this provision by suitable penalties.

6. The General Assembly shall have the power to provide for the punishment of fraud; and shall provide, by law, for reaching the property of the debtor concealed from the creditor.

SEC. IV.—1. Laws of a general nature shall have uniform operation throughout the State, and no special law shall be enacted in any case for which provision has been made by any existing general law. No general law affecting private rights shall be varied in any particular case by special legislation, except with the free consent, in writing, of all persons to be affected thereby; and no person under legal disability to contract is capable of such consent.

2. Legislative acts in violence of this Constitution, or the Constitution of the United States, are void, and the judiciary shall so declare them.

SEC. V.—1. The people of this State have the inherent, sole, and exclusive right of regulating their internal government, and the police thereof, and of altering and abolishing their Constitution whenever it may be necessary for their safety and happiness.

Article II. relates to the elective franchise. It provides that the vote at all elections shall be by ballot, and defines the qualifications of voters as follows:

2. Every male citizen of the United States (except as hereinafter provided), twenty-one years of age, who shall have resided in this State one year next preceding the election, and shall have resided six months in the county in which he offers to vote, and shall have paid all taxes which may hereafter be required of him, and which he may have had an opportunity of paying, agreeably to law, except for the year of the election, shall be deemed an elector: Provided, that no soldier, sailor, or marine in the military or naval service of the United States shall acquire the rights of an elector by reason of being stationed on duty in this State; and no persons shall vote who, if challenged, shall refuse to take the following oath or affirmation: "I do swear (or affirm) that I am twenty-one years of age, have resided in this State one year, and in this county six months, next preceding this election. I have paid all taxes which, since the adoption of the present Constitution of this State, have been required of me previous to this year, and which I have had opportunity to pay, and that I have not voted at this election."

The General Assembly is authorized to provide for the registration of voters; but the fol-

lowing classes of persons shall not be permitted to register, vote, or hold any office, or appointment of honor or trust, in this State, to wit: 1. Those who shall have been convicted, in any court of competent jurisdiction, of treason against the State, of embezzlement of public funds, malfeasance in office, bribery or larceny, or of any crime involving moral turpitude, punishable by the laws of this State with imprisonment in the penitentiary, unless such person shall have been pardoned. 2. Idiots and insane persons.

Other important provisions of this article are as follows:

SECTION IV.—1. No person who is the holder of any public money, contrary to law, shall be eligible to any office in this State, until the same is accounted for and paid into the Treasury.

2. No person who, after the adoption of this Constitution, being a resident of this State, shall have been convicted of fighting a duel in this State, or convicted of sending or accepting a challenge, or convicted of aiding or abetting such duel, shall hold office in this State, unless he shall have been pardoned; and every such person shall, also, be subject to such punishment as may be prescribed by law.

SEC. V.—1. The General Assembly shall, by law, forbid the sale, distribution, or furnishing of intoxicating drinks within two miles of election-precincts, on days of election—State, county, or municipal—and prescribe punishment for any violation of the same.

SEC. VI.—1. Returns of election for all civil officers elected by the people, who are to be commissioned by the Governor, and, also, for the members of the General Assembly, shall be made to the Secretary of State, unless otherwise provided by law.

Article III. relates to the legislative department. The Senate consists of 44 members, one from each district, and all the districts are defined; but the General Assembly may change them after each census of the United States, without increasing the number. The House of Representatives consists of 175 members, apportioned among the several counties; the 6 with the largest population having 3 each; the 26 having the next largest population, 2 each; and the remaining 105 counties, 1 each. The first election for members of the General Assembly was to take place on the first Wednesday in December, 1877. The next on the first Wednesday in October, 1880; and subsequently, every two years, on the first Wednesday in October. The first meeting of the Legislature was fixed for the first Wednesday in November, 1878; and subsequent meetings on the same day every two years; but an extra session might be called by the Governor, if, in his opinion, the public good should require it. Sessions of the Legislature are limited to 40 days, unless extended by a "two-thirds vote of the whole number of each House." The following restriction is placed upon the eligibility to the General Assembly:

SECTION IV.—7. No person holding a military commission, or other appointment or office, having any emolument or compensation annexed thereto, under this State, or the United States, or either of them, except Justices of the Peace and officers of the militia, nor any defaulter for public money, or for any legal taxes required of him, shall have a seat in either House; nor shall any Senator or Representative, after

MACON.

his qualification as such, be elected by the General Assembly, or appointed by the Governor, either with or without the advice and consent of the Senate, to any office or appointment having any emolument annexed thereto during the time for which he shall have been elected.

Appropriations and public expenditures are strictly guarded. Restrictions are also placed on the passage of special bills. The per diem of compensation is fixed at \$4, and mileage at

10 cents a mile of necessary travel. The following section is contained in the legislative article:

SECTION XI.—1. All property of the wife at the time of her marriage, and all property given to, inherited, or acquired by her, shall remain her separate property, and not be liable for the debts of her husband.

Article IV. relates to the power of taxation, and contains the following provisions:

SECTION II.—1. The power and authority of regulating railroad, freight, and passenger tariffs, preventing unjust discriminations, and requiring reasonable and just rates of freight and passenger tariffs, are hereby conferred upon the General Assembly, whose duty it shall be to pass laws, from time to time, to regulate freight and passenger tariffs, to prohibit unjust discriminations on the various railroads of this State, and to prohibit said railroads from charging other than just and reasonable rates, and enforce the same by adequate penalties.

4. The General Assembly of this State shall have no power to authorize any corporation to buy shares, or stock, in any other corporation in this State, or elsewhere, or to make any contract, or agreement whatever, with any such corporation, which may have the effect, or be intended to have the effect, to defeat or lessen competition, or to encourage monopoly; and all such contracts and agreements shall be illegal and void.

5. No railroad company shall give, or pay, any rebate, or bonus in the nature thereof, directly or indirectly, or do any act to mislead or deceive the public, as to the real rates charged or received for freights or passage; and any such payment shall be illegal and void; and these prohibitions shall be enforced by suitable penalties.

6. No provision of this article shall be deemed, held, or taken to impair the obligation of any contract heretofore made by the State of Georgia.

7. The General Assembly shall enforce the provisions of this article by appropriate legislation.

Article V. deals with the executive department. The Governor is to be elected for a term of two years, and after a second term cannot be reelected within a period of four years. His salary is fixed at \$3,000 per annum. The first election of Governor under the Constitution occurs in 1880. The returns of the election for Governor are to be made to the President of the Senate, and Speaker of the House of Representatives, without being opened. The candidate having a majority of the whole number of votes is to be declared elected, and if no candidate receives such majority, the General Assembly must elect one of the two having the highest number of votes. No person is eligible for Governor unless he is thirty years of age, and has been a citizen of the United States 16 years, and of the State of Georgia six years. In case of vacancy, the President of the Senate is to exercise the executive power until the vacancy is filled, and in case of his death, resignation, or inability, the Speaker of the House will act as Governor. Provision may be made for filling unexpired terms by special election. The Governor's oath of office is as follows: "I do solemnly swear (or affirm, as the case may be) that I will faithfully execute the office of Governor of the State of Georgia, and will, to the best of my ability, preserve, protect, and defend the Constitution thereof, and the Constitution of the United States of America."

The customary powers and duties are imposed upon the executive. If a person appointed to office by him is rejected by the Senate, he cannot be reappointed during the same session or the recess following. It is made the duty of the Governor, quarterly, and oftener, if he deems it expedient, "to examine

under oath the Treasurer and Controller-General of the State on all matters pertaining to their respective offices, and to inspect and review their books and accounts." The Secretary of State, Controller-General, and Treasurer are to be elected at the same time, and in the same manner, as the Governor. The salary of each is \$2,000 a year, and he must have been a resident of the State at least six years.

Article VI. relates to the judiciary. The Supreme Court consists of a chief-justice and two associate justices, whose term of office is six years. After 1880, these are to be elected by the Legislature. It is altogether a court of appellate jurisdiction. There is a Judge of Superior Courts in each circuit, holding office for four years. These are also to be elected by the Legislature. Superior Courts are required to sit in each county at least twice a year. Provision is made for minor courts and judicial officers.

Article VII. is entitled "Finance, Taxation, and the Public Debt." Exemption from taxation is provided as follows:

SECTION II.—2. The General Assembly may, by law, exempt from taxation all public property, places of religious worship or burial, all institutions of purely public charity, all buildings erected for and used as a college, incorporated academy, or other seminary of learning, the real and personal estate of any public library, and that of any other literary association, used by or connected with such library, all books and philosophical apparatus, and all paintings and statuary of any company or association kept in a public hall and not held as merchandise, or for purposes of sale or gain: Provided, the property so exempted be not used for purposes of private or corporate profit or income.

Restrictions upon the contraction of debt are provided in the following sections:

SECTION III.—1. No debt shall be contracted by or on behalf of the State except to supply casual deficiencies of revenue, to repel invasion, suppress insurrection and defend the State in time of war, or to pay the existing public debt; but the debt created to supply deficiencies in revenue shall not exceed, in the aggregate, two hundred thousand dollars.

SEC. IV.—1. All laws authorizing the borrowing of money by or on behalf of the State shall specify the purposes for which the money is to be used, and the money so obtained shall be used for the purpose specified and for no other.

SEC. V.—1. The credit of the State shall not be pledged or loaned to any individual, company, corporation, or association, and the State shall not become a joint owner or stockholder in any company, association, or corporation.

SEC. VII.—1. The debt hereafter incurred by any county, municipal corporation, or political division of this State, except as in this Constitution provided for, shall never exceed seven per centum of the assessed value of all the taxable property therein, and no such county, municipality or division shall incur any new debt, except for a temporary loan or loans to supply casual deficiencies of revenue, not to exceed one-fifth of one per centum of the assessed value of taxable property therein, without the assent of two-thirds of the qualified voters thereof, at an election for that purpose, to be held as may be prescribed by law; but any city, the debt of which does not exceed seven per centum of the assessed value of the taxable property at the time of the adoption of this Constitution, may be authorized by law

to increase, at any time, the amount of said debt three per centum upon such assessed valuation.

2. Any county, municipal corporation, or political division of this State, which shall incur any bonded indebtedness under the provisions of this Constitution, shall, at or before the time of so doing, provide for the assessment and collection of an annual tax sufficient in amount to pay the principal and interest of said debt within thirty years from the date of the incurring of said indebtedness.

Section IX. is as follows:

SECTION IX.—1. The receiving directly or indirectly, by any officer of State or county, or member or officer of the General Assembly, of any interest, profits, or perquisites, arising from the use or loan of public funds in his hands, or moneys to be raised through his agency for State or county purposes, shall be deemed a felony, and punishable as may be prescribed by law, a part of which punishment shall be a disqualification of holding office.

In regard to existing bonds, the following declarations are made:

SECTION XI.—1. The General Assembly shall have no authority to appropriate money, either directly or indirectly, to pay the whole, or any part, of the principal, or interest, of the bonds, or other obligations which have been pronounced illegal, null and void by the General Assembly, and the Constitutional amendments ratified by a vote of the people on the first day of May, 1877; nor shall the General Assembly have authority to pay any of the obligations created by the State under laws during the late war between the States, nor any of the bonds, notes, or obligations made and entered into during the existence of said war, the time for the payment of which was fixed after the ratification of a treaty of peace between the United States and the Confederate States; nor shall the General Assembly pass any law, or the Governor or other State official enter into any contract, or agreement, whereby the State shall be made a party to any suit in any Court of this State, or of the United States, instituted to test the validity of any such bonds or obligations.

Sec. XII.—1. The bonded debt of the State shall never be increased, except to repel invasion, suppress insurrection, or defend the State in time of war.

The proceeds of the sale of railroads or other property held by the State are to be applied to payment of the bonded debt. The sum of \$100,000 a year is to be raised by taxation for a sinking fund, to meet the payment of bonds at maturity.

Article VIII. relates to Education. It requires the establishment of a "thorough system of common schools for the education of children in the elementary branches of an English education only, as nearly uniform as practicable, the expenses of which shall be provided for by taxation, or otherwise. The schools shall be free to all children of the State, but separate schools shall be provided for the white and colored races." There is to be a School Commissioner appointed by the Governor for a term of two years. Certain special taxes for educational purposes are provided for.

Article IX. relates to "Homesteads and Exemptions." Property to the amount of \$1,600 belonging to the head of a family, or to a person with children, old persons, or females, dependent upon him, is made exempt from levy

and sale, and no judgment can be enforced against such property. The debtor may renounce his right to exemption, except for wearing apparel, and not more than \$300 worth of household furniture. The General Assembly is authorized to provide by law for the setting apart and valuation of such property.

Article X. authorizes the General Assembly to provide for the organization of a volunteer militia.

Article XI. relates to counties and county officers. It prohibits the creation of new counties and the changing of county lines, unless the latter is done under a general law for that purpose.

Article XII. relates to "Laws of general operation in force in this State." The Constitution of the United States, the laws made in pursuance thereof, and treaties made under the authority of the United States, are declared to be supreme, and the State Constitution next in authority.

Article XIII. provides for future amendments of the Constitution, and for submitting the present instrument to the people for ratification, at an election to be held on the first Wednesday in December. An ordinance was adopted submitting the Homestead article to a separate vote, and also an ordinance submitting the question of removing the State capital from Atlanta to Milledgeville.

The election took place on the 5th of December, and resulted in the ratification of the Constitution as a whole, and of the Homestead article, and the retention of the capital at Atlanta. The total vote on the Constitution was 151,889: for ratification 110,442, against ratification 40,947; majority for ratification 69,495. The total vote on the Homestead question was 146,722: for the Homestead provision of 1877, 94,722; for the Homestead of 1868, 52,000; majority for Homestead of 1877, 42,722. The total vote on the question of removing the capital was 154,347: for Atlanta as the capital 99,147, for Milledgeville 55,201; majority in favor of Atlanta 43,946. At the same election members of the Assembly were chosen for the session beginning in November, 1878.

The public debt of the State, as presented by the Treasurer, in response to the inquiry of the Constitutional Convention, under date July 18th, is as follows:

6-per-cent. bonds issued for stock in the Atlantic & Gulf Railroad Company, under an act approved February 27, 1856.....	\$900,000
7-per-cent. bonds secured by a mortgage on the Western & Atlantic Railroad, issued under an act approved March 12, 1866.....	3,800,000
7-per-cent. gold bonds with quarterly coupons in gold, issued for redemption of past-due and outstanding bonds of this State, under authority of an act approved September 15, 1870.....	2,098,000
7-per-cent. bonds issued for redemption of past-due and near-due bonds of this	

State, under authority of an act approved January 18, 1872.....	\$307,500
8-per-cent. bonds issued under authority of an act approved February 19, 1873 (maturing).....	900,000
7-per-cent. bonds issued to pay the past-due interest on the \$1,950,000 first-mortgage bonds of the Macon & Brunswick Railroad Company, and the North & South Railroad Company, \$240,000, both indorsed by the State of Georgia, under authority of an act approved February 24, 1876.....	542,000
6-per-cent. bonds issued to redeem the \$1,950,000 Macon & Brunswick, the \$240,000 North & South, and the \$34,000 Memphis Branch Railroads, indorsed by the State, and the accrued interest thereon, under authority of an act approved February 19, 1877.....	2,298,397

AGGREGATE.

6-per-cent. currency bonds due 1878-1886	\$900,000
7-per-cent. currency bonds due 1886....	3,600,000
7-per-cent. gold bonds due 1890.....	2,098,600
7-per-cent. currency bonds due 1892....	307,500
8-per-cent. currency bonds due 1878-1886	900,000
7-per-cent. currency bonds due 1896....	542,000
6-per-cent. currency bonds due 1889....	2,298,397
	\$10,645,897

INDORSED LIABILITY.

Bonds indorsed by the State of Georgia, \$8,000 per mile, of the first-mortgage bonds of the South Georgia & Florida Railroad, of 58 miles, being \$464,000.

The floating or temporary debt of the State is represented by the executive obligation for \$1000,000, borrowed from the Fourth National Bank of New York, bearing 6 per cent. interest per annum, of date March, 1877, and due in November, 1877.

The aggregate valuation of property for the year was \$235,659,530, a decline of \$10,194,220 from that of 1876. Reports are, in general, very favorable regarding the progress of industrial interests; and peace and good order have prevailed throughout the State during the year.

GERMANY, an empire in Europe, reestablished January 18, 1871. The Emperor, William I., was born March 22, 1797, and was married June 11, 1829, to Augusta, daughter of the Grand-duke Charles Frederick of Saxe-Weimar. The heir-apparent, Frederick William, born October 18, 1831, has the official title of Crown-prince of the German Empire, and Crown-prince of Prussia. He was married January 25, 1858, to Victoria, Princess Royal of Great Britain and Ireland, born November 21, 1840. Offspring of the union are, three sons: Frederick William, born 1859; Henry, born 1862, and Waldemar, born 1868; and four daughters: Charlotte, born 1860; Victoria, born 1866; Sophia, born 1870, and Margaretta, born 1872. Imperial Chancellor (Reichskanzler), Otto, Prince von Bismarck-Schönhausen. President of the Imperial Chancery (Reichskanzler-Amt), Hofmann, Minister of State, appointed in 1876.

The following table exhibits all the states of the German Empire, the area, the population according to the census of 1875, the number of representatives of every German state in the Federal Council, and the number of deputies who represent each state in the Reichstag:

STATES.		Area in English Square Miles.	Population in 1875.	Votes in Federal Council.	Deputies to the Reichstag.
Free Cities, Principalities, Duchies, Grand-Duchies, Kingdoms.	1. Prussia (including Lauenburg).....	184,499	25,742,404	17	286
	2. Bavaria.....	29,292	5,022,390	6	48
	3. Saxony.....	5,788	2,760,586	4	23
	4. Württemberg.....	7,531	1,881,505	4	17
	5. Baden.....	5,821	1,507,179	3	14
	6. Hesse.....	2,964	884,218	3	9

	8. Saxe-Weimar.....	1,404	292,353	1	3
	9. Oldenburg.....	2,470	319,314	1	3
	10. Mecklenburg-Strelitz.....	1,181	95,673	2	1
	11. Brunswick.....	1,425	327,498	1	3
	12. Saxe-Meiningen.....	958	194,494	1	2
	13. Saxe-Altenburg.....	510	145,844	1	1
	14. Saxe-Coburg-Gotha.....	760	182,599	1	2
	15. Anhalt.....	906	213,565	1	2
	16. Schwarzburg-Rudolstadt.....	364	76,676	1	1
	17. Schwarzburg-Sondershausen.....	339	67,450	1	1
	18. Waldeck.....	433	54,743	1	1
	19. Renss-Greiz (older line).....	123	46,955	1	1
	20. Renss-Schleitz (younger line).....	320	92,375	1	1
	21. Schaumburg-Lippe.....	171	38,188	1	1
	22. Lippe-Deimold.....	493	112,452	1	1
	23. Lübeck.....	108	56,912	1	1
	24. Bremen.....	97	142,200	1	1
	25. Hamburg.....	158	388,618	1	3
	26. Alsace-Lorraine (Reichsland).....	5,596	1,581,804	..	15
Total.....		208,739	42,727,360	58	397

This is an increase of 1,666,514 over 1871. The population decreased since that time in Mecklenburg-Schwerin, Mecklenburg-Strelitz, and Alsace-Lorraine.

In the following table will be found a full

exhibit of the governments of the particular states, including the names and the titles of all the sovereign princes, their years of birth and accession to the throne, and the name of the heir-apparent:

STATES.	Title.	Name.	When born, and when succeeded to the Throne.	Heir-Apparent.
Prussia.....	King.....	William I.....	Born 1797, succ. 1861...	Frederick William, son.
Bavaria.....	King.....	Louis II.....	" 1845, " 1864...	Otto, brother.
Saxony.....	King.....	Albert.....	" 1828, " 1873...	George, brother.
Württemberg.....	King.....	Charles.....	" 1828, " 1864...	William, cousin.

Hamburg.....	Burgomaster.....	{ C. Petersen.....	1877.....	
		{ G. H. Kirchenpauer.....	1877.....	
Lübeck.....	Burgomaster.....	Th. Curtius.....	1877.....	

It will be seen from the above table that the ducal line of Brunswick is likely to become extinct by the death of the reigning duke. The succession is disputed by the ex-King of Hanover and the Emperor of Germany. It is also interesting to notice that in only thirteen of the twenty-two sovereign houses which belong to the German Empire, the heir-apparent is the son of the reigning sovereign.

The legislative functions of the Empire are vested in the Bundestag, or Federal Council, and the Reichstag, or Diet of the Empire. The Bundesrath represents the individual states of Germany, and the Emperor must have its consent to declare war which is not merely defensive. The members of the Bundestag are appointed by the governments of the individual states for each session. On January 1, 1878, the German Bundesrath was composed of the following members:

Prussia.—Prince Bismarck, President and Imperial Chancellor; Hofmann, President of the Imperial Chancery; the Ministers Camphausen, Count Eulenburg, Leonhard, Kameke, and Achenbach; Bülow, State Minister and Secretary of State in the Ministry for Foreign Affairs; Von Stosch, Chief of the Admiralty; Von Phillipsborn, Director in the Foreign Office; Dr. Friedberg, Secretary of State in the Ministry of Justice; Postmaster-General Stephan; Hasselbach, Director-General of the Indirect Taxes; Meinecke, Ministerial Director in the Ministry of Finance; Maybach, Under-Secretary of State in the Ministry of Commerce; Herzog, Under-Secretary of State for Alsace-Lorraine; Von Möller, Oberpräsident of Alsace-Lorraine.

Bavaria.—The Ministers von Pfretzschner, Dr. von Fäustle, and von Berr; Freiherr Pergler von Perglas, ambassador in Berlin; Ministerial Director von Riedel; and Major-General von Fries.

Saxony.—General von Fabrice; the Minis-

ters H. von Nostitz-Wallwitz and Abeken; O. von Nostitz-Wallwitz, ambassador in Berlin.

Württemberg.—Minister von Mitnacht; Hugo von Spitzemberg, ambassador in Berlin; Major-General von Faber du Faur; and Councilor Hess.

Baden.—Turban, President of the Ministry; State Ministers Ellstätter and Stösser.

Hesse.—Freiherr von Starck, President of the Ministry; Ministerial Councilors Kempf and Neidhart.

Mecklenburg-Schwerin.—Von Prollius, ambassador in Berlin; Oldenburg, Director of Customs.

Saxe-Weimar.—Councilor Dr. Stichling.

Mecklenburg-Strelitz.—Councilor von Prollius.

Oldenburg.—Councilor Mutzenbecher.

Brunswick.—Councilors Schultz and von Liebe.

Saxe-Meiningen.—Minister Giseke.

Saxe-Altenburg.—Minister von Gerstenberg-Zech.

Saxe-Coburg-Gotha.—Minister Freiherr von Seebach.

Anhalt.—Minister Freiherr von Krosigk.

Schwarzburg-Rudolstadt.—

Schwarzburg-Sondershausen.—Councilor Rudolf von Wolfersdorf.

Waldeck.—Director von Sommerfeld.

Reuss (older line).—Faber, President of the Government.

Reuss (younger line).—Dr. von Beulwitz, State Minister.

Schaumburg-Lippe.—Councilor Höcker.

Lippe-Deimold.—Councilor von Lieb.

Lübeck.—Dr. Krüger, minister resident in Berlin.

Bremen.—Dr. Gildemeister.

Hamburg.—Dr. Kirchenpauer, burgomaster.

Of the states composing the Empire, six (Prussia, Bavaria, Saxony, Württemberg, Baden,

and Hesse) have a Legislature composed of two Chambers, two (Mecklenburg-Schwerin and Mecklenburg-Strelitz) have a Common Diet, the free cities (Hamburg, Bremen, and Lübeck) have a Common Council (Bürgerschaft), and the remaining states (Saxe-Weimar, Oldenburg, Brunswick, Saxe-Meiningen, Saxe-Altenburg, Saxe-Coburg-Gotha, Anhalt, Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, Waldeck, the two principalities of Reuss, Schaumburg-Lippe, and Lippe-Detmold) have Legislatures of one Chamber. (For a full account of the Legislatures of the different states, see ANNUAL CYCLOPEDIA for 1876.)

The following table shows the cities having more than 25,000 inhabitants in 1875:

Berlin.....	956,858	Essen.....	54,790
" (Feb. 1, 1877). 1,000,809		Cassel.....	53,043

Zürich.....	Switzerland.....	85	814	87	851
Total.....		853	8,102	1,184	9,236

The budget of the German Empire for 1877-'78, as declared by the law of April 28 and May 26, 1877, estimates revenue and expenditure each at 540,608,165 marks (1 mark=23.8 cents). The revenue was derived from the following sources:

	Marks.
1. Customs and excises of consumption.....	253,053,810
2. Stamp-duty for bills of exchange.....	6,914,000
3. Administration of postal affairs and telegraphs.....	11,709,686
4. Administration of railroads.....	9,944,000
5. Imperial Bank, and other receipts.....	1,550,000
6. Receipts of various descriptions.....	10,165,158
7. From the imperial funds for invalids.....	32,569,111
8. Surplus of the year 1875.....	11,528,595
9. Profits from the coining of imperial money.....	10,200,000
10. Interest of invested capitals.....	7,751,723
11. Extraordinary receipts.....	108,147,956
12. Matricular contributions.....	81,044,171
Total.....	540,608,165

The matricular contributions were divided among the particular states as follows:

STATES.	Marks.
Prussia.....	36,375,264
Bavaria.....	19,717,313
Saxony.....	4,008,861
Württemberg.....	6,374,942
Baden.....	5,048,550
Hesse.....	1,210,308
Mecklenburg-Schwerin.....	790,931
Saxe-Weimar.....	408,260
Mecklenburg-Strelitz.....	131,122
Oldenburg.....	429,754
Brunswick.....	474,628
Saxe-Meiningen.....	266,471
Saxe-Altenburg.....	201,031
Saxe-Coburg-Gotha.....	251,996
Anhalt.....	293,782
Schwarzburg-Rudolstadt.....	104,311
Schwarzburg-Sondershausen.....	91,806
Waldeck.....	73,579
Reuss (older branch).....	64,815
Reuss (younger branch).....	127,507
Schaumburg-Lippe.....	46,161
Lippe.....	152,672
Lübeck.....	83,732
Bremen.....	208,153
Hamburg.....	562,535
Alsace-Lorraine.....	3,041,087
Total.....	81,044,171

The regular expenditures of the Empire were estimated as follows:

	Marks.
1. Chancery of the Empire.....	4,190,471
2. Imperial Diet.....	319,700
3. Foreign Office.....	5,908,255
4. Administration of the Imperial Army.....	323,553,393
5. Administration of the Navy.....	21,672,073
6. Interest of the debt of the Empire.....	8,895,000
7. Chamber of Accounts.....	408,866
8. Imperial Chancery for Alsace-Lorraine.....	171,760
9. Railroad Office of the Empire.....	272,750
10. General Pension Funds.....	18,069,510
11. Empire Invalid Funds.....	33,569,111
12. Administration of Justice.....	798,217
Total.....	412,824,111

The extraordinary expenditures are thus estimated:

	Marks.
1. Chancery of the Empire.....	1,750,864
2. Imperial Diet.....	80,000
3. Foreign Office.....	1,034,050
4. Postal administration, and administration of telegraphs.....	11,768,388
5. Army of the Empire.....	51,515,424
6. Administration of the Navy.....	28,577,000
7. Chamber of Accounts.....	10,000
8. Railroads of the Empire.....	3,771,231
9. Mint reform.....	7,800,000
10. Expenditures arising from the war with France.....	21,300,622
11. Administration of Justice.....	6,000
Total.....	127,843,399

The following table gives the military forces of the Empire in time of war:

I. FIELD ARMY.			
DIVISIONS.	Officers.	Men.	Horses.
Higher staff.....	863	5,170	5,070
Infantry.....	10,190	455,620	17,908

On January 10th elections took place throughout Germany for members of the Reichstag. Of the 397 districts into which the Empire is divided, 70 held supplementary elections. The final result was as follows: 40 Conservatives, 38 belonging to the German Imperial party, 96 to the Centre, 126 National Liberals, 35 belonging to the Party of Progress, 12 Social Democrats, 14 Poles, 35 belonging to no party, while one seat remained vacant.

The total number of persons allowed to vote at the elections was 8,943,012. The number of votes cast was 5,557,767, or 61 per cent., of which 5,535,778 were counted as valid, and the

rest rejected. The votes counted were distributed as follows among the different parties:

PARTIES.	Votes.	Per cent.
National Liberals.....	1,594,142	28.6
Centre.....	1,416,808	25.4
Conservatives.....	538,739	9.6
Progress.....	498,190	7.9

Total.....	297	297	382	397	397

On February 22d the Reichstag was opened by the Emperor in person. The speech from the throne, after stating that the attention of the members would be called to the budget, to the negotiations with Austro-Hungary for a new commercial treaty, to the bills for the creation and the powers of the "Rechnungshof" (Court of Accounts), and to the necessity of determining the place where the Imperial Court is to hold its sessions, continues as follows:

Unfortunately, the depressed condition in which trade and commerce found themselves during the past two years continues with us as in other countries. The continued deliberations of the united Governments on the means to relieve it have not convinced me that the home relations of the German Empire contribute in any way to the causes of those evils, which are equally felt in all other countries: to relieve any temporary and local want of employment of labor in search of work, lies more in the province of the separate states than of the Empire. As far as a want of confidence in the future stability of law and order within Germany should seem to lie in the way of a resumption of business, I am sure that you will regard such fears as unfounded. The organization of the Empire, and the common-sense of the German people, form a strong protection against anarchical efforts. Whatever may be her internal condition, Germany is less threatened than other countries by the external dangers which may arise from the Eastern crisis. My policy has remained true, without wavering, to the principles which it has followed since the beginning of the Oriental complications. The conference has not succeeded in obtaining from the Porte the concessions which the Powers judged expedient to demand in the interests of humanity and as a means of securing peace for the future. Nevertheless, the proceedings of the conference have led to this result, that the Christian Powers have arrived at a common understanding among themselves respecting the guarantees to be demanded from the Porte. Before the conference such an understanding lacked universally recognized expression. By this means a solid basis has been secured for confidence that peace will be preserved among the Powers even should the hope be disappointed that the Porte will, of its own accord, carry out the reforms regarding the treatment of its Christian subjects which the conference considered requisite in the interests of Europe. Should the expectations now entertained,

based upon the promises of the Porte on the one hand and the opening of negotiations for peace on the other with Serbia and Montenegro, fail to be realized, the Imperial Government, while recognizing the fact that in the present question the interests of Germany do not prescribe any precise line of conduct, will continue to exert its influence, as hitherto, in behalf of the protection of the Christians in Turkey and of the peace of Europe; above all things, however, strengthening its own good relations with Governments allied or otherwise friendly to it.

The Reichstag had a quorum at its first meeting, so that on March 2d it proceeded to organize. This organization immediately showed that the breach between the two Liberal parties, the National Liberals and the Party of Progress, had been considerably widened by the elections. Herr von Forckenbeck, a National Liberal, and the President of the last Reichstag, was reelected, although 43 blank votes were deposited by the Party of Progress. Freiherr von Stauffenberg, of the German Imperial party, was elected first vice-president, and Prince Hohenlohe-Langenburg, a Conservative, second vice-president.

On March 17th the Government introduced a bill transferring the right to legislate for Alsace-Lorraine from the German to the Alsace-Lorraine Parliament. As a guarantee against anti-national opposition, the Government, under this bill, reserved the right of appeal from the Alsace to the German Parliament. When introducing this bill, the Under-Secretary of State, Herr Herzog, said that the Alsace Parliament—a body whose prerogative had been hitherto limited to preparing bills for discussion by the German Parliament—though opposing the Government in many instances, had proved a sensible and loyal body. This was the more satisfactory, as 55 per cent. of all enfranchised had taken part in the election of those district assemblies who returned the members for the Alsace Parliament. After this speech, an Alsace Deputy protested against the bill, declaring, amid the laughter and merriment of the House, that the Rayah population in Turkey was far better treated than

those annexed by the German nation and Government. Other Alsace Deputies accepted the bill as an installment of constitutional institutions, while one was grateful for Alsace-Lorraine being accorded the means of counter-acting and correcting the mistakes committed by its new German bureaucracy. This bill was eventually adopted by the Reichstag, and was proclaimed by the Emperor on the occasion of his presence in Strasburg on May 2d.

On March 19th, the Reichstag commenced the discussion of the bill for establishing the Supreme Tribunal of Germany at Leipsic. The Prussian Minister of Justice desired Berlin as the seat of the tribunal; but, on May 24th, the Reichstag decided, by a large majority, in favor of Leipsic, and on March 24th adjourned for the Easter holidays.

CASTLE OF HOHENZOLLERN.

A difference arose, in March, between Prince Bismarck and General von Stösch, the Chief of the Admiralty, which was interesting on account of the constitutional questions involved. In the Prussian cabinet, the premiership is a mere honorary title; individual ministers being free to act as they please, unless restrained and directed by cabinet votes. When the German Government was organized, Prince Bismarck declared his inability to allow the German Secretaries and Under-Secretaries of State the like privilege; and it was to enforce this determination that he publicly expressed his surprise at the Chief of the Admiralty reducing the estimates in compliance with a demand of the House, when he refused to oblige his premier. As Prince Bismarck declined to withdraw this statement, General Stösch tendered his resignation. Both parties were then requested to draw up reports to the Emperor, after which it was generally assumed that the general's resignation had been accepted. But a few days later the Emperor addressed

an autograph letter to him, in which he declared that, after carefully perusing the statements of the two opposing parties, he had arrived at the conclusion that Prince Bismarck did not intend to attack the general when making the unpalatable remark. Prince Bismarck, the Emperor further said, when he alluded to the general allowing a portion of the naval surplus to be utilized for current expenses, only wished to inform the House that the general had taken the step without his consent, and that he (Bismarck) would not have consented to it, and, indeed, would not recognize it as a precedent to be observed in future transactions of the kind. If Prince Bismarck thought it necessary, with a view to future contingencies, to acquaint the House with his notions about surpluses and their application in the

new budget, this was a mere precautionary measure, and no offense to the Chief of the Naval Department. In his letter the Emperor evidently recapitulated arguments contained in Prince Bismarck's statement, and the general determined to remain in office. On April 1st, Prince Bismarck tendered his resignation, and asked for permission to retire immediately. The reasons for this step are not positively known. It was believed by many that his withdrawal had been indirectly occasioned by his unwilling-

ingness to endure a degree of official friction greater than his health could support. Besides the Stösch affair, there had also been several cases of a clash of authority between the Imperial Government and the different states, which had left behind an unpleasant feeling. The Emperor refused to accept the resignation; and, after considerable negotiations, Prince Bismarck contented himself with a furlough until August. Herr Hofmann, President of the Imperial Chancery, took his place in the department of Home Affairs; Herr von Bülow, in the department of Foreign Affairs; while Herr Camphausen represented him in the Prussian cabinet.

The Reichstag reassembled on April 10th. On April 23d, the items of the war estimate, which had been referred to the Budget Committee, came up for discussion in Parliament. The increased grant for 105 new captaincies gave rise to a protracted debate, and to a remarkable speech of General von Moltke, who insisted on the necessity of the grant. He

said he wished for a long peace, but the times did not permit such hope. On the contrary, the time was not far distant when every government would be compelled to strain all its strength for securing its existence. The reason for this was the regrettable distrust of governments toward each other. France had made great strides in her defenses. Uncommonly large masses of troops were at present between Paris and the German frontier. Everything France did for her army received the undivided approval of her people. She was decidedly in advance of Germany in having her *cadres* for war ready in times of peace. Germany could not avoid a measure destined to compensate for it. The increased grant for captaincies was then adopted. The Progress, Centre, and Socialist parties voted against it. The speech of General von Moltke produced throughout Europe an impression that the continuance of peaceable relations between France and Germany was endangered; but official declarations by both the German and the French Governments soon allayed the excitement.

On May 1st the Patent Bill was passed in the amended form proposed by the Special Commission. In accordance with the bill, patents will, in future, be accorded for 15 years. Legal protection is obtained directly upon announcing the invention or discovery to the proper board; and, to render this protection permanent, the invention or discovery must be recognized as novel by the authorities mentioned. The examination of the invention, in the first place, is intrusted to the board, but may be continued conjointly by the board and the inventor—the latter being permitted to plead his cause, and produce legal and scientific evidence, oral or written, bearing upon the subject. If the invention is not carried out in three years the patent may be canceled. The bill was considered a great improvement on the old patent law, which made a secret board the sole arbiter of all patent petitions.

On May 3d the session of the Reichstag was closed by Herr Hofmann. On this occasion, President von Forckenbeck made the following report on the activity of the House: The Reichstag had been in session 55 days. During this time 37 sessions of the House, 82 of the sections, and 120 of the committees were held. The Government had introduced 22 bills; of these, 18 were passed, 1 was negative, and 3 remained unacted upon. The members of the House introduced 3 interpellations and 28 motions. Of the latter, 7 were adopted, 5 were withdrawn, 3 were rejected, 12 remained unfinished, and 1 became superfluous. 1,146 petitions were presented. The committees made 4 verbal reports, and 14 in writing. Of 896 elections examined, 386 were declared valid, 2 invalid, and 8 were contested. One election was not examined; and 3 districts at the time were not represented.

On May 21st Prince Bismarck suddenly re-

turned to Berlin, and was actively employed in the Foreign Office; but left Berlin again within a week, for Kissingen, where he devoted himself diligently to business. In the latter part of May the Emperor approved the proposals made by the War Office to strengthen the German forces on the French frontier, as a compensatory military measure for the alleged increase of the French army on the frontier of Lorraine. It was generally admitted that this reënforcing of the German army was carried out more as a demonstration against the French clericals and reactionaries, who had just been called to power by President MacMahon, than with any view either to aggression or defense.

STRASBURG CATHEDRAL.

Several attempts were made during 1877 to negotiate a treaty of commerce with Austria; but they all failed, in consequence of the strong attitude in favor of protection taken by the Austrian Government.

The Bavarian Diet was opened on July 2d, without a speech from the throne. The Catholic party reelected the Baron von Ow President of the Chamber. The Diet adjourned, after an unimportant session, on July 14th. It met again on September 28th. The main question considered was the increase of the taxes demanded by the Government. All parties conceded the necessity of the increase; but the opposition demanded, at the same time, a reform in the system of taxation.

The Diet of Saxony was opened on October 26th by the King, who, in his speech, expressed regret at the continued depression of trade, which weighed on almost all classes of

the population, and had made the revenue fall below the estimates, thus necessitating, in spite of every economy, increased taxation. A revised income-tax would, therefore, be proposed as a simplification and readjustment of the present direct taxes. The absorption of the private railways by the state lines had been effected, new lines had been constructed, and two others were now proposed. On October 30th, the Minister of Finance, Herr von Könneritz, in giving an exhibit of the financial condition of the country, stated that the balance of 9,000,000 marks of the preceding year were, in this year, replaced by a deficit of the same amount.

The Diet of Württemberg was opened on February 6th by the King in person. In his speech from the throne, he announced important changes in the organization of the communes to be proposed by the Government, as well as propositions to secure the execution of the imperial laws. The second Chamber unanimously reelected Herr Hölder as its president. It adjourned, however, before the end of the month.

A change occurred in the Government of the Grand-Duchy of Hesse during 1877. The Grand-Duke Louis III. died on June 13th, and was succeeded by his nephew, Louis IV., who is married to Princess Alice of England.

On August 7th the Emperor William met Emperor Francis Joseph of Austria at Ischl. This meeting was said to have had no political significance, although the two Emperors, in all probability, held conversations on the question of the day—the Russo-Turkish War. (*See AUSTRO-HUNGARIAN MONARCHY.*)

On July 1st the Imperial Patent Office was organized; and, on July 7th, it announced its organization to the patent offices of the foreign Powers.

On May 1st Emperor William set out on a visit to the new province of Alsace-Lorraine. He was everywhere received with great demonstrations of joy and respect, particularly in the Lower Alsace, in and around Strasburg, where the population is chiefly German. But even in Metz and its vicinity, where the French element predominates, his presence was considered to have had a favorable influence, although the population showed a greater reserve in receiving him.

January 1, 1877, was the 70th anniversary of the entrance of Emperor William into the Prussian army. On this occasion he held a reception of all the commanding officers of the army. It was after the disastrous battle of Jena, when the troops of Prussia had been driven to the easternmost confines of the kingdom, that King Frederick William III. ap-

METZ, ALSACE-LORRAINE.

pointed his ten-year-old son to a military position.

On January 27th, Prince Frederick William, the eldest son of the Crown-Prince, was declared of age, having completed his eighteenth year. The occasion was celebrated very quietly, owing to the death of Princess Charles, the sister of the Empress.

On February 25th Prince William, the presumptive heir to the throne of Württemberg, was married to the Princess Marie of Waldeck-Pyrmont.

On September 8th an international exhibition of articles connected with the leather industry was opened in Berlin. The United States Consul-General at that city, in a report

to the Department of State, said that all of Germany, Austria, Hungary, Belgium, Denmark, Holland, Sweden and Norway, Switzerland, and the United States, were fully represented; England, Italy, and Russia but partly. The great feature of the exhibition was the exhibit made by the American firm of Larrabee & Co., of Mayence, in connection with the boot and shoe factory—running American machinery—of S. Wolf, of that city. This exhibit consisted of a full and complete set of all the best and most approved American shoe machines, tools, apparatus, and supplies, which, operated by 25 experienced workmen, turned out boots and shoes as in the most complete American factory. It was the first opportunity publicly afforded in Germany for the proper appreciation of the skill and perfection to which the manufacture of boots and shoes by machinery has attained in the United States, and the fullest and frankest tribute was paid to the ingenuity and enterprise displayed therein. The interest excited thereby must act most favorably on the introduction of American shoe machinery into Germany. The number of shoe factories now in Germany using American machinery is 40, with an average daily production of 14,000 pairs.

On April 30th a statue of Gauss, Germany's greatest mathematician, was erected in his native city, Brunswick, to commemorate in a fitting manner his one-hundredth birthday.

GOLDSBOROUGH, LOUIS MALESHERBES, an American naval officer, died in Washington, D. C., February 20, 1877. He was born in that city in 1805, and was appointed midshipman in 1812, and made lieutenant in 1825. During the Seminole War he commanded a company of mounted volunteers, and also an armed steamer. He was made commander in 1841; took part in the Mexican War, and was afterward senior naval officer of a joint army and navy commission on the Pacific coast. He became a captain in 1855, and from 1853 to 1857 was superintendent of the Naval Academy at Annapolis. In 1861 he was placed in command of the naval part of Burnside's expedition to North Carolina. He was made rear-admiral in 1862, commanded the European squadron in 1865-'67, commanded the navy-yard at Mare Island, California, in 1868, and subsequently the Washington Navy-Yard.

GORTCHAKOFF, ALEXANDER MICHAILOVITCH, Prince, the present Russian Chancellor, was born July 16, 1798. He is the oldest statesman in Europe, and also excels all others in his term of office. He received his education in the Lyceum of Zarskoye Selo, and, having completed his studies, entered upon his diplomatic career as attaché to Count Nesselrode, at the Congresses of Laibach and Verona. In 1824 he was appointed Secretary of Legation in London, in 1829 *Chargé d'Affaires* in Florence, and in 1832 Councillor of Legation in Vienna; in 1841, Ambassador in Stuttgart, where he negotiated the marriage of the Grand-Duchess Olga

with the Crown-Prince of Würtemberg; and in 1850, while at his position in Stuttgart, Russian Plenipotentiary to the German Bundestag. Having been transferred as Ambassador to Vienna in 1854, he represented the interests of Russia with such energy and success, that, in 1856, the Emperor Alexander appointed him Minister of Foreign Affairs. As such he improved every opportunity to oppose Austria, whose ambiguous policy during the Crimean War he considered as the basest ingratitude. The chief features of his policy, however, were to keep aloof as much as possible from all international complications, and to introduce such reforms as would tend to develop the immense resources of the Empire. All those internal reforms which mark the reign of Alexander II.—the abolition of serfdom, two thorough reorganizations of the army, the construction of an extensive railroad system, and the promotion of popular education—were his work. This policy he very fittingly expressed by his celebrated remark: "Russia collects herself." Until 1863, he kept almost entirely aloof from foreign questions, but in that year, on the occasion of the Polish insurrection, the European Powers attempted to meddle with that question, and he addressed such firm and energetic notes to the different Powers, that an immediate end was put to all diplomatic complications, while he became immensely popular with the people. During the German-French War of 1870 he took such a decided position in favor of Germany, that it was impossible for Austria to interfere with Prussia. On October 31, 1870, he addressed a circular note to the Powers, demanding the repeal of that clause of the Treaty of Paris which prohibited Russia from having an armed fleet in the Black Sea. As France was completely crippled, and Germany was on the side of Russia, the London Conference of 1871, which assembled to consider this request, granted it. The reconciliation with Austria was brought about in 1872, by the meeting of the three Emperors at Berlin. The war with Turkey in 1877 was certainly one of the boldest steps of his administration; and while the opinions of the civilized world greatly differed with regard to the justness of the war, the ability with which he had prepared for and taken this step was generally admired.

GOURKO, JOSEPH VLADIMIROVITCH, a Russian general, was born November 15 (old style, 3), 1828. He entered the army as cornet in the hussars of the Imperial Guard, and, after passing through the school of the general staff, was created captain in 1852. As such he took part in the Crimean War. In 1857 he was appointed commander of the squadron of the Emperor, in his old regiment of the Guards, and in 1860 was created adjutant to the Emperor. In 1861 he was promoted to colonel, took part in the campaign in Poland in 1863, was created a major-general in the suite of the Emperor in 1867, received the command of a

brigade in the second cavalry division of the Guards, and on September 11, 1876, was created lieutenant-general and commander of the same division. Although this division did not reach Bulgaria until September, he was on the Danube as early as June, and, at the head of an "advance corps," was ordered to advance as rapidly and as far as possible, without regard to the main army, and to alarm the whole of the Empire. This mission he fulfilled in the most successful manner. Leaving the Danube on June 27, he was, ten days later, in possession of Tirnova, and within another week beyond the Balkans. The result of this bold dash was thoroughly to alarm the whole country; even Constantinople being considered in danger. After the arrival of Suleiman Pasha, from Montenegro, however, General Gourko was forced to retreat to the Shipka Pass. He was then ordered to return to St. Petersburg, to take command of his own division, after having been previously created adjutant-general.

GRAY, HENRY PETERS, an American painter, was born in New York, June 23, 1819, and died there November 12, 1877. He entered the studio of Daniel Huntington in 1838, and in 1839 went to Europe, where he painted his pictures of "Thou Art Gone," the "Roman Girl," the "Billet-Doux," etc. Returning to New York in 1843, he executed a number of small pictures of genre and history; and, after another absence abroad in 1845-'46, during which he produced his "Teaching a Child to Pray," "Proserpine and Bacchus," "Cupid Begging His Arrows," etc., he settled in New York. Among the most important of his works are the "Wages of War," the "Apple of Discord," "Hagar and the Angel," "Portia and Bassanio," "Charity," "Geneviève," "Cleopatra," "St. Christopher," "I Fiori di Fiesole," and the "Origin of the American Flag." He also painted several hundred portraits. From 1869 to 1871 he was President of the National Academy of Design. In 1871 he went to Europe, and remained there until the close of 1874.

GREAT BRITAIN AND IRELAND, a kingdom of Western Europe. The Queen, Victoria, was born May 24, 1819. She is a daughter of Prince Edward, Duke of Kent, the fourth son of George III.; succeeded her uncle, William IV., as Queen of Great Britain in 1837; married in 1840 Prince Albert of Saxe-Coburg-Gotha.

Children of the Queen.—1. Princess Victoria, born November 21, 1840; married to the Crown-Prince of Germany. 2. Prince Albert Edward, heir-apparent, born November 9, 1841; married in 1863 to Princess Alexandra, daughter

of King Christian IX. of Denmark. Issue, two sons and three daughters; eldest son, Albert Victor, born January 8, 1864. 3. Princess Alice, born April 25, 1843; married in 1862 to Louis IV., Grand-Duke of Hesse. 4. Prince Alfred, Duke of Edinburgh, born August 6, 1844; married in 1874 to the Grand-Duchess Maria of Russia. He is heir-apparent to the Duke of Saxe-Coburg-Gotha. 5. Princess Helena, born May 25, 1846; married in 1866 to Prince Christian of Schleswig-Holstein-Sonderburg-Augustenburg. 6. Princess Louise, born March 18, 1848; married in 1871 to the Marquis of Lorne. 7. Prince Arthur, born May 1, 1850. 8. Prince Leopold, born April 7, 1853. 9. Princess Beatrice, born April 14, 1857.

The cabinet was composed as follows in 1876: First Lord of the Treasury, Right Hon. Benjamin Disraeli, Earl of Beaconsfield; Lord High-Chancellor, Right Hon. Lord Cairns; Lord President of the Council, Right Hon. Duke of Richmond and Gordon; Lord Privy Seal, the first Lord of the Treasury; Chancellor of the Exchequer, Right Hon. Sir S. H. Northcote, Bart., M. P.; Secretaries of State: 1. Home Department, Right Hon. R. A. Cross; 2. Foreign Affairs, Earl of Derby; 3. Colonies, Earl of Carnarvon; 4. War, Right Hon. G. Hardy, M. P.; 5. Colonies, Marquis of Salisbury. First Lord of the Admiralty, Right Hon. W. H. Smith, M. P. Postmaster-General, Right Hon. Lord John J. R. Manners, M. P.

Parliament is composed of two Houses, the House of Lords and the House of Commons. The number of peers in 1877 was 494. Of these, 5 were peers of the royal blood, 2 archbishops, 21 dukes, 19 marquesses, 129 earls, 32 viscounts, 24 bishops, and 262 barons. Of the total number, 16 were representative peers of Scotland, elected for the twenty-first Parliament, and 28 Irish representative peers, elected for life. The Speaker of the House of Lords was Lord Cairns, the Lord High-Chancellor, and the chairman of committees Lord Redesdale. The Speaker of the House of Commons was Henry Bouverie William Brand, and the chairman of committees Henry Cecil Raikes. The members of the House of Commons are elected by the people. The number of electors on register in 1876 was 2,340,763 in England and Wales, 295,420 in Scotland, and 230,773 in Ireland.

The following table gives the area and population of the United Kingdom according to the census of 1871, as well as the estimates of the Registrar-General (who does not include the islands in the British waters, nor the soldiers and sailors abroad), for 1875, 1876, and 1877.

COUNTRIES.	Acres.	Pop. in 1871.	Pop. in 1875.	Pop. in 1876.	Pop. in 1877.
England and Wales.....	37,319,221	22,712,266	23,944,459	24,244,010	24,547,809
Scotland.....	19,496,132	3,360,018	3,495,214	3,527,511	3,560,715

1874.....	24,451	141,288	91,961	49,327
1875.....	24,259	138,382	98,243	40,139
1876.....	26,503	140,438	92,499	47,939

The Registrars' Returns for 1876 show that in that year the birth-rate in the United Kingdom was 34.8 per 1,000 of the (estimated) population; in England the rate rose to 36.5, and in Scotland to 35.9, but in Ireland the registers show only 26.4 births per 1,000 persons living. The Returns for Scotland state that 8.6 per cent. of the births in that country were illegitimate; in the mainland rural districts as many as 10.5 per cent. A new Return introduced, relating to the 8 principal towns of Scotland, showed that in 1876 the ratio of illegitimate births to the number of the possible mothers of such children (i. e., unmarried women, including widows, between 15 and 45 years of age) ranged from 1.66 per cent. in Edinburgh to 2.57 per cent. in Aberdeen; it was 2.31 per cent. in Glasgow. The death-rate in the United Kingdom in 1876 was as low as 20.4 per 1,000 persons living; 21 per 1,000 both in England and Scotland, but only 17.4 per 1,000 in Ireland. The number of persons married in 1876 in England was higher than in any year except 1873 and 1874, but the ratio, which was 16.6 per 1,000 of the population, showed a slight further decline from the high ratios of 17.5 and 17.6 in those two years; in Scotland the number for 1876 has only once been exceeded—namely, in 1873, and the ratio, which was 15 per 1,000, exceeded the last 10 years' average, though it was not quite up to the high rate of 1873 and 1874. In Ireland the ratio of last year is returned at a fraction below 10 per 1,000, or a little short of the average. The marriage rate in England in 1876 ranged from 10.2 per 1,000 in extra-metropolitan Middlesex, and 11.6 in Cornwall and Herefordshire, to 19.3 and 19.5 in Nottinghamshire and Lancashire. The 1,154,631 births in the United Kingdom in 1876 were more by 477,722 than the deaths, this excess of births over deaths being nearly 92,000 greater than the excess in the preceding year. The 510,308 deaths in England and Wales in 1876 included 129,537 of infants under a year old; and though this num-

ber was equal to 146 per 1,000 births, it was a lower rate than in any year since 1862. There were 124,059 deaths of persons above 60 years old, or 68.3 per 1,000 persons of such age estimated to be living; in 1874 and 1875, the ratios were 72 and 77.5 respectively. The deaths in England and Wales in 1876 from the 7 principal zymotic diseases were 73,217, or 6,042 fewer than in the preceding year; the rate of this mortality in 1876 was equal to 3 per 1,000, and had been 3.8, 2.9, 3.6, and 3.3 in the four preceding years. There were 21,527 deaths from diarrhoea, 16,643 from "scarlet fever," 10,372 from "fever," 9,884 from whooping-cough, 9,551 from measles, 2,822 from diphtheria, and 2,418 from smallpox. The fatal cases of smallpox and measles were more numerous in 1876 than in 1875, but those from

each of the 5 other diseases declined. The Registrar-General considered that the steady decline in the prevalence of fever (including typhus, enteric, and simple) afforded most satisfactory evidence of sanitary progress. The annual death-rate from fever, which in the 6 years 1870-'75 had steadily declined from 79 to 52 per 100,000 persons living, further declined to 43 in 1876. The rate of mortality in 1876 was 22.3 per 1,000 in London, 23.1 in the West Riding of Yorkshire, but 26 per 1,000 in Lancashire. In the whole of England and Wales, excluding Lancashire, the death-rate was but 20.3 per 1,000. In equal numbers living 123 persons died in Lancashire in 1876, to 100 in the rest of England and Wales.

The number of emigrants from the United Kingdom during the years 1853-'76 was:

NATIONALITIES.	To the United States.	To British North America.	To Australia and New Zealand.	To other Countries.	Total.
English.....	928,898	181,128	476,863	91,109	1,677,998
Scotch.....	168,873	71,712	120,461	14,018	374,764
Irish.....	1,569,572	121,628	206,948	12,608	1,910,756
Foreigners.....	570,702	85,146	19,638	24,042	699,528

The following table gives the population of the principal cities in July, 1876, according to the estimates of the Registrar-General:

1. London.....	3,459,428	12. Newcastle-on-Tyne.....	139,929
(1877).....	3,538,487	18. Dundee.....	139,125
2. Glasgow.....	545,144	14. Hull.....	136,938
3. Liverpool.....	521,544	15. Portsmouth.....	124,867
(1877).....	527,083	16. Leicester.....	113,581
4. Manchester.....	357,917	17. Sunderland.....	108,343
{ Salford.....	138,425	18. Brighton.....	100,692
(1877).....	500,397	19. Aberdeen.....	96,499
5. Birmingham.....	371,339	20. Nottingham.....	93,627
(1877).....	377,436	21. Oldham.....	88,609
6. Dublin.....	314,666	22. Norwich.....	88,430
7. Leeds.....	291,530	23. Wolverhampton.....	72,549
8. Sheffield.....	274,914	24. Plymouth.....	72,230
9. Edinburgh.....	215,146	25. Greenock.....	70,192
10. Bristol.....	199,539	26. Leith.....	52,919
11. Bradford.....	173,723	27. Paisley.....	48,679

The receipts and expenditures from 1871-1877 were as follows:

YEARS.	Receipts.	Expenditures.	Surplus.
1871-'72.....	£74,708,314	£71,490,020	£3,218,294
1872-'73.....	76,608,770	70,714,445	5,894,322
1873-'74.....	77,835,657	76,466,510	869,427
1874-'75.....	74,921,878	74,823,040	598,838
1875-'76.....	77,181,698	76,621,773	509,920
1876-'77.....	80,099,052	79,563,276	230,776

The revenue and expenditure for the year ending March 31, 1877, were as follows:

RECEIPTS.	Gross Receipts.	Delivered to the Exchequer.
1. Customs.....	£20,044,263	£19,922,000
2. Excise.....	23,408,052	27,736,000
3. Stamps.....	11,126,494	10,590,000
4. Land-tax and house-duty..	2,545,352	2,532,000
5. Property and income tax...	5,340,718	5,280,000
6. Post-Office.....	6,021,267	6,000,000
7. Telegraph service.....	1,607,050	1,805,000
8. Crown lands.....	438,295	410,000
9. Miscellaneous.....	4,517,561	4,490,086
Total.....	£80,099,052	£78,565,086

The export of foreign and colonial products in 1876 amounted to £56,187,000, making a total export of £256,776,000.

The value of the principal articles of import and export for the year 1876 was as follows:

CLASSES OF GOODS.	Imports.	Exports.
Grain.....	£57,195,000	£994,000
Malt and other liquors.....	11,067,000	2,240,000
Colonial produce.....	42,392,000	1,968,000
Tobacco and cigars.....	3,991,000
Seeds and fruits.....	18,046,000	1,903,000
Animals and animal provisions.....	39,735,000	2,164,000
1. Articles of food.....	£172,426,000	£9,264,000
Fuel.....	£9,142,000
Minerals and ores.....	£1,855,000	628,000
Raw metals.....	10,358,000	19,255,000
Hairs, hides, and leather.....	12,799,000	2,691,000
Spinning material.....	79,029,000	758,000
Wood and timber.....	21,217,000
2. Raw material.....	£125,258,000	£22,474,000

CLASSES OF GOODS.	Imports.	Exports.
Pottery and glass-ware.....	£2,274,000	£2,688,000
Metals.....	1,892,000	10,862,000
Metal manufactures.....	1,024,000	9,374,000
Machines and vessels.....	2,485,000	2,181,000
Leather, etc.....	2,914,000	19,956,000
Cordage and twine, woven goods and clothing.....	20,857,000	90,671,000
Caoutchouc and wax goods.....	95,000	771,000
Paper.....	1,264,000	1,020,000
Wood carvings.....	582,000	1,407,000
Jewelry and productions of the fine arts.....	429,000	990,000
Manuscripts, articles for printing.....	150,000	887,000
Miscellaneous manufactures.....	659,000
3. Manufactured goods.....	£33,936,000	£140,211,000
4. Miscellaneous goods.....	£49,485,000	£18,690,000
Total merchandise.....	£375,155,000	£200,630,000
Precious metals.....	87,054,000	29,464,000
Total.....	£412,209,000	£230,108,000

* The exports for 1876 are those of British products only, while those for 1874 and 1875 comprise all others also.

The movement of shipping was as follows (in tons) :

YEARS.	ENTERED.			CLEARED.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
1. Total number entered and cleared :						
1860.....	6,889,000	5,284,000	12,173,000	7,026,000	5,491,000	12,517,000
1874.....	14,884,000	7,535,000	22,369,000	15,256,000	7,804,000	23,060,000
1875.....	15,191,000	7,502,000	22,693,000	15,754,000	7,830,000	23,584,000
1876.....	16,512,000	8,555,000	25,067,000	16,930,000	8,788,000	25,718,000
2. Laden ships entered and cleared :

Number of vessels used in 1876 (exclusive of river steamers) :						
Coasting.....	10,641	707,000	1,345	247,000	11,986	954,000
Coasting and long-voyage.....	1,200	185,000	287	134,000	1,487	319,000
Long-voyage.....	5,887	8,234,000	1,489	1,489,000	6,876	4,723,000
Total.....	17,228	4,126,000	3,121	1,870,000	20,349	5,996,000

The railroad statistics for 1876 were :

COUNTRIES.	Miles in Operation.	Capital.	Gross Receipts.	Net Receipts.
England.....	11,989	£514,832,000	£30,504,000	£24,010,000
Scotland.....	2,726	82,717,000	6,677,000	3,367,000
Ireland.....	2,157	30,665,000	2,737,000	1,303,000
Total, 1876.....	16,872	£653,214,000	£39,918,000	£28,580,000
" 1875.....	16,658	630,223,000	58,983,000	28,016,000

The number of letters sent in 1876 was 1,019,000,000. Of these 856,000,000 were in England and Wales, 91,000,000 were in Scotland, and 72,000,000 in Ireland. The number of newspapers and printed matter was, in 1876, 299,000,000. The number of postal-cards in 1876 was 93,000,000. The number of money-orders sent and received in 1876 was 18,100,000, amounting to £28,661,000. The number of post-offices in 1876 was 13,447. The number of registered letters delivered in 1875 in the United Kingdom was 4,300,000, and the number of returned letters 4,350,000. The number of post-office savings-banks, on December 31, 1875, was 5,260; the number of deposits, 3,132,433; the amount of the deposits, £8,783,852; the number of accounts open, 1,777,103.

The length of the telegraph-wires, at the close of 1876, was 176,353 kilometres (1 kilometre = 0.62 English mile), and of the lines 33,858 kilometres. The number of stations was 5,602. The number of dispatches, in 1873, was 17,294,334; in 1874, 19,116,634; in 1875, 20,766,277, and in 1876, 21,575,207, exclusive

of the press, the Government, and the "news" messages.

The British Army is filled up exclusively by recruiting. The term of service is 12 years, after which a soldier can serve for 9 years more. At the end of 3 years he can also enter the reserve, one year in the regular army being counted as three in the reserve. By the reorganization of 1872, the United Kingdom is divided into 68 military districts. In each district there is one brigade depot of 182 men, two battalions of the regular army, which alternately serve abroad, two battalions of militia, and the volunteers of the district. According to the army estimates for the year 1877-'78, the army was to be composed as follows :

TROOPS.	Officers.	Privates.	Total.
I.—REGULAR ARMY.			
1. Cavalry (31 regiments).....	845	16,402	17,247
2. Artillery.....	1,412	33,963	35,375
3. Engineers.....	824	4,887	5,711
4. Infantry (148 battalions).....	5,053	123,704	128,757
5. Colonial corps.....	124	2,357	2,481
6. Officers on the general and departmental staff.....	1,436	90	1,526
7. Army service corps.....	8	3,006	3,014
8. Army hospital corps.....	45	1,550	1,595
9. Miscellaneous establishments.....	105	561	666
10. Reserves of the regular army.....	1,500	36,000	37,500
Total regular army.....	11,352	222,520	233,872
II.—RESERVES.			
1. Yeomanry cavalry.....	789	14,041	14,830
2. Militia.....	3,239	131,261	134,500
3. Volunteers.....	174,509
Total reserves.....	323,839
Grand total.....	557,711

The regular army was distributed as follows:

TROOPS.	Great Britain.	Colonies.	India.	Total.
Cavalry (31 regiments)...	12,926	4,821	17,247
Artillery.....	19,706	3,570	12,099	35,375
Engineers.....	3,992	1,284	485	5,711
Infantry (148 battalions)...	65,984	16,976	45,797	128,757
Colonial corps.....	2,481	2,481
Army service corps.....	2,886	128	3,014
Army hospital corps....	1,838	262	1,595
Reserves.....	87,500	87,500
Miscellaneous establishments.....	1,808	834	2,192
Total.....	146,135	25,085	62,652	233,872

Besides the above, there are the following organizations: In Ireland there is a police force, under military discipline, consisting of 13,000 men and 4,000 horses; the Channel Islands have a militia of 300 officers and 8,000 men, subsidized by the British Government; India has a native army of 140,000 men, and a police force, under military discipline, of 190,000 men, the officers of both of which are Europeans; the colonies all have a militia, a volunteer corps, of their own. The home Government stations troops only at fortified places, except in the Cape Colony, where peculiar circumstances exist, and in places where policy demands it, as in Hong-Kong.

The Navy consists of 60 iron-clads, about 360 steamers, and 125 sailing vessels. Of this number 245 were in commission on September 1, 1877, 118 being at home, and 127 abroad. The Navy is manned by 46,560 seamen, 14,000 marines, and 20,840 men belonging to the Royal Navy reserve.

In 1876 the number of schools inspected by the Government inspectors was 14,875 in England and Wales, including the Isle of Man and the Roman Catholic schools for Great Britain, and 2,912 in Scotland, exclusive of the Roman Catholic schools. These schools had accommodations for 3,483,789 children in England and Wales, and 462,986 in Scotland. The average attendance was 2,007,732 in England and Wales, and 332,545 in Scotland. In Ireland there were, on December 31, 1875, 7,104 national schools, with 1,011,799 pupils enrolled, and an average daily attendance of 389,961. In England the number of paupers relieved in 1876-'77 was 728,350. Scotland in 1876 had 100,105 paupers. In Ireland the number of paupers was 73,528.

The finances, commerce, and the movement of shipping of the British colonies, in 1875, were as follows, according to the "Statistical Abstract for the Colonial and other Possessions of the United Kingdom, 1860-1875" (London, 1877):

COLONIES.	Income.	Expenditures.	Debt.	Imports.	Exports.	Movement of Shipping (Tons).

The statistics of Industrial and Provident Societies in England and Wales in 1875 were given in a Parliamentary Blue Book issued in June, 1877, as follows. They were 926 in number, and the amount insured was £2,524,401. The number of members at the end of the year was

420,024, admitted during the year 73,454, and withdrawn during the year 36,700. Of share capital the amount at the end of the year was £4,477,988; the amount credited during the year was £1,812,522; the amount debited during the year, £1,888,975. The loan capital

shows the amount at the end of the year to have been £742,073; credited during the year, £324,810; and debited during the year, £158,422. The trade accounts set forth "goods" paid for in the year, £14,070,559; cash received for goods in the year, £16,176,570; and the average stock-in-trade, £1,856,397. The total expenses in the year were £714,604, and the interest on share loans and other capital, £216,218. Under the head of "liabilities and assets," the entire liabilities were, in the year,

£5,659,035; reserve fund, £220,011; and the entire assets, £6,199,266. The value of buildings, fixtures, and land, £1,894,646; capital invested with other industrial and provident societies, £636,400; and the capital invested with companies incorporated under the Companies' Act, £538,140. The disposable net profit realized from all sources during the year was £1,248,602; the declared dividends due to the members during the year, £1,117,870; dividends allowed to non-members in the year,

LONDON AND ITS ENVIRONS.

£18,555; and the amount allowed for educational purposes during the year, £10,454.

Parliament was opened on February 8th, by the Queen in person. The following is the speech from the throne:

MY LORDS AND GENTLEMEN: It is with much satisfaction that I again resort to the advice and assistance of my Parliament.

The hostilities which, before the close of last session, had broken out between Turkey on the one hand and Servia and Montenegro on the other, engaged my most serious attention, and I anxiously waited for an opportunity when my good offices, to-

gether with those of my allies, might be usefully interposed. This opportunity presented itself by the solicitation of Servia for our mediation, the offer of which was ultimately entertained by the Porte. In the course of the negotiations I deemed it expedient to lay down and, in concert with the other Powers, to submit to the Porte certain bases upon which I held that not only peace might be brought about with the Principalities, but the permanent pacification of the disturbed provinces, including Bulgaria, and the amelioration of their condition, might be effected. Agreed to by the Powers, they required to be expanded and worked out by negotiation or by conference, accompanied by an armistice. The Porte, though not accepting the bases, and pro-

posing other terms, was willing to submit them to the equitable consideration of the Powers. While proceeding to act in this mediation, I thought it right, after inquiry into the facts, to denounce to the Porte the excesses ascertained to have been committed in Bulgaria, and to express my reprobation of their perpetrators. An armistice being arranged, a Conference met at Constantinople for the consideration of extended terms in accordance with the original bases, in which Conference I was represented by a special envoy, as well as by my ambassador. In taking these steps, my object has throughout been to maintain the peace of Europe, and to bring about the better government of the disturbed provinces without infringing upon the independence and integrity of the Ottoman Empire. The proposals recommended by myself and by my allies have not, I regret to say, been accepted by the Porte; but the result of the Conference has been to show the existence of a general agreement among the European Powers, which cannot fail to have a material effect upon the condition and government of Turkey. In

the mean time, the armistice between Turkey and the Principalities has been prolonged, and is still unexpired, and may, I trust, yet lead to the conclusion of an honorable peace. In these affairs I have acted in cordial coöperation with my allies, with whom, as with other foreign Powers, my relations continue to be of a friendly character. Papers on these subjects will be forthwith laid before you.

My assumption of the Imperial title at Delhi was welcomed by the chiefs and people of India with professions of affection and loyalty most grateful to my feelings. It is with deep regret that I have to announce a calamity in that part of my dominions which will demand the most earnest watchfulness on the part of my Government there. A famine not less serious than that of 1873 has overspread a large portion of the Presidencies of Madras and Bombay. I am confident that every resource will be employed, not merely in arrest of this present famine, but in obtaining fresh experience for the prevention or mitigation of such visitations for the future.

The prosperity and progress of my Colonial Em-

TRAFALGAR SQUARE, LONDON.

pire remain unchecked, although the proceedings of the Government of the Transvaal Republic, and the hostilities in which it has engaged with the neighboring tribes, have caused some apprehensions for the safety of my subjects in South Africa. I trust, however, that the measures which I have taken, will suffice to prevent any serious evil.

GENTLEMEN OF THE HOUSE OF COMMONS: I have directed the estimates of this year to be prepared and presented to you without delay.

MY LORDS AND GENTLEMEN: Bills relating to the Universities of Oxford and Cambridge, and for amending the Law as to Bankruptcy and Letters Patent for Inventions, will be laid before you.

Your attention will be again called to measures for promoting economy and efficiency in the management of the Prisons of the United Kingdom, which will, at the same time, effect a relief of local burdens.

Bills will also be laid before you for amending the Laws relating to the Valuation of Property in England, for simplifying and amending the Law relating to Factories and Workshops, and for improving the Law regulating the summary jurisdiction of Magistrates.

Legislation will be proposed with reference to Roads and Bridges in Scotland, and the Scotch Poor Law.

You will be asked to constitute one Supreme Court of Judicature in Ireland and to confer an equitable jurisdiction on the County Courts in that country.

I commend to you these and other measures which may be submitted for your consideration, and I trust that the blessing of the Almighty will attend your labors and direct your efforts.

In the House of Lords the address was moved and seconded respectively by Lord Grey de Milton and Lord Haddington, after which Earl Granville criticised the conduct of the Government with respect to the Bulgarian atrocities, and declared that Turkey should be required to do justice. Lord Derby maintained that the Conference had not been a failure, as the prospects of peace were certainly not diminished. The Duke of Argyll made a sharp attack upon the Government, to which Lord Beacons-

field replied, Lords Cardwell and Salisbury also making brief speeches. In the Commons, after the address had been moved, Lord Hartington made some general remarks, and, referring to the Eastern question, spoke severely of Earl Beaconsfield's speeches as opposed to the sense of the country. The Chancellor of the Exchequer vindicated the policy of the Government, which, he said, had been consistent throughout, and Mr. Gladstone contended that it had been shaped by the feeling of the country caused by the Bulgarian atrocities, and he insisted that Turkey could not be allowed to govern her European provinces free from European control.

On February 20th, the Duke of Argyll made a bitter attack in the House of Lords on the Gov-

European Power. But except on these points he could conceive of no injury to Great Britain by any transfer of power from the Turkish Empire. He pointed to the various instances where European Powers, while professing to respect the independence guaranteed to Turkey by the Treaty of Paris, had interfered in Turkish affairs in a way that showed they regarded Turkish justice as utterly unworthy of confidence. It was necessary to carry this argument further in the sense indicated by the Marquis of Salisbury, when he declared the independence of Turkey might at the present time be interpreted so as to be consistent with the joint military and diplomatic action of the guaranteeing Powers. The speaker concluded with an eloquent appeal to the Earl of Beaconsfield to mark the close of his career by procuring some measure of liberty for the Christians in Turkey.

Lord Derby, who followed the Duke of Argyll, argued that the Conference could not be called a failure, since it had undoubtedly been the cause of considerable changes. The Conference was summoned, first, to maintain the peace of Europe, and, secondly, to improve the Turkish administration. "It cannot be said that the peace of Europe has been broken." Whatever might be the value of the respite which the Conference had given in this respect, the friends of the Turkish state, among whom the allied Governments must be reckoned, might be allowed to hope something from the promises of reform which had been again made, this time under circumstances which would insure an attempt to fulfill them.

On the 26th of February Lord Stratheden moved an address to the crown, praying for the observance of the treaties which, in his view, bound Great Britain to maintain the integrity of the Ottoman Empire. The motion met with no support from either side of the House, and, after a short debate, was negatived. In both Houses the opposition continued to question the Government on the Eastern question. The negotiations with the other Powers finally led to the signature, on March 31st, of the Protocol (*see* TURKEY). On April 26th, Earl Granville, in

ST. PAUL'S CATHEDRAL, LONDON.

ernment. In the course of the debate he pointed out that the object of the Marquis of Salisbury's mission had been to secure peace in Europe and reform in Turkey. Neither of these objects had been attained. Turkey was not reformed, and there was no prospect of peace in Europe. He deprecated the unreasonable suspicion of Russia which actuated English policy up to August last. He admitted that England had a great interest in the neutrality of Egypt and in preventing Constantinople from falling into the hands of any great

the House of Lords, referred to the papers relating to the Protocol, and asked that the draft of the document originally proposed by Russia should be laid before Parliament. He criticised the conduct of the Government as manifesting undue suspicion of Russia, and questioned the propriety of the refusal to adhere to the Berlin Memorandum. Earl Derby, in reply, intimated that the declaration appended to the Protocol was intended to prevent that document from being used otherwise than as an instrument of peace, and he spoke very doubtingly of the prospect of avoiding hostilities between Russia and Turkey. He declined to produce the draft of the Protocol, as the Russian Government objected. In the Commons, on April 18th, Lord Hartington moved for additional papers, and, in a speech of some length, he condemned the policy of the Government which, in his opinion, had led to the

existing unsatisfactory state of the Eastern question.

The great event of the session took place on April 30th. On that day, Mr. Gladstone read out at length the five resolutions which he proposed to move in reference to the prospective policy of the British Government on the Eastern question. The first recorded the dissatisfaction of the House at the conduct of the Ottoman Porte with regard to Lord Derby's dispatch on the Bulgarian atrocities; the second declared that, until such conduct should have essentially changed and substantial guarantees for future good government had been given, the Ottoman Porte had lost all claim to the moral and material support of the British crown; the third expressed a desire that British influence should be used to secure local liberties and practical self-government for the disturbed provinces, so as to secure them from

WESTMINSTER ABBEY, LONDON.

oppression without imposing on them any other foreign dominion; and the fourth, calling to mind the Protocol of 1826 and the treaty of 1827 with respect to Greece, expressed an earnest desire that the influence of the British Government should be addressed to promoting the concert of the European Powers in exacting from the Ottoman Porte, by their united authority, such changes as may be effectual for the purposes of humanity, for defense against intrigue, and for securing the peace of Europe. The fifth combined all the other four, and asked that an address to the crown, embodying them, should be prepared and presented.

The debate on these resolutions began on May 7th, with a preliminary inquiry from Mr. Trevelyan whether Mr. Gladstone would modify his second resolution, and would abstain from moving the third and fourth. Mr. Glad-

stone agreed to the first suggestion, and said that after the division on the second resolution, he might not press the others. Mr. Trevelyan's amendment to the second resolution read as follows:

The House is of opinion that the Porte, by its conduct toward its subject populations, and its refusal to give guarantees for their better government, has forfeited all claim to the moral and material support of Great Britain.

During a preliminary discussion as to whether the House should suspend the ordinary business so as to permit Mr. Gladstone to move the resolutions, Mr. Gladstone explained that he had given notice of his resolutions, in response to repeated challenges from the ministers, and in order that the opposition should declare its views in the House. He had never proposed a removal of the ministry, but had

asserted the necessity of a modification of their policy. He desired no party advantage, but he wanted to relieve his country from a most serious risk of dishonor and guilt. He would be the basest of men if, believing that danger existed, he did not endeavor to avert it.

After the House had agreed to suspend the ordinary business, Mr. Gladstone, in moving his first resolution, said he did not intend to move a censure on the Government, because he did not see what public interest would be thereby promoted. He did not refrain because he believed them uncensurable, for he knew no chapter in the history of the last 60 years of the foreign policy so deplorable as that of the last 18 months. He repeated his former accusations as to Sir Henry Elliot's encouragement of the Turks during the Conference. The Conference became a farce from the moment Turkey was informed that England would not enforce any decision that might be arrived at.

was to be determined by what might be considered British interests. The reforms in the Turkish Constitution, in which Lord Derby had expressed disbelief, were revived in Earl Derby's answer to Prince Gortchakoff's circular. In that answer, Lord Derby, not expressing the feeling of the country, had ventured, in the name of the country, to rebuke the Power which had made itself the organ of the united Governments, and the solemn conclusions of Europe. He (Mr. Gladstone) looked with some suspicion on the movement of Russia alone. The settlement of the question by Austria and Russia would be unsatisfactory, because, as neighboring states, they are exposed to great temptations. But the conscience of mankind would no longer be content with remonstrances and expostulations. If England is not ready to advance, she must be prepared to see the duty pass into other hands. Mr. Gladstone declared that the Porte, especially Midhat Pasha, direct-

ly instigated the atrocities. It was incompatible with the honor of England to be content with protests and remonstrances after the atrocities had been mentioned in a royal speech. No British interest, Mr. Gladstone continued, was endangered. Russia was not mad enough to touch British interests. She knew England had given her a good position. She could plead that what she asked is what all Europe asked. But others were content with refusal and she was not. It was a terrible thing to infuse into the minds of the Turkish Christians that

THE TOWER, LONDON.

There was a power behind Lord Salisbury which determined he should not succeed, and when the Porte was informed of the fact it drew from the Grand Vizier expressions of gratitude to Lord Beaconsfield. Mr. Layard's mission was another mistake, because Mr. Layard is a partisan of Turkey. A declaration by the House that Turkey had lost all claim to the moral and material support of England was, in his opinion, necessary, because, under the name of moral support, as much had been done as might at some not distant day be done in the name of protection of British interests. The squadron sent to Besika Bay to protect Christians had been increased to a fleet to overawe the seaboard provinces of Turkey. For the last two or three months England had been relapsing into the position where outrages were to be regarded as a matter of sentimental regret, action in regard to which

Russia was their only hope. The Eastern question could no longer be trifled with. It could only be satisfactorily settled by the united action of Europe. His complaint against the Government is, that whenever they had seemed to concur in promoting united action they had always done so under conditions that rendered it futile. He personally adhered to all the resolutions he had originally placed on paper, but was thankful for Lord Hartington's aid as far as it went, and would feel even more thankful for the aid of the Government, because he fully recognized the importance of unanimity. The cause of those who revolted against their Turkish oppressors was one of the noblest that ever animated a human breast. Whether England now defended or deserted the cause of oppressed nationalities, the knell of Turkish tyranny had sounded; its downfall, come from whose hands it might, would

be gladly accepted by Christendom and the world.

Mr. Cross replied, defending the Government from an imputation of indifference to the ill-treatment of the Christians in Turkey, and vindicating the policy they had pursued as one of neutrality; whereas that recommended in the resolutions was, he maintained, one of war against Turkey. The debate on the resolutions continued during the entire week, and on Monday of the following, when the division was taken. The first resolution was rejected by a vote of 354 to 223. The other resolutions were not put.

Mr. Gladstone at first met with considerable opposition in his own party, which, at one time, threatened a split among the Liberals. Even at the division on the first resolution on May 14th, 25 of the opposition voted against Mr. Gladstone, among these being the Marquis of Lorne, Mr. Lambert, Mr. Roebuck, and Sir Nathaniel Myer de Rothschild. An interesting contribution to the discussion was furnished by Mr. Thomas Carlyle in a letter to *The Times* on May 4th. The letter was as follows:

SIR: A rumor everywhere prevails that our miraculous Premier, in spite of his Queen's proclamation of neutrality, intends, under a cover of a care for British interests, to send the English fleet to the Baltic, or do some other feat which shall compel Russia to declare war against England. Latterly the rumor has shifted from the Baltic, and become still more sinister on the eastern side of the scene, where a feat is contemplated that will force, not Russia only, but all Europe, to declare war against us. This latter I have come to know as an indisputable fact—in our present affairs and outlooks surely a grave one. As to British interests, there is none visible or conceivable to me except taking strict charge of our route to India by Suez and Egypt, and for the rest resolutely altogether steering clear of any copartnery with the Turk in regard to this or any other British interest whatever. It should be felt by England as a real ignominy to be connected with such a Turk at all. Nay, if we still had—as, in fact, all ought to have—a wish to save him from perdition and annihilation in God's world, the one future for him that has any hope in it is even now that of being conquered by the Russians and gradually schooled and drilled into a peaceable attempt at learning to be himself governed. The newspaper outcry against Russia is no more respectable to me than the howling of bedlam, proceeding as it does from the deepest ignorance, egotism, and paltry national jealousy. These things I write not on hearsay, but on acute knowledge, and to all friends of their country will recommend immediate attention to them, while there is yet time, lest in a few weeks the maddest and most criminal thing that a British Government could do should be done, and all Europe kindle into the flames of war. I am, etc.,

T. CARLYLE.

Even in the cabinet grave dissensions existed, and nominal unity was only restored on May 5th, after an angry discussion in the cabinet, and by the threatened resignation of four of its members. Earl Beaconsfield was in favor of a violent and sensational policy. The British fleet had been ordered to rendezvous at Corfu with sealed instructions to sail for the Bosphorus, and there was every probability that an armed demonstration in favor of the

Turks would be made. Mr. Gladstone's resolution put matters in an entirely different position; and when the cabinet met, on May 5th, several members declared that they would not then sanction an armed demonstration on the Bosphorus. These four, to whom the country owed the final decision in favor of neutrality, were Lord Salisbury, Sir Stafford Northcote, Lord Carnarvon, and Mr. Cross.

On May 31st Mr. Gladstone addressed a meeting at Birmingham on the policy of the Government on the Eastern question. The assemblage consisted of upward of 25,000 persons, and Mr. Gladstone was loudly cheered at various points of his speech. In the course of his speech, he said: "How is it possible to place reliance upon the policy of the Government? What is it to-day, and what will it be to-morrow? What was it when Lord Beaconsfield spoke at the Guildhall? What was it when Lord Salisbury, in Constantinople, uttered, in manly tones, sentiments worthy of a British statesman? To which of these colors does the Government ultimately mean to adhere? Its policy is a policy of zigzag and seesaw. But, unfortunately, I am driven to the conclusion that when it moves in the right direction it moves under popular pressure; but when that pressure is withdrawn, it is apt to move in the wrong one. . . . The truth is, ladies and gentlemen, it would hardly be an exaggeration to say that we have not one Government, but two—one pulling in one direction, conformably to public sentiment, the other placed nearer to the springs of action, steadily and constantly watching, and upon the slightest appearance of even tacit remission in the manifestation of public feeling turning its course directly in the old sense of virtual assistance to the Turks, like the 'dog returning to its vomit, or the sow to its wallowing in the mire.'"

In the beginning of July, several of the Irish members began to adopt measures to delay the business of the House. On July 2d the army estimates were considered in Committee of Supply; but at a quarter to one o'clock on the morning of the 8d, Mr. O'Connor Power moved to report progress, which motion, being defeated by 128 to 8, was followed by no less than 16 motions of a similar character, in which the minorities finally fell to 5 votes. Four motions to count the House were also made, the last of which, at 12 minutes past 7 in the morning, was successful. At the session of the following day, complaints were made by several members of the inconvenience and unseemliness of the course adopted by a few members, and the Chancellor of the Exchequer intimated that it would be his duty to consider the rules of debate—a statement which elicited the loudly-expressed approval of the House.

In the beginning of July, the British fleet returned to Besika Bay, after an absence of 6 months. This action of the Government was freely commented on, so that, on July 6th, the Chancellor of the Exchequer considered it de-

sirable to explain to the House of Commons that the removal of the fleet to Besika Bay was for the convenience of communication with the Government at home and the ambassador at Constantinople, and was in no way intended as a menace. The dilatory tactics of the obstructionists were again made use of on July 24th and 25th. Repeated appeals were made to the Chairman, and at last the Chancellor of the Exchequer required some words uttered by Mr. Parnell to be reported to the Speaker, who requested Mr. Parnell to leave the House, which he did, but shortly afterward returned and joined his friends in renewed opposition to the Government. But the most extraordinary scene ever witnessed in the House of Commons occurred on July 31st. At 6 o'clock on the evening of that day, the House went into Committee of the Whole on the South African bill. At once the trouble began. Every device in the shape of amendments on which the House could be divided was resorted to. At an early stage the motion that progress be reported was resorted to. It simply means that no more business can be

nell, for County Dungarvan; Captain Nolan, for County Galway; Harley Kirk, for County Louth; and Edward Dwyer Gray, for County Tipperary. Many of the English members left the House at 9 o'clock, to return at midnight; a fresh relay arrived at 4 o'clock. The obstructionists now found the work telling on them, and adopted the tactics of their opponents, and rested in turn. The door-keepers, policemen, and even the Chairman, were relieved from time to time. Several incidents occurred during this session which were almost without precedent, and which created the greatest indignation throughout Great Britain. Sir Stafford Northcote, the Chancellor of the Exchequer, declared in one of the momentary pauses that the Government intended to pass the bill if they had to sit through the vacation. Upon this, Mr. O'Connor Power charged the Government with having organized a conspiracy to crush the Irish members. Immediately the House was in a tumult. The Chairman demanded the withdrawal of the word "conspiracy." Mr. Power tried to explain, but the cries of "Withdraw" drowned his voice, and

he was finally compelled to withdraw the expression. Later on, Mr. Gray, of the obstructionists, said the responsibility for the demoralization of the House rested on Sir Stafford Northcote. Strong measures should have been taken at first. Sir William Vernon-Harcourt, Liberal member for the city of Oxford, said the reason that stronger action was not taken was, not on account of the weakness of the House, but to show the character of the contumaciousness to the country, and to give the obstructionists rope enough. Mr. Gray cried, "Hear, hear!"

BUCKINGHAM PALACE, LONDON.

done on that measure. Again and again did the members file out to the lobby for division, and return to their seats and file out again. But the Government had made preparations to wear out the resistance of the obstructionists by physical means. It was arranged that the House should be attended night and day by relays of fresh members, who were to carry on the fight until exhausted nature compelled the faithful to succumb. The leaders of the opposition cheerfully gave their assistance. The names of the seven who thus effectually succeeded in obstructing the business of the House were, Mr. Parnell, member for County Meath; Mr. Biggar, for County Cavan; O'Connor Power, for County Mayo; Francis Hugh O'Don-

sneeringly. Sir Patrick O'Brien, a Home-rule member for King's County, objected to this, and intimated that Mr. Gray was a "humbug" and a "damned fool," which expressions he had to withdraw as unparliamentary. The session continued in this manner for 26 hours. Within recent history there has been scarcely a parallel to this sitting. The House of Commons sat 25 hours on the Slavery-Emancipation bill, but not on account of obstructions. The South African bill was read for the third time, and passed on August 4th. In the Commons, on August 10th, the Chancellor of the Exchequer declined to say whether the Government would regard the temporary occupation of Constantinople by the Russians as so far in-

consistent with British interests as to disturb the friendly relations of Great Britain with Russia. On the 11th, Mr. Fawcett asked a pledge from the Government, that, if during the ensuing recess they felt it necessary to depart from their attitude of neutrality, they would call Parliament together before taking any decisive step. The Chancellor of the Exchequer replied that the Government were fully aware of their constitutional obligations, and determined to act up to them. On August 14th, Parliament was prorogued till Tuesday, October 30th. On that day it was still further prorogued till December 19th, and on the latter day again till January 17, 1878. Numerous speeches were made by the members of the cabinet and the Liberal leaders during the recess. At the Lord Mayor's banquet, on November 9th, Lord Beaconsfield, in referring to the Eastern war, eulogized the bravery of the Turks, and, without expressing a hope of an early peace, said he did not despair of it. With the pledge of the Czar, that he did not aim at aggrandizement, and the promise of the Sultan, that reforms should be carried out in his territories, there ought, the Premier thought, to be grounds for a settlement.

The Turkish reverses in the latter part of the year created great excitement in England. After the fall of Kars, the Conservative journals declared that the time had come when the Government must change its policy of a conditional neutrality into one of armed neutrality. On November 28th a deputation from three Turkophile societies called upon Earl Derby and presented a memorial to him, urging the Government to depart, if they could, from their policy of inaction, and by some means or other bring about a desirable peace. Earl Derby, in reply, took exception to some of the views expressed, but said that England could not see with indifference the transfer of Constantinople to a foreign Power, and the Government would certainly avail itself of any opportunity of promoting peace.

On February 9th, Mr. Cross introduced the so-called Prisons bill, similar to that of last year. The Government in this bill proposed, instead of continuing its practice of contributing to the local rates, to take into its hands the whole cost, control, and management of prisoners from the date of their commitment. By this means, Mr. Cross believed it would be possible to redistribute the prisons in accordance with the wants of the population, to equalize the discipline, and to establish a uniform system of management. On June 14th, three new clauses, moved by Mr. Parnell, were agreed to: providing that the test of malingering should only be applied with the authority of the Visiting Committee; that no prisoner should be confined by a jailer for more than 24 hours; and that no person engaged in any trade with the prison should act as juror on an inquest held on the body of a prisoner. The bill was finally passed, on its

third reading, on June 19th in the Commons, and on July 10th in the Lords.

On July 16th, the Government suffered a defeat, in the rejection, by the House of Commons, of Mr. Piggott, who had been appointed Controller of the Stationary Office by Earl Beaconsfield. It was claimed that, although he was an able man, still he did not possess those abilities needed for the office; Mr. Holmes consequently moved a resolution censuring the appointment, which, he contended, was an injustice to the other officers of the department, and an affront to the Parliamentary Committee, whose recommendations had been ignored. The motion was seconded by Mr. Mellor, a Conservative member; and, after a debate, the motion was carried by a majority of four. This resolution was, however, rescinded shortly after by a unanimous vote, upon an explanation made by Earl Beaconsfield.

ALBERT MEMORIAL MONUMENT, LONDON

Among other bills of the session which were passed were the University act, enabling the Universities of Oxford and Cambridge to extend more generally the benefit of the higher education; for reorganizing the Superior Courts of Justice in Ireland; and for reforming and conferring an extensive equitable jurisdiction on the county courts. The number of private bills introduced into the House of Commons during the session of 1877 was 272, including 108 railway bills, 19 water bills, 32 gas bills, 16 dock, navigation, pier, and harbor

bills, 12 tramway bills, 35 bills for the improvement of towns, and 6 for the erection of bridges and subways, the remainder being principally bills for the extension of patents, for the improvement of private estates. Two personal bills—viz., Beamish's Divorce and the Gregory Heirlooms bills—received the royal assent, as well as one under the title of the "Brighton and London Sea-water Supply Bill." The great majority of the above measures became law; but 54 failed to receive the royal assent; 23 of them, after passing the Lords, where they originated, did not reach a first reading in the House of Commons.

In July, Earl Derby decided, with a view to the reorganization of the consular service in Turkey, Persia, and Egypt, to institute a corps of student dragomans, to be selected by open competition, and instructed in Oriental languages at the public expense. The dragoman and consular services in those countries were eventually to be amalgamated; and admission to them should be obtained by passing through the grade of student dragoman. These are to be selected by open competition, after examination by the Civil Service Commissioners, who will give public notice beforehand of the subjects of such examination, and of the time when it will be held. They will proceed, as soon as possible after their appointment, to Constantinople, where they will be under the orders of the British Ambassador, and of a member of the embassy specially appointed to superintend them. They will be provided, at the public expense, with lodgings in the neighborhood of Constantinople, and also with instruction in languages, and shall receive a salary of £200 a year. They are to devote themselves, in the first place, to the study of the Turkish, Persian, and Slav languages, and of Mussulman law; and, in the next place, they are to qualify themselves for the public service. They will, when qualified, be eligible for employment as dragomans and in the consular service in the East, as vacancies occur.

The eleventh triennial conference of the Society for the Liberation of Religion from State Patronage and Control (known as the Liberation Society) was held in London, April 30th. Mr. Joseph Chamberlain, M. P., presided. The President, in his opening address, put forward the claim that a great advance had been made in the views advocated by the society within a few years; then, the principle for which the society contended (disestablishment) was now admitted in many cases, even by its opponents; and the question was fast becoming one mainly of policy. The receipts of the society during the past year had been £15,035 13s. 5d., and its expenditures £14,873. The report of the society reviewed the results of its operations since its last previous triennial meeting. Its plans had been extended, and it had attracted a largely increased degree of public attention. It had now 35 local agents, and had carried on its work in the rural par-

ishes as well as in the larger towns. About 2,600 meetings had been held in the three years, and the subject of disestablishment was now discussed in connection with other organizations. Between five and six millions of publications had been distributed. Of the £100,000 which it had been resolved to raise, upward of £42,000 had been received and expended, "and the rest would come in when it was wanted." Under the head of "Parliamentary Work," the Endowed Schools and Education acts, and the Universities and Burials bills, were referred to. The Patronage act had had the effect of stimulating the movement in Scotland, where the society was about to act with increased vigor. A resolution of sympathy was passed with Mr. Gladstone's efforts in behalf of the Christian subjects of the Porte, with a protest against the Government aiding Turkey.

The British Empire was considerably enlarged in 1877 by the annexation of the Transvaal Republic, in South Africa. The territory thus acquired embraces 114,358 square miles, with an estimated population of 315,000. (*See TRANSVAAL REPUBLIC.*)

GREECE,* a kingdom of Southeastern Europe. Reigning King, George I., King of the Hellenes, born December 24, 1845, second son of the reigning King of Denmark; elected King of the Hellenes by the National Assembly at Athens, March 18 (30), 1863; accepted the crown June 4, 1863; declared of age by a decree of the National Assembly, June 27, 1863; married, October 27, 1867, to Olga, daughter of Grand-duke Constantine of Russia, born August 22, 1851. Issue of the union are three sons and two daughters: Constantinos, Duke of Sparta, born August 2, 1868; George, born June 25, 1869; Alexandra, born August 30, 1870; Nicholas, born February 9, 1872; Maria, born March 8, 1876.

The area of the kingdom amounts to 19,353 square miles; the population, according to the census of 1870, to 1,457,894 persons.

In the budget for 1877 the revenue was estimated as follows (1 drachma = 19.3 cents):

	Drachmas.
1. Direct taxes.....	11,605,000
<i>a.</i> Land tax, tithe.....	8,500,000
<i>b.</i> Duty on cattle and pastures....	1,245,000
<i>c.</i> Duty on beehives.....	60,000
<i>d.</i> Licenses.....	950,000
<i>e.</i> Taxes on edifices.....	850,000
2. Indirect taxes.....	18,155,000
<i>a.</i> Customs.....	18,400,000
<i>b.</i> Stamp.....	4,200,000
<i>c.</i> Miscellaneous.....	555,000
3. Produce of national property.....	2,580,000
4. Public service.....	1,155,000
<i>a.</i> Posts.....	650,000
<i>b.</i> Telegraphs.....	500,000
<i>c.</i> Printing-office.....	4,800
5. Sale of national property.....	8,000,000
6. Miscellaneous receipts.....	956,000
7. Ecclesiastical receipts.....	296,000
8. Arrears.....	1,500,000
Total revenue.....	\$89,247,000

* See ANNUAL CYCLOPEDIA of 1874 for statistics on the population of large cities, on nationalities, on religious denominations, and on education; and ANNUAL CYCLOPEDIA of 1876 for commercial statistics.

The expenditures were estimated as follows:

	Drachmas.
1. Interest on foreign debt.....	1,246,000
Interest on internal debt.....	7,287,749
2. Pensions.....	8,518,000
3. Civil list.....	1,125,000
4. Salaries of deputies.....	450,000
5. Department of Finance.....	1,358,270
6. " Foreign Affairs.....	1,127,196
7. " Justice.....	8,016,048
8. " Interior.....	4,802,745
9. " Worship and Education.....	2,111,949
10. " War.....	7,687,104
11. " Marine.....	2,114,705
12. Cost of general administration.....	2,773,262
13. Miscellaneous expenditures.....	2,204,000
Total.....	41,067,023

The actual budgets of the kingdom differ, however, widely from the budget estimates. Since the establishment of Greece as an independent kingdom, there have been few financial terms without a deficit.

The foreign debt, according to Mollet and Wyndham (in reports by his Majesty's secretaries of Embassy and Legation, 1875 and 1877), amounted, at the close of 1874, to 335,513,422 drachmas; the home debt, in 1877, to 147,569,480: total debt to 483,082,902.

Every Greek subject is now liable to military service for 30 years from his 20th year: 3 years in the active army, 7 years in the reserves

men capable of bearing arms between the ages of 18 and 50. According to the law of July 18, 1877, the active army is to be composed as follows: 8 infantry regiments of 2 battalions or 8 companies each; 4 battalions of chasseurs of 4 companies each; 1 regiment of ar-

of the active army, 10 years in the landwehr, and 10 years in the reserve of the landwehr. The Government may also form foreign legions; and, in case of an invasion, may call out all

tillery of 12 batteries (8 field and 4 mountain batteries); 1 regiment cavalry of 5 squadrons; 1 battalion of sappers of 6 companies; and 2 companies of nurses. These troops form 2 divisions, each of 2 brigades. According to the expectations of the Minister of War, 200,000 men should be in readiness in case of war, of whom 120,000 would belong to the active army and its reserves, 50,000 to the landwehr, and 30,000 to its reserves. In time of peace the active army is to consist of 24,376; of whom 20,168 are infantry, 1,959 artillery, about 1,000 cavalry, and 1,104 sappers. The general staff consists of 19 officers.

The Navy, in 1877, consisted of 1 iron-clad frigate, 1 monitor, 1 royal yacht, 8 screw-steamers, and 10 sailing vessels. It was manned, in 1876, by 71 officers and 582 sailors.
